To produce six tons of white crystalline sugar per acre, the Syndicate has ordered a New Semi-Electric Sugar Manufacturing Plant of daily crushing capacity of one thousand tons of sugar-cane. Part of the machinery has already arrived at our Factory-site. The Distillery will also start manufacture of spirit soon. We wish our shareholders, depositors and sympathisers a happy new year.

EVERETT

AYURVEDIC

Entrance to Shri Dhootapapeshwar Pharmacy.

Among existing medical systems AYURVED has its own particular position of great importance. Under foreign rule its practice languished due to the scant attention paid to it, but a practice having its roots in antiquity could never die out, and in the hands of ardent practitioners has continued till now. Great credit is due to Messrs. Shri Dhootapapeshwar Panvel Ltd., who have revived the system on a grand scale and re-established it on a firm basis.

The Shri Dhootapapeshwar Ayurvedic Pharmacy is seventy-six years old. Founded in 1872 by the late

Krishnashastri Puranik on a small scale as a private enterprise, it gradually assumed a bigger form until 1938 when it was converted into a private Limited Company. The Pharmacy employs about 400 persons and manufactures about 600 medicines. It has Branches and Distributing Centres at Bombay, Nagpur, Amraoti, Ahmedabad, Baroda, Poona, Kolhapur, Hubli, Lucknow, Raipur, etc., in addition to a net-work of Agencies in most of the provinces.

The Pharmacy follows the old processes of manufacture faithfully but does not oppose rational improvements in the same. Thus it has furnaces where Bhasmas are baked in cowdung balls (Vanotpala), cowdung cakes (Gowarya); it has hand mortars and also machine mortars, designed and made locally, to suit the Ayurvedic process of manufacture and a modern graduate in Pharmacy is at work in the laboratory and studies the various orthodox processes from the modern point of view and plans intelligently for possible improvements. The machine mortars designed here have now been adopted as standard by other progressive pharmacies.

HERB GARDEN

The Pharmacy is developing a herb garden of its own on a hill-side not far from the Bombay-Poona road. This will serve as a great educational Botanical Centre to students of Ayurved. 230 plants have now been planted in it.

AROGYAMANDIR MAGAZINE

The Pharmacy has promoted a monthly magazine named "Arogyamandir", devoted to Ayurved, Physical Culture and Hygiene. It is illustrated, and the first of its kind in the field. It is growing in its popularity and is increasingly becoming instrumental in putting forward the views of important personalities in the field of Ayurved and allied sciences.

The Pharmacy has a scheme of Health and Physical Culture propaganda through Cine Films, and has filmed occasions like The All-Maharashtra Physical Culture Conference of Satara, The Bombay Suburban Physical Culture Conference, etc. This work which has recently been taken in hand is expected to prove interesting and effective as a medium of propaganda.

ENTERPRISE

THE AYURVED STUDY CIRCLE

The Pharmacy has promoted a correspondence society, "The Ayurved Study Circle" to encourage and develop an exchange of thought amongst the present savants in Ayurveda, so that students and the science may derive benefit from all who are learned in Ayurveda. The Circle conducts its work only in English as it feels the necessity of having a good literature on Ayurveda in the English language.

A SCHEME OF FINANCING AYURVEDIC PRACTITIONERS

The Pharmacy has a scheme for financing Ayurvedic practitioners who have satisfactorily completed their education, and need financial help to start practice. Though the help can be extended to a limited number of practitioners, the scheme has been much appreciated by those concerned.

THE SHRI DHOOTAPAPESHWAR AYURVED TRUST

The Proprietors of the Shri Dhootapapeshwar Ayurvedic Pharmacy founded this Public Trust in 1933. A fund of Rs. 50,000 and properties worth Rs. 75,000 were given over to the institution. Its aim is to give free medical aid to the poor, and to encourage study and research in Ayurved.

It gives prizes to students standing highest in merit in the Acharya, Visharad and Bhishak Examinations of the All-India Ayurved Mahamandal. It conducts an outdoor dispensary where the average daily attendance is over 200, and also an Ayurvedic Hospital of 12 beds. The dispensary and the hospital are housed in an impressive and modern building having good lighting and ventilation. Annual reports of clinical experience are published with a view to exchange results based on this with similar institutions in order to derive mutual benefit.

This concern has grown during the last 76 years into a big family which includes : Dhootapapeshwar Industries, Ltd., a Public Limited Company registered on 21-10-1948 with a capital of Rs. 25 lakhs with the main object of manufacturing quality medicines on a very large scale ; Dhootapapeshwar Sales Corporation, Ltd. This concern was also registered on 21-10-48 for organising the sales of the products of Dhootapapeshwar Industries Ltd. and are the sole selling agents. This company will also be working as selling agents for other Indian medicine manufacturing concerns.

Shri Dhootapapeshwar Ayurvedic Hospital.

*Transparent
purity*

The very transparency is guarantee of the absolute purity of BOSFA Transparent Soap. It's subtly entrancing fragrance, its utter absence of any deleterious ingredient, its perfect cleansing qualities make it the ideal toilet soap.

**GLYCERINE
SOAP**

Office and Showroom :—

BOMBAY SOAP FACTORY

105, Abdul Rehman Street, BOMBAY 3.

(Established 1904).

“ INDUSTRIAL

MYSORE SANDAL SOAP

A soap whose soothing emollient properties, delightful fragrance, wonderful cleansing properties and suitability for use on the most tender skin has made its name a household word in every Indian home.

GOVERNMENT SILK WEAVING FACTORY, MYSORE

is where the finest silk is spun and woven by expert craftsmen. The designs and colour schemes have made MYSORE SILK FABRICS famous both in India and outside.

GOVERNMENT ELECTRIC FACTORY, BANGALORE

Manufactures Mysore Transformers, survey instruments, Mysorite moulded articles, and electrical accessories. One of the largest factories in India, its products are extensively replacing imported goods.

GOVERNMENT PORCELAIN FACTORY, BANGALORE

Porcelain goods of all description are manufactured at this factory and Mysore Porcelain insulators, ceiling roses, switches and other goods are in universal use.

MYSORE MAKES MANY PRODUCTS

MYSORE "

MYSORE SANDALWOOD OIL

This is the purest and highest grade of oil obtainable anywhere. Whether for pharmaceutical use or the manufacture of soap and perfumery, the name MYSORE is a guarantee of unsurpassed purity.

MYSORE IRON & STEEL WORKS, BHADRAVATI

The strength and durability of MYSORE Steel is as good as any manufactured elsewhere in the world. Cast iron pipes to B. S. S. for water supply purposes from 2" to 33" dia. in standard lengths can be supplied.

ARTS & CRAFTS

SRI CHAMARAJENDRA TECHNICAL INSTITUTE, MYSORE

The craftsmanship of MYSORE cannot be excelled in any part of India. This is because the State has taken the keenest interest in its development, and placed its teaching in the hands of experts.

THE MYSORE IMPLEMENTS FACTORY, HASSAN

Quality is the keynote of the high grade tools and implements turned out by this factory, and every single article produced is designed to fill the purpose for which it is manufactured.

GOVERNMENT DICHROMATE FACTORY, BELAGULA, KRISHNARAJASAGAR P.O.

Manufactures Sodium Bichromate, Potassium Bichromate, Sodium Sulphate, Sodium Silicate, and Chrome Pigments according to the latest scientific processes.

GOVERNMENT INSURANCE DEPT., BANGALORE

A progressive Government-sponsored department that undertakes Life and Motor Insurance. The claims paid exceed Rs. 90 lakhs and the last bonus declared was Rs. 18/- per thousand.

**“Reading Maketh A Full
Man Writing
An Exact Man.”**

—FRANCIS BACON

The promotion of *reading* and *writing* on a vastly increased scale in order to equip her teeming millions for full and enlightened citizenship is one of the first responsibilities which Freedom has brought to India.

Hundreds of thousands of tons of *printing* and *writing* paper will be needed every year for this gigantic task of national regeneration.

The Mysore Paper Mills will continue to assist in this great task by holding their production of high quality “BISON BRAND” papers—PRINTINGS and WRITINGS as well as LEDGERS, MANIFOLDS and BONDS—at the disposal of the country in the years to come.

**The Dominion
OF
INDIA**

PHYSIOGRAPHY

GEOGRAPHICALLY the mass of land today called India consists of the Dominion of India, the States Unions and states formerly under the rule of Indian Princes, the Portuguese Possessions of Goa, Daman, Diu and the French Possessions of Mahe, Karikal, Pondicherry, Yanam and Chandernagore.

In shape India is like a triangle with its base resting on the Himalaya Mountains in the north and its apex running far into the ocean in the south. At the southern extremity the triangle tapers with a pear-shaped curve to a point called Cape Comorin.

India lies entirely to the north of the equator. From south to north including Kashmir, it stretches from 8° north latitude to 37° north latitude, with the Tropic of Cancer cutting it roughly into two halves. West to east it stretches from about 66° 20' east longitude to 97° east longitude.

Broadly speaking India is shut off from the mainland of Asia by the Himalaya Mountains, the highest mountain range in the world. Going from west to east along the country's land frontier are Pakistan, Russian Turkestan, Tibet, China and Burma. In the south, the country is surrounded on all sides by water—the Arabian Sea in the west, the Indian Ocean in the south and the Bay of Bengal in the east.

India is about 2,000 miles from east to west, and about 2,000 miles from north to south. Its land frontier is about 5,500 miles long and the sea frontier about 4,700 miles. The total area involved is 1,220,099 sq. miles. The total population is 318,912,506, which is a little less than one-sixth of the population of the whole world.

Ports.—Compared with the size of the country, the coast-line is short, as there are few bays or inlets. Hence there are also very few harbours. The fact is the west coast is rocky and the sea is deep near the coast, while in the east the sea is extremely shallow so that big ocean-going ships have to weigh anchor at some distance from the shore. The only so-called natural harbours are Bombay and Goa. While Madras, Vizagapatam and Port Okha are examples of purely artificial harbours built by human enterprise.

The principal ports in India are (going from west to east along the coast), Bedi Bander, Port Okha, Porbandar, Surat, Bombay, Marmugao, Mangalore, Calcutt, Cochin, Alleppey, Quilon, Tuticorin, Dhanushkodi, Negapatam, Karikal, Cuddalore, Pondicherry, Madras, Masulipatam, Coconada, Vizagapatam and Calcutta. Of these, Karikal and Pondicherry belong to France, Marmugao belongs to Portugal, while the rest are in the Dominion of India. (For more details see section on ports).

THE MOUNTAIN WALL

India can be divided into three natural regions as shown in the physical map—1. the mountain wall, 2. the Plain of Hindustan, and 3. the Indian Plateau.

Let us take the mountain wall first. From the Pamir Knot in the far north two mountain ranges radiate one in the south-east, and easterly direction called the Himalayas, and the other in a south-western direction reaching almost down to the sea, called the Sulaiman Range in the north and the Kirthar Range in the south. In the east the mountain wall

between India and Burma is called by different names in different places. In the north, for instance, it is known as the Patkoi Hills, further south as the Naga Hills. In Assam it is called Jaintia, Khasi and Garo. Southward are the Lushai Hills, then finally there are the Arakan Yoma which finally reach the sea at Cape Negrais and continue in the Andaman and Nicobar Islands.

Of the various ranges which constitute the mountain wall of India the Himalayas are the most note-worthy. Extending like a semicircle for a distance of 1,500 miles along the northern frontiers of the country they form the loftiest mountain range in the whole world, and contain many of the highest mountain peaks, Mount Everest 29,000 ft., Mount Godwin Austen 28,250 ft., and Kinchinjunga 27,815 ft.

Passes.—There are no easy ways in and out through the mountain wall which shuts off India from the rest of Asia, but there are a few difficult passes. Over the north are the Zojila Pass and the Shipki Pass which lead out of Kashmir and East Punjab respectively. Then from Shipki right down to Darjeeling there is no route across the mountain wall. Across the Burma frontier again there are a few routes but they are of little use for purposes of communication.

Detailed Survey.—The following is a more detailed description of the mountain region.

In the east on the border of Burma the mountain wall is much lower. Here it can more accurately be described as a range of hills rather than of mountains. This region is wet, forested and very thinly populated. The region round about Cherrapunji in Assam has the highest rain-fall in the world.

Then from Darjeeling to Kashmir are the Himalayas proper, over 2,000 miles in length and 150 to 200 miles in breadth. The Himalayas are thus not a mountain chain in the proper sense of the word. They can be described as a series of parallel but converging ranges intersected by valleys and big plateaus. On the whole, the slopes of the mountains facing India are very steep, while those facing north are much more gentle. We say, on the whole, because though the Eastern Himalayas (in West Bengal and Bihar) rise abruptly from the plains in the west (western U. P. and East Punjab) the rise from the plains is a little more gradual. Hence the Himalayas themselves can be further sub-divided into three parallel zones, the Great Himalayas with an average elevation of 20,000 ft., always covered with snow; the Lesser Himalayas, the middle range, with an average elevation of 15,000 feet; and finally the Outer Himalayas lying between the Lesser Himalayas and the plains with an average elevation of about 3,500 feet. The last are a sort of foot-hills to the Great Himalayas, and are usually described as forming the sub-Himalayan region, a region which extends from eastern Bihar to East Punjab all along the Plain of Hindustan.

In the north the altitude of the range is much lower; there are few peaks which exceed a height of 20,000 feet. The Punjab Himalayas are comparatively dry, and the snow-line is much higher than elsewhere. The northern slopes are bare while the southern slopes are forested.

Two of the longitudinal valleys which separate the mountain ranges are worth a note. They

are the Vale of Kashmir and the valley of Khatmandu in Nepal. Both the valleys are fertile, extensive and from a tourist's point of view a dream of beauty.

Thus it is clear the whole region possesses great variety in climate and a range of vegetation stretching from the tropics to the poles.

The north mountain wall has a tremendous influence on the physiography of the country. On the one hand it keeps out the bitterly cold winds which blow from Central Asia and Tibet during the winter, and on the other it intercepts the moisture laden winds which blow from the sea in the south so that the northern plains of the country have rain during the monsoon. Second, the melting snow and rain falling on the mountains go to form the chief source for the water of the rivers which flow from the Himalayas. Hence the rivers of Hindustan never go completely dry in the summer. In short, if Egypt is a gift of the Nile, the Plain of Hindustan is no less a gift of the Himalayas.

THE PLAIN OF HINDUSTAN

Geologically, the Ganga Plain can be considered as the fore-deep of the mountains to the north of it. This fore-deep extends thousands of feet below the sea-level, though since its formation it has been filled in by deposit. In the east this deposit consists of alluvial material from the mountains, in the west it consists of material blown by the wind. All through the deposit is fine grained made up chiefly of muds and sands.

The Hindustan Plain extends from the Bay of Bengal in the east to the Pakistan frontier in the west, that is to say, it is about 1,500 miles long and from 150 to 200 miles broad. Throughout this vast tract of land not a hill can be seen. The slope from the mountains to the sea is so gradual that about 100 miles from the mouth of the River Ganga the surface is no more than 500 feet above sea-level.

The Plain of Hindustan is probably the most important part of the country. For one thing, it contains some of the richest soil in the world. Second, it is on the Plain of Hindustan that the whole drama of race conflict and race assimilation was played out, a drama which finally shaped the political and cultural destiny of both India and its neighbour Pakistan.

Going into more detail the Plain of Hindustan is formed by the basins of three distinct river systems. In the far west are the Bias and Sutlej, tributaries of the Indus draining into the Arabian Sea. Further east is the River Ganga with its tributaries the Yamuna, Gogra, Rapti and Gandak which flows south-eastwards into the Bay of Bengal. The capital of the Indian Dominion, Delhi stands on the water-shed between the Indus and the Ganga river basins. The third of the three river systems, the Brahmaputra rises beyond the Himalayas, turns east and enters India at its eastern extremity and joins the Ganga before reaching the Bay of Bengal. The Brahmaputra has no important tributaries.

On the Himalayas these rivers are rushing, roaring torrents, cutting their way through steep and rocky gorges. But when they reach the vast plains they broaden out and wander

slowly till they get to the sea. The land is so flat that the rivers sometimes leave their old beds and cut out new channels flooding the surrounding area.

The rivers of Hindustan are notable for three reasons. 1. They give a constant supply of water. 2. The land through which they flow is broad, flat and fertile and eminently suitable for irrigation. 3. Because water flows perennially they are navigable through the greater part of the year.

As we go from west to east in the plain rainfall increases and so does the fertility of the soil.

The whole plain can be sub-divided according to climate into a number of natural regions. There are first the plains of the north-west, comprising the Province of East Punjab, a dry area depending on the irrigation canals of the rivers Rias and Sutlej for its water. Second, there is the valley of the Upper Ganga covering the major part of the United Provinces, a comparatively dry region which depends for its cultivation on the irrigation canals of the Ganga and the Yamuna. Third, we have the valley of the middle Ganga embracing the Province of Bihar, which is an intermediate zone, with both wet and dry cultivation. As we go further east we have the lower valley of the Ganga, which includes the whole of West Bengal, a wet region with considerable rainfall growing rice and jute.

THE INDIAN PLATEAU

The third of the natural regions into which the country is divided is called the Indian Plateau because it comprises a three-sided table-land covering the whole of the country in the south except for two narrow coastal strips in the east and the west. The Indian Plateau is marked off from the Plain of Hindustan by a confused mass of hill ranges running with a general direction of east to west. Three of these ranges have been distinguished by the names of Vindhya, Satpura and Ajanta respectively. They stand from 1,500 feet to over 4,000 feet high and though pierced by road and railway at the present time were not easy to cross in the old days and thus formed a barrier of hill and jungle between the northern and the southern portions of the country.

The Indian Plateau is higher in the west and the south than in the east and north. Along the western and eastern edge of the plateau run the Western and Eastern Ghats. They start southward, from the extremities of the Vindhya mountain system and run along the western and eastern coasts of the country and unite to form a sort of upheaved angle towards their southern extremity. The Western Ghats run through the Province of Bombay and ascend to an average height of about 3,000 feet while some of the peaks are anything between 5,000 feet and 9,000 feet high. The Eastern Ghats stretch down the Province of Madras and have an average elevation of 1,500 feet. The inner triangular plateau which the Western and Eastern Ghats form far in the south is scamed with little ranges of hills exceeding 4,000 feet in height the best known among which are the Nilgiris. It is on the Nilgiris that Ootacamund the famous summer capital of the Madras Province stands.

Drainage Systems.—There are three systems of drainage in the Indian Plateau—one towards the north, the second towards the west and the third towards the east. The drainage from the northern or Vindhya edge of the plateau falls into the Ganga. Two rivers Narmada and Tapi carry the rainfall of the southern slopes of the Vindhya and Satpura mountains respectively in almost parallel lines into the Arabian Sea. Further south, as we have already stated, the plateau is much higher in the west than the east. So the drainage has to make its way across the whole breadth of the plateau eastwards until it falls into the Bay of Bengal. The most important rivers are the Mahanadi, the Godavari, the Krishna and the Cauvery. These rivers differ from the rivers of

the Plain of Hindustan in three ways; 1. They are fed only by the monsoon rains and therefore do not yield a constant supply of water. 2. Their valleys are less suitable for irrigation. 3. And finally, they are not navigable for certain seasons in the year when parts of the river dry up.

From a geological point of view the Indian Plateau consists mainly of very old crystalline rocks—much older than the Himalayan fold mountains. On some of the edges of the plateau in the north-east for instance, are areas of sedimentary rocks from which the country obtains most of its coal. About nine-tenths of the coal resources of India lie in Jharia in Bihar and Ranigunj in West Bengal, though coal-bearing beds are also found in the valley of the Godavari and the northern slopes of the Vindhya. The north-west of the plateau is covered by vast stretches of lava called the Deccan lavas. This region is one of the largest areas of lava in the world, covering as it does an area of 250,000 square miles with a total thickness of several thousand feet. In spite of the great extent of the lavas there are few or no signs of volcano. In the rest of the Plateau valuable minerals occur here and there among old crystalline rocks. Gold is obtained in Kolar, manganese in Vizianagaram, Mysore and the Central Provinces, copper and iron in Bihar and Orissa, mica in Madras and the south-east. The point about diamonds is of some interest. They occur in sand-stones or conglomerate in Pannah in Bundelkand or Karauli in Madras, though no diamond-bearing igneous rocks are found.

Natural Regions.—From the point of view of climate and vegetation the Indian Plateau can be divided into ten natural regions. There are first of all the coastal regions round the plateau. In the north covering part of the Province of Bombay is the Gujarat region, moderately dry and hilly in places. Further south is the west coast region covering part of Bombay and part of Madras, narrow and wet. In the east is the Carnatic or Tamil region comprising part of Madras, moderately wet but wider than in the west. In the north is what is called the Northern Circars region covering part of Madras and part of Orissa, also moderately wet. Then there are the dry regions lying to the north of the Vindhya mountains sloping downwards to the Plains of the Ganga. These are the Thar or Great Indian Desert, the Rajputana uplands dry and hilly, and the Central Indian Plateau comprising part of the Central Provinces. Finally there is a third group of regions which can be distinguished, all lying in the Indian Peninsula proper. These are first the southern part of the plateau covering the whole of Mysore and parts of Madras and Bombay, dry, somewhat barren and thinly populated; second, the Deccan lavas region in the north-west, containing parts of Bombay, Hyderabad and the Central Provinces, dry but with fertile black soil suitable for cotton and moderately thickly populated; and lastly, the North-Eastern Plateau covering parts of Bihar, the Central Provinces, and Orissa. This last mentioned region has moderate rainfall, is thinly populated, but thickly forested. The inhabitants are mainly concentrated in two river valleys.

Ceylon is the only important island lying off the coast of India to which it is joined by a line of sand bars collectively called Adam's Bridge. But Ceylon is politically separate from the sub-continent. Two groups of very small islands in the Bay of Bengal, the Andamans and the Nicobars, and one group in the Arabian Sea the Laccadives are part of the Dominion of India. So is the quasi-island of Cutch off the Kathiawar Peninsula in Western India. Cutch is a dry, rocky, treeless country.

VEGETATION

India is thickly populated and so over a greater part of the country the natural vegetation has been removed. The country has no distinctive botanical features peculiar to itself. Where the rainfall is more than 80 inches a year there

are ever green forests on the hills. The wood from these forests is hard but the forests have not yet been commercially exploited. These ever green forests are chiefly found on the slopes of the Western Ghats, the wetter eastern parts of the Himalayas up to a level of 5,000 feet, and in Assam.

Where the rainfall is less than 80 inches but more than 40 we have what are called the monsoon forests, so-called because the trees in these forests lose their leaves in the dry season. The monsoon forests are very valuable, because they contain two of the most useful kinds of tree, the teak and the sal. The teak is found chiefly in the western parts of the country while the sal is obtained in the lower slopes of the Himalayas and the north-east of the plateau. Where the rainfall is less than 40 inches, in the drier parts of the country we find small thorny trees, sometimes so small that they are more like bushes than like trees. In the driest parts where the land is desert or semi-desert even bushes cannot grow. There we find plants with thick fleshy stems and long roots. As we go up the mountains too the vegetation changes. In the higher reaches of the mountains, above 5,000 feet in the south, and 3,000 feet in the north the forests are similar to those found in temperate lands. Some of the trees have broad leaves and are like the oak while others are tall and have needle-shaped leaves like the pine.

On the highest parts of the mountains it is too cold and too dry for trees to grow and so we find only small bushes and short grass.

Along the sea-coasts and in the great river deltas where the land is flat and muddy grows a kind of tree called mangrove. These trees are most frequent in the deltas of the River Ganga where they are called Sundarbans.

There is not much grass land in India though in the hills in the monsoon areas a few patches can be seen. (For a description of forest wealth see section on forests.)

The main cultivated plants include rice, wheat, pulses and grains. Among the important seeds grown are castor, sesamum and ground nut. The chief fruit trees include mango, coconut, arecanut and certain citrus fruit. Apples, peaches, pears, apricots and walnuts are confined chiefly to the Himalaya valleys. There are tea plantations over large areas on the mountains in the north-east and south, while coffee, cardamom, pepper and rubber are extensively grown in the south. In some of the damper regions the cinchona is successfully cultivated. (For more detailed description see section on agriculture.)

ANIMALS

Just as natural vegetation has disappeared over the greater part of the land so have a great many wild animals. The lion, for instance, was not uncommon within historical times in the north. Today it is confined wholly, to the Gir forest in the former State of Junagadh in Saurashtra.

The most famous among the wild animals which survive are the tiger and the elephant. The leopard or panther is more common than the tiger and equally destructive of life and property. The cheetah or the hunting leopard is found only in the Deccan and is generally trained for hunting the antelope. Other wild Indian animals of the cat family are the marbled cat and the so-called jungle cat.

In the open country-side wolves are plentiful and usually prey on sheep. The Indian fox is comparatively scarce but the jackal is very common. The wild dog is found in the denser jungles and generally hunts in packs. Among other dogs are the pariah common in the south, and the greyhound used for hunting.

The black bear is common wherever rocky hills and forests occur. It lives on ants, honey and fruit and if agitated it may prove dangerous.

The Himalayan bear which is found only in the north, stays in the mountains during the summer but comes lower down during the winter.

The rhinoceros found in the country are of three different types, two have a single horn and one has double. The rhinoceros is commonest in the Brahmaputra valley and in the Sundarbans. With the rhinoceros might be mentioned the crocodile which can be very dangerous specially in the rivers of the north. The wild hog is also well-known in certain parts of the country and is very destructive of crops.

In the remote parts of the deserts of Cutch is found the wild ass but its contacts with man are few. Many wild varieties of sheep and goat are met with in the mountain ranges of the north.

The antelope proper is more widely distributed. On the coasts of Gujarat and Orissa, for instance, a herd of does accompanied by a single buck is a common sight. The gazelle can also be found almost everywhere. The sambar is confined to hill forests, while the spotted deer is considered to be the most beautiful animal of the Indian jungle.

In the Western Ghats, and in the hill jungles of Assam and the Central Provinces is found the bison. It is a fierce animal and almost as dangerous to hunt as the tiger. Akin to the bison is the wild buffalo very common in Assam.

The rat and the mouse are a perpetual nuisance. The bandicoots some of which can be as long as 2 feet burrow under stores and godowns and are often deadly to plants, fruit or grain.

The reptiles abound in garden and jungle and even intrude into dwelling places specially during the rains. Thousands of people die every year in the country-side of snake-bite. The most dreaded of the reptiles is the cobra. There is another variety called Russell's viper whose bite is equally fatal. Generally speaking the salt-water snakes are dangerous while the fresh-water ones are harmless. The bigger variety scorpion which abounds in parts of Madras is a terror.

Of all the wild animals in the country the elephant is the most interesting as well as the most useful. It generally lives in the wilder parts of the monsoon forests and being an intelligent animal can be trained to do heavy work such as dragging great logs of wood, or arranging them in neat piles. The elephant is also excellent as a transport animal as it can push its way through the thickest jungle where roads cannot be built.

Domestic Animals.—So much for the wild animals. Among the domestic animals the most useful are the oxen. It is estimated that there are about one bullock or cow to every two people in India. Milk is not a staple article of food and the oxen are chiefly used for ploughing or drawing carts. The bullocks are more valuable than the cows though in certain parts like the United Provinces dairy-farming is an important industry. One handicap is that in most areas fodder has to be specially grown for the cattle.

There are 30 million buffaloes in the country. The buffalo is stronger than the bullock and is chiefly used for ploughing. The she-buffalo is the typical dairy animal.

There are also a very large number of sheep in the country. But they are a very poor specimen and do not give good wool or meat. Sheep are most numerous in Madras and live chiefly on waste land which is not good enough for cattle. Goats are found everywhere because it does not take much to keep them alive. They can feed on the poorest grass or shrub and so find enough to eat even in the driest parts of the country.

There are over a million and half horses and ponies, most of which are used as draught animals. Mules, donkeys and camels are also

used for purposes of transport: mules and donkeys on the hilly parts, and camels in the sandy desert.

The birds of India though not as gorgeous as those of some other tropical lands deserve mention. The parrot is easily the most beautiful of the Indian birds. The peacock is another beautiful bird, while the maina like the parrot lives happily in a cage and talks well. Of the vulture there are four varieties which include the common scavenger. There are many types of eagle too and some of the falcons can be trained for hawking. A bird much sought after for its plumage is the king-fisher and among the birds which are hunted for their flesh are pigeons, ducks, partridges, plover, quail and snipe. The jungle fowl, however, is not considered good for eating.

There are many beautiful butterflies in India, while among the more useful insects are the bee, the silk-worm, the *coccus lac*, that is, the insect which gives lac. Certain varieties of Indian moth and ant are very destructive. Locust invasions are not frequent but when they appear they leave complete destruction behind them. Mosquitoes abound everywhere.

In India fish is eaten fresh as methods of fish preservation are either primitive or not practised. Among the edible Indian fishes are the carp family and the cat fishes. But the most delicious is the hilsa which is also a rich food. A fish which is found in all hill streams is the mahseer. (For a more detailed discussion see section on fisheries).

THE TWO DOMINIONS

The partition of what was British India took place on August 15, 1947. Broadly speaking, the areas in the north-west and the north-east inhabited predominantly by people belonging to the Muslim religion were cut off and formed into a separate independent Dominion. Only two Provinces were primarily affected by the decision to partition the sub-continent, and a third to a smaller degree. The two which were primarily affected were the Punjab in the West and Bengal in the East. The old Punjab was divided into West Punjab which is part of Pakistan and East Punjab which is part of India. The old Bengal was divided into East Bengal now part of Pakistan and West Bengal now part of India.

The Province of West Punjab includes the whole of the Multan and the Rawalpindi Divisions and the Districts of Gujranwala, Sheikhupura and Sialkot of the Lahore Division. The Province of East Punjab includes the whole of the Jullundur and Ambala Divisions and the Amritsar District of the Lahore Division. The Gurdaspur and Lahore districts of the Lahore division are divided between the two new Provinces.

In the east the Province of East Bengal includes the whole of the Chittagong and the Dacca Divisions and the Districts of Rangpur, Bogra, Rajshahi, Pabna and Khulna. The Province of West Bengal includes the whole of the Burdwan Division and the Districts of Calcutta, the 24 Parganas, Murshidabad and Darjeeling. The Districts of Nadia, Jessore, Dinajpur, Jalpaiguri and Malda are divided between the two Provinces.

The Province of Assam too was affected to a minor degree. Except four thanas the whole of the District of Sylhet was transferred to the newly created Province of East Bengal.

RELATIVE POSITION

An attempt is made below to summarize the present position in regard to the population, etc., of the two Dominions. But the estimate can

only be regarded as very provisional for the following reasons: First, the latest figures that are available are for 1944-45; in some cases indeed one has to go even further back. Second, big changes have recently taken place as between the two Dominions in men and material for which no accurate figures can so far be obtained. Thirdly, the allocation of resources in the divided Provinces of Punjab and Bengal are not yet final.

The population of India based on the 1941 census is 318,912,506 and that of Pakistan roughly 75,000,000.

The area of the Indian Dominion is 1,220,099 sq. miles and that of the Dominion of Pakistan 361,218 sq. miles. Another estimate puts this latter figure at 233,000.

The general economic position can roughly be summarized as follows:

As we have seen, the bulk of the population and territory go to India. Most of the roads and railways also fall to India's share as well as most of the ports and air-fields. The canal system is divided.

As regards food resources India as a whole is deficient while Western Pakistan is expected to have a surplus of 1½ million tons of which about half a million may have to be sent to Eastern Pakistan to meet the latter's deficiency. Pakistan has a good deal of cotton to spare and holds a virtual world monopoly in jute. But Pakistan has to import textile goods in which she is deficient. Nearly all the jute mills are also in India, but unless India imports a good deal of the jute of Pakistan, most of the mills will be idle. The major part of the mineral resources of the sub-continent with the possible exception of chromium remain in India. And out of about 780 factories covering all the major industries Pakistan's share is 9 and India's 771.

As regards fuel, India keeps most of the coal, but this is not very much. Hydro-electric power is going to be much more important in the future than it is today. And though India produces almost all the electric power in the sub-continent at present, Pakistan's potentialities are much bigger. At the present moment, however, Pakistan cannot do without Indian coal for her railways, of which she has to import about 2½ million tons a year.

As regards foreign trade Pakistan was expected to have a favourable balance of Rs. 18 crores while India would have an unfavourable balance of Rs. 110 crores owing mainly to the need to import food. (See under 'Trade').

That is a rough over-all picture. A more detailed account is given down below through a series of statistical tables. It must be emphasized once again that only a rough estimate is all that is possible.

As regards communications India has 264,605 miles of road and 25,970 miles of railway while Pakistan has 49,863 miles of road and 14,542 miles of railway. As has already been stated in the earlier part of this section all the major ports except Karachi and Chittagong are in India. Of the 19 of the largest air-fields in the sub-continent India has 15 and Pakistan has 4. There are 3 large canal systems, Sukkur, Sarda and the Sutlej valley. Of the three the first is in Pakistan (Sind), the second is in India (U.P.), and the third is divided between the two. The sub-continent is well known for its large dams. Of these the largest are in India (Madras, Bombay). Of the larger dams which are under construction at present, the Bakra, the Damodar, the Tungabhadra and the Thal, the first three are in India (East Punjab), Bihar and Madras, respectively while the last is in Pakistan (West Punjab). One generalization which may be permitted is while the States which have acceded to the Indian Union add substantially to its economy those which have acceded to Pakistan (with the exception of Khairpur) do not.

INDIAN AND PAKISTAN YEAR BOOK 1949.

Agricultural Produce.—Here are the figures for the chief food crops in tons.

| Cereal | Total | India | Pakistan | States |
|---------------|------------|------------|-----------|-----------|
| Rice | 26,249,000 | 17,154,500 | 8,662,500 | 432,000 |
| Wheat | 10,458,000 | 6,901,000 | 3,457,000 | 100,000 |
| Jowar | 7,446,000 | 6,020,000 | 199,000 | 1,227,000 |
| Bajri | 4,249,000 | 3,872,000 | 411,000 | 166,000 |
| Maize | 2,952,000 | 2,518,000 | 382,000 | 62,000 |

The position in regard to cash crops is somewhat as follows:

| Cash Crop | Total | India | Pakistan | States |
|----------------------------|--------------|-----------------------------------|-----------|------------|
| Jute (in bales) | 7,991,100 | 1,455,700 | 6,535,400 | .. |
| Cotton (in bales) | 3,498,000 | 2,059,000 | 1,118,000 | 321,000 |
| Rubber (lbs.) | 35,530,000 | 4,695,000 | .. | 30,835,000 |
| Linseed (tons) | 432,000 | 382,000 | 7,000 | 43,000 |
| Sesamum (tons) | 433,000 | 426,000 (States included) | 7,000 | .. |
| Castor seed (tons) | 105,000 | .. | Nil | .. |
| Groundnut (tons) | 3,702,000 | 3,702,000 | Nil | .. |
| Coffee (lbs.) | 34,822,000 | 34,822,000 (includes States) | Nil | .. |
| Tea (lbs.) | 4,63,881,000 | 4,63,881,000 (includes States) | Nil | .. |

So far as tobacco, copra and hemp are concerned the whole of the supply comes from India, while the position in regard to wool is obscure.

Mineral Resources.—And this is how the mineral resources (in tons) are roughly distributed:

| Ore | Total | India | Pakistan |
|-----------------------------|------------|------------|------------|
| Coal | 28,218,837 | 28,118,000 | 100,837 |
| Petroleum (gallons) | 87,082,371 | 65,968,951 | 21,113,420 |
| Chromium | 44,000 | 22,100 | 21,900 |
| Copper | 288,100 | 288,100 | Nil |
| Iron | 2,743,675 | 2,743,675 | Nil |
| Mica (cwts.) | 123,169 | 123,169 | Nil |
| Gold (ounces) | 321,138 | 321,138 | Nil |
| Silver (ounces) | 22,300 | 22,300 | Nil |
| Magnesite | 25,611 | 25,611 | Nil |
| Saltpetre (cwts.) | 148,824 | 148,824 | Nil |
| Bauxite | 14,768 | 14,768 | Nil |
| Manganese | 992,795 | 992,795 | Nil |

Other minerals of which India has a much bigger supply than Pakistan are limenite, steatite, graphite, monazite and some containing radio-active substances.

And here finally are the production figures for the chief industrial goods:

| Goods | Total | India | Pakistan |
|------------------------|--|---|-------------|
| Iron and Steel | 18 works 1,959,000 tons ingots 978,000 tons finished | 18 works. 1,959,000 tons ingots 978,000 tons finished | Nil |
| Textiles | 389 mills | 380 mills 5 billion yds. 1½ billion lbs. of yarn | 9 mills |
| Chemicals | | 42,000 tons of sulphuric acid 22,000 tons of ammonium sulphate | very little |
| Paper | | 73,138 tons | very little |

Almost all other industrial plants such as those producing matches, paints, glue, glass, soap, aluminium, cement, etc., are in India. The great bulk of hydro-electric power too as we have stated is produced in India. In rural electrification, for instance, development is most advanced in Madras, Mysore and the United Provinces, two of which are in India while the third (Mysore) has acceded to the Indian Union. The great hydro-electric projects now under construction are also in India. But it is believed that the potentialities of Pakistan in this regard are much higher.

[N.B. For latest details on Pakistan see Pakistan section.]

METEOROLOGY

THE all-important fact in the meteorology of the sub-continent is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in north-west India and Western Pakistan by about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the end of October, they embrace all parts of the sub-continent except the southern half of the Peninsula, and by the end of the year have extended to the whole land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to March over the sub-continent are:—westerly winds of the temperate zone over the extreme north; to the south of these the north-east winds of the winter monsoon or, perhaps more properly, the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole land and sea area.

Two exceptions to these fine weather conditions exist during this period, viz., the Madras Presidency and North-West India and Western Pakistan. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, i.e., the summer monsoon, at the Madras Observatory amounts to 16.36 inches the total rainfall for the three months October to December amounts to 31.45 inches. The other region in which the weather is unsettled, during this period of generally settled conditions, is the north-west. This region from December onwards is traversed by a succession of shallow storms from the westward. In normal years in the north periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and occasionally even heavy rain or snow occurs.

These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of the north-west though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of the north.

THE SOUTH-WEST MONSOON

It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon. The sun at this time is progressing slowly northward towards the northern Tropic. The temperature increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trade circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the land area and the adjacent seas and the sub-

continent is invaded by oceanic conditions—the south-west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people.

When this current is fully established a continuous air movement extends over the Indian Ocean, the seas and the land area from Lat. 30° S. to Lat. 30° N. the southern half being the south-east Trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the seas and flows over the land it is highly charged with aqueous vapours.

The current enters the Indian seas by the end of May and in the course of the succeeding two or three weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over the sub-continent from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajasthan and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Eastern Pakistan and Assam while another portion after meeting the Himalayas gets collected and blows as a south-easterly and easterly current right up the Ganga plain.

DISTRIBUTION

The south-west monsoon continues for three and a half to four months, viz., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rainfalls throughout the sub-continent, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches, most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajasthan.

The part of the monsoon current over the southern half of the Bay of Bengal which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of Eastern Pakistan and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then directed westward by the barrier of the Himalayas and gives general rain over the Ganga plain and fairly frequent rain over the lower ranges of the Himalayas from Sikkim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists

a debatable area running roughly from Hissar in East Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where one or the other current of the monsoon prevails. In this area the rainfall is conditioned by the storms from the Bay of Bengal which exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain. The monsoon rains are carried into north-west India and Western Pakistan by storms which form at the head of the Bay of Bengal and more in a north-westerly direction right across the country.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast; the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

Cyclonic storms are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz., May and November, but in the Bay they form a constantly recurring feature of the monsoon season.

METEOROLOGICAL DEPARTMENT

Now there are two Meteorological Departments, one for India with headquarters in Delhi and the other for Pakistan with headquarters in Karachi. Both the Departments perform much the same kind of functions the more important of which are:

- (a) The issue of warnings to ports and coastal districts of the approach of cyclonic storms.
- (b) The issue of storm warnings by wireless to ships in the Indian seas, and the collection of meteorological data from ships.
- (c) The maintenance of systematic records of meteorological data and the publication of climatological statistics.
- (d) The issue to the public of up-to-date weather reports and of rainfall forecasts.
- (e) Meteorological researches of a general character, but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.
- (f) The study of agricultural meteorology, i.e., the study of the meteorology of soil, air and the air layers near the ground with particular reference to the growth of plants and crop production.
- (g) The issue of seasonal rainfall forecasts.
- (h) The issue of telegraphic warnings of heavy rainfall and frost (cold wave) mainly to Government officials (e.g., Canal and Railway Engineers, Collectors, Directors of Agriculture, etc.) and through the newspapers to the public in general.
- (i) Determination of time and the issue of time-signals, also the determination of errors of chronometers for the Royal Indian and Pakistan Navies.
- (j) Maintenance of seismological instruments at various centres.
- (k) Issue of weather forecasts to Civil Aviators.
- (l) The issue of weather bulletins to farmers broadcast by the Provincial Broadcasting stations.

Normal Monthly and Annual Maximum Temperature in Shade at Some Stations in India and Pakistan

1948 MONSOON

The chief features of the monsoon of 1948 are: (i) Good monsoon over the whole sub-continent except in Gujarat where rainfall was very deficient; (ii) Disastrous floods in and near the East United Provinces in the last week of August and the first week of September.

Here is a summary month by month:

June.—The Arabian Sea branch of the monsoon arrived in Malabar on the 10th, ten days after the usual date. Advancing rapidly thereafter, it extended into the Konkan, the Bombay Deccan, West Central India and the West Central Provinces by the 14th. The advance of the monsoon over the Konkan was attended with severe squalls and rough seas resulting in the grounding of some ships off the west coast ports, and the wrecking of a few barges. After a few days' activity the monsoon weakened in the interior of the sub-continent and till the end of the month was generally confined to the Konkan and Malabar. The Bay branch advanced into Eastern Pakistan and Assam by the 15th and was normally active there till the 24th. A depression which formed in the North Bay of Bengal on the 24th and moved up to the south-east United Provinces carried the monsoon into the rest of north-east India and the east United Provinces by the 26th. Simultaneously it also stimulated the Arabian Sea branch in the central parts of the sub-continent and from the 25th to 28th there was well-distributed rainfall over the whole sub-continent outside north-west India and Western Pakistan. Averaged over the plains the rainfall for June was 17 per cent in defect.

July.—The monsoon was generally feeble in the first week of July; during this period there was well-distributed rain only in the

west coast and over the region extending from the northern districts of the East United Provinces to upper Assam. However, under the influence of a depression which formed in the North Bay on the 7th, and moved up to the United Provinces, the monsoon strengthened in north-east India, the central parts of the sub-continent and the United Provinces in the second week, and thereafter, till the end of the month, it continued active over these regions, and extended into the East and the West Punjab by the end of the third week and into the North-West Frontier Province, Sind and North Baluchistan by the end of the month. The monsoon also extended into Gujarat during the last ten days, but it was weak there. The heavy rains in the Brahmaputra catchments in the first week of July caused very heavy floods in that river. This resulted in serious damage to standing crops and distress to thousands of people in many parts of Assam. Severe floods in the Indus and its tributaries in the last week of July were reported to have caused widespread damage to property and loss of human life and of innumerable heads of cattle in the West Punjab. A major part of the rice crop of Sind was also destroyed. The rainfall in July was normal or in excess over most of the sub-continent except in Gujarat, South Hyderabad and the Madras Deccan where it was deficient. Averaged over the plains, the rainfall was 2 per cent in excess.

August.—After a few days of subdued activity over the whole sub-continent, the monsoon revived over the Gangetic plain in association with a "low" which developed over Bihar and moved to north Rajputana by the 11th. Well-distributed rain fell over the region extending from Assam to the East Punjab during this period. The monsoon was also active over the western half of the Peninsula during the first ten days of August. The formation of a cyclonic

storm in the North Bay and its movement to the East United Provinces kept the monsoon active over the belt of the sub-continent from Gujarat and North Konkan to North Orissa during the next week. Thereafter, the monsoon became weak in north-east India and the eastern half of the Peninsula, but it continued to be strong in the United Provinces, the East Punjab, East Rajputana and the central parts of the country till the end of the month. Locally very heavy rain occurred in the west United Provinces during the last week of August. The rainfall for the month was in excess or normal over most of the sub-continent except in Chota Nagpur, Gujarat, south-east Madras and the North Madras coast where it was in slight to moderate defect. Averaged over the plains, the rainfall was 15 per cent in excess.

September.—The monsoon continued to be strong in the West United Provinces, the East Punjab, Central India and the West Central Provinces during the first week of September. Very heavy rains in the plains of the United Provinces during this period, preceded by heavier falls in the hills, resulted in unprecedented and disastrous floods in the Ganga and the Yamuna. The Ganga rose to record levels, overflowing its banks, submerging hundreds of villages and rendering thousands of people homeless. The worst affected districts were Banaras, Allahabad, Kanpur and Lucknow. In Banaras City, the streets were reported to have been covered by flood water to such heights that boat traffic was the only means of rendering aid to the stranded people. The monsoon abated in the West United Provinces after the first week, but continued strong over the region from the East United Provinces to the north Central Provinces and Bihar for another week, when locally very heavy rain fell in and around Bihar and the East United Provinces. This

heavy rainfall resulted in a further rise in the already overflowing Ganga and caused considerable damage to crops in Bihar. The monsoon withdrew from north-west India by the 18th

of September and from the United Provinces and Central India in the beginning of the third week. The monsoon which had been generally weak in the Peninsula during the first half of

the month, became strong over the Deccan and the North Madras coast and vigorous along the Konkan in the beginning of the 4th week in association with a depression which moved from the West Central Bay across the Deccan into the East Central Arabian Sea. This depression became a storm on emerging out into the Arabian Sea and moved north-westwards skirting along the west coast of Saurashtra and then moved away westwards. It strengthened the monsoon in Gujarat where widespread light to moderate rain occurred during the fourth week. Towards the end of the month, the monsoon was generally weak in the Peninsula and in north-east India. It finally withdrew from the sub-continent by the 5th October. The rainfall for September was normal or in excess over most parts of the sub-continent outside the East Punjab, Gujarat, Hyderabad, Mysore and south-east Madras. Averaged over the plains the rainfall was 2 per cent in excess.

Season as a whole.—After arriving late along the west coast and in Assam, the monsoon did not extend into the interior of the sub-continent in June except for two short spells. Consequently, the rainfall during June was normal or in excess only along the west coast, the Deccan and north-east India outside Bihar and was in defect elsewhere. July was a month of good monsoon activity over the whole sub-continent except Gujarat which was the only region where the large rainfall defect still continued. In the first half of August also, the monsoon was active or strong generally over the sub-continent outside Gujarat while during the second half, it remained strong in the Gangetic plains but weakened elsewhere. During the first half of September, the monsoon was vigorous in the United Provinces and strong in the central parts of the sub-continent and generally weak elsewhere. It withdrew from north-west India, the United Provinces and Central India by the middle of the month. The rainfall for the season as a whole was in slight to moderate excess in the Bay Islands, the United Provinces, East Rajasthan, Central India, the west Central Provinces, the Konkan, the Bombay Deccan and Mysore and normal in north-east India outside Orissa, in the East Punjab, Berar, the East Central Provinces and the North Madras coast. It was in moderate defect in south-east Madras, in large defect in Gujarat and in slight defect elsewhere. Averaged over the plains, the rainfall for June to September was 2 per cent in excess.

THE FOLLOWING TABLE CONTAINS INFORMATION ABOUT RAINFALL DURING THE PERIOD JUNE TO SEPTEMBER 1948.

| SUB-DIVISION. | RAINFALL. Period, June to September 1948. | | | |

EARTHQUAKES

THE sub-continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute the sub-continent's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophes, as we know from the Bihar earthquake of January 1934.

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in the sub-continent, being comparatively free from any severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this.

These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by Dr. W. D. West of the Geological Survey of India.

CAUSES

It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes.

A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyauk-kyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes.

It may, however, be pointed out that it is only such "faulty" areas as are still active that give rise to earthquakes. Thus the faults in the Peninsular area appear to be inert and therefore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kanagra, 1905) in the readjustment of which these movements occur. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec, 1927). The regions where mountain ranges take sharp bends, being highly folded, are naturally areas of pent-up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Sulaiman, Bugti or Kirthar ranges.

Recent Shocks.—Numerous earthquake shocks were experienced during the year 1946 in various

parts of the Union of India and in Pakistan, but none of these appear to have caused any serious damage or loss of life. In the Union of India shocks of varying intensity were recorded at Digbol, in Assam (March 7, 1946), at Srinagar in Kashmir (February 25, 1946), at Jubbulpur in C.P. (January 19, 1946), at Dehra Dun in the United Provinces (September 4, 1946), and at Faridpur (September 12, 1946) where the hitherto calm water of the river was agitated and rose to a height of 2 feet, the phenomenon being observable for 15 seconds.

In Pakistan, earthquake shocks were recorded from Drosch, where a continuous shock was felt for 40 seconds (January 31, 1946) at Nagar Parker (Sind) where shocks lasted for 20 seconds (July 14, 1946). Shocks were also felt at Peshawar on December 26, 1946, and lasted from one to three seconds.

Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A.D. occur are the *Tārīkhul Khulafā* (History of the Caliphs), the *Alkāmūl-fīl Tārīkh* by Ibnulathir—a historical work of the Arabians, the *Mirāt-ul-Ālam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Bahadur* (Bilalotheca Indica), Baber's memoirs, Khafi Khans *Muntakhabulab*, etc.

Much information is also gleaned from the *Journals of the Royal Asiatic Society of Bengal*, the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information given here is drawn.

HISTORICAL REVIEW

The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Daibul or Daipul, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Tārīkhul Khulafā* (History of the Caliphs) and in *Alkāmūl-fīl Tārīkh*.

The earthquake of July 6, 1505 affected Afghanistan and the northern part of the sub-continent. It is recorded that great fissures appeared in many parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month.

The State of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhnagar in Assam suffered an earthquake on February 7, 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected the sub-continent occurred in May 1668, between the dates 2nd—11th. Its effect was so serious that Samajli or Samawani—a town of 80,000 inhabitants sank into the ground.

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the '14 Muharram of Aurangzeb's 12th year' (*Mirāt-ul-Ālam*, an unpublished work

of Bakhtiwar Khan) that is, the 4th of June 1669. This earthquake was accompanied by a big shower of meteors, which, it is reported, fell into a lake and caused its waters to overflow.

Kashmir and Attock were affected by shocks on June 22 and 23, 1669 respectively, but not much damage appears to have been done.

Delhi Earthquake.—A severe earthquake shook Delhi on Friday, July 17, 1720, at about midday and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river.

Bengal, Burma and the Arakan coast were affected on April 2, 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of the sub-continent—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between July 13, 1762 and May 22, 1803, but they were not of much importance.

A violent earthquake took place on Sept. 1, 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

The earthquake of June 16, 1819 was one of the worst earthquakes experienced in the sub-continent. Its effect was the severest in Cutch, the chief town of which—Bhuji—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

A Town Submerged.—In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A track 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on October 29, 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

Sometime in September 1827 the fort of Kolitaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

There is record of at least eighty earthquakes affecting the sub-continent between June 6, 1828 and the year 1839, but of these only two are worth mentioning, namely, the one that shook the vale of Kashmir on June 6, 1828 and the other that affected Nepal and the eastern and central region in the north. In Kashmir alone over a thousand persons lost their lives, and

for at least two months following the earthquake the number of shocks was as high as one to two hundred per day.

The earthquake of August 26, 1833 was felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

The earthquake of February 19, 1842 lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singurgarh, Bellary, Kurnool, Belgam were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Upper Sind.—Severe shocks, local in their effect, occurred in Upper Sind on January 24, 1862. Fort Kahan was completely ruined and about 350 persons were killed.

An earthquake occurred on January 10, 1869 in Assam (Cachar). The total area where shocks were felt extended 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of December 31, 1861. The radius of the area affected was about 800 miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Azra, Ootacamund and Calcutt. The northernmost point affected was near Monghyr.

The earthquake of May 30, 1885 although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300-450 miles, the total area affected being about 110,000 square miles.

The epicentre of the earthquake of July 14, 1885 was north-west of Jacca. It was felt violently throughout East and West Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

There was an earthquake on December 20, 1892, which was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs, which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet. The earthquake was, however, local in its effects.

The Worst Ever.—The worst earthquake which has affected Assam and probably the greatest within historic times occurred on June 12, 1897. Stone buildings in Shillong, Golpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in East Punjab suffered heavily on April 4, 1905, more particularly because the shocks occurred early in the morning

when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

The earthquake of October 21, 1909 affected only the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15-45 miles. The elongated epicentre was N.W.-S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent shock was felt on July 8, 1918 which affected East Bengal, Assam, Burma, and the north-west as far as Lahore. It was most strongly felt in Srinagar (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on February 1, 1929 in the north-west Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 kms which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

Assam was shaken by a severe earthquake on July 8, 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dibrui suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible' superstructure supporting light, often galvanised iron roofs and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

The earthquake of August 27, 1931 was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake. The epicentre of which was near Shahrigh. The earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Suleiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

The earthquake of January 15, 1934, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected the sub-continent. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitamarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Mothari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 p.m.), for had it occurred at night it would have been one of the worst of such disasters ever experienced by mankind.

Quetta Earthquake.—The Quetta earthquake of May 31, 1935 was one of the latest of the more violent catastrophes that have overtaken

the sub-continent. This can be seen from the fact that 25,000 people perished and damage to private property, railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causes leading to these earthquakes are unknown, but the focus was probably shallow. A possible explanation is that the earthquake is connected with the sharp bend in the hill ranges near Quetta.

The frequency of aftershocks of the Quetta earthquake of May 1935, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18.45 hours and of 21st March at 21.45 hours, Indian Standard Time.

The last severe earthquake to be experienced in the sub-continent occurred in the Hindu Kush on November 14, 1937, and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over East and West Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peshawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of the sub-continent later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below:

January 5, 1938.—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on January 7, but there was no damage or loss of life.

May 3, 1938.—Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

February 7, 1939.—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

In 1939.—Mention must also be made of the earthquake of November 21, 1939, which was felt at Jammu, Minawati, Dehra Ismail Khau, Peshawar, Rawalpindi, Srinagar, Dalmouie, Kabul, Gilgit, Skardu, etc. Its epicentre was in the Hindu Kush range being situated at 36° N. 75.5° E. Its focal depth was 200 kms.

The intensity of this earthquake at Srinagar and Gilgit was VII on the Mercalli scale. At Srinagar three shocks were felt at intervals of 10 seconds each. Cracks developed in the walls of the Observatory and other buildings in the city. At Gilgit, which suffered three shocks at intervals of two seconds each, boulders slipped down from the surrounding mountains and dust spread all over the valley.

During 1940 earthquake shocks were felt at Gulnarg in Kashmir, at Barmer (Rajasthan) and at Bhuj and Radhanpur in Western India.

At Gulnarg two shocks of moderate intensity were felt on August 3, at 14-45 (I.S.T.) and cracked walls of *kutchas* houses. Shocks of moderate intensity were also felt on August 8, and September 21, 1940, but apart from cracks in *kutchas* houses no damage was done. Barmer and Bhuj experienced a slight shock on October 31, while Bhuj had another shock on November 13, 1940.

There was no loss of life or serious damage to property during any of these earthquakes.

In 1941.—A large number of earthquakes shocks occurred in the sub-continent during the year 1941. It is unnecessary to give details of all these but particulars of four of the more important ones may be given.

An earthquake of moderate intensity took place on January 21, 1941 at 18-16 hours (I.S.T.) with its epicentre to the north of Assam. The shocks lasted for about one minute but no damage was caused.

Another earthquake occurred on June 26, at 17-27 hours (I.S.T.). This earthquake whose epicentre lay in the neighbourhood of Nicobar Island, was of very great intensity and was felt in Madras, Chittagong, Chandwadi, Colombo, etc. Extensive damage to buildings occurred in Port Blair where four persons were killed and four seriously injured. The duration of the shock was less than half a minute.

On June 30, at 23-58 hours (I.S.T.) a shock of moderate intensity was felt at Port Blair. Its epicentre lay in the neighbourhood of north Andaman.

Another earthquake occurred on September 29, at 8-5 hours (I.S.T.) at Quetta. The shocks lasted for about 35 seconds and caused damage to *kacha* buildings and mud houses in Quetta.

Three earthquakes of slight to moderate intensity were recorded during the year 1942. An earthquake of slight intensity with its epicentre in Assam was felt at 16-17 hours (I.S.T.) on February 22, in parts of old undivided Bengal and Assam. No loss of life or damage was reported. On March 22, a quake of moderate intensity was felt at 7-38 hours at Lahore and Rawalpindi in Pakistan and at Simla in India. The epicentre was in the Hindu Kush Mountains. A third earthquake of slight intensity was felt in parts of India on May 15, 1942 at 22-25 hours (I.S.T.). The epicentre lay in the Hindu Kush. There was no loss of life or damage to property.

Srinagar.—Two shocks of slight intensity were felt at Srinagar in Kashmir and at Dosh in Chitral, on February 6, 1943, at intervals of 30 seconds. On February 9, an earthquake of slight intensity was felt in parts of Assam. Slight shocks were felt over a wide area—Rawalpindi, Mizaffarabad, D. I. Khan in Pakistan and Gahat, Gulmarg and Srinagar in India on September 9, 1943, at 10-36 (C.I.S.T.). The epicentre of this earthquake was near the Hindu Kush Mountains. An earthquake of great intensity with epicentre in Assam was felt in parts of Assam and North Bengal, on October 23 at 23-54 (I.S.T.). Slight shocks were felt at D. I. Khan on November 27 at 15-15 (I.S.T.).

Although a large number of earthquakes have occurred during 1944-45, with the exception of one, they were all of comparatively small intensity. An earthquake of moderate intensity was felt on December 25, 1944, at Silchar, Shillong and Calcutta, at about 9-25 p.m. (I.S.T.). At Silchar shocks were felt over a period of three minutes and several houses suffered damage. No damage was, however reported from either Shillong or Calcutta.

Another earthquake of slight intensity was felt at Patna, at 10-25 p.m. on February 18, 1944. Though the shocks felt were fairly sharp no damage to property or loss of life took place.

On February 29, 1944, an earthquake of great intensity, with epicentre in the Maldive Islands, was felt in the Ceylon region at 22-58 (I.S.T.). An earthquake of moderate intensity with epicentre near the Andaman Islands, was recorded on September 27, 1944. During 1944 further shocks were felt in different parts of India—Kashmir, Bihar, Assam—but none of them is of much importance.

Between January 1945 and March 1945 the reported shocks are all of small intensity and occurred in Nepal and Assam.

A severe earthquake however took place on November 28, 1945, at 3-26-40 (I.S.T.) and shocks were felt intermittently for a period of two hours, commencing at 3 hours 31 minutes, over a wide area in the north-west of the sub-continent. This earthquake was due to a submarine land slide. A characteristic feature of this earthquake was the high tide which swept the coastal region of Mekran in Pakistan

and neighbouring areas, causing heavy floods, damage to property and loss of life. A lasting visible effect of this earthquake was the appearance of two small islands about 10 miles into the sea, off the Mekran coast. Although the epicentre of this earthquake was well out at sea, the towns of Ormara and Pasni, were totally destroyed.

MAP SHOWING THE EARTHQUAKE ZONES OF INDIA

By M. R. SAHNI,

Geological Survey of India. (After W. D. West.)

POPULATION

SOME of the facts and figures refer to the sub-continent as a whole, others to India only and yet others to Pakistan only. The context makes this clear in every case.

The main facts can be easily stated. The population of the sub-continent is about 389 millions (388,997,955). Out of this roughly 230 mins. are in the Dominion of India, 70 mins. are in the Dominion of Pakistan, and 90 mins. are in the States ruled by Princes. Out of the 90 mins. in the States again more than 88 mins. live in the States which have acceded to the Dominion of India and about 2 mins. in the States which have acceded to Pakistan.

Of the total population 201 mins. are males and 188 mins. are females. The urban population is about 50 mins. while the rural population is about 340 mins. The birth-rate is about 40 per thousand, and the death-rate is about 30 per thousand.

The more exact figures for India are worked out as follows: the total population is 318,912,506, the population of the Dominion 230,104,072, of the States and States Unions 88,808,434.

Six physical types can be distinguished among the people living in India: the Indo-Aryan, the Srytho-Dravidian, the Aryo-Dravidian, the Mongolo-Dravidian, the pure Mongolian and the pure Dravidian. But the types are all so mixed together that it is much easier to classify the people according to the language they speak or the religion they profess.

The chief religions of India are Hinduism, Islam, Buddhism, Sikhism, Jainism, Christianity, Zoroastrianism, and Animism. The number of Hindus in India is 239,424,400, mins., of Muslims 42,781,996, of Buddhists 131,723, of Sikhs 4,114,741, of Indian Christians 5,592,419, of Parsis 110,325, Anglo-Indians 129,007, Jains 1,434,181, Tribes 24,806,737, Others 436,977. To represent the figures in the form of a ratio: Hindus form about 75 per cent. of the population, Muslims about 13 per cent., Sikhs about 1.25 per cent., Christians a little less than 1½ per cent. and Tribes about 7½ per cent.

According to a linguistic survey no fewer than 215 languages are spoken in India. But they all fall into four main groups: the Mundia languages, the Dravidian languages, the Indo-Aryan languages and the Tibeto-Chinese languages.

Literacy is very low, being about 12 per cent.

ECONOMIC SET-UP

A few more figures from the economy of the sub-continent will complete the over-all picture. The per capita income is about Rs. 65 a year which is among the lowest in the world. In the U.S.A. it is Rs. 1,406 and in Japan Rs. 281. A word of caution is, however, necessary here. The figures given above represent income in terms of money. And it is possible that real incomes, that is, the amount of goods which the money can buy, do not vary as much.

About 44 per cent. of the population was enumerated as workers in the census of 1931. Out of this about 67 per cent. was engaged in agriculture, 10.2 per cent. in mining and industry and the rest, 22.8 per cent. in trade, transport, etc.

In 1931 the average worker in agriculture earned about Rs. 86, in industry and mining

Rs. 192, and in trade and transport Rs. 305 a year respectively.

Carrying the analysis of industry further, there are two types of industry, cottage industry and large-scale industry. About 90 per cent. of the total industrial population is engaged in small scale or cottage industry, and 10 per cent. in large-scale industry. The average monthly income varies from Province to Province. In Bombay in 1936-37 the average income of a worker in cottage industry was Rs. 15, while the average earnings in organised industry was Rs. 27 a month. These figures could be taken as representative for the sub-continent as a whole.

Turning to agriculture, the amount of land available for cultivation is 362 mins. acres. The number of workers in agriculture which comprises cultivating owners, tenant cultivators, etc., was 66½ mins. according to the census of 1931. Thus the amount of land per worker works out at 5½ acres. 70 per cent. of all farms are less than 5 acres each, and a good percentage are actually less than one acre each.

Of late, of course, the earnings of workers have risen. The following two tables show the average annual earnings of workers* in factories† in perennial industries. The figures in both the tables refer to the Dominion of India.

| Industry | 1939 | 1945 | 1946¶ | 1947§ |
|-------------------------------|-------|-------|-------|---------|
| | Rs. | Rs. | Rs. | Rs. |
| Textiles (All) | 203.5 | 613.7 | 624.5 | 773.7 |
| Cotton | 320.2 | 723.4 | 721.8 | 911.3 |
| Jute | 230.8 | 390.5 | 425.0 | 497.6 |
| Engineering | 263.5 | 653.1 | 696.1 | 999.9 |
| Minerals and Metals | 457.2 | 601.9 | 599.8 | 890.2 |
| Chemicals and Dyes | 244.8 | 445.2 | 492.4 | 592.4 |
| Paper and Printing | 332.7 | 568.8 | 638.4 | 724.8 |
| Wood, Stone and Glass | 194.2 | 413.6 | 434.3 | 496.5 |
| Skins and Hides | 285.8 | 536.7 | 558.2 | 603.9 |
| Ordnance Factories | 361.9 | 642.8 | 721.2 | 754.1 |
| Mints | 367.4 | 667.0 | 858.7 | 1,071.2 |
| Miscellaneous | 281.2 | 503.2 | 611.8 | 663.1 |
| All Industries | 287.5 | 595.8 | 619.4 | 738.3 |

* All workers including clerical and supervisory staff drawing below Rs. 200 p.m.

† Factories covered by the Factories Act, 1936.

¶ Figures exclude Punjab and N.W.F.P.

§ Figures relate to Provinces in the Indian Dominion excluding East Punjab.

This table shows the average daily earnings (based on figures for December) of workers in Mines:

| | 1939 | 1945 | 1946 | 1947 |
|----------------------------------|-----------|-----------|-----------|-----------|
| | Rs. a. p. | Rs. a. p. | Rs. a. p. | Rs. a. p. |
| Jharia Coalfields. | | | | |
| Miners | 0 9 9 | 1 2 3 | 1 8 3 | 2 5 0 |
| Loaders | 0 8 9 | 1 1 0 | 1 7 9 | 2 1 0 |
| Raniganj Coalfields. | | | | |
| Miners | 0 9 0 | 1 3 9 | 1 8 0 | 2 5 8 |
| Loaders | 0 7 9 | 1 1 3 | 1 6 9 | 2 4 8 |
| Perich Valley Coalfields. | | | | |
| Miners | 0 12 0 | 1 4 9 | 1 5 9 | 2 4 3 |
| Loaders | 0 7 6 | 0 11 0 | 0 12 6 | 1 15 9 |

We shall leave the vital statistics to a later section, and deal with the rest of the items one by one in greater detail.

PHYSICAL TYPES

As we have already stated the physical type found in India varies considerably from place to place. No one, for instance, would confuse the main types, such as Gurkhas, Sikhs, Rajputs, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in India for countless ages and that their present physical characteristics have been evolved locally. In the north-west they have been displaced by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the north-east by Mongoloid tribes allied to those of Burma. Between these foreign elements and the pure Dravidians is a borderland where the contiguous races have intermingled.

The people of India are generally divided into six main physical types. There would be seven if the Andamanese were included, but this tiny group of Negritos may be disregarded.

The **Indo-Aryan** type is found in East Punjab, Rajasthan and Kashmir, and has as its characteristic members the Rajputs, Khattis, and Jats. This type approaches most closely the traditional Aryan type which colonised the sub-continent. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful, head long; nose narrow and prominent but not specially long.

The **Scytho-Dravidian** type comprises the Maratha Brahmans, the Kunbis, and the Goorgs of Western India. It is formed probably by a mixture of Scythian and Dravidian elements. This type is distinguished by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index than the Aryan. All of these characters, except perhaps the last, may be due to an intermixture of varying degree with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower Dravidian elements are more pronounced.

The **Aryo-Dravidian or Hindustani** type is found in the United Provinces, in parts of Rajasthan and in Bihar and is represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. This type is probably the result of the intermixture, in varying proportions of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group and usually of the average according to the scale. The higher representatives of this type approach the Indo-Aryans while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportion of the nose.

The **Mongolo-Dravidian, or Bengali** type of lower West Bengal and Orissa, comprising the Bengal Brahmans and Kyasthas and other groups is peculiar to this part of India. This type is a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad; the complexion is dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive

types in India and its members may be recognised at a glance. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and west Bengal.

The **Mongoloid** type of the Himalayas, Nepal, and Assam is represented by the Kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim; the Limbus, Murmis and Gurungs of Nepal; and the Bodo of Assam. The head is broad; the complexion is dark, with a yellow tinge; hair on face scanty; stature short or below average; nose fine to broad, face characteristically flat; eyelids often oblique.

The **Dravidian** type extends from Ceylon to the valley of the Ganga and pervades Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Panjians of Malabar and the Santals of Chota Nagpur. Probably this was the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens of this type the stature is short or below mean; the complexion very dark, approaching black; hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest clad ranges, terraced plateau, and undulating plains which stretch roughly speaking, from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is coterminous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive. The Dravidian is a hard labourer and is found wherever there is demand for hard manual labour whether hoeing tea in Assam, the Duars, or Ceylon, or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his aquatic figure, and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

RELIGION, COMMUNITY

Before partition Hindus formed about two-thirds of the whole population, Muslims a little less than a third; while Sikhs, Christians and Parsis and others covered the rest. In the omnibus head 'others' went foreigners and minor elements not falling within the main divisions. The table given below shows the position as it existed before partition.

| Community. | India & Pakistan (millions) | States (millions) |
|------------------------------|-----------------------------|-------------------|
| Hindus { Scheduled Castes .. | 39.9 | 8.9 |
| Others .. | 150.9 | 55.2 |
| Muslims .. | 79.4 | 15.0 |
| Tribes .. | 16.7 | 8.7 |
| Sikhs .. | 4.2 | 1.5 |
| Christians .. | 3.5 | 2.8 |
| Others .. | 1.2 | 1.0 |

And the present position in the Indian Union is given by the table below :

INDIAN UNION

| Community. | India (millions) (Census 1941) | States (millions) (Census 1941) |
|------------------------------|--------------------------------|---------------------------------|
| Hindus { Scheduled Castes .. | 37.02 | 6.94 |
| Others .. | 151.22 | 44.24 |
| Muslim .. | 32.53 | 10.17 |
| Indian Christian .. | 2.87 | 2.78 |
| Sikh .. | 2.69 | 1.41 |
| Jain .. | 0.80 | 0.63 |
| Tribes .. | 20.59 | 4.23 |
| Others .. | 0.69 | 0.19 |

Hindus predominate everywhere while the Sikhs are localised in East Punjab and the Jains in Rajasthan, Ajmer-Merwara and the neighbouring States Unions.

More than half of the total number of Christians reside in south India including the Hyderabad State. The remainder are scattered over the continent, the larger numbers being returned in the United Provinces, West Bengal, Bihar and Bombay. The Parsees and Jews are chiefly residents of the Bombay Presidency.

The Christian community now numbers a little over 5.6 millions of persons or 1.25 per cent. of the population. This constitutes an increase of 6 per cent. over the last census. Nearly 60 per cent. of Christians are returned from the Madras Province and States in the South, and the community can claim 40 persons in every 1,000 of the population of Madras and as large a proportion as 23 per cent. in Cochin and 32 per cent. in Travancore. Elsewhere the Christians are scattered over the larger Provinces and States, East Punjab, Bihar and Orissa.

Comparing with the older figures we find that the Muslims have gradually increased over India as a whole, but the increase is very small. The ratio in East Bengal remains about the same. Within the Punjab the population has re-sorted. There are hardly any non-Muslims left in West Punjab, or the N.W.F.P. and Baluchistan for the matter of that, and hardly any Muslims in East Punjab. The most noticeable rise is in the Assam area which for the present purpose includes Sylhet, the rise being a consequence of migration from Mymensingh Dt. in East Bengal. In some provinces the ratio of Muslims has dropped. Areas where a drop is registered are Ajmer 2 per cent. and Kashmir 1 per cent. Once again recent events may have helped to reinforce the tendency both in Ajmer and Jammu.

The proportion of Hindus shows little change over India as a whole. There is a small rise in Delhi, Ajmer, Gwalior and Travancore, while there is a small drop in Madras (1½ per cent. due to ex-cision of Ganjam and Koraput), U.P. (¼ of 1 per cent.), and Bihar. C.P., Assam and Mysore. The overall position is substantially unchanged, though recent developments have tended to make Hindu areas more Hindu and Muslim areas more Muslim in the north-west and the north-east.

In the census of 1941 religion as a census criterion was dropped in favour of the concept of community. The chief reason was that there were a great number of tribes who were more or less assimilated towards Hinduism so that it was always difficult to draw the line of demarcation.

For this reason it was felt that enumeration by community rather than by religion would not only be simpler but actually give a more accurate picture of the whole set-up.

Here is a table which shows the number of people of some of the chief castes among the Hindus in the sub-continent. Certain of the castes are grouped together as 'scheduled castes' or 'Harijans' as Mahatma Gandhi called them. The scheduled castes number between 50 and 60

mins. and are one-fifth of the Hindus as a whole, or one-eighth of the total population of the sub-continent.

| | |
|-------------------|------------|
| Baniya | 2,800,000 |
| Brahmin | 14,250,000 |
| Chamar | 11,260,000 |
| Dhobi | 2,000,000 |
| Gond | 2,900,000 |
| Hajjam | 2,900,000 |
| Jat | 7,400,000 |
| Kayasth | 2,300,000 |
| Koli | 2,500,000 |
| Kumbar | 3,350,000 |
| Kunbi | 8,300,000 |
| Lingayat | 2,700,000 |
| Mahar | 3,000,000 |
| Mahratha | 6,000,000 |
| Namasudra | 2,200,000 |
| Rajput | 9,800,000 |
| Teli | 4,200,000 |

LANGUAGES

A note on language will not be out of place here. As we have already stated there are four main groups of languages, the Munda languages, the Dravidian languages, the Indo-Aryan languages and the Tibeto-Chinese languages.

The Munda languages are spoken by the pre-Dravidian inhabitants of India now confined chiefly to the hills and jungles of the Chota Nagpur plateau.

The principal Dravidian languages, Tamil, Telugu, Malayalam, Kannarese and Tulu have a much wider distribution. Once they were spoken over the whole of India. Now they are limited to peninsular India. The last-named language Tulu is indeed spoken in just one district in the whole sub-continent, viz., South Canara in the Madras Presidency.

The Indo-Aryan languages were introduced by the invaders coming from the north-west. But the languages have now spread over the whole of the north and have penetrated further south than the Vindhya. Going east we find Pahari, Jadhua, Punjabi, Kashmiri, Hindi, Bihari, Oriya and Bengali. Going south we find Rajasthani, Gujarati and Marathi. Another language which is generally grouped with Hindi is Urdu. Urdu was born in the bazaars of the northern parts of the sub-continent when the Moghul soldiers came into touch with the local population. Urdu may be called Persianized Hindi and is widely spoken by the Muslims in the north and in certain areas by the Hindus as well.

The Tibeto-Chinese languages are not important as they are confined wholly to Himalayan hill tribes such as Lepchas.

The following figures are intended to give some idea of the distribution in the sub-continent of the various languages mentioned above:—

| | |
|-------------------------|------------|
| Hindi | 70,000,000 |
| Bengali | 54,000,000 |
| Telugu | 26,000,000 |
| Marathi | 21,000,000 |
| Tamil | 20,000,000 |
| Punjabi | 16,000,000 |
| Rajasthani | 14,000,000 |
| Kannarese | 12,000,000 |
| Oriya | 11,000,000 |
| Gujarati | 11,000,000 |
| Malayalam | 10,000,000 |
| Sindhi | 4,000,000 |
| Assamese | 2,000,000 |
| Kashmiri | 1,500,000 |
| Munda languages | 4,000,000 |

URBAN AND RURAL

Passing next to the question of the distribution of population between urban and rural areas we find, as we have already stated, that in the sub-continent the percentage of the urban population to the rural is about 14, which shows an increase of 2 per cent over the last census due partly to natural increase and partly to migration from rural areas.

The percentage of urban population ranges from 2.8 in Assam to 20.6 in Bombay which is the most urbanized of the major Provinces. The relative figures for the major Provinces and States—and States groups are given in a table further on while the table showing the percentage of urban population is given below:

INDIAN UNION

| | Percentage of urban population. |
|------------------------------|---------------------------------|
| INDIAN UNION | 13.9 |
| Madras | 15.97 |
| Bombay | 23.92 |
| Bengal, West | 21.76 |
| United Provinces | 12.46 |
| Punjab, East | 15.09 |
| Bihar | 5.37 |
| C.P. & Berar | 11.29 |
| Assam | 3.0 |
| Orissa | 2.99 |
| Ajmer-Merwara | 36.68 |
| Coorg | 0.06 |
| Andamans | .. |
| Bilaspur | 2.6 |
| Cutch | 18.0 |
| Delhi | 75.78 |

| Panth Piploda | .. |
| Madhya Bharat | 15.33 |
| Matsya | 12.74 |
| PEPSE | 14.57 |
| Rajasthan (original) | 10.02 |
| Saurashtra | 25.6 |
| Vindhya Pradesh | 5.49 |
| Assam States | 9.0 |
| Baroda | 25.19 |
| Bhopal | 17.72 |
| Bikaner | 26.23 |
| Cochin | 18.8 |
| Hyderabad | 13.4 |
| Jaipur | 17.2 |
| Jaisalmer | 0.79 |
| Jodhpur | 13.8 |
| Kashmir | 10.3 |
| Mysore | 18.4 |
| Sikkim | .. |
| Travancore | 11.4 |
| U.P. States | 10.9 |

India is so often referred to as a land of villages that one is apt to overlook the real dimensions of the urban population. It is true that only 14 per cent. of the population is urban; but then it is a 14 per cent. of 320 mins., which works out to a total of about 45 mins. that is to say, only 2 mins. less than the population of Britain which is always referred to as a highly urbanized country. In the same way it is true that there are 500,000 villages in India. But there are also over 2,000 urban areas, that is, areas with a

population of more than 5,000. Of these urban areas 48 are cities, towns with a population of 100,000 and more. Since 1931 the number of cities has risen by 17.

The new cities are Surat, Jamshedpur, Jullundur, Kolar, Coimbatore, Trivandrum, Bikaner, Hyderabad, Jodhpur, Calicut, Aligarh, Ludhiana, Shajahanpur, Saharanpur, Gaya, Jhansi, Bhavnagar.

| City. | Population 1941. | Population 1931. |
|---|------------------|------------------|
| Calcutta with Howrah | 2,488,083 | 1,388,644 |
| Bombay | 1,489,883 | 1,101,383 |
| Madras | 777,481 | 647,230 |
| Hyderabad | 739,159 | 466,894 |
| Delhi | 521,849 | 347,539 |
| Ahmedabad | 691,287 | 310,000 |
| Bangalore with Civil and Military Station | 406,760 | 306,470 |
| Lucknow | 387,177 | 274,059 |
| Amritsar | 391,010 | 264,840 |
| Poona | 258,197 | 198,078 |
| Kanpur | 487,324 | 243,755 |
| Agra | 284,149 | 229,764 |
| Nagpur | 301,957 | 215,165 |
| Benares | 263,100 | 205,315 |
| Allahabad | 260,630 | 183,914 |

| Srinagar | 207,787 | 173,573 |
| Patna | 175,706 | 145,432 |
| Sholapur | 212,620 | 144,654 |
| Jaipur | 175,810 | 150,579 |
| Bareilly | 192,688 | 144,081 |
| Trichinopoly | 159,566 | 142,848 |
| Meerut | 169,390 | 136,709 |
| Indore | 203,695 | 147,100 |
| Jubbulpore | 178,339 | 124,382 |
| Ajmer | 147,258 | 110,524 |
| Baroda | 153,301 | 112,860 |
| Moradabad | 142,414 | 110,682 |
| Tinnevely with Palamcottah | 91,644 | 100,068 |
| Mysore | 150,540 | 107,142 |
| Salem | 129,702 | 102,179 |
| Lashkar | 182,492 | 125,949 |
| Surat | 171,443 | 98,930 |
| Jamshedpur | 148,711 | 83,738 |
| Jullundur | 135,283 | 89,030 |
| Kolar | 133,859 | 85,103 |
| Coimbatore | 130,348 | 95,198 |
| Trivandrum | 128,365 | 96,016 |
| Bikaner | 127,226 | 85,927 |
| Jodhpur | 126,842 | 94,736 |
| Calicut | 126,352 | 99,273 |
| Kolli-Aligarh | 112,655 | 83,878 |
| Ludhiana | 111,639 | 88,586 |
| Shajahanpur | 110,163 | 83,764 |
| Saharanpur | 108,263 | 78,655 |
| Gaya | 105,223 | 88,005 |
| Jhansi | 103,254 | 93,112 |
| Bhavnagar | 102,851 | 75,594 |

The population of the cities in India and Pakistan increased from 9.1 mln. to 15.5 mln., a rise of 81 per cent, which is in notable contrast with the 15 per cent. rise in the sub-continent as a whole. These percentages should hold good for India considered apart from Pakistan.

It is interesting to note how the urban element has gradually risen over a number of years from 1891. Here is a short table which makes the trend quite clear.

| Year | Rural | Urban. |
|--------------|-------|--------|
| 1891 | 90.5 | 9.5 |
| 1901 | 90.1 | 9.9 |
| 1911 | 90.6 | 9.4 |
| 1921 | 89.8 | 10.2 |
| 1931 | 89 | 11 |
| 1941 | 87 | 13 |

INDIAN UNION

The figures for India alone are given by the following table :

| Year | Rural | Urban |
|------|-------|-------|
| 1921 | 88.7 | 11.3 |
| 1931 | 87.9 | 12.1 |
| 1941 | 86.1 | 13.9 |

The United Provinces shows the largest accretion in numbers to the city category with the Punjab area coming second. Over a third of the new names come from these areas.

In a relative sense the United Provinces has always had more large towns than any other Province.

On any showing India is in for urbanization on a big scale, which will affect more pronouncedly really large towns than the smaller ones. Much of this urbanization is attended by the usual evils of lack of control, squatters' freedom and general squalor. The approach to some of the fast growing towns like Delhi or Calcutta are hideously defaced by brick-fields, squatters' camps and general riff-raff. The matter of the spreading town cries aloud for a plan.

The rate of growth is much higher in the larger units than in the smaller ones. Reasons : First, industrialization which has for instance largely created Coimbatore as a modern phenomenon. The case of Coimbatore is interesting as it is the first striking instance of a large town based on electric and not steam power.

A contributory cause of the growth of large towns is the fact that city life has begun to appeal to the middle and lower middle classes in India. Accommodation which is within its means and to its taste is now available. There are the huge blocks of flats with such amenities as electric lights and running water which have altered the face of cities like Bombay and Calcutta. Other city features like trains, buses, cinemas also appeal. Education is not only better in the towns it is sometimes not available

in the rural areas. Thus housing, transport, and the sheer conveniences of life in the city have led to a steady stream of migration into the larger towns of India. During the war owing to the enormous demand for manual and clerical work, the stream of migration became a flood which overwhelmed cities like Bombay, Calcutta and Delhi. The present population of Bombay is estimated at three millions while that of Calcutta at four millions. After London, New York and Moscow, Calcutta was the largest Allied capital during the War.

LITERACY

We can now wind up the first half of this survey with a short note on the literacy position.

Literacy by which was meant, until the 1931 census, ability to read a letter and write a reply was in the 1941 census expanded to provide for a record of partial literacy, i.e. ability to read only. According to the latest census, 120 out of every 1,000 of the population of the sub-continent are now literate as against 95 ten years ago and less than 40 half a century ago. The increase in the sub-continent as a whole amounted to 70 per cent over 1921 of which the male increase was 60 and the female 150. The reason for the disparity is that in the case of women the field for improvement was much bigger.

For the Provinces the increase was 80 and for the States 70, with the sex components more or less the same. The most remarkable figures are returned by the old undivided Punjab which professes a 140 per cent. increase to a present literacy of 13. This figure covers 110 per cent. increase for males and no less than 300 per cent. for females. In the U.P. the literacy figure is below that of other areas and all major Provinces of the sub-continent and is still only 8 per cent. for the whole population but the decade increase is 80 per cent. all over, 70 for men and 150 for women. Even now, however, the percentage of literacy among women is only 2.

Bombay leads the Provinces, Indian or Pakistan as it did in 1931, and shows also an increase of over 100 per cent. to produce a 30 per cent. literacy for males and 9 per cent. for females. Old undivided Bengal follows with 16 per cent. all over, representing 25 for males and 7 for females. The percentages are on the total population.

These figures are left far behind by Travancore and Cochin, which show a literacy figure over the whole population of 45 per cent, representing 56 for men and 34 for women. The latter figure is four times the highest from any Province of India or Pakistan.

The primary reason for the growth of literacy is the great expansion in education which took place all over the sub-continent between the years 1920 and 1930 and specially the general strengthening of the primary education side. It is the fruit of this expansion which has shown itself so strikingly—in the census of 1941. A second cause but a minor one of the rise in literacy is the anti-illiteracy drive among adults which was so prominent a feature of the 1930-1940 decade. The fact must be bluntly stated, however, that the quality of literacy attained, through the adult literacy movement is very low.

There is no doubt that the diminution in illiteracy revealed this time will be continued at future census and at an accelerating rate. A democratic system and a mainly illiterate population go ill together and in some ways are very nearly a contradiction. There is a great stirring of consciousness among the people themselves in this regard. More and more people are feeling the need for literacy either for themselves or what is more probable for their children and despite obvious difficulties of the position this want will insist on being answered in some form or other.

VITAL STATISTICS

The main facts have already been stated. The total population of the sub-continent is 388,997,955. Out of this 201,025,726 are males and 187,972,229 are females. 339,301,902 live in rural areas, and 49,696,053 in urban areas. Out of the 339,301,902 who live in rural areas 173,638,982 are males and 165,662,920 are females. And out of the 49,696,053 who live in urban areas 27,387,637 are males and 22,308,416 are females.

In regard to India the main facts are as follows : Out of a total population of 318,898,060, 163,982,000 are males and 154,915,000 are females. 274,754,000 live in rural areas and 44,144,000 live in urban areas. Detailed figures for individual Provinces are given in the table below :

INDIAN UNION

(All population figures are in thousands.)

| | Area in sq. miles | Total Population | Density per sq. mile | Male | Female | Rural | Urban |

* Most of these States have now merged into a neighbouring Province or to form Unions.

PAKISTAN

The following table shows the distribution of population (based on 1941 figures) in the Provinces of Pakistan:—

| | Area in sq. miles | Total population | Density per sq. mile | Male | Female | Rural | Urban |
|--------------------------|----------------------|---------------------|-------------------------|------------|------------|------------|-----------|
| Pakistan | 361,218 | 71,096,000 | 197 | | | | |
| W. Punjab | 62,012 | 18,746,000 | 302 | 10,123,000 | 8,623,000 | | |
| Sind | 48,136 | 4,535,008 | 94 | 2,494,190 | 2,040,818 | 3,643,805 | 891,703 |
| N.-W.F.P. | 14,203 | 3,038,067 | 213 | 1,651,214 | 1,386,853 | 2,485,874 | 552,193 |
| Baluchistan | 54,456 | 501,631 | 9 | 294,516 | 207,115 | 401,168 | 100,463 |
| E. Bengal | 54,991 | 41,949,710 | 775 | 21,733,549 | 20,216,161 | 40,568,948 | 1,380,762 |

PAKISTAN STATES

Here are the figures for the States which have acceded to the Dominion of Pakistan:—

| | Area in sq. miles | Total population | Density per sq. mile | Male | Female | Rural | Urban |
|-------------------------|----------------------|---------------------|-------------------------|---------|---------|-------|-------|
| Bahawalpur | 17,494 | 1,341,209 | 71 | 737,474 | 603,735 | | |
| Khairpur | 5,989 | 305,787 | 51 | 168,043 | 137,744 | | |
| Kalat | 53,995 | 253,305 | 5 | 188,590 | 114,715 | | |

A word of explanation about the sex ratio is needed. The present position is this: In the sub-continent as a whole there are 940 women for every 1000 men. In India there are 938 women for every 1000 men. Reckoning by the community, there are 902 women for every 1,000 men among the Muslims, and among the Hindus 944 women for every 1,000 men. The only Provinces in India in which there is an excess of women over men are Madras and Orissa, though the Central Provinces can be added if Bihar is excluded.

All these figures show that the proportion of women to men has continued to fall from the

beginning of the century. This shortage of women is peculiar to the sub-continent. The figures for England and Wales, for instance, are 1,088 women for 1,000 men. But the view so widely held that an increase in masculinity is an indication of declining population may be true of Europe but quite clearly it cannot apply to India or Pakistan.

What are the reasons for the relative scarcity of women? Here are some of the reasons which are generally given: comparative neglect in infancy, the strain of child bearing in adolescence, relative under-enumeration of women at the census. There may be some truth in all these

reasons. But a simpler explanation is available in the mortality conditions of men and women in the sub-continent. For ages of 11 and beyond the female death rate exceeds the male, and the margin of excess increases with the advance of years. These conditions should be sufficient explanation for the relative scarcity of women in the sub-continent. The higher mortality of women may be the result of the more strenuous labour that the women are called upon to do. It is also a fact that adverse living conditions like poverty, ignorance and the absence of usual aids to health tell more heavily on women than on men.

DISTRIBUTION BY COMMUNITY

A second way of sorting the population is by religion or community :

INDIA

(In thousands)

| Provinces, etc. | Hindu | | Muslim | Indian Christian | Sikh | Jain | Tribes | Others | Total |
|------------------|-----------------|--------|--------|------------------|-------|------|--------|--------|--------|
| | Scheduled Caste | Others | | | | | | | |
| Madras | 8,152 | 35,095 | 3,927 | 2,022 | .. | 39 | 562 | 52 | 49,841 |
| Bombay | 2,252 | 18,351 | 2,223 | 362 | .. | 391 | 2,333 | 149 | 26,069 |
| Bengal, West .. | 3,311 | 11,017 | 5,392 | 60 | 15 | 9 | 1,369 | 111 | 21,196 |
| P.P. | 11,717 | 34,095 | 8,416 | 131 | 232 | 103 | 289 | 37 | 55,021 |
| Punjab, East .. | 1,028 | 4,489 | 4,427 | 116 | 2,536 | 30 | .. | 273 | 12,697 |
| Bihar | 4,344 | 22,263 | 4,719 | 25 | 13 | 5 | 5,165 | 11 | 36,546 |
| C.P. & Berar .. | 3,310 | 10,920 | 811 | 32 | 13 | 86 | 4,440 | 13 | 19,648 |
| Assam | 377 | 2,861 | 1,752 | 35 | 3 | 6 | 2,421 | 16 | 7,472 |
| Orissa | 1,865 | 8,187 | 166 | 37 | .. | 1 | 3,509 | 3 | 13,768 |
| Ajmer-Merwara .. | .. | 376 | 90 | 4 | 1 | 19 | 91 | 2 | 584 |
| Andamans | .. | 8 | 8 | 1 | 1 | .. | 11 | 4 | 34 |
| Bilaspur | 16 | 93 | 1 | .. | .. | .. | .. | .. | 110 |
| Cooch | 26 | 105 | 15 | 3 | .. | .. | 29 | .. | 169 |
| Cutch | 39 | 279 | 117 | .. | .. | 64 | 1 | .. | 501 |
| Delhi | 123 | 415 | 305 | 10 | 16 | 11 | .. | 8 | 918 |
| Himachal Pradesh | 229 | 672 | 29 | .. | 1 | .. | .. | 1 | 935 |
| Panth Piploda .. | 1 | 4 | .. | .. | .. | .. | .. | .. | 5 |

Note.— This distribution is based on 1911 Census figures. These figures do not take into account the 1917 population shift.

PAKISTAN

| | Total population | Hindus | | Muslim | Christian | Sikh |
|------------------|------------------|------------|-----------|---------------|-----------|-------|
| | | Caste | Scheduled | | | |
| W. Punjab | 18,746,000 | ? | ? | 18,319,000 | 1,26,000 | ? |
| N.W.F.P. | 3,038,067 | | | 2,783,797 | 5,426 | |
| Sind | 4,535,008 | ? | ? | 3,298,325 (?) | 13,232 | ? |
| Baluchistan .. . | 501,631 | | | 438,930 (?) | 2,633 | |
| E. Bengal | 41,949,710 | 11,736,027 | .. | 29,481,099 | 56,882 | 1,197 |

AGE GROUPING

A third way of grouping the population and one which is very important from an economic point of view, is by age. The table below shows the age distribution of 10,000 males and females of the population of the sub-continent by 10-yearly age-groups at the 1931 census.

| Age-groups | 1931 | | 1921 | |
|----------------|-------|---------|-------|---------|
| | Males | Females | Males | Females |
| 10-20 .. | 2,086 | 2,062 | 2,087 | 1,896 |
| 20-30 .. | 1,768 | 1,856 | 1,640 | 1,766 |
| 30-40 .. | 1,431 | 1,351 | 1,461 | 1,839 |
| 40-50 .. | 968 | 891 | 1,013 | 967 |
| 50-60 .. | 561 | 545 | 619 | 606 |
| 60-70 .. | 269 | 281 | 347 | 377 |
| 70 and over .. | 115 | 125 | 160 | 180 |
| Mean age | 23.2 | 22.8 | 24.8 | 24.7 |

If we were interpreting the same figures as a ratio we should set out the position as follows.

| Age-Period | Male | Female |
|------------|------|--------|
| 1-4 .. | 14.7 | 15.9 |
| 5-9 .. | 13.2 | 12.8 |
| 10-14 .. | 12.0 | 11.9 |
| 15-19 .. | 8.9 | 9.4 |
| 20-24 .. | 9.1 | 9.8 |
| 25-29 .. | 8.6 | 8.7 |
| 30-34 .. | 7.9 | 7.6 |
| 35-39 .. | 6.4 | 5.9 |
| 40-44 .. | 5.5 | 5.0 |
| 45-49 .. | 4.2 | 3.9 |
| 50-54 .. | 3.3 | 3.2 |
| 55-59 .. | 2.3 | 2.3 |
| 60-64 .. | 1.8 | 1.9 |
| 65 .. | 2.1 | 2.3 |

The table makes it quite clear that the population of the sub-continent is a very young population. As high as 39.9% of males and 40.6% of females is in the age-group 0-14. For purposes of comparison the percentages for England and Wales may be given, which are 25.2% and 22.6% respectively. At the other end of the scale, we find that only 9% of males and 9.7% of females are 50 and above. The corresponding figures for England and Wales are 22.8% and 23.6% respectively.

Another point which must be noted is the very low mean age—23.2 for males, and 22.8 for females.

One reason for grouping the inhabitants of a country by age is to show the size of its working population, that is to say, that part of the population which is engaged in producing wealth. Other things being equal, the larger the size of the working population the bigger the national dividend.

Now if we assume the working age of the population in the sub-continent is 15 to 60 about 44% of the aggregate population could be classed as workers. "Aggregate" because in India or Pakistan women in the lower classes at any rate usually join the men-folk in their work and so can be classed as workers. In the rural areas this practice whereby women join the men in their work is probably universal. At the 1931 census, for instance, it was found that for every 1,000 men there were as many as 465 women workers. But the percentage of the

working population high as it is, is actually less than the percentage for England and Wales which is 47%. If we take males only the disparity is still higher—57% as against 63%. It becomes higher still, if we extend the working age of the English people to 64—68%. Thus in the race for production India and Pakistan are handicapped as against a European country because of the age composition of their population.

The national dividend is influenced not merely by the percentage of the working population but also by the working period. Consider the following facts, for instance. Out of every 1000 males born in the sub-continent only 541 survive to enter the working period. Out of these 541 again only 14 survive to reach the age of 60. So out of a theoretical maximum of 45 years of working life a person of 15 in India or Pakistan can expect to get only 30, while a European can look forward to 40 years of working life. The whole argument, in short, leads to two conclusions; One, the sub-continent has a

smaller proportion of people in the working age, and for every person, reaching the working age the working period which is available is also much shorter.

INCREASE IN POPULATION

So far we have given what may be called an instantaneous picture of the community, Indian as well as Pakistanian, that is to say, a picture which affords some knowledge of numbers and conditions, valid only for a particular point. But a community is subject to change there are drifts and currents in national life and they must be defined and measured. Thus the census of a country have a second aspect. They are not only a source of statistical knowledge but one item in a consecutive series which afford the necessary data for forecasting future trends and developments. Among the more important of these data is the one relating to the population trends in a country.

In 1931, the population of British India (now includes India and Pakistan) was 256.8 mlns. and

that of the States was 81.3 mlns. making a total of 338.1 mlns. The present figures which have already been given are roughly 230 for India, 70 for Pakistan, and 90 for the States making a total of 390 mln. people in all. That is to say during the last 10 years the population of the sub-continent as a whole has risen by about 50 mlns., 39 mlns. in India and Pakistan, and 11 mlns. in the States.

The following Table gives the trend of population since 1881, and the percentage increase for the sub-continent as a whole :

| Year | Population | Increase | Percentage |
|--------------------|-------------|-------------|------------|
| 1881 | 253,896,330 | 47,733,970 | 23.2 |
| 1891 | 287,314,671 | 33,418,341 | 13.2 |
| 1901 | 294,361,056 | 7,046,385 | 2.5 |
| 1911 | 315,156,396 | 20,795,340 | 7.1 |
| 1921 | 318,942,480 | 3,786,084 | 1.2 |
| 1931 | 352,837,778 | 33,895,298 | 10.6 |
| 1941 | 388,997,955 | 50,878,801 | 15.0 |
| Total 1881 to 1941 | — | 149,820,210 | 39 |

Two Swarming Areas—These tables speak for themselves but a few explanatory notes may be added. The population of the sub-continent has risen by 50 mlns. in a decade. This is more than the entire population of any European country except Russia or Germany. And in the fifty years preceding the census of 1941 the population of the sub-continent increased by 110 mlns. or 39%. We realise something of the enormity of the whole problem when we remember that the aggregate population of France and Germany is only slightly greater than 110 mlns. But large as these figures are it still remains true that the population of the sub-continent expanded less rapidly than that of some other countries. Here, for instance, are two corresponding figures one for Europe, and the other for Japan. The increase for Europe minus Russia was 60%, and for Japan 113%.

A second point which must be noticed is that the increase in the 1931-1941 decade is not uniform—does not apply to the sub-continent as a whole, though a greater rise than in the 1921-1931 decade is universal. Coming back to the 1941 census, we find that the rate of increase is greater in the north than in the south, and two areas stand out as peaks, as it were, the west and the north-west, and the east. In fact, the Punjab and East Bengal form two swarming areas. This is no matter for surprise. For, wherever there is an empty country with the means for filling it the country gets filled up very quickly. We see much the same process going on in Bikaner in India and Bahawalpur in Pakistan. In every case except East Bengal the means for filling the country came from irrigation projects.

Another reason for the difference between the north and the south may also be noted. The boycott of the 1931 census was more effective in the north generally than in the south, so the rates of increase in the 1941 census are correspondingly higher in the north than in the south. The present figure for Ahmedabad, for instance, bears no relation to the 1931 determination. Not only were the 1941 census not boycotted people everywhere were very anxious that they should not be left out; they were much more census-conscious, so to say, than ever before. The reason for this active interest was that communal considerations were becoming important. In certain areas every Hindu and Muslim went to great trouble to see that he was not left out. The effect of this attitude is once again more noticeable in the Bengal area and Bihar, for instance, than in Madras and Mysore.

The following table gives the corresponding figures for India :—

| Year | Population | Variation | Percentage | Net variation 1901-1941 | Percentage 1901-1941 |
|------|-------------|--------------|------------|-------------------------|----------------------|
| 1901 | 238,406,202 | — | — | — | — |
| 1911 | 252,208,973 | + 13,802,771 | 5.8 | — | — |
| 1921 | 251,500,696 | — 708,277 | 0.3 | — | — |
| 1931 | 279,167,844 | + 27,667,148 | 11.0 | — | — |
| 1941 | 318,897,532 | + 39,729,688 | 14.2 | + 80,491,330 | 33.8 |

Provinces and States—The following Table shows how the population of some of the major Provinces has risen from 1891 to 1941:

| Province | 1891 | 1901 | 1911 | 1921 | 1931 | 1941 |
|-----------------------|------------|------------|------------|------------|------------|------------|
| Madras | 33,732,664 | 36,258,955 | 39,129,111 | 40,126,512 | 44,205,243 | 49,341,810 |

BIRTH-RATE

The size of the population depends upon a country's birth and death-rates, that is by the number of births and of deaths per thousand of its population. The following table shows the birth and mortality rates for the sub-continent from 1920 to 1940:

| Year | Birth-rate | Death-rate | Infant-mortality |
|------|------------|------------|------------------|
| 1920 | 33 | 31 | 105 |
| 1921 | 32 | 31 | 198 |
| 1922 | 32 | 24 | 175 |
| 1923 | 34 | 25 | 176 |
| 1924 | 33 | 28 | 189 |
| 1925 | 32 | 24 | 174 |
| 1926 | 33 | 25 | 189 |
| 1927 | 33 | 23 | 167 |
| 1928 | 34 | 24 | 173 |
| 1929 | 33 | 24 | 178 |
| 1930 | 33 | 25 | 189 |
| 1931 | 35 | 25 | 179 |
| 1932 | 34 | 22 | 169 |
| 1933 | 36 | 23 | 171 |
| 1934 | 34 | 25 | 187 |
| 1935 | 35 | 24 | 164 |
| 1936 | 36 | 23 | 162 |
| 1937 | 35 | 22 | 162 |
| 1938 | 34 | 24 | 167 |
| 1939 | 34 | 22 | 156 |
| 1940 | 33 | 22 | 160 |

Let us take the question of the birth-rate first. The officially recorded birth-rate for 1940 was 33, but this is known to be an underestimate, for in a backward country like India or Pakistan about a third of the births are likely to go unregistered, so that we would not be far wrong if we assumed that the actual birth-rate is in the neighbourhood of 47 or 48 per thousand.

Now a birth-rate of 47 or 48 is the highest in the world and only about four points less than the highest possible 52. There are a few countries including Palestine whose birth-rate is about the same but they are all among the smaller countries. The birth-rate of the more important countries are far below 40 and in the most advanced of them the birth-rate is as low as 20 or even 15. If we restate the same position in absolute numbers, about 1,250,000 babies are born every year in the sub-continent. Of these, we may add here, only a third live to be 30, while a fourth die before they are one year old.

Reproductive Capacity.—Now the birth-rate of a people depends among other things on three important factors: the number of women of child-bearing age in the community, the number of women of child-bearing age who are married, and the age at which the women generally marry. For fertility rate is higher in the first half of the child-bearing age than in the second half.

Let us consider the position statistically first. The following table gives the proportion of women in each group per 10,000 women according to the 1931 census:

| Ages | 1931 per 10,000 | 1921 per 10,000 |
|-------|--------------------|--------------------|
| 5-9 | 1,280 | 1,404 |
| 10-14 | 1,124 | 1,081 |
| 15-19 | 938 | 815 |
| 20-24 | 985 | 881 |
| 25-29 | 868 | 885 |
| 30-34 | 756 | 833 |
| 35-39 | 595 | 565 |
| 40-44 | 505 | 621 |
| 45-49 | 389 | 346 |

If we assume that the reproductive period of women in the sub-continent ranges from 15 to 45 we find that for every 10,000 women there are about 5,036 women of child-bearing age, 46.47%. Converting this into absolute numbers we find there were about 75.4 mns. women in the sub-continent in 1931 in the age-group 15-45 compared with 79.9 mns. men. Women fell short of men by about 4.5 mns.

In a number of European countries, on the other hand, England for instance, women are always in excess of men. In this particular age-group in England the excess of women over men is about 1.7 mns. At first sight therefore the sex ratio in the sub-continent, would appear to be unfavourable from the reproduction point of view. But actually the sex ratio has not affected reproductive capacity because the men in the sub-continent are in the habit of finding their wives from a much wider age-group than elsewhere and are not averse to marrying much below their age.

Again we have assumed the reproductive period of women in the sub-continent to be from 15-45. Actually, there is a great deal of evidence to show that the period starts at least two years earlier at the age of 13; but then as it also ends two years below 45 it is not necessary to make any adjustments: the variations at either end cancel each other. In any case, we have no figures except for five-year age periods on which to base any calculations.

Incidence of Marriage.—A second factor which influences reproductive capacity is the number of women of child-bearing age who are married.

Here is a table which gives the proportion of married women per thousand women at the same ages:

| Ages | 1931 per thousand | 1921 per thousand |
|-------|----------------------|----------------------|
| 15-20 | 818 | 771 |
| 20-25 | 886 | 877 |
| 25-30 | 869 | 863 |
| 30-35 | 824 | 797 |
| 35-40 | 703 | 727 |
| 40-45 | 627 | 599 |
| 45-50 | 473 | 527 |

In 1931, that is to say, about 49.3% of women were recorded as married. The corresponding figure for England and Wales was 41.3. The reason for the disparity between the figures for the sub-continent and those for England is that there are more men than women in the sub-continent, and marriages are mostly arranged by parents so that it is rarely that a marriageable girl goes unmarried. Also in the sub-continent

people marry very young. The following table gives the number of unmarried women for every 1,000 women in the different age-groups:

| Age | Unmarried per 1000 |
|-------------|-----------------------|
| 0-4 | 969 |
| 5-9 | 802 |
| 10-14 | 609 |
| 15-19 | 148 |
| 20-29 | 44 |
| 30-39 | 17 |
| 40-60 | 11 |
| 60 and over | 10 |

Only 1% of the women are unmarried by the time they reach 60 which compares favourably with 13.6% in England and Wales. Notice the fall from the age-group 15-19 to the age-group 20-29. By the time they are 29 almost all marriageable girls are married.

Fertility Rate.—There is yet another point which has to be taken into account when calculating the reproductive capacity of a people. In the child-bearing period itself the frequency of child-bearing varies from age to age. The earlier years, and 15-25 particularly, are markedly more fertile than the later ones in the reproductive span, so that distribution by age of reproductive women is as important as the proportion which the women in the aggregate bear to the total population. When we look up the appropriate table we find that the first half of the reproductive period contains as many as 60% of women of child-bearing age. The corresponding figure for England is 53.5%.

To sum up, about 80% of the women in the age-group 15-45 are married and of these 64% are in the age-group 15-30 when the rate of fertility is very high.

That brings us to the last of the elements which go to make up reproductive capacity—the rate of fertility. Fertility rate is different from birth-rate. Birth-rate is the number of children born per thousand of a people. Fertility rate is the frequency of births among the women. The fertility rate only shows how prolific the women are.

The only data which we possess for calculating fertility rate for the sub-continent relate to Cochin and Travancore but then these data can be taken as representative for the sub-continent as a whole. The following table gives the fertility rates for married women in Cochin and also for purposes of comparison those for married women in England and Wales:—

| Age period | Cochin | England and Wales |
|-----------------|--------|-------------------|
| 15-19 | 224 | 372 |
| 20-24 | 249 | 267 |
| 25-29 | 253 | 187 |
| 30-34 | 246 | 127 |
| 35-39 | 182 | 81 |
| 40-44 | 120 | 33 |
| Total Fertility | 6,370 | 5,385 |

Thus we find that while the disparity between the birth-rates in the sub-continent and in England is very great, the disparity between the

fertility rates is very narrow. The average woman in India or Pakistan leaves about 6 children behind her while the average English woman leaves about 5. Contrary to general impression the Indian or Pakistani woman is not very much more fecund than the English woman. And if we consider certain national habits like the use of contraceptives, for instance, it may turn out that the Indian or Pakistani woman is actually less fecund than the English woman.

A second point which we notice is that the fertility rate among English women varies more

sharply from age-group to age-group than the fertility rate among women in the sub-continent. The fertility rate among English women belonging to the first age-group, is more than ten times that among English women belonging to the last age-group, while the corresponding ratio for Indian or Pakistani women is only 2.

DEATH-RATE

So far we have been concerned with the question of birth-rate and allied problems. But the population of a country depends not only on its

birth-rate but also on its death-rate. The death-rate indeed affects the aggregate population in a double sense. In the first place it reduces the number of people who are living, and secondly it reduces future accretion by killing off potential mothers. The effects of mortality must therefore be studied in both these aspects.

The death-rate and the infant mortality rate have already been given in a previous table. For purposes of comparison the death-rate for the sub-continent may be set out once again along with the death-rates for a number of other countries:—

| | 1911-13 | 1921-25 | 1926-30 | 1931-35 | 1936 | 1937 | 1938 | 1939 |
|---------------|---------|---------|---------|---------|------|------|------|------|
| Sub-continent | 29.9 | 26.0 | 23.5 | 24.3 | 22.6 | 22.4 | 24.3 | 21.1 |
| Germany | 14.8 | 13.3 | 11.2 | 11.8 | 11.8 | 11.7 | 11.6 | 12.8 |
| France | 19.7 | 17.2 | 15.7 | 16.8 | 15.3 | 15.0 | 15.4 | 15.8 |
| U.K. | 14.2 | 12.4 | 12.5 | 12.3 | 12.3 | 12.8 | 11.8 | 12.2 |
| U.S.A. | 14.1 | 11.8 | 10.9 | 11.8 | 11.6 | 11.3 | 10.6 | 10.6 |
| Australia | 10.9 | 9.5 | 9.0 | 9.3 | 9.4 | 9.4 | 9.6 | 9.9 |
| Japan | 20.7 | 21.7 | 17.8 | 19.3 | 17.6 | 19.1 | 17.6 | 17.6 |

Even as it is the death-rate in the sub-continent is high. But these figures are really not comparable for while vital statistics are very accurate in every one of the countries cited above they are notoriously defective in India or Pakistan. It is difficult to say how faulty the figures are but according to one estimate an average death-rate of 23 for the sub-continent would be near enough. Assuming that is so we have a death-rate in India or Pakistan which is nearly double that of Japan, a little more than double that of France, and over three times that of Australia.

If instead of converting the figure into a rate we simply put down the total number of deaths in India and Pakistan, we will get some idea of the enormous scale of Indian mortality. The average recorded deaths per year in the sub-continent from 1921-1938 were 6.40 mns. But the total actual deaths were probably in excess of 8 mns. Compare this with the scale of mortality in Europe. The total number of deaths per year in Europe minus Russia was 5.28 mns. This means that in the years between 1921 and 1938 about 54 mns. more people died in India and Pakistan than in Europe minus Russia. Or to put it differently about the same number of people died in the sub-continent between 1921 and 1938 as the population of Britain and Canada taken together.

Distribution of Death-Rate:—Not only is the death-rate in the sub-continent high but the distribution of death according to age and sex is not very favourable either. Consider the figures for deaths per 10,000 of either sex given in the table below:

| Age group | Male | Female | Female as percentage of male |
|-----------|-------|--------|------------------------------|
| 0-1 | 1,844 | 1,671 | 95.5 |
| 1-4 | 376 | 346 | 92.0 |
| 5-9 | 100 | 99 | 99.0 |
| 10-14 | 63 | 63 | 100.0 |
| 15-19 | 89 | 106 | 119.0 |
| 20-29 | 95 | 119 | 125.3 |
| 30-39 | 129 | 113 | 105.6 |
| 40-49 | 187 | 163 | 87.2 |
| 50-59 | 318 | 283 | 89.0 |
| All ages | 236 | 119 | .. |

As we have already said the death-rate in the sub-continent is high all along the scale. It is very high among first year infants—about 20% of them die every year, 60% of them in the first week after birth. In the second age-group the death-rate comes down but compared with European standards it is still very high. Then from 5 year onwards it continues to fall till the 10-14 age-group is reached when it starts rising again till it reaches the climax in the 50-59 and over group.

Now considering the same figures from the point of view of sex distribution we find that dur-

ing infancy and childhood the female death-rate is lower than the male. In the 10-14 age-group it is about equal. Then the female death-rate begins to overtake the male. In the age-group 15-29 the female death-rate is higher. Then it begins to fall below that of the male, and thenceforth is always lower than the male.

Thus we find that the odds against women are specially high in the reproductive age which means that maternal mortality is abnormally high in the sub-continent. There are no records for maternity mortality for the sub-continent as a whole. But two enquires, one made in 1933 and the other in 1936 reveal that the average mortality rate might be in the neighbourhood of 24 per thousand births. That is to say, the maternal death-rate in the sub-continent is about eight times as high as that in England and Wales.

Effect on Income:—The incidence of mortality in the sub-continent specially the distribution by age greatly hampers economic advancement. The reason for this will be clear if we follow the progress of a group of 1,000 newly born babies and see what happens as they move from infancy to old age through youth and manhood. The following table shows how many of a group of 1,000 babies survive through successive stages to contribute to the country's economic wealth.

| Age | Sub-continent | | England | |
|-----|---------------|---------|---------|---------|
| | Males | Females | Males | Females |
| 1 | 751 | 768 | 928 | 945 |
| 5 | 602 | 628 | 901 | 920 |
| 10 | 565 | 593 | 890 | 911 |
| 15 | 541 | 568 | 883 | 904 |
| 20 | 512 | 528 | 872 | 894 |
| 25 | 478 | 479 | 858 | 881 |
| 30 | 439 | 427 | 844 | 868 |
| 35 | 395 | 373 | 829 | 853 |
| 40 | 346 | 318 | 809 | 837 |
| 45 | 294 | 264 | 784 | 817 |
| 50 | 243 | 215 | 750 | 790 |
| 60 | 149 | 132 | 636 | 702 |
| 70 | 70 | 66 | 434 | 531 |

Interpreting the figures we find that about 250 people have died before the first year is reached. By the age of 5 another 150 have dropped out. With the age of 20 when a person is mature enough to take a hand in the business of production only about half are left. And in the age-group 25-50 which period represents the major part of a man's working life there are on an average only about 360 people to shoulder the whole burden.

If we now turn to conditions in England we see how different the picture is. After the

first five years are over, the loss is insignificant. And in the age group which is most crucial for the present purpose there are as many as 750 men out of the original 1,000 to enter into the business of production.

Applying the same analysis to the incidence of mortality among women about 450 die before they enter the reproduction stage, and of those who enter the reproduction stage only 346 live through the whole of it. Second, the heavy mortality among women in the child-bearing age leads to scarcity of partners for married life. One way in which this difficulty is circumvented is by forming unequal partnerships, unequal in the sense that the difference in age between a husband and wife is very great. Though this situation leaves little scope for spinsterhood among women it produces a great number of widows. In 1931 as many as 15.5% of all women in the sub-continent were recorded as widows while the corresponding percentage in England was only 8.7. The incidence of widowhood is particularly high in the reproductive stage—about 14%. Going up the scale we find that as the proportion of spinsters diminishes the proportion of widows increases.

Causes of Mortality:—We can wind up this section with a short note on the chief causes of mortality in the sub-continent.

The overwhelming majority of deaths are caused by such typical tropical diseases as small-pox, typhoid, dysentery, cholera and malaria. Out of 6,165,234 deaths in 1939 1,411,614 were caused by malaria, 260,300 by diarrhoea and dysentery, 97,566 by cholera and 48,103 by small-pox. Tuberculosis which is one of the biggest killers in the larger cities continues to spread. Malnutrition and nutritional diseases are very common. This is no surprise considering the general poverty of the people. In fact, it would be no exaggeration to say that poverty and the consequent lack of vitality and resisting power are the root cause of the overwhelming majority of deaths from diseases in the sub-continent. Remedies for most of the diseases mentioned above exist but no medicine can be of any help where a patient has little or no reserves on which he can call in time of danger. This is the chief reason why in a general campaign against disease measures aimed at raising the average income of the citizen will bring in a quicker return than an extension of medical facilities. In other words, the most important single disease which has to be fought and overcome in the sub-continent is poverty.

The figures quoted are for the larger cities like Calcutta, Bombay or Madras because they are generally more accurate than figures for the smaller towns or rural areas. Here is a table which shows the specific death-rates per

thousand for Calcutta, Madras and Bombay and also for purposes of comparison those for London and New York.

| | Calcutta | Bombay | Madras | London | New York |
|----------------------------|----------|--------|--------|--------|----------|
| Tuberculosis .. | 270.0 | 170.0 | 113.0 | 87.0 | 47.0 |
| Dysentery and Diarrhoea .. | 250.0 | 252.0 | 436.0 | 0.0 | 0.0 |
| Typhoid .. | 90.0 | 40.0 | 16.0 | 0.4 | 0.2 |
| Cholera .. | 50.0 | 0.0 | 0.0 | 0.0 | 0.0 |

Turning to infant mortality figures in the larger towns we find that there has been no perceptible improvement as the following table shows:

| City | 1935 | 1936 | 1937 | 1938 | 1939 | 1940 | 1941 |
|------------------|------|-------|-------|-------|-------|-------|-------|
| Bombay .. | 248 | 250.2 | 246.3 | 267.9 | 212.2 | 201.5 | 211.4 |
| Calcutta .. | 239 | 241.6 | 252.7 | 218.6 | 205.4 | 212.5 | .. |
| Madras .. | 227 | 218.3 | 223.8 | 222.1 | 241.6 | 205.7 | 208.9 |
| Lucknow .. | 224 | 224.4 | 223.5 | 226.4 | 212.2 | 214.4 | 134.3 |
| Lahore .. | .. | .. | .. | .. | .. | .. | .. |
| Nagpur .. | 261 | 283.5 | 234.6 | 264.2 | 226.2 | 294.6 | 218.8 |
| Delhi .. | 196 | 170.0 | 187.4 | 156.0 | 169.9 | 173.8 | 185.9 |
| Karachi .. | 151 | 167.0 | 142.2 | 149.6 | 136.7 | 136.8 | 127.8 |
| Ahmedabad .. | 280 | 303.4 | 280.2 | 283.0 | 267.4 | 310.2 | 133.2 |
| Hyderabad (Sind) | 232 | 198.2 | 205.1 | 192.6 | 182.4 | 259.1 | 220.6 |

Special causes contribute to the high mortality of infants in the sub-continent.

Owing to the custom of early marriage, cohabitation and child birth commonly take place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery, seriously affects the health and vitality of the mother and through her of the child. If the child survives the prenatal and natal chances of congenital debility and the risks of child birth, it is exposed to the dangers of death in the early months of life from diarrhoea or dysentery. According to the Executive Health Officer of Bombay City, by far the greater number of infantile deaths are due to infantile debility and malformation, including premature birth, with respiratory diseases coming next, then convulsions, then diarrhoea and enteritis.

There has not been any marked reduction in the general rate of mortality due to specific diseases over the last two decades either:

| Year | Cholera | Small-pox | Plague |
|---------|---------|-----------|--------|
| 1920 .. | 0.6 | 0.4 | 0.4 |
| 1925 .. | 0.5 | 0.3 | 0.5 |
| 1930 .. | 1.3 | 0.3 | 0.3 |
| 1931 .. | 0.9 | 0.1 | 0.2 |
| 1932 .. | 0.3 | 0.2 | 0.2 |
| 1933 .. | 0.3 | 0.4 | 0.2 |
| 1934 .. | 0.8 | 0.3 | 0.3 |
| 1935 .. | 0.8 | 0.3 | 0.1 |
| 1936 .. | 0.6 | 0.4 | 0.04 |
| 1937 .. | 0.4 | 0.2 | 0.1 |
| 1938 .. | 0.9 | 0.1 | 0.06 |
| 1939 .. | 0.4 | 0.2 | 0.1 |
| 1940 .. | 0.3 | 0.3 | 0.7 |

[N.B.—Part of this section is based on D. Ghosh's "Pressure of Population and Economic Efficiency in India" which represents some of the latest work done in this field. The figures for communities and languages were taken from Dudley Stamp's "Geography." For latest details about India see end of this article and about Pakistan see Pakistan section].

Manners and Customs

Next to the complexion of the skin, which varies from fair to black, the tourist's attention in India is drawn to their dress and per-

sonal decoration. In its simplest form the dress of a Hindu consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Muslim always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Men and women on the hills who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear today within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in pictures and images.

In parts of India the Hindu dress, the loin-cloth comes nearly down to the feet. On the Malabar coast, the ends are left loose in front. In the greater part of the sub-continent they are tucked up behind a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt.

When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves; the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before the Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Muslim prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed.

The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans may be seen in the city of Bombay. In East Punjab and the United Provinces, in West Bengal, and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles, folded brims, projecting brims, long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Muslim or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water, he does not cover his legs, but suspends only a coloured kerchief from his waist in front. The poorer people in West Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable.

Many well-to-do Indians notably Christians and Parsis wear European dress at the present day, or a compromise between the Indian and European costumes. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs with the European costume. The majority of the people do not use shoes; those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

On ceremonial or religious occasions indigenous dress is almost always preferred and with the recent change in the political landscape, it is possible that blind imitation will give place to intelligent selection.

There is also a certain tendency to economise in the use of cloth in times of scarcity, and fashions once introduced often remain. One way in which people in urban areas try to meet scarcity is to make, what they call, 'bush shirt' or 'bush coat' which is really a cross between a coat and a shirt and can be made to do duty for either.

Women's Costumes—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of the sub-continent women wear a bodice; on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats or drawers, or both are worn. Many Muslim ladies wear gowns and scarfs over them. The vast majority of Muslim women are *gusha* and their dress and persons are hidden by a veil when they appear in public; a few of the converts from Hinduism have not, however, borrowed the custom. In the north, Hindu women have generally adopted the Muslim practice of seclusion. In the Deccan and Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindus, widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, some Muslims, however, especially in Malabar, do. The orthodox remove the hair from a part of the head in front, over the temples, and near the neck and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many have their hair combed in the European fashion which is also followed by Parsis and Christians. A great many Muslims grow beards. But most Hindus do not, except in places as in the north where Muslim influence was paramount in the past. Parsis and Christians follow the individual inclinations. Hindu ascetics, known as Sadhus or Jaisias, as distinguished from Sanas, do not clip their hair, but coil it into a crest, in imitation of the God Shiva.

Hindu women wear more ornaments than women of any other community. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist and the toes, until motherhood is attained, and by some even later. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads and flowers, like the lotus, the rose and the champaks, are among the most popular objects of representation in gold or silver.

Caste Marks—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. Among certain communities absence of the mark might indicate that the person is a widow. The mark may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot to represent Lakshmi who is the goddess of prosperity. A more elaborate mark on the forehead has the shape of a U or a V, generally with a central line, sometimes without it, to represent Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay.

To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elaeagnus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas respectively. The Lingayats, a Shaiva sect suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, i.e., ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows, as is mentioned above, are forbidden to exhibit this sign of happiness, nor may they deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces arms and feet sometimes with a paste of turmeric, so that they may shine like gold. It is not always possible to say why a particular colour has been selected. The red liquid with which the evil eye is averted may recall the blood of the animal slaughtered for the purpose in former times. But in many other cases this particular colour has no such associations. The Muslim dervish affects green, the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned for the choice.

Festivals and Observances

Some of these festivals are also mentioned in the section under Pakistan.

Bara Wafat—(Death on the 12th) is called in Bengal *Fatima-i-Duwwadham* (Prayers of the 12th). In Turkey and Egypt the day is known as *Mauludu'n-Nabi* (Birth of the Prophet). The date is 12, Rabi I.

It is a joint celebration of the birth and the death of the Muslim Prophet. In some parts of the sub-continent it is celebrated only as the birthday of the Prophet. (Jashn-i-Milad Sharif). It is believed that his birth and death took place on the same day, although there are differences of opinion of this question. It is a great day of fasting for Muslims (the Wahabites, however, do not observe it; they regard it to be an innovation or *bid'ah*). On this occasion the life story of the Prophet is recited and its points of excellence stressed. Prayers are offered for the benefit of his soul. Prayers are also read over cooked food which is then given to the poor. Some observe the fast on the second day of the month. As the date is disputed, the more devout read the prayers on all the days from the 1st to the 12th day of the month.

Dasara (DASHAMA—TEN DAYS)—This festival is held on the 10th of Ashwin Shuddh (Oct.). It is called *Durga Puja* or *Durgotsava*, and is supposed to relate to the autumnal equinox.

The festival commemorates the victory of Devi, wife of Shiva, over the buffalo-headed demon Mahishasura. Her image is worshipped for nine days and afterwards consigned to the river. This is also the day on which Rama marched against Ravana, the demon king of Lanka (modern Ceylon). Early in the morning Hindus perform *pooja* to their household gods or religious books. Marathas and Kshatriyas, or those who consider themselves of the martial race, worship their weapons and ask protection for them throughout the year in the faith that, to the propitiousness of the sword, they owe every prosperity. In the afternoon they go to the temple in procession.

The day is also considered most auspicious by the Hindus to begin education of their children. The nine preceding days of Dasara are called *nawaratra*, a compound word for 'nine nights'. During this period devotees of Durga engage a Brahman to read hymns before her image, extolling her exploits and describing her rewards to her votaries. On the ninth day, at every temple of Durga, the sacred fire is made and fed with rice and ghee to the chanting of *mantras*. It is customary among Hindu women to keep up a dance called *garba* during these nine nights.

The celebration of Dasara is also said to owe its origin to the Pandavas (the five sons of Pandu) who selected this day as an auspicious one for making preparations for their war with their paternal cousins, the Kauravas, which is narrated in detail in the *Mahabharata*.

In modern times Dasara is observed with great pomp in Mysore State.

Dipavali—(Popularly termed *Diwali* or *Dewali*).—Dipa means a lamp and Dipavali means a row or collection of lamps. It is a festival of rejoicing at Lord Krishna's triumph over Narakasura, a demon. Rows of lamps at all places, sacred and secular, make a most beautiful feature on the occasion. Exhibitions of fireworks, crackers, etc., add to its festive nature.

On the 14th day of the waning moon of Kartika (Sept.-Oct.), known as *Naraka* or *Bhuta Chaturdashi* (Chaturdashi means 14th lunar day), Krishna destroyed Narakasura. The demon was, however, a great devotee of Krishna and had done severe penance to propitiate the Lord, but he had abducted 16,000 women for his harem and had to be destroyed for his sins. In view of his piety, however, the death anniversary was enjoined to be observed as a sacred day. In the morning a bath is taken and certain rites with a lamp made of rice-flour, etc., are observed. New dresses are worn and sweets are served.

Gahambars—These are traditional festivals of Iran (Persia) adopted by the Parsis, and mark the six festivals of the six seasons of the year. The first one commences on the 11th day of Ardibehesht (Oct. 15), the second on the 11th day of Tir (Dec. 14), the third on the 26th day of Shehrevar (Feb. 27), the fourth on the 26th of Mehr (March 29), the fifth on the 16th day of Ist (June 17) and the 6th on the 1st day of Gatha at the end of the Parsi year (Aug. 31). They were mainly agricultural festivals and necessarily formed formal seasonal celebrations. The Parsis hold public feasts on the days of the Gahambars.

Ganesh Chaturthi—On this day was born Ganpati, or Ganesh, who is regarded as the god of wisdom and one to be propitiated for the removal of obstacles. As such he is invoked at the commencement of all ceremonies and undertakings. There are varying versions of the circumstances attending his birth. One relates that as the god Kartikavirya was created by Shiva without conjugal assistance, in like manner Ganpati was formed by his consort Parvati from the turmeric and oil escaped from her body while bathing. The loss of his human head and the substitution of that of a female elephant with one tusk are also variously explained. By some his head is said to have been cut off by Shiva when he endeavoured to prevent the god from entering the chamber of Parvati when she was performing her ablutions. According to others, it was

reduced to ashes by a glance from Shani (Saturn) who, with all the gods, went to look at the newborn child, and it was replaced by that of the animal first found, which happened to be an elephant.

The fourth of Bhadrapad Shuddh (Aug.) is the period appointed for the celebration of this festival in honour of Ganpati's birth. His image is installed in Hindu households and offered *pooja*. Some people keep the image for a day and a half; some for five or ten days, according to the wealth and wish of the householder. On the final day, the image is taken in procession and eventually committed to the river, sea or tank.

There is a legend that one day Ganpati while riding his favourite mouse had a fall, at which the moon laughed. Enraged at the insult, Ganpati cursed the moon and all who should look at her, but afterwards restricted it to one day, i.e., his birthday. Thus, on the day of Ganesh Chaturthi, Hindus avoid the moon lest they should incur any calamity during the year. If by any chance they happen to see the moon, they try to provoke their neighbours into reviling them in the belief that its ill-effects will stop at such abuse.

Gokulashtami—(Also known as *Janmashtami* and *Krishnashtami*). The occasion marks the celebration of Krishna's birth on the 8th day of the dark fortnight in the month of *Shrawana* (July-August) or *Bhadra* (Aug.-Sept.). In each case (i.e., either in *Shrawana* or *Bhadra*) different sects observe it on either of the two consecutive days of Ashtami. At the temple of Puri a Brahmin and a dancing girl play the roles of Vasudeva and Devaki, the parents of Krishna.

To the Vaishnavites, the devotees of Vishnu, and therefore also of Krishna (who was one of Vishnu's incarnations), the occasion is a great festival. It is also observed by non-Vaishnavites, and thus sets an example of the spirit of toleration. Janmashtami is a day of fasting. A large part of the day is spent in worshipping Krishna Shri (the consort of Vishnu) and Devaki the mother of Krishna. *Kirtans* or religious songs (relating to Krishna) make a notable feature. Dacca (East Pakistan) brings out a great procession on this occasion.

Grahana—Grahana means an eclipse. Hindu astronomers were the first to declare that the earth is round and Hindu astronomy was the first to discover the scientific facts relating to eclipses. The popular tradition of other days, however, stuck to the popular mind. And the sight of an eclipse continues to suggest to the ignorant person that *rahu* (the ascending node), the trunkless demon, is devouring the sun or the moon as the case may be. Rahu in the guise of a god had attempted to share the nectar along with the gods. As soon as his tongue had tasted the nectar (a drink having the power of making those drinking it immortal), Vishnu detected the false god and struck off his head. Trunkless, up to the throat, as the nectar had passed, Rahu became immortal. Necessarily when he gulps the divine orbs they emerge out down his throat. Acceptance of the version therefore makes it an unholy sight and the delilement of the gods entails a delilement of the earth. Delilement requires a bath and a bath in holy water is held to be particularly efficacious on this occasion. As a matter of fact, two baths are required, one at the first contact of the eclipse and another when it terminates. People flock to the temples and other holy sites for baths are resorted to. The occasion, naturally, reminds one of death and oblations are offered to the dead. To ensure full merit of the bath, gifts must be offered after the bath. As a matter of fact gifts make an essential condition of all Hindu fasts and festivals. The inference is justified that gifts were to some extent ordained to ensure a spirit of charity. The period of the eclipse is a period of fasting. No food should be prepared during this period. Food prepared earlier cannot be used later.

Haj—It means "setting out" or "tending towards," and is the term used for the pilgrimage to Mecca. The performance of the *Haj* is to all good Muslims a most cherished ambition. It is one of the five pillars of the practices of Islam (Arkan), and there are the highest Quranic injunctions for its observance. The rites of the *Haj* may be divided into three groups; *Fara* or compulsory; *Wajib* or obligatory (in a lower degree than *fara*); and optional. *Fara* compulsions are three in number; wearing of Ihram (two seamless garments, one worn round the waist and another thrown loosely over the shoulder), standing in *Arafat* and doing the *Tawaf* (circumambulation of the Ka'bah). The *Wajib* rites are five in number in the case of those who do not belong to Mecca; to run between Mount As Safa and Mount Al-Marwah, to remain in Al-Muzdalifah, to cast stones to the three pillars of Mina (Ramayn-r-rijan), to perform a second *tawaf* and shave the head as the final ceremony. The month of Zul-Hijjah (the 12th Muslim month) is the month of the *Haj*.

Idul-Azha (also called Idaz-Zaha)—It is the Muslim counterpart of the Passover. It is enjoined in the *Quran* (xxii 33-38) and falls on the 10th Zul-Hijjah. The words of the prophet are: Man cannot (by any act) on this day propitiate God better than by shedding blood.

Idul Azha means the (great) sacrificial ceremony or festival. The festival commemorates Abraham's offer to sacrifice the object dearest to him, his son Ishmael (not Isaac), on Mount Mina close to Mecca (the Bible gives the name of the land as Moriah). Its observance is one of the necessary acts in the performance of the Haj. All adult Muslims who can afford it are required to make a sacrifice of an animal. If the animal is a big one (e.g., a camel or a cow), it is allowed to be the joint offering of seven, (according to some authorities as many as seventy). It is necessary to sacrifice one animal for each member of the family, but on economic grounds the sacrifice of one animal for a whole family is allowed. A fully grown-up and sound camel, cow, goat or sheep is considered best. The sacrifice is offered with a short prayer absolutely surrendering the soul to Allah and acknowledging His greatness as the accepted creed. The meat is distributed equally among the poor, the relatives and friends and members of the household.

In India and Pakistan the cow is the usual beast of sacrifice. In other Muslim countries the camel takes its place. The cow being held most sacred by Hindus, the more popular Muslim monarchs of India (possibly a few of Afghanistan as well) had stopped its slaughter out of consideration for Hindu sentiment.

Id-ul-Fitr—"The festival of breaking fast," called also *Ramazan ki Id*, and "the feast of alms," is celebrated on the 1st of Shawwal. On this day Muslims bathe, put on new clothes, apply antimony to the eyes, and perfume themselves; then distribute the *fitr* or *sadaqah*, which is 2½ seers of wheat, dates, or any grain used for food, to the poor or religious mendicants. All then proceed to the *Idgha*, repeating "God is great. There is no God but God." The Mulla ascends the *minbar* or pulpit, and after a short thanksgiving reads the *Khatbah* or sermon. He then descends to the lowest step (which with the Shi'ahs is the third, but the fourth with the Sunnis) and recounts the virtues of the king, and prays for him. Then a general prayer is offered, and the congregation rise with a shout of *Din-i-Faith* and fire of muskets. The evening is spent in rejoicing and merriment.

Khordadai—The birthday (the 6th day of the 1st Parsi month, Farvardin, 10th Sept.) of Zarathustra, the Prophet of Persia. He is the earliest known founder of a great religion of faith, courage and hope. The exact date and place of his birth have not yet been fully ascertained. Probably he was born in the province of Media, Iran (Persia) about 3,000 years ago. His great sermons are preserved in the Gathas (Parsi Scriptures). He was held in

great respect by the court of Gushtasp. He professed the doctrine of monotheism and held that Ahura Mazda is the Creator of the Universe. He preached the doctrine of *Asha* or piety, which would infuse in man the spirit to fight the force of evil and attain the beatific region of Ahura Mazda.

Muharram (Ar. Muharram, 'most sacred')—The mourning held annually in remembrance of the first martyrs of Muslims, Hasan and Husain, from whom the whole race of Sayads are descended. Abu Muhammad al Hasan and Husain were the two sons of 'Ali bin Abi Taleb, the cousin, and Fatimah, the daughter of Muhammad. The Muslims are divided into two distinct sects, called the Shi'ahs and the Sunnis; the former regard Ali and his descendants, Hasan, Husain, Zain-ul-Abidin, Muhammad Baqir, Jafar Sadik, and Ismail bin Jafar Sadik, as the lawful leaders after Muhammad; and the latter, the Caliphs, as Abubakar, Umar, Osman and 'Ali—hence quarrels, animosities, and dislikes are hoarded up to be avenged during Muharram. Taziyas (a term signifying grief, applied to a representation of the mausoleum erected over the remains of Imam Husain at Karbala) made of ivory, ebony, sandalwood, cedar, and sometimes wrought in silver filigree—and indeed of every variety of material from pure silver to tawdry brass, according to the rank and wealth of the party—are exhibited and conveyed in procession through the streets.

Navroz, Nauroz—Jamshed of "the seven-ringed cup," who fixed the Parsi calendar, marked this day on which the Sun enters Aries (20th or 21st March) to be the New Year's Day. It is held that he chose to make the State entry on this day to the newly founded capital of Persepolis. The festival was given the name of Id of Jamshed and it has been celebrated with the greatest eclat in both Parsi and Muslim Iran (Persia). Shah Jahaluddin commenced his administrative year from this day. The Shi'ahs celebrate the day as Id-i-Khilafat or the festival in commemoration of 'Ali's formal succession on this day to the Caliphate. For the Parsis it is only next to Pateti as a festival of social merriment and they begin the Fash (agricultural) year on this day. *Navroz* is one of the three celebrated Jashans of ancient Iran. Modern Iran celebrates the festival as a national event.

Pajusana—A great Svetambara Jain festival. Literally it means serving with a whole-hearted devotion. Formerly it was only observed by the ascetic order, but now the laity also observe it. The festival, as is common to all Jain festivals, is marked with rigorous fasting and penance.

Two schools, both of the Svetambara sect, observe the festival on slightly different dates, either from the 12th or the 13th day of the dark fortnight to the 9th or the 5th day of the bright fortnight of Bhadra (Aug.-Sept.). In either case it lasts for eight days. The more devout observe complete fasting during the whole period, while others fast on the last day only.

Pateti—The Parsi New Year, being the first day Hormazd of the first month Farvardin (Sept. 5). Farvardin associates many historical events of Zoroastrian Iran (Persia) with this day. It is the greatest social festival of the Parsis. In the great gatherings in their Fire Temples the cause of purity and chastity is preached.

Ram-Lila—An open-air amateur dramatic representation of selected episodes from Rama's life. The performance continues all through the Navaratra (the first nine days of the bright fortnight of Asvin) (Sept.-Oct.) and the Vijaya-Dashami (the tenth lunar day). Every day in the afternoon one act is played, the battle between Rama and Ravana being the most popular theme.

Ram-Lila is an important festival observed in the Hindi-speaking provinces.

Ram-Navami—It is the celebration of the birth of Rama, one of the incarnations of Vishnu of the Hindu Trinity, on the 9th lunar day (navami) of *Chaitra* (March-April). Besides Rama, his consort Sita, and brothers Lakshmana, Bharata and Shatrughna are also worshipped. Prayers are offered to them at intervals of three hours. The day is one of strict fasting. The night is spent in worshipping. The learned give discourses upon Rama's life, stressing the excellent points as examples for man to follow. A legend (the *vrata-katha*) relating to the origin of this ceremony with pointers to the merits of observing it is recited. At Puri (*Jagannath*), an incarnation of Rama (*Vishnu*), in his representative figure *Madanamohana* is dressed as Rama and worshipped with great eclat. On this day oblations are offered to the departed ones.

In some cases, preparatory ceremonies commence from the first day of the waning moon. In the evening sermons or discourses (*kathas*) are delivered in the temples of Rama. The birth is celebrated at 12 noon of the ninth day. This day is observed by a great many people as the New Year's day.

Ramzan—This Muslim fast commences from the morning after the new moon of Ramzan is first observed, and is kept each day throughout the month of this name from 4 a.m., or when the first streak of light borders the eastern horizon, till the stars are clearly discerned in the heavens. During the whole period not the slightest particle of food, or a single drop of water or any other liquid should pass the lips. The day is spent in occasional prayers, besides the usual *namaz*, and in reading the *Quran* or the life stories of the prophets. The fast is generally broken by a cooling draught, called *Dandi*. On the 21st and 22nd the Shi'ahs celebrate the night of Ali, the nephew and adopted son of Muhammad, who is said to have died on one of these two nights. They perambulate the streets, carrying a *tabut* and beating their breasts. The odd ones of the last ten nights are called, *Lailat-ul-Kadr*, or "night of power," because it is said the *Quran* descended from heaven during one of those nights. It should be observed as a vigil.

Shiva-Ratri—The 14th night of the dark fortnight in Megha (Jan.-Feb.) is known as the night specially consecrated to Shiva. The 13th night of the waning moon of each month is held as the night of Shiva (Shiva-Ratri). The month of Shrawana (July-August) is very sacred to Shiva. Hence, Shivaratri of Magha is generally called Mahashivaratri (*maha* meaning great).

In the *Manabharata*, Bhishma, the great celibate, most scholarly and valiant prince relates that King Chitrahant of the Ikshvaku dynasty popularised the festival. On this day when the King was fasting, a sage suggested to him that the human soul being one with God, indulgence in pleasure to the self and not infliction of pain to it by fasting would please God best. The King explained that the self of flesh and blood was not the real self and narrated the legend of a fast. In a previous life, the King was born a hunter. One dark night he lost his way in the forest and took shelter for the night on a *biba* or bel (Indian wood apple) tree. The hunter had no food for the whole day and was ruminating on how his family must keenly feel the double misery of starving and missing him. He wept bitter tears. To make himself comfortable and also to have a better view of the lie of the land and approaching game, he tore away and threw down the boughs and leaves obstructing his vision. It so happened that that night Shiva was under that *biba* tree, and the tears and leaves fell on him. Shiva was propitiated by this act of the hunter, although unknowingly done, and declared that if anybody fasted on that day and worshipped him with offerings of water and *biba* petals he would, on death, be accepted in Shiva's heaven.

Another account in later Puranic stories (e.g., *Linga-Purana*) narrates that a hunter, spending the day imprisoned in a Shalva monastery or temple for having failed to pay his debt, was let out on parole. His way home lay through a forest and as night grew too dark to continue the journey, he took shelter on a *bilva* tree with his store of water. Hunger, anxiety and expectation of game kept him awake all through the night. Throughout the day in the monastery he had nothing to do but listen to the incessant recitation of Shiva's name, which had made an almost indelible impression upon his weakened brain. He filled his time by mumbling the term in mock fashion, plucking the *bilva* leaves and throwing them down. Often his water pot was knocked about either by his movements or the wind and its contents trickled all down. Shiva happened to be resting under the tree and was propitiated. The moral is

that acts of devotion, even if not meant to be so, are accepted by the Lord.

Zarthost-No-Diso—The anniversary day of Zoroaster's death. The Parsi Prophet died a martyr's death, at the age of 77, while at prayer in a fire temple, at the hand of Turbaturs. On this solemn occasion of mourning, discourses on the life and teachings of the Prophet form the most important feature.

STATEMENT SHOWING BIRTH, DEATH AND INFANT MORTALITY RATES FROM 1941 TO 1947

| | Birth rate p.m. | Death rate p.m. | I.M.R. per 1000 live births |

ART

Sculpture & Painting

CHARACTERISTICS—Indian Art is almost completely a religious art. Creation as well as contemplation of a work of art is a devotional act. From this it follows that Indian art is predominantly spiritual and contemplative and not concerned with the representation of appearances. Form in Indian art achieves symbolical meaning. Without the help of correct anatomy and perspective, Indian artists fill their works with life from within. Naturalistic to a degree, they give expression to the internal forces of nature through its visible form. The essential qualities of Indian Art are its inherent rhythm and vitality and its plastic power which, in painting and sculpture alike, reaches a perfection hardly ever matched elsewhere.

Indian art, up to very recent times, was anonymous, i.e., hardly any names of individual artists were known or connected with any particular work of art. The arts of ancient and medieval India sprang from the co-operative effort of craftsmen guilds who worked in the employ of rulers or religious institutions. In the course of time a collection of scriptures came into being, the *shilpa shastra*, which laid down certain rules to be followed in the creation of religious images, buildings, etc. While these manuals were originally meant to guide design without interference in the creative work of the artist, they had, in the long run, a sterilizing effect on the artists' imagination and may have contributed to the decline of Indian art.

History—Art in India is always Indian regardless of the religious or dynastic powers which it happened to serve at different times.

The idiom of expression was always Indian. Racial and provincial peculiarities can be traced in all Indian styles but what separates the provinces of Indian art is subsidiary to what they have in common* (S. Kramrisch). The inherent strength of this art enabled it to absorb and overcome numerous foreign influences (such as Greek, Persian, Scythian, etc.) without being altered in its course.

The chronology of Indian art is a difficult problem. The classification of periods given here tries to do justice to the development of styles and is based on a broad dynastic framework.

Early Art.—The excavations of Sir John Marshall and others in the Indus valley at Mohenjodaro and in Harappa in the Punjab discovered an ancient civilisation which in about 3000 B. C. had already reached a considerable degree of refinement. In many forms and symbols Mohenjodaro heralds the beginning of Indian art with a strong Dravidian flavour. Outstanding are animal engravings on seals and little statuettes in terracotta, stone or bronze, amongst which a bronze girl in a dancing pose anticipates later qualities of Indian plastic art.

From Mohenjodaro to about 300 B.C. hardly any traces of artistic activities survive. Yet we know from the description of houses and palaces in the great epics that painting, image making and the minor arts existed. The intervening time saw the arrival of the Aryans in India and the coming into being of the three great Indian religions, Brahmanism, Buddhism and Jainism. The archaic sculptures, made

under the patronage of the Buddhist Maurya rulers, retain vestiges of earlier and more primitive cuts in the large "yaksha" stone statues of Besnagar and Mathura (Muttra). Soberly naturalistic animal sculpture adorns the capitals of Asokan edict pillars.

Beginnings of Classic Art.—After the fall of the Maurya Empire the Sungas ruled in the North, the Andhras in the South (2nd—1st century B.C.). The robust sculpture of earlier stages is made pliable by a penetrating flowing rhythm. The characteristic voluptuous forms of Indian art, through which pulsates the sap of life, make their appearance in the Yakshi figures of the Bharhut stupa rails. A certain angularity and flatness of modelling are gradually being overcome. The art of the period is almost exclusively Buddhist. Its famous centres are Bharhut, Sanchi, Bodhi Gaya, Mathura and Patalliputra (Patna). Bhaja in the Western Ghats and Vengi in South India. Sculpture and relief (and most probably not surviving painting) were used to illustrate religious teaching on the rails, gates and walls of stupas (relic mounds which had become the centres of worship) and in the monasteries and chapels attached to them. In the reliefs depicting Buddha's life or that of his previous incarnations (*jatakas*) Buddha is never presented in human form, but his presence is shown by symbols such as the tree of enlightenment, his footprints, the throne on which he sat or the platform on which he used to walk.

Kushan and Andhra Art.—The first and second centuries A.D. saw the power of the Kushan Empire establishing itself in the north

west and north, while the Andhras ruled the south. The classic progress shows itself in increased plastic penetration of large-size sculptures and in greater vitality. The centre of artistic creation is Mathura (Muttra). Buddhism is still the predominant theme. Mathura creates the Indian Buddha image in direct continuation of the Mauryan tradition of large-size stone figures, overcoming bulk and crudeness in spirited modelling. Frankly sensuous, but in a different way from the nudes of the Greek schools, are the female figures of Mathura and other centres. Most probably originating from aboriginal symbols of fertility, these graceful if voluptuous nymphs fix, for centuries to come, the round-breasted, narrow-waisted, full-hipped ideal of female beauty for the Indian artist. In the South, the *stupa* of Amaravati has yielded a wealth of magnificent sculpture.

Belonging to the first century B.C., the fresco paintings in cave 9 and 10 in Ajanta (Nizam's Dominions) are the earliest well-preserved paintings, though still earlier work survives in several other localities. The high level of competence in Ajanta proves a long, but lost, history of this art.

Græco-Indian Art:—From the first century A.D. onwards a peculiar hybrid art develops in the north-west, the Gandhara country. Through direct contact with Græco-Seythian and Parthian neighbours, Hellenistic forms were applied to Indian Buddhist themes. The Gandhara school is famous for the quantity of its output and for fine workmanship. From an artistic point it is inferior and derivative. Its chief interest is archæological.

THE GUPTA AGE

In 320 A.D. Chandragupta founded the Gupta dynasty in Patna, which was to be the dominant power in India for about 250 years. Pauranic Hinduism came to the fore-front during this period and the most powerful Brahmanical art was produced all over the sub-continent especially in Deccan, Badami and Aihole (Deccan), Udaygiri (near Sanchi), Gwalior and many other places. The art of the Gupta period can best be characterised by the word *spiritual*. The latent spiritualism of earlier periods is now overcome or harnessed to the spiritual representations of superhuman, elementary or cosmic powers. The human figure is only the vehicle of transcendental forces. The artist masters every mood from the lyrical to the terrible. The Buddha images of Mathura and Sarnath are in their classic simplification and perfection of modelling. In their serene spirituality and dignity amongst the world's supreme religious images. The boat incarnation of Vishnu in Udaygiri is of impressive power which changes primitive terror to a deep experience of divine force. The iconography of the Hindu pantheon is developed during this age.

Painting: During the sixth and seventh centuries the Gupta spirit survives in Indian art. In spite of the decline and overthrow of the Gupta empire; therefore, in our classification of styles they are included in Gupta art. The art of fresco painting had then reached its zenith. Ajanta, Bagh (Buddhist) and Badami (Brahmanical) are the chief centres of this art as it survives today, but the Jain paintings of Sittanavasal (South India), the Brahmanical paintings of Tirumalai and the Sinhalese rock pictures of Sigiriya (Ceylon) testify to its distribution over the whole sub-continent.

All these paintings are mostly narrative in character. The painters depict religious legends in easily understandable form, making use of the costume, scenery and manners of their own time. The colours, made from minerals, are bright green, red, brown, yellow, black and blue (Ajanta). The greatest artistic merit of these paintings lies in their rhythmic, flowing outline which indicates the plastic volume of a body. Light and shade are unknown, but forms are modelled with colour shading. Perspective in the Western sense was not known but compositions achieve a surprising degree of depth.

Climax of Indian Art:—During the seventh and eighth centuries sculpture reaches its high water mark. The surging power of Brahmanism fills Indian sculpture with unheard-of virility. Sweeping movement becomes an expression of force; the swelling, rounded forms of human or animal bodies become signs of pent-up energies. The rock-hewn sculptures of Elephanta (near Bombay), Ellora (Deccan) and Mahabalipuram (seven pagodas, near Madras) are the finest representatives of this period. In Ellora, the close union between sculpture and architecture, so typical for Indian art, is carried to an extreme in the Kallisanatha temple which, an enormous building, was carved out of solid rock as a whole.

Medieval Art:—From the 9th and 10th centuries onwards Hindu art conquered every corner of the sub-continent. With wider distribution, local schools and styles developed in the course of time, without, however, breaking its unity. Medieval sculpture was called upon to decorate with stone carvings the innumerable temples that were being built, and to provide images for worship in temples and private chapels in stone, bronze or wood.

While much of the grandeur of the classical age survives in medieval sculpture its simplicity and force are gradually lost in an over-elaboration of decorative by-work such as jewellery and the iconographical attributes of deities. The tendency towards spiritualism is accentuated especially under the influence of *tantric* symbolism. In the end, the demands of iconographical correctness, made on the artist by the priests, suppressed his own imagination and sensitivity and produced an enormous volume of indifferent and mediocre work.

Paintings:—It was, not so long ago, a widely accepted belief that the art of painting died out in the Indian sub-continent after the 7th century and was not revived till the 16th century by the miniature paintings of the Moghul Court. But there is enough evidence now to show that mural painting was practised throughout the medieval period even if, owing to large-scale destruction (especially in the North) and to neglect, little of it survives. Medieval painting is of varying vigour and excellence and tends, like sculpture, towards an over-emphasis of decorative detail and to a hardening of accepted forms. In Ellora paintings of the 8th-10th century are preserved, in Tanjore frescoes of the 11th century, in Polonnaruwa in Ceylon Buddhist work of the 12th century. Later work of the Vijayanagar period is known and a large volume of murals survives in Jain temples and monasteries of Gujarat and in the palaces of Rajputana, all dating from a much later time. In Cochin and Travancore many examples of elaborate Kerala painting can be found belonging to the 16th-19th century. Jain paintings in Conjevaram of the 17th and 18th century illustrate the close affinity between medieval mural art and miniature book illustrations.

The illuminating and illustrating of religious scriptures was a widespread art in the sub-continent even if little of it escaped destruction with the exception of a large number of Jain manuscripts from Gujarat. The earliest, painted on palm leaves, date from the 12th and 13th centuries. They have highly conventionalized figures with sharp noses and protruding eyes. The background is flat red, later blue.

Rajasthani and Pahari:—The middle of the sixteenth century sees the beginning of an Indian School of miniature painting in Rajputana of great vitality, charm and artistic merit. The early Rajasthani paintings are known as *ragmalas*, pictorial representations of musical moods (*ragas*). These paintings have an intimate, lyrical flavour and are full of the loving devotion which the Vaishnava revival brought with its intense cult of Krishna. Rajasthani painting, like the *pahari* schools of the North, is strictly formalised, i.e., human figures, animals and trees are represented in a simplified, conceptual manner but are, nevertheless, very alive and expressive. The plastic quality of the great frescoes is absent, the line very gentle and

sensitive. The colours are flat, yet brilliant and colour schemes vary in the different schools (*kalams*). Perspective is attempted but not in the Western, scientific manner. The *pahari* (Hill) Schools of the Hill States in the North, are similar in type to Rajasthani painting. They flourished in several *kalams* (Kangra, Basohli, Jammu, etc.), from the 17th to 19th century.

Moghul: Derived from the Timurid School of miniature painting in Persia and beginning under strong Persian influence in the middle of the 16th century, Moghul painting developed into an Indian art, if that term can be accepted with reservations. Already Akbar employed indigenous artists who under the guidance of Persian masters were put to the task of illustrating manuscripts. Under Jahangir and Shahjahan Moghul painting reached its climax. Moghul art is a court art, limited in its scope, and overshadowed by the demand for extreme technical perfection. It is individualistic with a clear development of personal styles of different artists which are known by name (a thing rarely heard of in popular Indian art). It is illustrative, and mainly concerned with the representation of court scenes, portraits, historical events, or the skillful rendering of flowers or animals. But Indian painters did not only introduce Hindu themes into Moghul art, but gradually flavoured it with a Hindu spirit. In technical excellence, accurate and delicate drawing, observance and taste Moghul art is unsurpassed. The wrong notion that Moghul court art was responsible for the revival of painting in the sub-continent must be given up though a strong influence on Rajasthani and *pahari* painting is obvious.

MODERN ART

With the eclipse of medieval powers and the arrival of European civilisation, the indigenous arts experienced a rapid decline. Art schools were initiated in the sub-continent on British models in the 19th century and attached to the educational system. In these the arts of drawing, painting and modelling and certain arts and crafts were taught on the lines of Western academic tradition.

At the beginning of this century a revival of traditional and indigenous art was propagated by Mr. Havell, then Principal of the Calcutta Art School, and by Abanindranath Tagore and his followers. By a re-orientation on the lines of Ajanta and medieval miniature painting these men began a powerful and successful art movement, which, known as the Bengal School, very soon influenced artists throughout the sub-continent. An outstanding figure of this school is Nandalal Bose who has great imaginative force. Of the direct disciples of Abanindranath the names of late Suren Ganguly, Asit Bhahtar and Kallimandra Nath Mazumdar are worth mentioning. Jammun Roy, the celebrated artist of India to-day with an international reputation, is also a Revivalist although not belonging to the Tagore School of re-orientation. Janini Roy, first studying the naturalistic approach gradually became interested in the indigenous art of Bengal from which he evolved a style and technique of his own, unequalled among his contemporaries for its excellence of art forms and æsthetic import.

Concurrently with the Revivalist movement, there was a school of painters who believed in the naturalistic approach to art in the painting of portraits or other realistic subjects. Notables in this line are J. P. Gangooly, H. Mazumdar and Atul Bose.

There is yet another School of Art which may be termed Modernist, after its marked tendencies in that direction gaining a wide field of admirers in recent times. The evident leanings of Gaganendranath Tagore and later Rabindranath Tagore in their approach to art, although exclusive and individualistic, nonetheless, justify their being regarded as the precursors of this School. Well-known among these experimenters in this line are Rathin Maitra, Gopal Ghose and Paritosh Sen. The three distinct currents

In the flow of art movements mentioned here apply actually to Bengal alone, but these are traceable in the art world of India generally too.

Institutions—The Government School of Art, Calcutta teaches Fine Art, Indian Painting, Commercial Art, Modelling, Lithography, Wood-Engraving and Draftsmanship and has a Teachership Department for post-graduate studies. The present principal is Kamendra Nath Chakravorty.

Under its successive principals Messrs. Lockwood Kipling, Griffiths, Greenwood, Cecil Burre, Gladstone Solomon and Charles Gerrard,

the Sir J. J. School of Arts in Bombay has grown into a large and many-sided institution. The School favoured thorough training on European lines. Under Mr. Gladstone Solomon a class of mural painting was added in which Western art was fused with Indian decorative principles.

The J. J. School teaches a variety of crafts and industrial arts, such as stone carving, metal work, leather work, textile design, etc. It has also a large commercial art and photographic section. Under Mr. Gerrard interesting modern tendencies developed in painting which seem to indicate a union of contemporary European work with sound Indian traditions.

Many art schools flourish in India and Pakistan in different centres such as Lahore, Delhi, Lucknow, Benares, Shantiniketan, Madras, Mysore, Travancore, Patna, etc., under the patronage of provincial governments, State governments or as private institutions. Indian and Pakistan artists of today strive for new forms of expression which would be in tune with present day life without breaking with the ancient traditions of their country. An impressive solution for this problem was attempted in the moving paintings of Anrita Sher Gil who died prematurely in 1941.

ARTS AND CRAFTS

IT is in the arts and crafts of a people that its heritage of artistic feeling, design and religious belief remainative over many hundreds, if not thousands, of years. The Indian sub-continent absorbed throughout its long history innumerable foreign influences into its arts. Beginning with the fusion of Aryan and Dravidian art during the first millennium B.C., over the influx of Greek, Persian, Hellenistic, central or Asiatic Far-Eastern elements in pre-Gupta and Gupta times, to the blending of Islamic with Hindu forms of design after the Muslim conquest and even to the absorption of European features, the arts and crafts of the Indian sub-continent have adopted new designs, fused them with old ones and infused them with the spirit and the sensitiveness of this country. Two main elements can be discerned, on the one hand we have the geometrical element of the Northern nomads in which all natural forms are reduced to decorative patterns. This element came into the country in successive waves by the Aryans, the Scythians, the White Huns, the Mongols and the Muslims. The other element, which might be taken as belonging to the indigenous South Indian is more exuberant and uses natural forms such as human or animal figures with greater freedom. The desire to decorate even the humblest articles of daily use and to introduce beauty into every feature of life has been inherent in the Indian sub-continent from time immemorial and has even survived, sadly weakened, the industrial revolution of our age. The gay and tasteful dresses of the village folk of today testify to the indestructible artistic sense of this ancient race.

Pottery—In the excavations of Mohenjo-daro and other Indus valley sites pottery of the 4th and 3rd millennium B.C. has been found, of pleasing shape and with very decorative paintings in black or red in which animal forms feature prominently. Up to the present time, the potter's wares have usually been of good functional design and quite often they have been painted. Well known is the glazed ware from Agra. Terra-cotta work has found manifold adaptations throughout the ages, a particularly beautiful one in the terra-cotta reliefs on 17th century temples in Bengal. Glazed tiles were used by the Muslims for architectural decoration. The many coloured tile mosaics of Lahore Fort are famous.

Stone Work—Carved stone work is the principal form of decoration on Hindu or Muslim buildings. Ranging from fully sculptured figure friezes to the finest trellis work it is found on buildings of every epoch. Well known for the skill and the imagination displayed, are the Jain marble temples of Dilwara in Mount Abu and the Hoysala temples of Mysore. Muslim buildings are soberer in their ornamentation. The stone carvers of Ahmedabad excelled in delicate "jali" (stone tracery) work for windows (Shah Sayyid's mosque). On buildings of the Pathan dynasty of India wonderful decorative use has been made of carved Persian or Arabic lettering (Qutb Minar). The use of marble inlay and mosaic work became fashionable under the Moghuls and led to mastery in the costly art of "pietra dura" in which precious stones are inlaid in marble in most delicate and delightful

flower patterns. The stone masons of modern Jaipur are highly skilled in architectural carving.

Wood Work—Wood carving was, as elsewhere, the mother of the art of stone carving. With a fine range of precious timbers suitable for the purpose, wood has always played an important part in building and decoration. Typical are the carved house fronts in Ahmedabad and other Gujarat cities, in Nasik and in the Punjab. 16th and 17th century Jain temples in Ahmedabad are carved in wood and painted right up to their domes teeming with multitudes of figures. They are the prototype of the stone carved temple ceilings of Mount Abu. Richly carved furniture is made today in Kashmir (walnut) and in South India (rosewood and blackwood). Decorative carving in sandalwood for domestic or religious purposes is at home in South India.

Ivory—An inscription in Sanchi (1st century B.C.) says that part of the stone relief work of the Southgate was done by the Ivory carvers of Besnagar. This alone proves the close interrelation of all the arts and crafts in the Indian sub-continent. Still a flourishing art in South India (Mysore, Travancore) and in Delhi, Ivory articles find a ready market inland and overseas. Though of perfect finish, modern work lacks the sensitive sculpturing of earlier work.

Metal Work—With the exception of weaving the metal industry employed and still employs the greatest number of craftsmen and the greatest variety of methods and techniques. There is hardly a place where metal objects are not made in one form or other. Iron and steel, known from early times, were mainly used in weapons. The best damascened blades come from South India and Rajasthan. Brass and copper go to make the plain but beautiful utensils of domestic use (*lota*, *hugga*, etc.) and ceremonial lamps, images, vessels, etc., for religious worship. These articles are cast, hammered, chased, inlaid, enameled or otherwise worked. The South Indian image maker's (*thapali*) bronze or brass castings are a marvel. Well known is *bidi* ware (from Bidar in Hyderabad) in which silver is inlaid in a dark metal alloy or *koffara* ware, the best specimens of which come from Muradabad and the Punjab, in which gold and silver are inlaid in steel. Gold and silver in repoussé or filigree, are worked into fine articles in Kashmir, Lucknow and other places.

Jewellery—From time immemorial jewellery of rich design was made in the Indian sub-continent, and worn by both sexes. Similar beads of polished precious stones have been found in many pre-historic and early historic sites. Classic and medieval sculptures and paintings tell us about the endless variety of jewellery, to describe which would require a large treatise. Flowers being the most primitive form of adornment, many forms of jewellery, up to the present day, derive their name and shape from floral prototypes. Perhaps the finest jewellery work is done in gold enamelling, Lahore and Jaipur giving the choicest pieces. Typical is the in-crustation of gold and silver with gems which are always *cabochon* cut (never faceted as modern European jewellery) for a fuller colour effect.

Another very ancient technique is gold and silver filigree applied to ornaments. Nothing can compare with the exuberant splendour of the country's jewellery, though the skill in stone-cutting and also in setting has not always reached the level of Western craftsmen.

Lacquer Work and Papier Maché—Lac being an indigenous product, lacquer work in various techniques has assumed industrial proportions in parts of the sub-continent. Best known perhaps are the products of the Kashmiri craftsmen, especially in connection with papier maché painting. Lac turnery for furniture, toys and other objects is a widespread art in western India, especially in Kathiawar and Gujarat. In Sawantwadi (Konkan Coast) a small lacquer industry produces artificial fruit, playing cards, toys, etc.

Textiles—No other country, East or West, has ever excelled the Indian sub-continent in the weaving of cotton and silken fabrics. Since ancient times, Indian textiles were in great demand in all world markets. There is hardly a technique or art in fabric making that was or is not known in some part of India or Pakistan. A very short enumeration must suffice. *Patola* silks of Gujarat, in which the threads are variously dyed before weaving; fine silks and brocades from Benares, Murshidabad, Hyderabad, Madras, Tanjore and other places; finely woven woollen Kashmir shawls; delicate muslins from Dacca; tie-dyed fabrics from Rajputana; various forms of dye-painting on cotton (*guldamar*, similar to Japanese *barbie*) from South India; printed silks and cottons from all parts north or south with some of the finest cotton prints coming from Sangamner near Jaipur. As there is no limit to the styles of embroidery, mention may be made only of the *phulkari* work of the Punjab, the colourful embroideries of Kathiawar and the world-famous Kashmir shawls. Carpet making is at home in the North. Especially under Akbar in the 16th century, gorgeous rugs and carpets were made, exquisite in colour and fabric, though the finest work from Persia was never equalled.

It has been estimated that there are still 2½ million handlooms in India and Pakistan and the industry though depressed by the competition of the power loom, survives with part of its old artistic sense and skill.

Angolite—Worth mentioning are the artistic designs made by the women with coloured powders on the floor or on the doorsteps of their houses as festival decoration. Preserving the age-old designs of religious symbolism, they are known in all parts of India in a great variety of patterns (*angolite* in Gujarat, *alponta* in West Bengal, *kolam* in South India, etc.).

There can be no doubt that the skill and artistic sense of the craftsman is still alive, perhaps slumbering. As Mr. Fred H. Andrews said, "deterioration is not the fault of the craftsman but of his employer." Well directed official and private patronage can do much to save the cultural heritage of the arts and crafts in India and Pakistan which may, otherwise, fall a victim to progressive industrialisation.

ARCHAEOLOGY

ALTHOUGH the sub-continent is one of the most ancient lands in the world and the cradle of an ancient civilization, it has long remained in the background owing to the absence of written histories going back to the earliest recorded period as in the case of other ancient lands such as Egypt or Mesopotamia. Over a hundred years ago the foundation of Indian Archaeology was laid by Prinsep, who first deciphered the ancient Brahmi script and thus opened the way to a knowledge of the edicts of the Emperor Asoka and other ancient documents, which till then were a sealed book to the people of India and Pakistan. Since then a large number of scholars Indian, Pakistani and European have helped in building up the edifice of Indian and Pakistani Archaeology which though fairly comprehensive is still incomplete in several respects.

PRE-HISTORY

The story commences with the beginnings of human existence in the vast sub-continent. The roughly chipped stone implements discovered in various parts of the sub-continent, particularly in the eastern districts of the Madras Province, and the valleys of the Sabarnati, Naranda and Godavari show the first attempts made by man to work his tools with which to master his surroundings. Two of these palaeolithic implements were found in association with the bones of extinct animals, one at Bhutra in Narsingpur district, C.P. on the banks of the Naranda and the other at Mungi on the upper Godavari. The age of the palaeoliths determined mostly by geological considerations may be anywhere from 50,000 to 200,000 years, and the great interval of time between the microlithic and the palaeolithic periods is shown by nearly a hundred feet of alluvial and wind blown loam deposits in the valley of the Sabarnati river.

Stone Age—The whole field of pre-history is receiving increasing attention, which is expected to systematise our knowledge of the earliest inhabitants of the sub-continent and systematic work has been recently attempted at several sites in Madras, and Mayurbhanj, Rajpura and Baroda State.

Neolithic man, who used a large variety of polished stone implements, was more widely distributed throughout the continent, particularly in the Peninsula and the Vindhya regions and his skeletal remains have for the first time been unearthed in Gujarat. On the other hand the megalithic tombs which occur in great variety of forms in the central and southern parts of the Peninsula, belong to the iron age and some even persist to our own age. The knowledge of metals developed differentially in the North and the South. Thus in the North the copper implements of the Gangetic Valley and the copper and bronze antiquities of the Indus culture exclude any knowledge of iron. In the South, however, though certain recent finds in Raichur District do not exclude the knowledge of copper smelting in the Peninsula, the neolithic settlements of the Bellary district seem to have been immediately followed by the knowledge of the smelting of iron, as evidenced by the large-scale furnaces which stand in the shape of conical mounds notably at Kudatol. It is clear, however, that while copper and bronze were known in the North in the third millennium B.C. the South may have been generally content with the use of stone implements right down to the first millennium B.C. until stone was supplanted by iron. It is remarkable that in some of the localities in the ancient Deccan, comprising the Bombay Karnataka, the Ceded Districts of Madras, South Hyderabad and North Mysore, stone implements and painted pottery are followed by antiquities of the regular historic period. This gives the hope that a regular sequence can be established and links forged between the history and the pre-history of the Deccan.

INDUS VALLEY

The most interesting and significant phase of the pre-historic civilization of the sub-continent is that represented by the excavations at Harappa in West Punjab and Mohenjo-daro in Sind. These have completely revolutionized ideas on this subject and proved that as far back as the 3rd millennium B.C. the sub-continent was in possession of a highly developed civilization with well-planned and populous cities, well built houses and public buildings of brick, carefully constructed wells and a system of drains and many other amenities not always enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjo-daro and Harappa there are the remains of some 6 or 6 cities super-imposed one upon the ruins of another.

Mohenjo-daro and Harappa—The structures that have so far been exposed at Mohenjo-daro include a large bath, surrounded by fenestrated galleries and halls. Another massive and extensive building found at Harappa appears to have been a public granary. All the structures were built of well burnt brick and many of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery, some remarkable statuary in stone and copper, engraved seals of stone, ivory and paste, some of them exquisite specimens of glyptic art, copper implements and vessels, terracotta figurines and toys, shell ornaments, potteries, both painted and plain, and polished stone weights progressively ascending in a regular scale—all denoting a well-developed artistic sense and business-like habits.

These discoveries establish the existence in Sind and the Punjab during the 3rd millennium B.C. of a highly developed city life; and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the citizens at least equal to that found in Sumer and superior to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of wheat found at Mohenjo-daro and Harappa resemble the common variety grown in Pakistan today. Their food appears to have included bread, beef, mutton, and pork, the flesh of tortoises, turtles and gharial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped bull, the buffalo, a short-horned bull, the sheep, pig, dog and elephant. Besides gold and silver they used copper, tin, bronze and lead; they were familiar with the arts of spinning, weaving and the cultivation of cotton, and had attained a high degree of proficiency in the Jeweller's and potter's arts.

That they possessed a well-developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well-executed animal devices and pictographic legends in an unknown script. The method of the disposal of the dead during the Indus Valley period, as revealed by the excavations at Harappa during 1946, was that of inhumation. The body usually oriented from north to south and laid supine, was buried in a grave together with funerary pottery; sometimes a few ornaments and toilet objects were also placed. A unique example was that of a "cotton-burial" with reed-shroud, the only one of its kind so far known in the Indus Valley but of a type common in contemporary Mesopotamia.

Previous excavations revealed "pot-burials" which contained a skull and some other human bones. These are seemingly post-exposure burials, and are later in point of time than the proper Harappa burials.

The 1946 excavations also discovered fortifications in the western part of the city of Harappa around an area of 450 yards by 250 yards. The main wall, built of mud-bricks, is 40 feet wide and now stands to a height of over 30 feet. It is battered both internally and externally and has a baked-brick facing on the outside. The wall is reinforced at intervals on the outside by rectangular bastions. The discovery of defence points to a "citadel-sub" under whose shadow was carried on the highly centralised life of the Indus people.

Other Sites—The late Sir Aurel Stein's survey of the whole of Baluchistan and his last journey in Bahawalpur and Las Bela States have added to our knowledge a number of ancient sites of the pre-historic epoch. Among the 20 or more sites in Sind, discovered mostly by the efforts of the late Mr. Majumdar, at least three are now recognised as representing distinct phases, some earlier and some later than the main culture of Harappa and Mohenjo-daro.

The Indus Valley culture has now been traced in the north east as far as Rupar in the Amritsar District of East Punjab relatively close to the watershed of the Sutlej and Jinnah and it is therefore highly improbable that this civilization was confined to the Indus Valley. There can hardly be any reasonable doubt that future researches will trace it or its successors into the valley of the Ganges where already painted pottery has been traced in the earliest levels. In the south-east, this pre-historic culture has been traced upto Limbdi in Saurashtra. Of the long period of more than 2,000 years that separates the pre-historic monuments referred to above from the historic period little is yet known except some painted pottery but there is every hope that this gap in our knowledge may be filled in by further finds in western U.P. and East and West Punjab. (Mention of these excavations is also made in the relevant section under 'Pakistan'.)

BUDDHIST MONUMENTS

From the time of the Mauryas, i.e., 4th century B.C., the history of architecture and of the formative arts is clear and can be traced with relative precision.

The earliest monuments of the historical period that have come down to us relate to the Mauryan period from which time onwards the main currents are pretty clear. The Mauryan monuments include certain caves in the Barabar hills near Gaya, the remains of a pillared hall and wooden palisade near Patna (ancient Pataliputra), a number of stupas at different places, built of large sized bricks traditionally attributed to Asoka, and a wealth of minor antiquities such as sculptures, terracottas, beads, etc., recovered in the excavations at Patna, Taxila (Bhir Mound), and Sarnath and in course of the sewage operations at Patna. Special mention must be made here of the *stupa* at Piprahwa opened by Peppé in 1885, which yielded a large stone box containing an inscribed steatite or soap-stone reliquary with a number of relics and beautiful precious stones now preserved at the Indian Museum, Calcutta. The inscription written in characters of the 4th-3rd century B.C., speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas.

Asoka's edicts—The rock and pillar edicts of Asoka (c. 272-232 B.C.), deserve special mention. His major rock edicts are engraved in seven places, ranging from Shahbazgarhi in the Peshawar District in Pakistan to Yerragudi in the Karun District in Madras. Among the thirteen pillars of Asoka (besides the Elephant capital of a 14th at Sankisa and a fragment of a 15th at Benares) ten bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured.

The Mauryas were followed in the second century B.C. by the Sungas in the east, while in north-west Græco-Bactrian rulers were gradually extending their sway. The Buddhist stupa at Bharhut (Nagaud State, Central India) is the most typical and remarkable monument of this period illustrating the simple but expressive character of the art. Besides dedicatory inscriptions, the labels inscribed on the Bharhut panels are of unique importance. Antiquities of this period particularly terracotta figurines with exquisite ornamentation have been found in the excavations of city sites all over the North, notably Kosam and Rihita near Allahabad, Ahichchhatra near Bareilly, and Benares and Patna.

Sanchi—The best preserved in the series of early Buddhist monuments are the magnificent Buddhist remains at Sanchi in Bhopal State. Here the main stupa of which the core probably belongs to the time of Asoka, was later faced with stone and surrounded by a stone railing with four great gateways, one at each cardinal point, something about the first century B.C. Besides the stupa, a number of other buildings, temples, apsidal halls and monasteries of different periods form a splendid galaxy, illustrating the principal phases of the religion of the Buddha, from its early days to its decline.

Taxila—The extensive remains of the ancient city of Taxila, near Rawalpindi in Pakistan, are among the most important in the land, constituting three different cities that flourished in adjacent sites in successive epochs and a number of monastic establishments centered around stupas, situated in the suburbs or perched on the tops of hillocks in the vicinity. For over a quarter of a century, Sir John Marshall's labours here have served to elucidate the splendid history and culture of this centre, the meeting-place of the three great civilizations of Greece, Persia, and of India and Pakistan.

The most prosperous of the cities was an Indo-Scythian city, now known as Sirkap, dating from a century on either side of the Christian era with regularly planned streets, houses and palaces, the antiquities from which including exquisite jewellery, beads, coins, all kinds of household objects and pottery, etc. form the bulk of the exhibits of the fine Museum on the spot.

Mathura—Mathura, one of the most important religious and art centres in the north from ancient times was galvanised into activity perhaps from the beginning of the Christian era, if not earlier. Here the abundance of red sandstone in the neighbourhood was availed of by the followers of all the religions and some of the earliest Brahmanical and Jain images were manufactured here in a peculiarly attractive and playful though sensuous art. From Mathura the Buddha image and some of the Hellenistic motifs travelled further to the east and south and even to the distant Buddhist school of the lower Krishna valley as at Amaravati, Nagarjunikonda and other places. By the fourth century A.D. the Hellenistic element in native art was, however, completely absorbed when under the stimulus of the Gupta Empire it reached its golden age.

THE GUPTA AGE

The rise of the Gupta dynasty early in the fourth century was a signal for the high water mark of Hindu achievement in literature, art and sculpture.

The best sculpture of this period has been found at Sarnath, Mathura, Deogarh and Garhwa in the United Provinces, while examples of terracotta and minor arts have been found in all the excavations in the North. Sarnath, where Buddhism first saw the light of day, was the most prosperous centre of Buddhism at this time and, significantly enough, is the centre of a Buddhist revival in India, the Mulgandhakuti vibhara founded here by the Mahabodhi Society, having received from the Government of India

three Buddhist relics recovered from excavations at Nagarjunikonda in Madras, Mirpurkhas in Sind and Taxila in West Punjab.

In the field of religion the Brahmanical faith was steadily in the ascendancy while Buddhism still held its own, the intellectualism of the age finding expression in a broad spirit of tolerance. Simplicity of conception and restrained ornament is the keynote of the architecture of this period, examples of which are found at Sanchi, Bhimara, and Deogarh in stone and Bhitarraon, Ahichchhatra and other places in brick. A well known monument of the Gupta period is the iron pillar standing in the middle of the open court of the mosque at the Qutb near Delhi, which has an inscription referring to King Chandragupta identified with Chandragupta II circa A.D. 370-413. It is wonderful to find that a bar of wrought iron of such dimension should have been made at this early period and still more surprising that not a speck of rust appears anywhere on it in spite of the weather action of 15 centuries. Other interesting examples of wrought iron are the beams from Konarak, 12th century, and the iron pillar at Dhar, C.I., dating back to the time of the Paramara King Bhoja early 11th century.

INSCRIPTIONS

We now come to inscriptions, of which vast numbers have been brought to light and which are particularly numerous in South India. They have been engraved on varieties of materials, but principally on stone and copper. The former are mostly associated with temples of which they record the construction or donations, while the copper plate records are usually grants of land made by kings on special occasions. In either case, the mention of the exploits of the donor and his ancestors and the dates (where specified) give the student of history, valuable contemporary material.

The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi, the latter being confined to the north-west of the sub-continent. Brahmi was read from left to right, and from it have been evolved all the modern scripts of India. The Kharoshthi script was written from right to left, and was a modified form of the ancient Aramaic alphabet introduced into the north-west of the sub-continent during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi.

The earliest datable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of this has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshwar in Pakistan to Nalanda in the Nepal Terai, from Girnar in Saurashtra to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Yerragudi in the Kurnool District of Madras showing by the way the vast extent of territory held by him.

The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 260 as the date of his coronation. His Rummindei pillar inscription, again, discovered in Nepal Terai, now settles beyond all doubt the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Benagar Pillar, at Benagar, near Bhillai, C.I., which records the erection of this column, which was a Garuda Pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, an envoy of King Antialcidas of Taxila. Heliodoros is herein called a *Bhagavata* which shows that though a Greek he had become a Hindu and a Vaishnava. Another inscription worth noticing in this connection is that of Cave No. 10 at Nasik, in which Chavandata, who calls himself a Saka or an Indo-Scythian, granted three hundred thousand kula and sixteen villages to gods and Brahmins and annually fed one hundred thousand Brahmins. Here is another instance of a foreigner having embraced Hinduism.

The part played by Numismatics in reconstructing the continent's ancient history may also here be mentioned. The earliest coins are those of the silver punch-marked series, going back at least to the 4th century B.C., and found all over the land often in large hoards, which are still being systematically studied. Next come the cast coins issued by the various tribes and rulers in the north of the sub-continent. For the Indo-Greek, Indo-Scythian and Indo-Parthian periods, coins are our almost exclusive source of information, having revealed the names of scores of rulers, otherwise unknown. The entire genealogy, succession and regnal years of the kings of Saurashtra and surrounding territories, known as the Western Kshatrapas (2nd to 4th centuries A.D.) has been built up on the numerous coins issued by them.

ARCHAEOLOGICAL DEPARTMENT

The work of the Archaeological Department is primarily twofold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archaeological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archaeology. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established most of the Archaeological Circles that now obtain placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities.

Under the direction of Sir John Marshall, first Director-General of Archaeology under Lord Curzon's scheme, a comprehensive and systematic campaign of repair and excavation was prosecuted and at present the Central Governments bear all expenditure in connection with the preservation and maintenance of monuments, as well as with excavation and research. Under later Directors-General it was continued with equal vigour and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila (in Pakistan), Paluduputra, Sanchi in Bhopal, Sarnath near Benares, Nalanda in Bihar, Palpurpur, and Nagarjunikonda in Madras, in the Indus Valley at Harappa in West Punjab and Mohenjodaro in Sind and at Rannagiri (ancient Ahichchhatra) in Bareilly District, U.P., where an extensive walled town inhabited from before the fourth century B.C. to the ninth century A.D. has been unearthed stratum by stratum with far-reaching results for the study of archaeology throughout the sub-continent's age-long history. Dr. R. E. Mortimer Wheeler, the late Director-General of Archaeology in India, opened an excavation training centre at Taxila in 1944, where a large number of students were trained in the latest methods of archaeological excavation. He also carried out excavations at the ancient port of Arikamadu near Pondicherry, which have yielded vestiges of Roman intercourse and have thus helped in the dating of an associated Indian culture of the 1st and 2nd centuries A.D.

In 1947, excavations were carried out at Brahmagiri and Chaudravalli in the northern part of Mysore State. At the former site, several megalithic burials known as 'cists' and 'pit-circles' were uncovered. These belonged to a period between circa 200 B.C. and A.D. 50. Besides, remains of a crude Chalcolithic culture (circa 800 B.C.-circa 200 B.C.) those of the Andhra culture (1st to 3rd century A.D.) were also obtained. At Chaudravalli remains of only the 'Megalithic' and 'Andhra' cultures were obtained. During 1948, excavations were undertaken under the direction of

Mr. B. B. Lal at a site called Sisupalgarh near Bhubaneswar in the Province of Orissa. Here, a fort, roughly square on plan, with each side measuring about $\frac{1}{2}$ mile was brought to light. The fortification wall, now standing up to an average height of 25 to 30 feet, is pierced through by eight large gateways, two on each side. Around the fort flows a streamlet which seems to have served as a moat. The fort was built about 200 B.C. and seems to have been under continuous occupation till about the 4th century A.D.

Museums.—The Archaeological Survey of India has devoted great attention to the organization of museums as centres of research and education. It maintains the archaeology section of the Indian Museum at Calcutta, small museums at the Forts at Delhi and the Central Asian Antiquities Museum at New Delhi. Local Museums have also been established at the excavated sites of Sarnath and Nalanda, with the object of keeping the principal movable antiquities recovered at these sites in close association with the structural remains to which they belong.

Duplicates of antiquities from Mohenjo-daro and Harappa have been widely distributed among other museums.

The epigraphical material dealt with by the Archaeological Survey has enabled the history of the various dynasties of the sub-continent to be established on a firmer basis and in greater detail. The "Epigraphia Indica" is now in the 27th volume, a revised edition of the Asoka inscriptions has been recently published, while the companion volume of post Asokan Brahmi inscriptions is under preparation along with two others devoted to the records of the Gupta and Kalachuri epochs. The volume of work done in South India, which is particularly rich in lithic records, will be apparent from the fact that over

20,000 inscriptions have been copied and noticed in the Annual Reports on South Indian epigraphy and a large number published in *extenso*.

THE STATES

The example of what used to be called British India stimulated several of the progressive States to create their own Archaeology Departments. Prominent among these must be mentioned Hyderabad, Mysore, Gwalior, Baroda and Jaipur. In Hyderabad the systematic and scientific treatment of the frescoes at Ajanta is an outstanding achievement of the Archaeological Department of the State. Besides this, attention has been devoted to the rock-cut temples at Ellora and many other structural temples. Among the Islamic monuments the great mosque of Gulbarga and the Bahamani mosque at Bidar have been fully conserved. Of late, systematic excavation of ancient sites as at Maski and Palthan has been a regular feature of the Department's work, the latest excavations at the Andhra city site of Kondapur and at Kallur in Raichur being fraught with results of immense importance.

The Mysore Archaeological Department has completed nearly half a century of its existence. The first Director, Mr. B. L. Rice, published some 10,000 inscriptions in 12 volumes of the Epigraphia Karnatica. This progress has been well maintained, and the conservation work has rescued many famous temples, such as the Kesava temple at Somanathpur, and the temples at Halebidu and Halebidu. Excavations conducted at Chandravalli and Brahmagiri have been very fruitful.

In Gwalior the Department, established in 1913 has done excellent work in exploration of ancient sites, such as Pawaya, Ujjain, Tarnagar and Mandasor. The conservation of the rock caves and other ancient monuments and the maintenance of a good museum are among the other achievements of the Department.

In Jaipur excavations initiated by the late Rai Bahadur Daya Ram Sahni have revealed the existence of a unique Buddhist establishment at Bairat and a city site near the Sambhar lake. The excavations at Bairat, an ancient commercial and industrial mart, have brought to light large hoards of punch-marked and other coins of early date, and the work now started at the great site of Karkotnagar bids fair to assume great importance.

The Archaeological Department of the Baroda State has done valuable work in the listing of monuments and the exploration of several sites including Anreli in Kathiawar and Pattan in Gujarat.

The Archaeological Departments of Indore, Mayurbhanj, Travancore, Jodhpur, Kashmir, Pudukkottai, Patna, Rewah, Cochin and Rajpura have also done good work.

The recently amended Ancient Monuments Preservation Act has established a system of licenses for scientific excavations to non-official bodies. The first Society to take part in this work was the American School of Indian and Iranian Studies which, co-operating with the Boston Museum of Fine Arts, organized an expedition for work at Chanhudaro in Sind in 1936. Here several phases of the pre-historic culture of the Indus Valley represented by Harappa were unearthed. Unfortunately the work was discontinued after the first season. The University of Calcutta conducted excavations at Bangorh in North Bengal for a number of years, with success and the Punjab Exploration Fund did work at the site of Bhira in West Punjab. Recently the University of Allahabad with the active co-operation of the Department of Archaeology has undertaken short excavations at the ancient site of Kansambli in the Allahabad District where some work was done previously by the Department.

ARCHITECTURE

THE first comprehensive work, accessible to lay readers, to give a history of styles in architecture in the Indian sub-continent is Mr. Percy Brown's *Indian Architecture* in two volumes which marks a definite advance in the treatment of the subject over Fergusson's *Indian and Eastern Architecture* which, for many years, was considered to be the standard work.

The chief characteristics of our architecture, especially in its later stone phase, are (a) its use of heavy masses; (b) construction based on vertical not lateral pressure, i.e. without true arches or true domes; (c) its plastic treatment and close relationship with sculpture, (d) its undeveloped treatment of space and (e) its spiritual significance and symbolism.

Hindu Styles.—In Harappa and Mohenjo-daro and other sites of the Indus valley extensive cities have been discovered under the mud and sand of the river. These cities were built from c. 3000—2000 B.C. by a people whose chief occupation was trading. The buildings, which are carried out in brick in "English bond", are plain, functional and without great artistic merit. They are mainly houses, store houses, baths and wells and no certain traces of temples or palaces have yet been found. The city drainage system was perfect. The corbelled arch was used, the true arch being unknown.

With the invasion of the Aryan tribes a new architecture came into existence which, originating from the village, developed into the city and palace architecture of the epic period. Wood being the only building material, hardly any visible traces of this period exist. The main forms were the long house with a vaulted roof constructed with bamboo or reed and with horse-shoe shaped "sun windows" on either end; circular village huts (and perhaps shrines) and the wooden fence with wooden "cow-gates". In the South are found "dolmens" covered with a single slab of stone, and in Rajgirha, the ancient capital of Maghada, cyclopean fortifications in stone were carried to a height of 12 feet.

With the establishment of a large political power under Asoka the use of a more permanent stone architecture was gradually introduced. Monuments of this period include (a) 13 monolithic edict pillars, some with beautifully carved animal figures on bell shaped capitals (Persian influence); (b) remains of a large, three storied wooden palace near Patna supported on stone pillars; (c) several stupas or Buddhist relic mounds built largely in brick and (d) a group of rock-cut caves in the Barabar Hills in Bihar.

Buddhist Styles.—During almost four centuries, from 200 B.C. to 200 A.D., under

two great dynasties, the Sungas of the North and the Andhras of the South, Buddhist zeal gave us some of our most remarkable monuments. In this period the stupas are stone-faced, with a stone casket and umbrella on top, surrounded by stone railings in which are set four doorways or *toranas*. All forms though carried out in stone, betray their wooden origin. Sculpture and relief are used profusely to decorate the sacred shrines. The most famous stupas are those of Sanchi (Bhopal State), Barhut (C.I.), Buthi Gaya, Sarnath and Amaravati in Madras Presidency which is the latest and most elaborate one.

To serve priests, monks and lay worshippers, temples and monasteries were built, mainly in brick and wood. Little of these has survived but their exact replicas have come to us, carved from solid rock in the shape of cave temples and monasteries; the largest caves (Karli, 124 ft. long 46 ft. wide and 45 ft. high) reach considerable proportions.

Buddhist caves are generally of two types—*chaityas* or chapels, and *viharas* or monasteries. The *chaityas* are long apsidal buildings with a vaulted roof and a horse-shoe window over the entrance. The interior is divided into a nave for the priests and aisles for the lay worshippers by means of a double row of pillars. At the

apsidal end is a *stupa*. *Viharas* are rectangular halls surrounded by cells and having (in a later development) a *sanctum* in the centre of the back wall containing a Buddha image. The most important groups of caves of this period are those of Bijaja, Ajondane, Pitalkhota, Beda, Nasik, Ajanta, Ellora, Junnar and Kanheri, all in Western India.

During the Gupta age (c. 350-650 A.D.) a flood of creative energy swept over India. It is during this period that the later Hindu temple begins to take shape. Wood architecture is gradually replaced by stone masonry. Builders used the simple construction of pillar and bracket supporting beams. Arches except corbelled arches, were not used. Pillars and beams are, preferably, monolithic i.e., made from single large slabs of stone. Masonry consists of large, very well worked stones bonded without mortar.

The reawakening of Brahmin culture soon developed its own forms for houses of worship. Typical of the age are flat roofed temples consisting of a square *sanctum* with a pillared porch. They are found in Udaygiri (Bhopal) Sanchi, Tigowa, Bhimara and Naclma Kuthara (C.J.) and in Aihole (Lad Khan Temple). Some have another cell on the roof which may mark the first beginning of the *shikhara*. In the Ganges valley originates a form of brick temple consisting of a square shrine with a pyramidal roof which is made up by duplicating the roof twice or repeatedly (Bhatnagar near Cawnpore). The northern temples have pillars with bell-shaped capitals or with "vase and flower" capitals, the Deccan temples use square pilasters with heavy brackets.

Temples—During the 900 years from 600 to 800 A.D. the medieval temple is established in its main forms and styles. The typical temple consists of a cell which houses the image (*Garbha Graha*—womb-house), and a pillared hall (*mandapa*). Originally not connected, these two parts were joined by an intermediate chamber (*antarala*). Leading into the main hall are one or several porches (*ardhi-mandapa*). The cell is surmounted by a *shikhara* (spire or pyramidal roof) which is the main distinguishing mark of temple styles. The whole temple may be raised on a platform and be surrounded by an enclosure through which leads a gateway (*gopuram*).

At Bhuvaneshvar in Orissa, the northern style unfolds in many beautiful temples (from 750 A.D.). The rock-cut temples of the "seven pagodas" at Mahavallipuram near Madras, excavated by the Pallavas of the 7th century, show how the earliest southern temples grow out of common forms of preceding times; the house, the village shrine, the Buddhist *chaitya* and the many-storied Buddhist monastery. Under the Rastrakuta family which overwhelmed the Chalukyans in Western India during the 8th century, rock-cut caves and temples, Shaiva in character, were excavated in Elephanta and Ellora (Deccan). The Kailasanath temple of Ellora is a complete Dravidian structural temple carved in solid rock.

The time from the 8th to the 13th century is the great age of temple-building in India. The three main styles are now clearly differentiated, the northern or Indo-Aryan style emphasising the perpendicular, the southern or Dravidian style stressing the horizontal, while the Chalukyan or western style combines elements of both. Apart from Bhuvaneshvar in Orissa, the northern style comes into full flower in Khajuraho in Bundelkhand, in Ramayana (Mount Abu), Gujarat (Modhera), Osa in Marwar, in the Deccan (Ambar Nath) and many other places.

In the south, temple architecture develops independently through its successive phases. Typical of the southern temple is the addition of spreading pillared halls and long covered corridors. The temple compound expands into a whole complex of buildings surrounded by large walls. The entrance gates are marked by impressive pyramidal towers (*gopurams*) which grow larger in time and far exceed the *vimana* in size. Famous Dravidian temples, in their order of origin, are the Kailasanath of Conjeevaram, the great temple of Tanjore, the Vithala temple of Vijayanagar and the Meenakshi temple of Madura.

Indo-Saracenic Architecture—This begins with the 13th century after the permanent occupation of the Muslims. Their first mosques were constructed of the materials of Hindu and Jain temples, and sometimes with comparatively slight alterations. The *Quwat-ul-Islam* mosque near the Qutb Minar in Delhi and the *Ahrar-din ka-jhonpra* mosque in Ajmer are the best examples of this kind. Gradually new methods and principles of construction were introduced from Persia and other Islamic countries of the West. The Muslims brought the arch and the true dome, they used mortar (which became necessary because of the lateral pressure exercised by arches) and they introduced novel types of buildings (the mosque and the tomb). They laid greater emphasis on the perfection and the proportions of interior spaces than the temple builders who did not require lofty spaces.

The early Pathan architecture of Delhi was massive and at the same time characterised by elaborate richness of ornamentation. The Qutb Minar and the tombs of Iltutmish and Alauddin Khilji are typical examples. The tomb of Ghiasuddin Tughlak at Tughlakabad, the Lodi tombs, and lastly the tomb of Sher Shah at Sasaram in Bihar clearly illustrate the subsequent progress of Pathan architecture.

The Rulers of the Bahmani dynasty of Gulbarga and Bidar were great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in the country in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes.

"Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu.

In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jamii Masjid, Gagan Mahal, Mihari Mahal, Ibrahim Rauza and Mosque and the Gol Gumbaz. The latter is supposed to have the largest dome in existence.

Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Mohammedan features. Noteworthy among the Emperor's buildings are the tomb of Humayun and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his tomb at Lahore and the tomb of Iltmad-ud-daula at Agra are the most typical

structures. The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail and it was during his reign that the luxurious buildings in the forts at Delhi and Agra and the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, were constructed. The Moti Masjid in Agra fort is another surpassingly pure and elegant monument of his time.

Modern Architecture—With the arrival of European western styles of architecture were soon introduced. The Portuguese built churches and palaces in an agreeable baroque style. The early British colonial style of which many pleasant examples survive, especially in South India, was appealing in its simplicity and its clever adaptation to the local climate. During the 19th century public buildings were erected in a hybrid style composed of classic, romanesque, Gothic and Indian elements comparable with the derivative styles of the Victorian epoch, in Europe. In more recent times, two schools of thought have fought for supremacy; the one propagating a revival of indigenous art as still practised by Hindu and Muslim "master builders" surviving in Rajputana and other parts of the country; the other proclaiming the development of a modern architecture on western lines. The western school has found more widespread acceptance. The work of building the new capital in Delhi was entrusted to Sir Edwin Lutyens and Sir Herbert Baker. This most ambitious scheme, incorporating the design and planning of a whole new city, has led to a new style of official architecture, the merit of which is still a controversial question. The contemporary use of reinforced concrete structures, though indubitably cheaper, safer and faster, emphasises the dangers of standardisation and suppression of national character. The solution to the problem will have to be found by a young generation of architects who, while fully trained in modern methods of construction, are yet conscious of the glorious artistic heritage of their country.

A School of Architecture, recognised by the R.I.B.A., is part of the Sir J. J. School of Arts in Bombay. Its professors of Architecture since 1913 have been R. W. Cable, H. Foster King and Claude Batley. The present Professor of Architecture is Mr. S. S. Reuben, F.R.I.B.A. The School has a full-time five-year course in architecture which was brought to the Final R.I.B.A. standard in 1941 in respect of course and examination. Since 1947 the School has been conducting its own examinations and awarding certificates at the end of the 3rd and 6th years.

The Examinations in Architecture of the Government of Bombay will continue to be taken by external (or private) candidates by submitting specified Testimonies of Study, and on passing will be granted the Elementary, Intermediate, Advanced and Diploma Certificates.

The School Final Certificate in Architecture is on a par with the Government Diploma in Architecture in respect of course and examination and both are recognised by the Central and Provincial Governments as also by the Bombay Municipality for granting Surveyor's Licence to practise.

The Indian Institute of Architects which was affiliated to the Royal Institute of British Architects in 1925 is a professional body of Architects in Bombay whose members are scattered all over India and Pakistan. The R.I.B.A. Examination Board in India, under the auspices of the R.I.B.A. conducts the Special and Final R.I.B.A. Examinations in Bombay once a year.

LITERATURE

Modern Indian Literature

THE common characteristics of present-day literary aspiration and activity in India in the main are two; namely, an attitude of realism and an angle of world-vision as against narrow nationalism and cloud-capped idealism of the immediate past. The result is a kind of scientific humanism. Man is the hub of the universe, but man as understood with the aid of the scientist's gospel and gadgets. But soon the study of man in all his integrality, including his entity as Spirit, will become the aim of Indian literature, thus falling into line with the age-long tradition.

In this bird's-eye view of current Indian literatures only names of important authors and here and there of their well-known works can be given. And this is all that is attempted here together with an indication of the trend towards the future of the Indian literatures.

During 1948, however, quite a large number of the literary books in the various provincial languages, which were published, dealt with Mahatma Gandhi and had the penultimate period of the country's political struggle for their background. Equally large was the output of periodical literature.

Modern Assamese literature dates back to the publication of *Jonaki* (Moonlight), a monthly magazine, published in 1899, and conducted by Lakshminath Bez Baruah, Chandrakumar Agarwalla and Hemchandra Goswami. This trio essayed in every branch of literature and soon others followed—poets like Kankakanta, Ambicigiri and Nabinilala Devi; novelists like Rajanikanta, Padmanabhi Gobain Baroach, Saratchandra Goswami, Puziruddin Ahmed and Mouli Malizuddin Hazarika; and research scholars like Dr. S. K. Bhuyan, Dimeshwar Neog, Kaliram Medhi and Birinchi Kumar Barua.

Bengali literature came into its own during the time of Raja Ram Mohan Roy. Then came the poet Michael Madhusudan Datta, the novelist Bankimchandra and the many-sided genius Rabindranath, Satyendranath Dutta, Sarat Chandra Chatterji, the prince among story-writers, Kazi Nazrul Islam, the poet of the people, and Mir Musharraf Hossain, Jafur Rahman and Begum Rokaya among young Muslim writers, Ramnanda Chatterji and Pramatha Choudhuri, Gokul Nag, Premendra Mitra, Jibanananda Das, Buddhadeva Bose, Achintya Sengupta, Ananda Sukanta Roy, Bishnu De, Manik Bandyopadhyaya, "Bannaphul," Bibhutibhusan Bandyopadhyaya, Tarasankar Bandyopadhyaya, Saikajanan Mukhopadhyay, Sudhindra Datta and Prabodh Kumar Sanyal among young Hindu writers.

Mr. Satinath Bhaduri's novel, *Jagari*, has been an outstanding piece of fiction during recent years, while Mr. Abanindranath Tagore's autobiographical works, Mr. Achintya Kumar Sen Gupta's experiment with the dialect of East Bengal Muslim villagers, Mr. Premnath Kumar Acharji's *Mahashavira Jataka* and Shrimati Bani Ray, have set new styles in writing.

Mahatma Gandhi—Narmadasankar is the parent of present-day Gujarati literature. He was succeeded by Dalpatram Malipatram, Nandasankar Bhambhani and Mansukhram. Then appeared the Bombay University group of scholars: Govardhanram, Manilal, Narasinhrao, Keshavlal, Ramnabhai, Manishanker, "Kalapi," Anandasankar and Balwantrai. Keshavlal Dhruva's translations of Sanskrit classics, critical studies, Ramnabhai's *Bhadram Bhadra* and *Kavita* are *Sahitya*, Govardhanram's *Saraswati Chandra*, Kalapi's *Kekarava*, Balwantrai's *Prithvi Chhanda*, Khabardar's *Kalika* are considered milestones. This group passed on the torch to Kavi Nanaal and Kanaiyalal Munshi, when there appeared on the scene Mahatma Gandhi whose contribution to Gujarati

literature is at once voluminous, varied and vital. In his wake have come Kaka Kalelkar, Ramnarayan Pathak, Ganishankar Joshi, Ramnagar Desai, Jhaverchand Meghani, Krishnabhai Jhaveri, Sundaram, Umashankar Joshi, Chandravadan Mehta and women-writers like Vidyagauri, Sumati Trivedi, Dipika Desai, Jyotsna Shukla, Lilavati Munshi and Hansa Mehta.

The Hindi literature of today can be traced back to Ishwari Das Harishchandra and to Nagari Pracharini Sabha which developed *Khari Boli* literature in all its variety, under the guidance of Pandit Mahabir Prasad Dwivedi. A band of poets then sprang into being: Ayodhya-singh Upadhyaya whose *Pritya Prarak* is a classic, Maithili Sharan Gupta of *Uharal Bharati* fame, Nathuram Shankar Sharma, Rai Devi Prasad Purna and Kampta Prasad Guru. The coming of Munshi Premchand opened the floodgates of fiction-writing. His *Godaan*, *Karmachumi* and *Servants* have been the joy and inspiration of many. He was followed by Jeyanand Kumar, Bhagwati Charan Verma, Brindaban Lal, Kaushtik, S. H. Vatsayana and several others. A school of critics also came into existence, led by Pandit Ram Chandra Shukla, Pandit Hazari Prasad Dwivedi and Mata Prasad Gupta. Shri Jaya Shankar Prasad, Pandit Sumitra Nandan Pant and Shrimati Mahadevi Verma are the mystical poets whose *Kanyasulk*, *Pallava* and *Jama* are highlights. The drama had its exponents in Madhava Shukla, Mukhanlal Chaturvedi, Govind Haladhara Pant, Laxminarain Misra and Upendranath "Ashk."

The dominant note has been one of social protest.

"The aesthetic crystallisation of the new consciousness in Kannada literature," took place, it is said, in *Ramshubhanna* of Muddana. It was catalyzed by Karibasava Shastri, Santa Kavi, Panji Mangeshkar, B. Venkatachar and V. T. Galaganath and others. Devudu Hoyasala, B. S. Mandala, Karanth and Rajaratnam have appreciatively contributed to children's literature. B. M. Srikantha, D. V. Gundappa and Masti Venkatesa Iyengar are some of the other pillars of the pantheon. The "wizard" is D. R. Bendre, followed by Sali Khanolkar, K. V. Puttappa, V. Sitaranah, V. K. Gokak, P. Sadasiva Rao, R. S. Mugali and others. Among the novelists there are A. K. Krishna Rao, K. K. Kulkarni; among the short story writers, K. Bettiiger and Gopala Krishna Rao; among the dramatists, T. P. Kailasam and K. V. Jugirdar; and among the women writers there are Mrs. Gouramma, Kalyanamma, Shyamala.

A Turning Point—Mahamahopadhyayas Maralidhara Jha, Parameshwara Jha, Ganaganath Jha, Madhusudana Jha and Ramchandra Mishra are the inaugurators of the modern Maithili literature. Among the leading writers are the poets Ishanubhat Jha, Bhola Jha, Munshi Raghunathnadasa, Acyutanandadatta and Sitaran Jha; dramatists Ishanubhat Jha and Tantranath Jha; novelists Keshinath Jha and Ganagananda Sinha; and women-writers Arundhati Devi, Harilata and Yoganaya.

There has been a widespread awakening among the Maithilis to the inherent beauty and status of their own mother-tongue, which promises a rich literary harvest.

"The *Gitanjali* of Rabindranath Tagore was the turning-point in the history of contemporary Malayalam poetry," says an eminent scholar. The death of Kerala Varma Valla Koi Thampuran, the acknowledged king in the literary domain in 1914 was the beginning of the present renaissance, to the ushering in of which Vallathol, Ullur S. Parameshwara Aiyer, Nalapat Narayana Menon, K. M. Panikkar, Krishnan Tampi, C. V.

Raman Pillai, T. M. Appu Nedungadi, Sankara Pillai, Hari Shornua and Dr. C. Kunhan Raja have contributed a good deal.

Short-story writing and writing of lyrics have been the special features of late.

In modern Marathi literature after the stalwarts, Chiplunkar, Tilak and Acharkar, the names of writers to be conjured with are Hari Narayan Apté, Keshavadas, S. M. Paranjape, N. C. Kelkar, Phadke, Sane Guruji, Khadikar, P. K. Atre, V. M. Joshi, Gadkari and T. M. Patwardhan.

To Radhanath Bai, Fakir Mohan Senapati and Madhusudan goes the credit of creating the modern Oriya literature. They have been succeeded by a chain of writers: Gangadhar Meher, Ram Shankar Rai, Nandakishore Bal, Pandit Gopalabandhu, Sri Padma Charan, Nilakantha Das, Gopal Chandra Prharaj, Godavarshi Mahapatra, Kuntala Kumari Devi and Kanhu Charan—poets, essayists and story-writers.

Mass appeal has been the principal feature of the period.

The Punjabi literature of today is dominated by the personality and performance of Bhai Vir Singh, who has been ably assisted by Mohan Singh Vaidya in the work of "revival." Dhani Ram Chattrak, Puransingh, Charan Singh, I. C. Nanda, young Mohan Singh, Amrita Pritham, Nanak Singh, Joshua Fazal Din and Gurbux Singh constitute the present shining ranks of writers.

Today Punjabi literature is passing through a period of comparative inactivity.

In Sindhi literature the school of writers preceding the present one was a creation of Devaram Gidumal, Nirmaldas Fatechand, Kalich Beg Mirza, Allah Baksh Abjho, Permananda Mewaram and Kourmal Chaudhmal. Among the writers who hold public attention these days are Kishuchand Bewas, Hyder Baksh Jatoti, Akbar Ali Ayaz, Bheramal Mahirchand, Jethmal Parsaram, Lalchand Jagtani, Ansari Ram Punjwani, Narain Malkani, Nanki Gidwani and Guli Sadarangani.

There is a growing body of opinion in favour of the present Sindhi alphabet being substituted by the Devanagari alphabet.

Modern Tamil literature has been usually divided into three sections: the era of origin, the era of Bharathi and the era of Gandhiji. Arumma Navadar of Jaffna was a pioneer in simple prose style. Subramania Bharati was a poet and translator. Kavi Ramalingam, Shuddhananda Bharati, T. S. Chokkalingam and R. Krishnamurti are among the prominent writers of the Gandhian era, while among the women writers mention must be made of V. M. Kothanagari Ammal, Swarnambal Subramaniam and Ambujammal. P. Sandhana Mudaliar, Rajam Iyer, "S.V.V." "A Ra" are leading dramatists and story-writers.

Veerasingam, Chikakamarti Lakshminarasimham and Guruzada Appa are the fathers of Telugu literature in the twentieth century. They were followed by Gidugu Ramamurti Pantulu, Venkata Parvataswara Kavulu, Tallavajjulu, Sivasankara Sastry, Vajjababu, Nori, Chinta, E. V. M. G. Ramarao Bhadr, Gadiparam Venkata Soma Sastri, author of *Siva Bharatamu* and Dr. C. Narayana Rao.

Modern Urdu literature, before Iqbal was dominated by Sir Syed Ahmed, Shibli and Hali. They have been succeeded by Abul Kalam Azad, Syed Sulaiman Nadvi and Mohammad Ali as well as by Sh. Abdul Qadir, Qazi Abdul Ghafor and Sajjad Hyder. *Ahazal* has been developed intensively during this period. The other

writers who deserve a mention are Bedi, Josh, Krishna Chandra Akhtar, Ansari, Sharar, Husrat, Fani, Asghar and Jigar.

Urdu having been made the state language of Pakistan, the future of Urdu literature is bound to be bright.

The recent political changes in the country have for the present deprived Urdu of one of its ancient homes, as they have Punjab. Its emergence in "pastures new," as that of Punjab, will be watched with anxious interest, just as the future of English as a medium of literary expression will be, though the writings in this language of Sri Aurobindo Ghosh, Rabindranath Tagore, Sarojini Naidu, Gandhiji and Iqbal Krishna will continue to spur many of the English-educated people to employ this medium at least for a generation to come.

A word about Sanskrit literature. It is not "dead," as is wrongly supposed so often. Not only does it continue to function as the fountain-head of inspiration to almost all the Indian languages, but also in the critically edited versions of classics as well as in several original works.

Recent works of writers like Pandit C. K. Nandan Raja and Pandita Kshama Raw are a proof of the vitality of the language.

Whither Indian literature? With an answer to this question this brief survey may be concluded. Indian literature is at the threshold of still greater achievements inasmuch as freedom brings out the best in the people and their artists and authors. Add to it the expected redistribution of the Provinces on a linguistic basis, which is bound to give a great impetus to further and fuller growth in each of the literatures. But there is also a danger in this, a note of warning against which must be sounded—the danger of decentralization resulting in a narrowing down of the all-India angle of vision and attitude on the one hand, and of world loyalty on the other. Prudence lies, however, in co-operating with the evolutionary spirit which is steadily moving towards one world, one religion, one people, one philosophy of life.

The Indian literatures, however, are still in the "re-formative" stage, trying to adjust themselves to the speedily changing spirit of the times.

Aspects of Indo-Anglian Literature

An Indian writing in English starts off with a major handicap. He has to attain a certain degree of mastery over the medium before proceeding to use it as a vehicle for self-expression at the level of literature. Now it is true that Indians have scored certain remarkable triumphs in their use of the English language. Some have used it with great precision and clarity as, for instance, Mahatma Gandhi or Dr. Sarvapalli Radhakrishnan. Others, speaking in English, have reached remarkable heights of eloquence, Gokhale or Subhas Chandra Bose in the latter days of his career. Yet others have been able to acquire a manner of writing whose rhythms are indistinguishable from those of an Englishman's English—G. K. Chettur, for instance, who had a fine feeling for the English language, or V. S. Shrinivasa Shastri whose expression was always lucid, idiomatic and absolutely correct according to the best English standards. Finally, there are those like Pandit Jawaharlal Nehru, who, for expressiveness or animation or range of subject-matter challenge comparison with the best work that is produced in England or other English-speaking countries.

But there is something which escapes even the best schooled and the most sensitive among the writers, something which makes the higher branches of Indo-Anglian writing seem hollow and unreal. The truth is that while control over English for purposes of law or political and social discussion may come easily to the foreigner,

control over English for purposes of self-expression at the highest level is a much more difficult achievement. This is just the reason why Indian writing in English have made a better showing in the literature of political, legal or general discussion than in literature properly so-called such as poetry, drama, fiction, essay or criticism.

POETRY

In poetry, for instance, which is the quintessence of literature, a great deal of early Indo-Anglian effort appeared quite staid and flat. Indeed here we come upon yet another obstacle which Indo-Anglians have had to overcome in their struggle for creative expression. For not only was the medium in which the poet was trying to express himself foreign but the very sources from which he drew his inspiration were also strange and alien. A great many Indo-Anglians knew little about the tradition in which they were born and their ancient culture and heritage. The history which they learnt at school was English history. The literature which fed their imagination was English literature. In fact much of the passion of young Indians for education was focused in exuberant enthusiasm around English language and literature. Young Tagoris and Punjabis, Bombay Parsis and Calcutta Babus drunk in fascination at the fount of English literature. They who had never heard an English skylark sing over an English meadow wrote whole essays on Shelley's *Ode to the Skylark*. In the hot aridity of an Indian summer, they puzzled over Keats's exact meaning when he called autumn a season of mists and mellow fruitfulness. The result was that when later they felt the need for self-expression themselves it was to the sights, the smells and the sounds of the English countryside that they turned for inspiration. Early Indo-Anglian writing was full of the song of the nightingale, the smell of the musk-rose, the beauty of the English spring or the blackness of the English winter. The result was pure disaster for Indo-Anglian poetry. Neither in India nor in England did it carry any special appeal. To the Indian the verses seemed unreal, while to the Englishman they seemed at best like clever machine-made imitations of English classics. Not even such a gifted poet as Mrs. Sarojini Naidu succeeded in making robins and skylarks seem authentic. Everyone knows the advice which the famous English critic Edmund Gosse gave her: "...write no more about robins and skylarks...set your poems firmly among the mountains, the gardens, the temples...introduce to us the varied populations of your own voluptuous and unlandular province... In other words be a genuine Indian poet of the Deccan, not a clever machine-made imitator of the English classics." Mrs. Naidu promptly changed her tune and turned to such typical Indian figures as the corn-grinder, the palanquin bearer, the bangle-seller or such authentic Indian landscapes as the call of the bulbul from a cassia plume, the song of the weaver at work at the loom, the voice of the shepherd gathering his flock under the pipal tree or the shout of the young Banjara woman driving her cattle across the fields. Here was Indo-Anglian poetry at its most natural and unpretentious—sweet, sensuous, sincere and unmistakably Indian, though in rhythm and rhyme it still remained consistently conservative.

Indeed Mrs. Naidu's success marked a turning point in the history of Indo-Anglian poetry. It taught other practitioners of the art where to look for inspiration if they were to produce any worthwhile stuff. They saw that all genuine poetry was rooted in the tradition in which the poet was born or in modes of thought and action which were common to all humanity such as love, faith, desire, devotion, self-sacrifice. Thus, to cite a few examples, we have G. K. Chettur writing about a temple-tank or the Trevunje waterfall, Sheshadri about champak leaves, or Joseph Purohit about Brahmin girls. Best of all there is the example of Tagore himself describing a typical rustic scene such as a farm-labourer plodding along a dusty road to the market. In a different category there is

once again G. K. Chettur celebrating the triumph of heavenly over earthly love, or S. R. Donker-kery wondering where the secret of music lies. At a still higher level, we have the philosophical, if rather old fashioned, poetry of Aurobindo Ghosh, Sadhu Vaswani and J. Krishnamurthi describing the adventures of those who set out in quest of Truth, Beauty and Goodness. These earlier poets—and among them should be mentioned Manmohan Ghosh, the doyen of Indo-Anglian poets—were mainly content with Parnassian rhymes and rhythms. A later school of Indian poets—B. Rajan, Bharati Surabhai and Buddhadeva Bose—has tended to break away towards the standards of Eliot, Auden and Ezra Pound. This in spite of the imitative leanings involved, is all to the good, since it has infused new life and imagery into their work.

LANGUAGE PROBLEM

The poets seemed to have solved their problem in regard to subject-matter. Thenceforward the subject of Indian poetry was to be wholly Indian—Indian people, Indian landscape, Indian mythology and Indian history, which were as rich a source of inspiration as the heritage of any other country. But the other difficulty, namely, the difficulty about language remained as serious as ever, regarding both freedom of expression, inhibiting mental processes and generally introducing an element of unreality into the work of the Indo-Anglians. The language problem was not, of course, peculiar to the poets; it was common to all practitioners of the art of literature—novelists, dramatists, essayists, short story writers as well as to poets. And unless the means were found of solving the language problem there was no chance of Indo-Anglian literature, developing along healthy and vigorous lines. One suggestion was that Indians should evolve an English of their own. There was American English, Irish English, Welsh English. Why not, it was asked, Indian English? But then a further question arose: What is Indian English and exactly how does it differ from English English? Neither Raja Rao nor Mulk Raj Anand the two supporters of this theory clearly answered this question. Mulk Raj Anand wrote a pamphlet in which he not only attacked English English under the name of King Emperor's English, but the kind of language in which he wrote the whole pamphlet did not seem very different from the kind of language which he was engaged in attacking at the moment. Indeed if one was to judge from the idiom which the other exponent of the theory used in his novel *Kanthapura* it would seem as though the new English consisted in little more than literal translation of Indian swear-words (son of a bitch, son of a widow) or Indian word groups (killing flies to mean whiling away time) into English. It was quite clear that the solution of the language problem did not lie along the lines suggested by Raja Rao or Mulk Raj Anand. It cannot for the simple reason that the real problem is of a totally different nature. This may be stated in some such way as this. How exactly are Indians to acquire with the greatest economy and thorough command of whatever sort of English it is that they wish to employ? One has merely to put the question in this way to realize that it is more concerned with methods of teaching than with the creation of a new species of language.

A second way in which the language problem has sometimes been met is through collaboration between an Indian and an Englishman. This has, on the whole, produced happier results though for obvious reasons it is not a solution which is frequently possible. Two examples of collaboration may be mentioned here. One is the autobiography of Mahatma Gandhi. The Mahatma himself informed his readers how the manuscript of his autobiography was touched up by his English disciple Miss Margaret Slade better known as Mira Ben. The Mahatma, of course, wrote in a language which was entirely adequate for his purpose. But surely something of the even flow and the quiet beauty of the narrative can be partially ascribed to Mira Ben's co-operation. The

autobiography of Mahatma Gandhi cannot, of course, be regarded as a good example of collaboration since the parts played by Mahatma Gandhi and Mira Ben in the writing of it were very unequal. A better example of collaboration is afforded by Hilda Werner and Huthi Singh in their novel about Indian village life entitled *The Land and the Well*. Hilda Werner who is the principal author has lived in such a village as she describes in the book; but she wisely sought the assistance of an Indian collaborator to make her ground doubly sure. The result is an authentic and fascinating record of the hopes and fears, joys and tragedies of peasant life in a north Indian village.

FICTION

Turning to Indo-English fiction we find that there are many failures but there is also a large measure of achievement particularly in the realm of the short story. There are some Indian novelists who tend to fall between two stools. They aim to attract and please the English reader and at the same time to attract and please the Indian. This leads inevitably to inconsistencies. Mr. Hilton Brown (to whose work a great deal of the following sketch of the Indian novel is indebted) gave the Indo-English novelists the same kind of advice as Edmund Gosse gave the Indo-English poets. Mr. Hilton Brown told Indo-English novelists that they would never do any good till they dropped the horrible habit of forcing Indian pictures into European frames, of distorting a Hindu story into the mould of the *Strand Magazine*. "Write well as an Indian," he said. "And Europeans will read you."

One of the difficulties of the Indian novelist is that in India sex does not make stories as in Europe. And if someone does try to compose love stories on Western lines he will be doomed to failure for he is at once introducing an unnatural and jarring element. If he is to succeed at all he must contrive as R. K. Narayan and K. Nagarajan have contrived to handle the love interest in the delicate, elusive, unsubstantial form. And if he cannot so contrive he must leave it out altogether. But then, if sex and love interest are to be barred what is left? Once again R. K. Narayan has pointed the way. The Indo-English novelist must fall back, as Narayan has done, on the components which make up the social sketch or skit—such as family and social humour, life's daily business and mischiefs, the difficulties of political intercourse, the hopes and renunciations of youth, the clash of modernity on old established tradition. He could write about the arrangement for a marriage, the election to a municipal council or a deal in tamarind or betel-nut, a transaction in the black market—write in such a way as to elevate these commonplace into literature in the same manner as Anton Tchekov made memorable creations out of everyday occurrences in the Russian life of his day. R. K. Narayan's *Bachelor of Arts*, for instance, contains no striking events. But it is a deft, vivid, truthful piece of writing for all that. It depends wholly on character and atmosphere. Its people are charming people and its picture of an Indian family is actually real. It does contain love interest, but the love interest is decidedly of the Indian brand. The first girl cannot even be spoken to and the final bride only gets the length of casting down her eyes. And indeed little more than that happens at all. Within the last few years, Narayan has achieved a great reputation with the leading London literary critics. His novels, *The Bachelor of Arts*, *The English Teacher*, *The Dark Room* and his collection of short stories, *An Astrologer's Day*, have had increasingly wide sales. He has in fact, become the most lauded Indian imaginative writer since Tagore.

The Narayan type of novel is really an extension of the social sketch. But then there is also the novel proper which describes the general dolings of men and women over a period of time. A typical example is K. S. Venkataraman's *Murugan the Tiller* a novel which has fine descriptive power, a few great ideas and is

thoroughly Indian. Another good example in this genre is K. Nagarajan's *Athavara House* which along with Raja Iao's *Kanthapura* and Ahmed Ali's *Twilight in Delhi* is the nearest thing to a full-blown novel Indo-English literature has yet produced. *Athavara House* deals with the financial, matrimonial and social ups and downs of a Brahmin family. Its characters are sound and real, its episodes coherent and probable and its essence genuine. *Twilight in Delhi* catches with rare felicity the hot, violet-shot atmosphere of roof-life in India's capital when the *loo* is blowing. Its creator would appear to be a one-book man.

Of late Indian novelists have inevitably turned to politics for ideas. The scope is wide enough. The escape of Subhas Chandra Bose, the I.N.A. movement, the Bengal famine, the Punjab upheaval and consequent mass migration or the British withdrawal from India should all prove to be a fruitful source of material for the fiction-writer. But so far the whole of this field remains unexplored except for one notable exception—the Bengal famine which is the subject of a heart-rending novel entitled *So Many Hungers* by Bhubhani Bhattacharya.

Tagore has, of course, dealt with some of the political movements of his time in a story entitled *Four Chapters*, while in the most famous of his longer novels *Gora* he has given the reader a wonderful picture of the home life of Bengal and the changes which came over it during the last century. To give yet another example, A. Subramaniam has written a novel entitled *Indira Devi* in which he looks forward to 1951 when Indians and Europeans are found living side by side on the most intimate terms, and inter-marry quite naturally, and where barriers of all sorts have vanished with the years.

But the typical political novel at the moment is concerned with proletarian questions. Mukul Raj Anand, the author of *Untouchable* and *Coolie* is perhaps the best known representative here. *Coolie* which is the life-story of a young man from the hills who works successively as domestic servant, factory boy, mill-labourer and rickshaw-puller is in its fashion quite remarkable. Dr. Anand writes of the working class not as so many proletarian writers do in a superior condescending fashion but with dignity and comradeship and pleads for greater joy in life and more love in the relations between different classes of society. Dr. Anand's work has hitherto suffered from his extreme fertility; he has been a little too prolific, whereas Raja Rao has gone to the other extreme and practically permitted his fount of inspiration to dry up. Narayan, who has achieved perfection within his narrow limits, is the most natural artist of the trio. Towards the end of 1948 G. V. Desani, a Sindhi, created a stir in literary circles in London with his picturesque novel *All About Mr. Hatter*. This was highly praised by many of the leading critics, some of whom, however, pointed out that it owed a great deal both to Baron Munchausen and to James Joyce.

ESSAY

So much for fiction. Let us next rapidly pass under review Indo-English achievement in essay, drama, criticism and biography.

Not many Indo-Englishmen have used the essay form for the simple reason that it does not constitute a natural vehicle for the expression of Indo-English artistic genius. The one outstanding success is S.V.V. of the *Hindu*. Some of his work was of the most delicious kind, light as a feather, satirically humorous, most intimately revealing of Hindu life. It can indeed bear comparison with the kind of work which E. M. Delafield used to do for *Punch*. No praise could be higher. Then there were the group of writers who flourished in the hey-day of the *My Magazine* and *Merry Magazine* like K. Bangaruswami and A. T. Macnaughton Thomas. They did some fine work and gave their readers immense pleasure, but it must be confessed that a great deal of the humour was coarse and most of the language undignified. G. K. Chettur who

always wrote with a sensitiveness to the finer points of the language was a more considerable figure. His work does not bulk large but some of his efforts are in the best English tradition. But the truth must be faced. The essay properly so-called is the expression of an attitude of mind which is rare in this country. As a branch of literature the essay originated with Montaigne in France but it has had its spiritual home in England where there is a certain disposition to deal with the minor occurrences of life in a big, light-hearted, mock-serious fashion. But the Indian spirit is flatly opposed to this mode of expression. It is deadly serious for one thing. For another it is disposed to deal with big issues in a big way. It can, for instance, describe with great subtlety the sensations produced by the sight of a star. But in the presence of a loaf of bread it may be dumb.

DRAMA

In the realm of drama the Indo-English output is even more scanty. Whatever drama has been produced, is either heavily symbolical like that of Tagore, or frankly propagandist like that of Harindranath Chattopadhyaya. Taking the latter as a typical example, we find that Mr. Chattopadhyaya's plays are more in the nature of Socialist propaganda than genuine expressions of the dramatic spirit. His characters are mere puppets and neither speak nor act like human beings. Where, however, Mr. Chattopadhyaya lays aside his didactic purpose and follows his characters the dialogue acquires considerable force and eloquence. His treatment of abnormal psychology is wholly convincing. In a play called *Evening Lamp* the creeping crawling sea of shadows envelopes and overpowers the reader with an insidious terror such as we find in the more poetical parts of Ibsen. Another play entitled *The Parrot* reels with a magnificent drunkenness which imparts to it a structural as well as symbolic beauty, and in the end an almost dramatic power.

CRITICISM

Much of Indo-English criticism is dull and lifeless. In the first place, there is very little scholarly reviewing of books in Indian newspapers and periodicals; very few reviewers have, in fact, the mental equipment necessary for the task to which they address themselves. Criticism of poetry like the writing of it can be specially difficult. In any case critical work by Indo-Englishmen can be justified only if the point of view from which the criticism is presented is thoroughly Indian. As it is, much of what passes for criticism is a mere rehash of the work of foreign critics lacking conviction, vigour or originality. There is one man, however, to whom the above criticism does not apply, one who stands out of the general run by reason of his scholarship and critical judgment. That is the man whose reviews used to appear in the *Hindu* under the initials "K.S." He is witty, original, fearless and his critical judgments are always backed by a wide reading and real appreciation of English literature. His introduction to an abridged edition of Trevelyan's *Life of Macaulay*, for instance, is a masterpiece of its kind. So are some of the obituary notices of well-known South Indian literary figures which he has in the habit of writing in the columns of the *Hindu*. His criticism of Chattopadhyaya which is reproduced in the course of this article is a good example of his work.

Of late much critical work has come out of Indian Universities from painstaking conscientious scholars preparing themselves for a doctor's degree. The outstanding name here is that of C. Narayana Menon whose *Shakespeare Criticism* is far and away the most notable contribution made by any Indian to the scholarly study of English literature. Mr. Menon who has knowledge, wisdom, tolerance, has synthesized a vast mass of Shakespeare criticism. By illuminating paraphrases of certain well-known Shakespearean passages and by some unconvincing character-interpretation of Falstaff, Brutus, Hamlet, Macbeth, Lear, Othello and Cleopatra, he leads the reader to an exhilarating and

completely satisfying apprehension of Shakespeare's plays and a clear comprehension of his multifarious critics. Dr. Menon should now take rank along with Raleigh, Bradley and Dover Wilson among the few inevitable critics whom no serious student of Shakespeare can afford to ignore. Another outstanding volume of criticism—which appeared towards the end of 1948—is Dr. Itrat Husain's scholarly monograph *The Mystical Element in the Metaphysical Poets of the Seventeenth Century*. This work, embodying researches in the field over a period of 10 years, was published in London and was consistently well received by competent judges. Equally sound in his critical work is Dr. K. R. Shrinivasa Iyengar, of the Andhra University.

BIOGRAPHY

Indo-Anglians have made a better showing in the art of biography than in criticism. Wisely enough no attempt was made to imitate the manner of Lytton Strachey except in some of the smaller sketches. Nor is there anything in the style of Boswell which attempts to recreate a living personality by the sheer accumulation of detail. Most Indo-Anglian biographers are content to record in a straightforward manner the main facts in the life and times of their subject. Such, for instance, are the series of lectures given by V. S. Shrinivasa Shastri on Gopal Krishna Gokhale, which together go to make up a clear, lucid and moving account of the life and times of the great Liberal leader. Professor P. A. Vaidya's *Mahatma Gandhi*, another outstanding work in this class is set out in the form of a discussion and is concerned more with the Mahatma's personality than about his life. Then there are the biographies published by G. A. Natesan & Co.—workman-like little books with no claim to literary merit but entirely adequate for their purpose.

The greatest Indo-Anglian work in autobiography is, of course, Mahatma Gandhi's *Experiments with Truth*. The simplicity and the complete candour with which the Mahatma wrote make it one of the most moving personal documents of all time. Pandit Nehru's *Autobiography* is more in the nature of an exposition of Indian politics than an account of personal development. As politics it is excellent, but as autobiography it is much inferior in human interest to the autobiography of Mahatma Gandhi. Much of its celebrity would today be ascribed to the eminence of the author rather than to any intrinsic autobiographical qualities in the work.

Since the Mahatma's tragic end, a spate of books on his life and achievements has appeared. Many of these, unfortunately have been hurriedly concocted and obviously written in the spirit of *carpe diem*. Not infrequently their literary merit has been nil.

A much humbler work in biography is *The Last Enchantment* by G. K. Chettur. G. K. Chettur was one of those remarkable men who wrote English like a native. For sheer literary merit the account of his experience at Oxford is inferior to none in the whole domain of Indo-Anglian literature.

THE PRESENT

Two books by Indian authors which have recently created a considerable stir in the London literary world are *And Gargles Limping* by Sudhin N. Ghose and *All About Mr. Hatter* by G. V. Desani. The former—which has the advantage of a most attractive format and many remarkable black and white illustrations—is a record of childhood's memories by a young Bengali, whose writing might be termed in places an amalgam of Rudyard Kipling's style in his *Just So Stories* and Rumer Godden's delicate and knowledgeable touch in *The River and Black Narcissus*. Though not specifically termed a children's book it will undoubtedly have a wide appeal to youth, for it contains a delightful elephant and many quaint and likable characters drawn direct from the Bengali landscape. Mr. Ghose has no unnecessary frills in his writing and succeeds in evoking atmosphere in fluent

straightforward prose with an occasional undercurrent of poetry. The book was much appreciated by English readers and labelled by many reviewers "an enchanting book." Mr. Sudhin Ghose is an interesting newcomer to Indo-Anglian literature. Should he venture into the field of fiction, he is likely to produce work of lasting value.

Mr. Desani—who hails from Sind—has had a *success de scandale* with his extraordinary novel *All About Mr. Hatter*, which has been lavishly eulogised by many of the leading British literary critics. This rather incoherent piece of fiction is unlikely to appeal to the general public because of its esoteric nature. The author has clearly soaked himself in the work of James Joyce. The influence of Proust and Prandello may also be detected in his narrative, which, in its rather gaudy patchwork, resembles a coat of many colours. There is undeniable cleverness here, but the writing—discursive and elliptic—too frequently goes off at a tangent, and the writer's philosophy and beliefs are somewhat difficult to assess. As a foundation for a literary reputation, Mr. Desani will have to produce something more lasting than this diverting display of verbal pyrotechnics.

In the course of 1948, Mr. R. K. Narayan's new novel, *Mr. Sampath*, was serialised in a Bombay weekly. This tale of a printer's woes is even s lighter in treatment than the author's previous books, but it has subtlety and abundant humour and catches successfully the intricacies of thought in the Southerner's mind. It is due for publication in London this year and should add to the literary laurels which Mr. Narayan has deservedly won with readers in England.

Both Dr. Bhahani Bhattacharya and Dr. Mulk Raj Anand have new novels in the offing. The former's new story—tentatively titled *Music for Mohini*—makes very pleasant reading and should increase the public which he attracted with his first novel, *So Many Hungers*.

Mention should also be made of the first translation into English of the short stories of a remarkable writer in Urdu and Hindi called Prem Chand who died nearly fifteen years ago. Few Indian writers have displayed such intimate detail of life in the mofussil or such a fluent mastery of phrase. One of Prem Chand's stories translated is *The Shroud*; this little gem can bear comparison with the best of Chekov and Turgenyev.

TAGORE

Even the briefest survey of Indo-Anglian literature would be incomplete without an appreciation of Rabindranath Tagore who is one of its chief glories. In a sense, Tagore belongs to Bengal. His poems are full of the beauty of Bengal scenes. And it is surprising how much of his work was originally published in Bengali—*Gitanjali*, *The Crescent Moon*, *Chitra*, *The Post Office*, *The Gardener*, *Fruit Gathering*, *The Home and the World*, all the works in fact which made Tagore famous were all translations from original Bengali. Many of these were sponsored by the Irish poet, W. B. Yeats. But in a sense too Tagore belongs to the whole of India as much as any man which the country has produced, the country whose heritage and culture he enshrined in such matchless prose and poetry.

Tagore had an abiding sense of the beauty of the world. Nothing on earth was dull for him: the most ordinary things had a new and wonderful meaning. Rain or harvest, a rice-field or a clump of bamboos—such things stirred Tagore to noble and unique utterance. Tagore's work is permeated not only by a sense of the beauty of the universe but also by a sense of its abiding mystery. The dark depths of the earth, the infinite distances of the sky filled him with consciousness of God. To him earthly beauty is a reflection of eternal beauty.

Tagore was not only a poet, he was a prophet and also a patriot—the creator of Vishwabhārati, the interpreter of the East to the West, the citizen

of the world. But it is impossible to separate in him the poet from the patriot or the patriot from the citizen of the world. In him they were all one and of that one the poem and the plays are the undying voice.

A SELECTION

Here is a selection from among the works of Indo-Anglians made with the help of K. R. Shrinivasa Iyengar's *Indo-Anglian Literature*:

POETRY

Rabindranath Tagore: *Collected Poems and Plays*. Toru Dutt: *Ancient Legends and Ballads of Hindustan*; *A Sheaf Gleaned in French Fields*. Sarojini Naidu: *The Bird of Time*; *The Broken Wing*; *The Golden Threshold*. B. C. Dutta: *The Mahabharata*; *The Ramayana*. Aurobindo Ghosh: *Collected Poems and Plays*. Brijendranath Seal: *The Quest Eternal*. Harindranath Chattopadhyaya: *Ancient Wings*; *The Dark Well*; *The Feast of Youth*; *The Magic Tree*; *The Perfume of Earth*. K. S. Venkatramani: *On the Sand-Dunes*. Humayun Kabir: *Poems*. G. K. Chettur: *Gumataraya*; *The Shadow of God*; *The Temple Tank*; *The Triumph of Love*. Armando Menezes: *Chaos and Dancing Star*; *Chords and Discords*; *The Emigrant*; *The Fund*; *A Mock Epic*. Joseph Furutodo: *A Goa Fiddler*; *Songs in Exile*. T. B. Krishnaswamy: *Swallow Flights*. K. P. Appaji Rao: *Dawn and Other Poems*. P. Seshadri: *Bilhana*; *Champak Leaves*; *Sonnets*; *Vanishing Hours*. Muhammad Iqbal: *Himalayan Mountain*. Mrs. Dennis Stoll (Bharati Sarabhai): *The Well of the People*. S. R. Dongerkerry: *The Ivory Tower*. Adi K. Set: *The Light Above the Clouds*.

FICTION

Rabindranath Tagore: *Gora*; *Home and the World*; *The Vreck*; *Hungry Stones and Other Stories*. M. K. Ashraf: *Other Stories*. R. G. Dutt: *The Lake of Palms*; *The Slave Girl of Agra*. Cornelia Sorabji: *Love and Life behind the Purdah*; *Between the Twilight*; *Sun-babies*. T. Ramkrishna: *Padmini*; *The Dire for Death*. K. S. Venkatramani: *Murugan the Tiller*; *Randam the Patriot*; *Jatadharan and Other Stories*. K. Nagarajan: *Athavar House*. A. Subramaniam: *Indira Devi*. K. Raja Rao: *Kanthapura*; *The Cow and the Baricades*. R. K. Narayan: *Inheritor of Arts*; *The Dark Room*; *The English Teacher*; *Malgudi Days*; *Swami and Friends*; *Astrologers Day*. Mulk Raj Anand: *Codic*; *Untouchable*; *The Village*; *Across the Black Waters*; *Two Leaves and a Bud*; *The Tract*; and the Corn Goddess. Ahmed Ali: *Twilight in Delhi*. Shankar Ram: *The Children of Caveri*; *The Lore of Dusts*. A. S. P. Iyer: *Indian After-Dinner Stories*. G. K. Chettur: *The Ghost City and Other Stories*. S. K. Chettur: *Homday Murder*; *The Cobra of Dharmacharya*. K. Ahmed Abbas: *Bire*. Hilda Wernher and Iluthi Singh: *The Land and the Well*. Humayun Kabir: *Men and Rivers*; *Three Stories*. Bhahani Bhattacharya: *So Many Hungers*. Santa Devi and Sita Devi: *Tales of Bengal*; *The Garden Creeper*. Sita Devi: *The Cage of Gold*. G. V. Desani: *All About Mr. Hatter*.

DRAMA

Rabindranath Tagore: *Chitra*; *Post-Office*; *The King of the Dark Chamber*. Chattopadhyaya: *Five Plays*. Fyazee Rahamin: *Daughter of Ind*. V. V. Shrinivasa Iyengar: *Dramatic Diversions*. Armando Menezes: *Caste*; *A Social Comedy*. V. N. Bhushan: *Anklet Bells*; *Ear Rings*; *Mortal Coils*; *Samyukta*.

CRITICISM

C. Narayana Menon: *Shakespeare Criticism: An Essay in Synthesis*. Itrat Husain: *The Mystical Element in the Metaphysical Poets of the Seventeenth Century*. Amiya Chakravarti: *The Dynasts and the Post-war Age in Poetry*. Aurobindo Ghosh: *The Future of Poetry*. Armando Menezes: *Shakespearean Comedy and Other Studies*. K. R. Shrinivasa Iyengar: *Lytton Strachey: A Critical Study*. V. K.

Ayappan Pillai: *Shakespeare Criticism*.
Brijendranath Seal: *New Essays in Criticism*.
Humayun Kabir: *Poetry, Monads and Society*.

MISCELLANEOUS

Rabindranath Tagore: *The Religion of Man*;
Sadhana, Aurobindo Ghosh: *Essays on the Gita*; *The Life Divine*. S. Radhakrishnan:

The Hindu View of Life; *An Idealist View of Life*.
M. K. Gandhi: *My Experiments with Truth*.
Jawaharlal Nehru: *Autobiography*; *Glimpses of World History*; *Letters from a Father to His Daughter*; *The Discovery of India*. P. A. Wadia: *Mahatma Gandhi*. R. P. Masani: *Dadabhai Naoroji*. V. S. Shrinivasa Shastri: *Life of Gokhale*. G. K. Chettur: *The Last Enchantment*. Khasa Subba Rao: *Men in*

the Lime-light. A. S. P. Iyer: *An Indian in Western Europe*. D. F. Karaka: *I Go West*; *Chungking Diary*. S. Natarajan: *West of Suez*. K. P. S. Menon: *Dakhi-Chungking*. Minoo Masani: *Our India*. K. S. Venkatramani: *A Day with Shambhu*; *Paper Boats*. S. V. V.: *Chaff and Grain*; *Soap Bubbles*; *More Soap Bubbles*. R. Bangaruswami: *Misleading Cases*. Sudhin Ghose: *And Gazelles Leaping*.

INDIAN STANDARD TIME

FOR many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways; and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed the Provincial Governments and through them all local bodies, a long letter which reviewed the situation and made suggestions for the future.

The Government pointed out that the Madras local time kept on all railway and telegraphic lines is not useful. So the timing arrangement was completely altered for international scientific

purposes in India. This was done in such a manner as to bear a simple and easily remembered relation to Greenwich time.

It was proposed, therefore, by the Government of India, to put on all the railway and telegraph clocks in the sub-continent by 8m. 50s. This represented a time $5\frac{1}{2}$ hours faster than that of Greenwich, which would be known as **Indian Standard Time**; and the difference between standard and local time at the places mentioned below were approximately as follows, the figures representing minutes, and P. and S. meaning that the standard time is in advance of or behind local time respectively.—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 P., Madras 9 P., Lahore 33 P., Bombay 39 P., Peshawar 44 P., Karachi 62 P., Quetta 62 P.

On the 1st of January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time. Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishment of some orthodox Hindus. Elsewhere Standard Time is universal.

The Bengal Government decided from October 1, 1941, to move forward their clocks by 36 minutes. Bengal time therefore became an hour ahead of Indian Standard Time and 36 minutes ahead of Calcutta local time. This was followed by the Indian Standard Time also being advanced by one hour with effect from September 1, 1942, making it 64 hours ahead of Greenwich Mean Time. With the end of the Second World War the old Indian standard time was restored with effect from 2 a.m. on October 15, 1945.

WEIGHTS AND MEASURES

THE maund is the denomination of weight common all over the sub-continent, but we may find that in a given city there are nearly as many maunds as there are articles to weigh. It varies even from district to district. Thus in the United Provinces itself the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Goshalgunge. Thus the maund varies throughout the sub-continent from the Bengal or railway maund of 82·2/7 lbs. to the Factory maund of 74 lbs. 10 oz. 11 dr., the Bombay maund of 28 lbs., which apparently answers to the forest Department maund in use at the Fuel depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs.

Committee of Inquiry—As there are variations in the weights and measures from one place to another in the sub-continent there is much confusion and sometimes heavy individual loss. And Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Central and Provincial Governments have made various attempts during the past to solve the problem of common units of weights and measures; commercial and trade interests have agitated about the question for the past century. The Indian Railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by the whole trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments as early as 1890-1894 and various special steps have at different times been taken in different parts of India with a view to uniformity. The Govern-

ment of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report was not published, but they presented in 1912 an *ad interim* report which was issued for public discussion. It points out the practical impossibility of proceeding by compulsory measures affecting the whole of the sub-continent. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcomed by the people. They opined that, legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reforms so successfully as a "lead" supplied by local legislation based on practical experience.

Weights—The various systems of weights used in India combine uniformity of scales with immense variations in the weights of units. The scales used generally throughout Northern India, less commonly in Madras and standardized in Bombay Presidency under the Bombay Weights and Measures Act, 1932, may be thus expressed as one maund=40 seers, one seer=80 tolas. The actual weight of seer varies greatly from district to district and even from village to village except in Bombay Presidency. In the standard system the tola is of 180 grains and so the seer thus weighs 2,057 lbs. and the maund 82·28 lbs. This standard is also used in official reports.

Retail—For calculating retail prices, the universal custom is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down. If it be desired to convert quantity prices from Indian into

English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. So the areas have been expressed here either in square miles or in acres.

Attempts At Reform—A lead is apparent in the East Khandesh District of the Presidency, where the then District Officer, Mr. Simcox, during the course of three years, gradually induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

The whole problem was again brought under review by the Government of India in October, 1918, when the following Committee was appointed to inquire into the entire subject anew:—

C. A. Silberrard (President),
A. Y. G. Campbell,
Rustomji Fardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. viz.:—

| | |
|------------|------------|
| 8 khaskhas | = 1 chawal |
| 8 chawals | = 1 ratti |
| 8 rattis | = 1 masha |

| | |
|---------------------|------------|
| 12 masha or 4 tanks | = 1 tola |
| 5 tolas | = 1 chatak |
| 16 chataks | = 1 seer |
| 40 seers | = 1 maund |

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3'60 lbs. or 140 tolas.

Government Action—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. They also announced their decision not to adopt all-India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", earlier. These were recommended by a majority of the Weights and Measures Committee and received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation on standardisation and stated that if subsequently opinion developed strongly in favour of an Imperial standardisation of weights, the Government of India would be prepared to undertake such legislation but for the time being they considered that any such step would be premature.

STANDARDS OF WEIGHTS ACT, 1939

By 1939 opinion in favour of legislation by the Government of India for the standardisation of weights crystallised to the extent that the Indian Legislature passed the Standards of Weight Act (Act No. IX of 1939) applicable to the whole of British India. The Act received the assent of the Governor-General of India on the 28th March, 1939, and was published in Part IV of the Gazette of India of the 1st April, 1939. The Act laid down the following standard weights:—

- (a) the standard tola, being a weight of 180 standard grains;
- (b) the standard seer, being a weight of 80 standard tolas or 14,400 standard grains;
- (c) the standard maund, being a weight of 40 standard seers;
- (d) the standard pound, being a weight of 7,000 standard grains;
- (e) the standard ounce, being one-sixteenth part of the weight of a standard pound;
- (f) the standard hundred-weight, being a weight of 112 standard pounds;
- (g) the standard ton, being a weight of 2,240 standard pounds.

Under sub-section (2) of section 4 of the Act, the Central Government undertook to supply to each Provincial Government a complete set of duly authenticated standard weights. Accordingly in October, 1941, Government of India supplied to the Provincial Government of Bihar a complete set of Reference Standard Weights, which was placed under the charge of the Senior Marketing Officer, Bihar.

The enforcement of standard weights throughout the Province of Bihar, was awaiting supplementary provincial legislation which may be possible under normal conditions. But

the Government of Bihar in their notification No. 185 D.R. dated the 7th May, 1942, in exercise of the power conferred by sub-section (1) of section 92 of the Government of India Act, 1935, have directed that the Standards of Weight Act, 1939 (IX of 1939), shall apply to the Chota Nagpur Division and to the Santal Parganas District, as a special measure. In Bihar it was felt that it may be convenient to start with the enforcement of standard weights alone in the first instance, and the measures of capacity may be left alone for some time to allow the buyers and sellers to adjust the measures on the basis of the standard weights.

BOMBAY WEIGHTS

The following are the Standard Weights and Measures according to the Bombay Weights and Measures Act of 1932:—

Weights—

- (i) The Bombay Tola of 180 grains.
The Bombay Seer of 80 tolas.
The Bombay Maund of 40 seers.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$ and $\frac{1}{32}$ and the multiples 2, 4 and 8 of the tola, seer and maund.
- (ii) The pound avoirdupois equal to 7,000 grains and the sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$ and 4 and 8 ounces, the multiples 1, 2, 4, 7, 14, 28 lbs. (a quarter), 56 lbs., 112 lbs. (1 cwt.) and 2,240 lbs. (1 ton).
- (iii) The Bullion Tola of 180 grains. Multiples 2, 3, 4, 5, 10, 20, 30, 50, 100, 200, 300, 500, 1,000 and 2,000 and sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{16}$ of a Tola.
The Val. = $\frac{1}{40}$ of Tola = 4.5 grains.
Sub-multiples $\frac{1}{2}$ and $\frac{1}{4}$ of Val.
- (iv) The Rati = $\frac{1}{62}$ of Tola. Multiples 2, 3, 6, 12, 24, 48, 72, 120, 240 and sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$ and $\frac{1}{64}$ of Rati.
- (v) The dram is equal to $\frac{1}{16}$ th part of an ounce or $\frac{1}{256}$ part of a lb. Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ of dram and multiples 2, 4, 8 drams. The grain and sub-multiples .01, .02, .03, .05, .06, .1, .2, .25, .3, .5, .6 and multiples 2, 3, 4, 5, 6, 8, 10, 12, 16, 20, 24, 30, 40, 50, 60, 72, 100, 120, 240.
- (v) (APOTHECARIES)
Apothecaries ounce equal to 8 drachm or 480 grains.
Apothecaries drachm equal to 60 grains.
Sub-multiples $\frac{1}{16}$, $\frac{1}{8}$, $\frac{1}{4}$ and multiples 2, 4, 6, 8 and 10 apothecaries oz. The Scruple equal to $\frac{1}{3}$ drachm or 20 grains.
Sub-multiples $\frac{1}{2}$ and multiples 2 of Scruple.

Note.—Apothecaries weights from 10 oz. to 1 oz. should be marked "Apoth".

Dry measures—

- (i) The Bombay Seer.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ seer.
The Bombay Chatak = $\frac{1}{16}$ seer.
The Adpao = $\frac{1}{4}$ seer.
The Adholi = 2 seers.
The Bombay Payali of 4 seers.
The Bombay Maund of 16 payalis.
The Bombay Map of 2 maunds.

- (ii) Sub-multiples $\frac{1}{32}$ seer.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ of Bombay Maund.

Liquid measures—

- (i) The Bombay Seer.
The sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and $\frac{1}{16}$ seer.
The multiples 2, 4 and 8 seers.
The Imperial Gallon.
The Pint = $\frac{1}{2}$ gallon.
- (ii) Sub-multiples $\frac{1}{32}$ and $\frac{1}{64}$ and multiples 10, 20, 30 and 40 seers.
The maund = 40 seers.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and multiples 2, 4, 5, 8, 15, 16, 20, 25, 40, 50, 100 and 200 of Imperial Gallon.
The Gill = $\frac{1}{4}$ pint.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$ and multiples 2, 4, 8, of Pint and Gill.
- (iii) Liquid measures (For Road Tank Vehicles used as Measures)—
All multiples of Imperial Gallon.
- (iv) APOTHECARIES—
Fluid oz. = $\frac{1}{160}$ Imperial Gallon.
Fluid drachm = $\frac{1}{8}$ Fluid oz.
Minim = $\frac{1}{60}$ Fluid drachm.
All measures of capacity from 40 fluid oz. down to a half-fluid oz.
All measures of capacity from 16 fluid drachm down to a half-fluid drachm.
- (v) All the measures of capacity from 60 minims down to 1 minim.
- (vi) The liquor dram = $\frac{1}{18}$ of Imperial Gallon.
Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and multiples 2, 4, 8, drams.
The Peg = 2 fluid oz. or $\frac{1}{80}$ Imperial Gallon.
Sub-multiples $\frac{1}{2}$ Peg.

Length—

- (i) The Inch = $\frac{1}{36}$ th yard, and
The Foot = $\frac{1}{3}$ rd yard.
The Furlong of 220 yards.
The Mile of 1,760 yards.
- The yard is that unit of length which is exactly equal to the certified yard kept in the custody of the Mint Master, Bombay.
- (ii) Sub-multiples $\frac{1}{2}$ of the Yard.
Multiples 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 25, 33, 50, 66, 100 of the Foot.
Multiples 6, 15, 30, 42, 50, 66 and 100 all sub-multiples of the Inch.

Area and volume—

- (i) The Square Yard, Square Foot and Square Inch.
The Cubic Yard, Cubic Foot and Cubic Inch and sub-multiples of a Cubic Inch.
The Anna of $\frac{1}{4}$ of the guntha.
The Guntha of 121 square yards and the acre of 4,840 square yards for land measurement.
The Square of 100 square feet.
The Brass of 100 cubic feet.
- (ii) Sub-multiples $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ of Brass.

EDUCATION

SINCE August 15, Education at the Centre has been constituted into a separate Ministry of Education, the present Minister for Education being Maulana Abdul Kalam Azad. The provincial Governments are fully autonomous in regard to educational matters except in respect of educational development programme for which they receive grants-in-aid from the Central Government. Such programme has to be approved by the Central Government who have to examine whether it is in accord with the All-India approved educational policy.

The Central Ministry of Education consists of an Educational Adviser-cum-Secretary, a Joint Educational Adviser-cum-Joint Secretary and four Deputy Educational Advisers who are in charge of the different Divisions in the Ministry. There are also two Deputy Educational Advisers who are in charge of Educational work in London and Washington respectively. The names of the chief men in the Central Ministry of Education are given below :—

Educational Adviser-cum-Secretary, Dr. Tara Chand, M.A. D.Phil. (Oxon.).

Joint Educational Adviser-cum-Joint-Secretary, Humayun Kabir, M.A. (Oxon.), M.A. (Cal.).

Deputy Educational Advisers, M. S. Sundaram, M.A., B.Litt. (Oxon.), (*Educational Secretary to the Indian High Commissioner in London*), Asfaq Hussain, B.A. (Oxon.), Bar-at-Law (*Educational Secretary to the Indian Ambassador at Washington*).

Deputy Educational Adviser-cum-Deputy Secretary, P. N. Kripal, M.A., LL.B., B.A. (Oxon.), (*Head of the Administrative and Cultural Division in the Ministry*).

Deputy Educational Adviser-cum-Deputy Secretary, L. R. Sethi, M.A. (Punjab) & (Toronto), (*Head of the Development Division in the Ministry*).

Deputy Educational Adviser, G. K. Chandiraman, B.E. (*Head of the Technical Division*) (*Officiating*).

Deputy Educational Adviser, Mrs. P. Johari, M.A., L.T., T.D. (Lond.) (*Head of the Scholarships Division*) (*Officiating*).

Secretary, University Grants Committee, Dr. P. Narasimhaaya, M.A., Ph.D. (*Officiating*).

PROVINCIAL ORGANISATION

In Provinces also, the subject 'Education' is under the control of a Minister. The Director of Public Instruction is the permanent head of the Department and acts as an expert Adviser to the Minister in charge of Education. The Director controls the inspecting staff and the teaching staff of the Government institutions. In Bombay there is an Educational Adviser in addition to the Director of Public Instruction. A list of the Provincial Ministers of Education with their Directors of Public Instruction is given below :—

In the Centrally Administered Areas, Delhi and Ajmer, have each a Director of Education. Coorg has an Educational Officer. These Officers perform the functions of Directors of Public Instruction in provinces.

The authority of Government in controlling the system of public instruction is in part shared with and in part delegated to Universities and Boards of Secondary and Intermediate Education as regards secondary education and to local bodies as regards elementary education.

Certain forms of Technical Education are under the technical departments concerned and come within the purview of the Minister in Charge of those Departments.

ASSAM

Education Minister.—The Hon'ble Sri Jut Gopinath Bordoloi, M.A., B.L.

D.P.I.—Shri. U. K. Goswami, MA., B.L.

WEST BENGAL

Education Minister.—The Hon'ble Sri H. N. Chaudhury.

D.P.I.—Dr. Snehamooy Dutta, M.Sc.(Cal.), D.Sc., (London), D.I.C., F.N.I.

BIHAR

Education Minister.—The Hon'ble Acharya Badri Nath Verma.

D.P.I.—Shri G. Sinha, M.A. (Pat.), B.A. (Cantab.).

BOMBAY

Education Minister.—The Hon'ble B. G. Kher, M.A., LL.B.

D.P.I.—D. C. Pavate, M.A. (Cantab.).

Educational Adviser.—K. G. Saiyidain, M. Ed. (Leeds).

CENTRAL PROVINCES & BERAR

Education Minister.—The Hon'ble P. K. Deshmukhi.

D.P.I.—E. W. Franklin, M.A., B.E., T.D. (Lond.), Ph.D.

MADRAS

Education Minister.—The Hon'ble A. B. Shetty.

D.P.I.—D. S. Reddi.

ORISSA

Education Minister.—The Hon'ble Pandit Lingaraj Misra, M.A.

D.P.I.—Shri Satichandan Ray, B.A. (Oxon).

EAST PUNJAB

Education Minister.—The Hon'ble Dr. Gopi Chand Bhargava.

D.P.I.—Dr. K. C. Khanna, M.A., I.E.S.

UNITED PROVINCES

Education Minister.—The Hon'ble Sri Sampurnanand, B.Sc.

Director of Education.—Rai Bahadur Chuni Lal Sahney, M.Sc.

In India there are six Boards of Intermediate and/or Secondary Education, and 20 Universities. The names of the Vice-Chancellors of the Universities are given below :—

1. *Agra University*.—Dr. Narain Prashad Asthana, M.A., LL.D., C.I.E.

2. *Aligarh Muslim University*.—Dr. Zaker Hussain, M.A., Ph.D.

3. *Allahabad University*.—Dr. D. S. Bhattacharya.

4. *Andhra University*.—Sir C. R. Reddy, M.A. (Cantab.), Hon. D. Litt. (Andhra).

5. *Annamalai University*.—M. Ruthnaswamy, C.I.E., M.A., Bar-at-Law.

6. *Benaras Hindu University*.—Pt. Govind Malviya, M.A., LL.B.

7. *Bombay University*.—Mahamahopadhyaya Pandurang Vaman Kane, M.A., LL.M.

8. *Calcutta University*.—P. N. Bannerjee, M.A., B.L., Bar-at-Law.

9. *Delhi University*.—Sir Maurice Gwyer, G.C.I.E., K.C.B., K.C.S.I., D.C.L., LL.D.

10. *Lucknow University*.—Acharya Narendra Deva, M.A., LL.B.

11. *Madras University*.—Diwan Bahadur Sir A. Lakshmanaswami Mudaliar, M.D., LL.D., D.Sc., F.R.C.O.G., F.A.C.S.

12. *Mysore University*.—M. Sultan Mohiyuddin, M.A., LL.B., B.Ed.

13. *Nagpur University*.—Lt.-Col. Pandit K. L. Dubey, B.A., LL.B.

14. *Osmania University*.—Dr. Wali Mohammed, M.A., Ph. D.

15. *Patna University*.—Sir Chandresvar Prasad Narayan Singh, C.I.E., M.A.

16. *Travancore University*.—H. C. Papworth, O.B.E., M.A.

17. *Utkal University*.—P. Prija, Esq., O.B.E., M.A. (Cantab.), I.E.S.

18. *Saugor University*.—Sir Hari Singh Gour.

19. *Rajputana University*.—Dr. G. F. Mahajani

20. *East Punjab University*.—Mr. G. C. Chatterji, M.A., I.E.S. (Retd.).

THREE STAGES

The whole structure of education in India is being remodelled. Old Primary Schools, which in some provinces comprised of four classes, in others of five and six, in still others of seven or eight are giving place to Junior and Senior Basic Schools; High Schools will be/are being reorganised into Higher Secondary Schools to include the 1st Year of Intermediate Education, leading up to three-year degree course. So far, only in Delhi Province has this change been introduced. Technical Education is in the forefront and definite vocational bias is being given to education in Basic Schools.

The Central Advisory Board of Education in India, has since its revival in 1935 been considering the question of educational reconstruction in India. At their meeting held in December, 1935, the board passed the following resolution on the subject.

(1) The Board is of opinion that a radical readjustment of the present system of education in schools should be made in such a way as not only to prepare pupils for professional and university courses, but also to enable them at the completion of appropriate stages, to be diverted to occupations or to separate vocational institutions.

(2) These stages should be :—

(a) The primary stage, which should aim at providing at least a minimum of general education and training and still ensure permanent literacy.

(b) The lower secondary stage, which will provide a self-contained course of general education either for higher education or for specialised practical courses.

In rural areas, the courses at this stage should be tuned to rural requirements.

Higher Secondary Stage.—Some form of manual training at this stage should be provided which would aim at the development of practical aptitudes and be made compulsory.

(c) The higher secondary stage, in which would be included institutions with varying length of courses :—

(i) preparing students for admission to universities in arts and science ;

(ii) for the training of teachers in rural areas ;

(iii) for agricultural training ;

(iv) for clerical training, and

(v) for training in selected technical subjects which should be chosen in consultation with employers.

Where separate institutions are not possible for the diversified courses, some of them might be incorporated in a higher secondary course of enlarged scope which would permit a choice of alternative groups of subjects and would end in leaving certificates.

(3) At the end of the lower secondary school course there should be the first public examination.

(4) Candidates desirous of joining the subordinate clerical service of Government and of local bodies should pass such qualifying examinations as might be prescribed by proper authority and should not be more than 19 years of age at the date of their examinations.

The certificate granted to pupils completing other specialised courses should receive Government recognition.

(5) Expert advice would be of value in organising the scheme of reconstruction outlined above; and also for suggesting methods of training masters who would assist pupils and selection, by the pupils, of courses of study with due regard to their aptitudes.

WOOD-ABBOT REPORT

As the board had recommended that expert advice will be necessary for planning educational reorganisation, Messrs. A. Abbot, C.B.E., formerly Chief Inspector of Technical Schools, Board of Education, England, and Mr. S. H. Wood, M.C., Director of Intelligence, Board of Education, England, were invited to India for the purpose. Their visit resulted in the production of the famous report on educational reconstruction commonly known as "Wood-Abbot Report". The most important recommendations outlined in this report are:—

- (a) Infant classes should, so far as possible, be entrusted to trained women teachers; and for this and other reasons the development of educational provision for girls and women is of paramount importance.
- (b) The education of children in the Primary Schools should be based more upon the natural interests and activities of young children and less upon book learning. Concentrations on literacy as a narrow objective is unsound.
- (c) The curriculum of the rural Middle (or Lower Secondary) Schools should be closely related to children's environment; and if English is taught to any children of middle "school" age it should not be allowed to result in an excessive amount of time being devoted to linguistic studies.
- (d) The Vernacular language should, so far as possible be the medium of instruction throughout the High (or Higher Secondary) Schools, but English should be a compulsory language for all pupils in these schools.
- (e) The teaching of English should be made more domestic and less attention should be devoted by the average boy to the study of English "prose and poetry"—arrangements being made to meet the needs of those boys specially qualified to pursue more advanced English studies.
- (f) More systematic attention should be paid to the teaching of Art, and steps should be taken to secure for the High (or Higher Secondary) Schools a supply of qualified teachers of Art.
- (g) The pre-employment course of training for teachers of Primary and Middle (or Lower Secondary) Schools should be three-year course following without any gap, the completion of Middle (or Lower Secondary) School course.

OTHER REPORTS

In conjunction with the Wood-Abbot Report, the Board gave the considered thought to the scheme of educational reconstruction whose real author was Mahatma Gandhi, which had emerged in the shape of Dr. Zakir Hussain Committee report. The Board accepted the Basic Education Scheme with certain essential modifications, and on this subject two very important reports known as Kher Committee reports were published.

In the expectation that sooner or later the problem of providing India with a system of education approximation to those available in other countries will have to be tackled, serious attention was devoted to the surveying of the main fields of educational activity so as to ascertain the minimum provisions required. Thus since the Board's revival in the year 1935, the various committees of the Board reported on following subjects, up to the year 1945.

(1) Basic Education; (2 reports); (2) Adult Education; (3) The Physical Welfare of School-children; (4) School Buildings; (5) Social Ser-

vice; (6) The Recruitment, Training and Conditions of Service of Teachers in Primary, Middle and High Schools; (7) The Recruitment of Education Officers; (8) Technical (Including Commercial and Art) Education; (9) Text-books; (10) Examinations; (11) Educational Administrations; (12) Agricultural Education; (13) Religious Education; (14) Selection of Pupils for Higher Education.

At their meetings held in October, 1943 and January, 1944 the Board reviewed the recommendations of their Committees with special reference to post-war needs and developments. They were satisfied that the Educational Adviser's Memorandum on Post-war Educational Development in India, subject to the modifications suggested by them, would provide the foundation upon which an efficient system of public instruction, suited to the needs and circumstances of the country could effectively be erected. Their final recommendations are contained in the published Report on Post-War Educational Development in India. These have been given in the previous issue of the Year Book, and are repeated here for convenience.

BASIC (PRIMARY AND MIDDLE) EDUCATION

- (a) A system of universal, compulsory and free education for all boys and girls between the ages of six and fourteen should be introduced as speedily as possible though in view of the practical difficulty of recruiting the requisite supply of trained teachers it may not be possible to complete it in less than forty years.
- (b) The character of the instruction to be provided should follow the general lines laid down in the reports of the Central Advisory Board's two Committees on Basic Education.
- (c) The Senior Basic (Middle) School, being the finishing school for the great majority of future citizens, is of fundamental importance and should be generously staffed and equipped.
- (d) All education depends on the teacher. The present status and remuneration of teachers and especially those in Primary Schools are deplorable. The standards in regard to the training, recruitment and condition of service of teachers prescribed in the report of the Committee approved by the Central Advisory Board in 1943 represent the minimum compatible with success of a national system. These should be adopted and enforced everywhere.
- (e) A vast increase in the number of trained women teachers will be required.

PRE-PRIMARY EDUCATION

- (a) An adequate provision of pre-primary instruction in the form of Nursery Schools or classes is an essential adjunct to any national system of education. The provision in this respect at present is negligible.
- (b) In urban areas, where sufficient children are available within a reasonable radius, separate Nursery Schools or department may be provided; elsewhere Nursery classes should be attached to Junior Basic (Primary) Schools.
- (c) Nursery Schools and classes should invariably be staffed with women teachers who have received special training for this work.
- (d) Pre-primary Education should in all cases be free. While it may not be feasible to make attendance compulsory, no efforts should be spared to persuade parents to send their children to school voluntarily, particularly in areas where housing conditions are unsatisfactory and/or mothers are accustomed to go out to work.
- (e) The main object of education at this stage is to give young children social experience rather than formal instruction.

HIGH SCHOOL EDUCATION

- (a) The High School course should cover six years and the normal age of admission should be about eleven.

(b) Entry to High Schools should be of a selective basis; only those pupils should be admitted who show promise of taking full advantage of the education provided. Additional places may be provided for those not selected provided that no cost falls on public funds.

(c) In accordance with the general principle set out in (b) above, places in High Schools should be provided for at least one child in every five of the appropriate age-group.

(d) In order to secure the right children, the methods of selection to be employed will require the most careful consideration. Special arrangements will have to be made for the transfer from Senior Basic (Middle) Schools to High Schools of suitable children and particularly of those who show signs of late development.

(e) High Schools should be of two main types (A) Academic (B) Technical. The objective of both should be to provide a good all round education combined with some preparation in the later stages for the careers which pupils will enter on leaving school.

(f) The curriculum in all cases should be as varied as circumstances permit and should not be unduly restricted by the requirements of Universities or examining bodies.

(g) In order that no poor child of ability may be excluded, liberal assistance in the form of free places, scholarships and stipends should be available throughout the course.

(h) In order to secure teachers of the right type, the salaries paid in all recognised schools, whether maintained by the State or by private bodies, should not be less than those prescribed by the Central Advisory Board of Education.

UNIVERSITY EDUCATION

- (a) Indian Universities, as they exist today, despite many admirable features do not fully satisfy the requirements of a national system of education.
- (b) In order to raise standards all round, the conditions for admission must be revised with the object of ensuring that all students are capable of taking full advantage of a University Course. The proposed reorganisation of the High School system will facilitate this. Adequate financial assistance must be provided for poor students.
- (c) The present Intermediate course should be abolished. Ultimately the whole of this course should be covered in the High School but as an immediate step the first year of the course should be transferred to High School and the second to Universities.
- (d) The minimum length of a University degree course should be three years.
- (e) The tutorial system should be widely extended and closer personal contacts established between teachers and students.
- (f) The importance of establishing a high standard in post-graduate studies and particularly in pure and applied research should be emphasised.
- (g) Steps should be taken to improve the conditions of service, including remuneration of University and College teachers where those now in operation are not attracting men and women of the requisite calibre.
- (h) An Indian University Grants Committee should be constituted for the purpose and with the terms of reference set out in this chapter.

TECHNICAL, COMMERCIAL & ART EDUCATION

- (a) In view of the prospective needs of post-war industry and commerce for skilled technicians, and in order to cater for the aptitudes of those who will derive greater benefit from a practical course, the establishment of an efficient system of Technical Education at all stages on the lines set out in the report of the Technical Education Committee, is a matter of great urgency.
- (b) Due regard should be had to the recommendations of the Abbot-Wood Report in respect of the scope and content of Technical Education.

ADULT EDUCATION

(a) Comprehensive arrangements on the general lines set out in the Adult Education Committee's report should form an integral part of education. These are particularly important in India today in view of the very high percentage of illiterates.

(b) Literacy is a means and not an end in itself. The present plan of Adult (Social) Education aims at removing illiteracy as well as at teaching the people the fundamental of citizenship in an independent country.

(c) It is estimated that even with introduction of a universal system of Basic education there will be over 600,000 illiterates (age-group 10-40) to be dealt with. The Government of India have recently so planned the system of Adult (Social) Education, as to make possible the removal of 50 per cent illiteracy in five years; and have allocated a sum of Rs. 1 crore in 1949-50 for the purpose.

(d) In this as in all branches of education the quality of the teachers is of supreme importance. The difficulty of obtaining a sufficient number of teachers of the right type, particularly women, must on no account be underestimated.

(e) The responsibility for adult education must rest with the State but every effort should be made to enlist the aid of suitable voluntary organisations wherever available.

TRAINING OF TEACHERS

(a) The proposals for the recruitment and training of teachers as set out in the Report approved by the Central Advisory Board in January, 1943 should be generally adopted.

(b) The existing training institutions are barely sufficient to meet wastage among existing teachers to train those hitherto untrained.

(c) New Training Schools and Colleges (including University Education Department) must be provided to supply the additional teachers whom a national system will require. These will amount to over 20,00,000 non-graduates for schools of all types and 180,000 graduates for High Schools.

(d) Arrangements should be made to pick out suitable boys and girls towards the end of the High School course. This is particularly important in Girls' High School in view of the vast increase in the number of women teachers required.

(e) The courses provided should be essentially practical and should be specially related to the needs of the schools in which the trainees will subsequently serve.

(f) No fees should be charged either in Training Schools or Training Colleges; liberal assistance should be available for the maintenance of poor students.

(g) Refresher courses are of the utmost importance and should be provided for all types of teachers but particularly for those in remote rural areas. Facilities should be provided for research and selected teachers should be encouraged to study educational methods in foreign countries.

The Health of the School Child—Provision for ensuring the physical welfare of all pupils and students should be made on the lines set out in the report of the Joint Committee.

THE EDUCATION OF THE HANDICAPPED

(a) Provision for the mentally or physically handicapped should form an essential part of a national system of education and should be administered by the Ministry of Education.

(b) While much of the work relating to the education of the handicapped has been done so far by voluntary efforts, the Government of India are no less anxious to promote the cause of the education and welfare of the handicapped. The Ministry of Education have set up a special unit which deals with all matters relating to this branch of education. Plans for the establishment of a Braille Printing Press as well as a National Centre for the Blind are in hand.

(c) Wherever possible, handicapped children should not be segregated from normal children. Only when the nature and extent of their defect make it necessary, should they be sent to special schools or institutions. Partially handicapped children should receive special treatment at ordinary schools.

(d) The blind and deaf need special educational arrangements, including specially trained teachers. The Government of India have also proposed to modernize the existing Teachers Training Centres for the Deaf and Dumb.

(e) Particular care should be taken to train the handicapped, wherever possible for remunerative employment for them. After care work is essential.

RECREATIVE & SOCIAL ACTIVITIES

(a) The provision of recreative and social activities on an adequate scale is an essential feature of any modern educational system.

(b) Apart from the needs of boys and girls in schools and colleges special attention should be paid to those in the 14-20 age-group who are no longer attending school. To serve these a Youth Movement on an All-India basis should be set up.

(c) A Youth Movement should aim at co-ordinating and supplementing rather than superseding the work of organisations already dealing with aspects of this problem.

(d) This main need of a Youth Movement will be for leaders, both men and women, who will have to be specially trained. The possibility of finding suitable recruits among demobilised Officers and N.C.O.'s should be explored.

(e) The provision of social and recreative facilities for adults should form an important part of any Social Service Scheme. Reference is invited to the report of the Board's Committee on Social Service and Public Administration (1941).

Employment Bureaux—(a) Employment Bureaux form an essential part of educational administration; they are especially necessary in India in view of the restricted openings at the moment for progressive employment.

(b) Employment Bureaux, if they are to fulfil successfully the functions set out in this chapter, must be staffed by trained experts with practical experience of teaching and of industrial conditions.

(c) While contact should be maintained with Unemployment Exchanges, Labour Tribunals, etc. established by other Departments, Employment Bureaux which deal with the output of educational institutions should be under the control of the Education Department.

ADMINISTRATION

(a) The Provinces should remain the main units for educational administration except in regard to University and Higher Technical Education, the activities of which could be co-ordinated on an All-India basis.

(b) In the event of the Indian States taking part in educational development on an All-India scale it may be necessary in order to form economic educational units to group the smaller ones or attach them to larger States or contiguous Provinces.

(c) A national system of education will mean closer co-operation, financial and otherwise between the Central and Provincial Governments.

(d) Provincial Governments should be left to make such changes in their administrative arrangements as the carrying out of education developments on the scale contemplated may require. Experience, however, suggests that they would be well-advised to resume all educational powers from local bodies, except where these are functioning effectively.

(e) In order to enlist local interest in education, School Managing Bodies, School Board and District Education Committees may be constituted, if and when sufficient people of the right

type are available to serve on them. An Educational Advisory Board for the whole Province may be desirable.

(f) A strong Education Department will be required at the Centre and in this connection the scope and functions of the Central Advisory Board should be enlarged.

(g) Steps should be taken in accordance with the recommendations of the Board's Committee on the Recruitment of Education Officers (1943) to check the present deterioration in the status and calibre of the educational administrative service and to enable it to secure the services of the type of officer who will be capable of carrying a scheme of the kind contemplated into successful operation.

(h) Arrangements should be made for the exchange of officers between the Centre and the Provinces and between one Province and another. The desirability of establishing a senior educational administrative service on an All-India basis should receive consideration.

(i) The Director of Public Instruction should be directly responsible for the general administration of education, other than University and Higher Technical Education, throughout the Province. He should also be Secretary for Education, should it be thought necessary to keep in existence a separate post of this kind.

SOME OBJECTIONS

(i) Forty years is too long a period, in which the whole scheme is to be brought into effect. Such a scheme is in grave danger of being put on one side and neglected. During this period, so many changes may take place which may bring the wheel back to the starting point.

(ii) Any educational post-war reconstruction scheme, should give, subject to a minimum fitness an equal opportunity for all rich and poor, those from the rural areas as well as those from the urban areas, and from backward communities as well as from the more advanced communities. Selection for higher education on merits will be an injustice to students of backward communities and groups which for whatever reason take longer to develop mentally.

(iii) Compulsion has existed for many years in some areas in India, but on the whole it has been a failure, because it was never properly enforced. A plan for universal compulsory education in India must, at the very outset indicate a strong enough possibly governmental machinery, for seeing that compulsion is actually effective.

(iv) The idea that where compulsory education can only be introduced by stages, the progress should be from area to area and not from age-group to age-group, may create serious conflicts, since the people in certain areas may have to wait a long time for educational advantages which those in other areas may already be enjoying.

GOVERNMENT APPROVAL

As a result of the general agreement which Provincial Governments expressed with the policy outlined in the Board's report the Government of India generally accepted, subject to the limitation of finance, the principles and objects of the Board's scheme.

In 1944, the Government of India asked the Provincial Governments to prepare their Five-Year Post-War Educational Development Plans on the general lines laid down in the report of the Central Advisory Board of Education. Early in 1946, the Provincial Governments were asked to select a few important schemes like Training of Teachers, and Compulsory Primary Education from their plans, and start implementing them after their approval by the Government of India. All the schemes submitted by the Provincial Governments to the Government of India have been examined, and such of them as conformed to the recommendations contained in the Report have been approved by the Government of India for immediate execution. The outstanding

feature of the Provincial Development schemes is that the scales of pay of teachers will be appreciably raised, so as to secure for them a 'living wage'. For example, the teachers who get in certain provinces a salary from Rs. 8 to 15 will henceforth get at least Rs. 20 if not Rs. 25, and matriculate trained teachers will invariably be placed in the scale of pay recommended by the Central Advisory Board of Education, viz., Rs. 30-1-35-3 (biennially)-50 p.m. plus house rent and other allowances recommended. Even these salaries are not adequate, but they certainly effect some improvement on the existing lamentable plight of the teachers. Free and compulsory basic education for boys and girls of the age-group 6-11 will be introduced forthwith, and it will be extended to the 11-14 group. On the University education side, there will be general improvement in the scales of pay of teachers, increased facilities for scientific education and for research work. Technical and Adult Education will also receive their due share.

The 1947-48 Educational Development Programme of the Provincial Governments which is also based on the Central Advisory Board of Education Report has also been approved by the Central Government in almost all cases, and is being implemented.

Financial Assistance.—The Government of India undertook that the entire expenditure incurred by the Provincial Governments on their educational development plans, approved by the Centre, during 1946-47 will be borne by the Central Government. They have further undertaken to give over forty crores of rupees to Provincial Governments for their entire Post-War Development Programme during 1947-48. Whatever portion of the total development budget is allocated by a Province to educational development the same portion of the total Central grant is assumed to be the contribution of the Centre towards education (in that Province) e.g., if a Province is complementary to the Development budget on education, then 10 per cent. of the Central grant is deemed to be the Centre's contribution for education.

Financial Aspect of Central Schemes.—The Government of India in the Ministry of Education have also drawn up their Five-Year Plan which is complementary to the Development Plans of the Provinces and is expected to cost over Rs. 23.71 crores. A start has already been made with a number of Central Schemes, e.g. Training of Teachers for Basic Schools, Technical Education, Development of Central Universities, and so on.

PROVINCIAL SCHEMES

Here is a brief account of the Five-Year Educational Plans (1947-52), Province by Province.

ASSAM

Basic Education.—Assam proposes to adopt the 'basic' system of education, though compulsion is not contemplated. Junior Basic primary education is already free in this province. During the first quinquennium 1,250 junior basic (1,000 two-teacher and 250 one-teacher) and senior basic schools will be opened. At present, approximately 9 lakhs children of age-group 6-11 and 6.5 lakhs of the ages of 11-14 are not at school. At the rate proposed, and provided compulsion is applied to the whole of the age-group 6-14, a minimum period of 35 years will be required to cover the whole province.

The expenditure proposed on basic education in the first period, including indirect expenditure on teachers' training and inspection approximates to Rs. 57 lakhs (Rs. 24 lakhs capital and Rs. 33 lakhs recurring). This is 52 per cent. of the total expenditure proposed on all education schemes. This does not take into account the Rs. 400 lakhs additional expenditure proposed on education.

Pre-Primary Education.—It is proposed to open six Pre-Primary schools and classes in suitable areas every year for a period of five years.

The expenditure proposed on Pre-Primary education in the first five-year period is Rs. 1.99 lakhs (Rs. 1.5 lakhs N.R. and Rs. 49 lakhs R.).

High School Education.—It is proposed to open 3 high schools and 25 middle schools during the quinquennium.

It is also proposed to introduce vocational subjects in selected High Schools and to improve the condition of buildings and equipment of the non-Government High Schools.

Separate figures of expenditure are not available.

Technical, Commercial & Art Education.—

(a) There are at present 3 Technical Schools in the province and it is proposed in the Five-Year Plan to start 2 new Junior Technical Schools, and to open Technical and Commercial Classes in 4 High Schools. Also it is intended to give increased grants to Commercial schools.

The total expenditure on this expansion will amount to Rs. 9 lakhs (Rs. 3.3 lakhs N.R. and Rs. 5.7 lakhs R.) during the quinquennium.

(b) There is at present only one scholarship for training in Music and 4 scholarships for Domestic Science. It is intended to create at least 5 more scholarships for training of both boys and girls in these and other special subjects, facilities for which do not exist in Assam, so that in due these subjects may be introduced in the educational institutions.

The total expenditure proposed during the quinquennium is Rs. 60,000.

Adult Education.—At present there are 400 centres with our part-time teacher in each on a monthly allowance of Rs. 6 but it is intended to open 400 centres (at 100 per year from the 2nd year) on a monthly allowance of Rs. 12 with a view to liquidate illiteracy and promote adult education. The total number of illiterates of age-group 10-40 in the province approximates to 40 lakhs. At the rate proposed it will take three to four decades to render literate the entire population.

The expenditure proposed for the purpose during the quinquennium is Rs. 3,39,000.

Training of Teachers.—There are at present only Government training schools for men teachers and two-aided Training Schools for women teachers. These institutions cannot cope with the existing and potential demand, and hence it is intended to open at least one Training School for men and another for women teachers in each valley with a view to providing facilities for the training of untrained teachers as also for the expansion of Basic Education.

The total expenditure involved on this account comes to Rs. 10.7 lakhs (Rs. 4.7 N.R. and Rs. 6.0 R.).

The Health of the School Child.—As there are no arrangements for proper medical service for school children, it is proposed to strengthen the staff of Inspectors and Inspectresses of Physical Training and establish a School Medical Service.

The total expenditure proposed is Rs. 3.4 lakhs (Rs. 1.3 lakhs N.R. and Rs. 2.1 lakhs R.).

The Education of the Handicapped.—There being no Government institution for the education of the handicapped in the province, it is proposed to open one Government School for the Blind, and one Government School for the Deaf and Dumb.

The total expenditure proposed for the five-year plan period is Rs. 1.7 lakhs (Rs. .8 lakhs N.R. and Rs. .9 lakhs R.).

Administration (Inspectorate).—To strengthen the inspecting staff with a view to ensure efficient inspection and supervision of the basic schools as also the mass literacy centres, 2 posts of Deputy Inspectors, 2 of Sub-Inspectors, and 24 of Assistant Sub-Inspectors will be created.

Figures of expenditure are not separately available.

Miscellaneous.—There are also schemes for giving increased grants-in-aid to the existing aided European Schools (Rs. 2 lakhs for five-year period), and for the improvement and expansion of cultural education.

WEST BENGAL

On account of the partition of the old province of Bengal, the Five-Year Educational Plan prepared for the province of Bengal is no longer operative in West Bengal, for which a revised plan is being prepared. For the immediate requirements of the province, a few educational schemes selected out of the old Plan but modified to fit in the new order are being put into execution.

BIHAR

Basic Education.—(a) Universal and compulsory basic education for all children, boys and girls of the age-group 6-14 in one-fourth of the province will be introduced according to the basic scheme in a period of 35 years. At this rate not less than 60 years may be required to complete the introduction of compulsory education throughout the province.

(b) The expenditure proposed on basic education in the first five-year period including indirect expenditure on teachers, training, etc., is Rs. 641 lakhs (Rs. 374 lakhs capital and Rs. 267 lakhs R.) which is 71 per cent. of the total expenditure proposed on all education schemes.

(c) The trained teachers possessing matriculation or equivalent qualification will be placed in the scale (Rs. 30-50) recommended by the Board but for the middle trained and lesser qualified teachers the scale proposed is Rs. 15-13-25.

Middle School Education.—(a) It is proposed to give additional grants-in-aid (Rs. 19 lakhs) to existing non Government middle schools in order to enable them to improve the pay and qualifications of the teachers and their buildings.

(b) For the encouragement of girls' education it is proposed to open 40 Government managed Middle English Schools for girls with 8 classes.

The total expenditure involved in the scheme is Rs. 24.6 lakhs (Rs. 19.8 lakhs N.R. and Rs. 4.8 lakhs R.).

(c) It is also proposed to convert 32 upper primary schools into middle schools each year. This will cost Rs. 5.8 lakhs recurring in the five-year period.

High School Education.—(a) It is proposed to open 15 Government High Schools for girls, and to improve an existing Girls' High School.

The total expenditure on this scheme will amount to Rs. 35.3 lakhs (Rs. 26.4 lakhs N.R. and Rs. 8.9 lakhs R.).

(b) It is also proposed to give additional grants-in-aid to High Schools for improvement in the pay of teachers and their buildings and to open Science Classes. The total expenditure will amount to Rs. 24 lakhs (Rs. 5.3 lakhs N.R. and Rs. 18.7 lakhs R.).

University Education.—(a) It is proposed to open a college for women to teach Arts subjects including Psychology up to the B.A. Honors, and Science up to the intermediate stage, and to attach to it post-graduate training classes.

The total expenditure will amount to Rs. 24.5 lakhs (Rs. 18 lakhs N.R. and Rs. 6.5 lakhs R.).

(b) It is further proposed to expand the Government managed and aided Arts and Science Colleges for providing increased facilities for the teaching of Arts and Science subjects. In the five-year period Rs. 42.5 lakhs N.R. and Rs. 10.6 R. will be spent.

Technical, Commercial and Art Education.—

(a) There are at present 35 Technical Schools and 2 Technical Colleges or Institutions for advanced studies in the province. It is proposed in the Five-Year Plan to start a new college

of Technology and 2 new Junior Technical Institutions and 15 part-time vocational institutions. It is also proposed to expand one Senior Technical Institution and 3 Junior Technical Institutions and to provide for a Technical Education Loan Fund and a Technical Education Scholarships Fund.

(b) There is also a proposal for opening a Commercial Institute by Government for teaching shorthand, type-writing, book-keeping, etc.

Adult Education—A network of voluntary-run adult education centres will be opened all over the province in 25 years. It is expected that these centres will be the custodian of the culture of the country-side. The province has about 174 lakhs adults of the age-group 10-40 who are illiterate.

A sum of Rs. 15 lakhs has been proposed for the first five years period.

Training of Teachers—The following provision has been made in the Five-Year Plan.

- Expansion of existing 55 elementary training schools for men teachers and opening of 15 new elementary training schools for them.
- Opening of 4 new elementary training schools for female teachers and improvement of the 2 existing women training classes and a training college.
- Opening of a large secondary training school for men and women, and improvement of the C.T. classes attached to a Training College.
- Opening of two training colleges.

Health of the School Child—(i) It is proposed to appoint a Superintendent of Physical Training to supervise the work done by the Professors and Instructors of Physical Culture in training schools and colleges and to appoint one Physical Instructor in the Patna Training College where there is none.

The total expenditure proposed for the scheme is Rs. 17 lakhs non-recurring and Rs. 51 lakhs recurring.

(ii) For the medical inspection of school children, and improvement of school hygiene it is proposed to give grants-in-aid to all high schools to enable them to appoint a qualified Medical Officer. For this purpose, a sum of Rs. 1 lakh is proposed as expenditure.

(iii) Government proposes to subsidise the mid-day lunch scheme by giving a small grant of annas 4 per head per month for feeding the really poor children. The estimated five-year cost on this account comes to Rs. 30 lakhs.

Education of the Handicapped—At present there are two schools for the blind in the province but this provision has been found to be inadequate. It is therefore proposed to open another school for the blind, deaf and dumb.

The estimated expenditure for five-year comes to Rs. 1.55 lakhs (Rs. .83 N.R.).

BOMBAY

Basic Education—The Provincial Government have proposed the introduction of free and elementary education for children of 6 to 11 years of age throughout the province within a period of 10 to 12 years. The school course has been reduced from 5 to 4 years. The total number of children attending primary schools in the province at present is about 16 lakhs, and the proposal is to provide for the education of 16 lakhs additional children during a period of 10 to 12 years. Compulsion will be introduced through the local bodies concerned, but the Government will bear the whole expenditure over and above what could be met by increasing the cess contributions to 15 pies in the case of District Local Boards and half of the additional cost on compulsion in the case of Local Authority Municipalities.

The total estimated cost for the five-year period is Rs. 417 lakhs. The primary school teachers will be placed in the scale of Rs. 30-1-50-5-2-75.

(b) The Provincial Government's policy is to provide a school for each school-less village

(population 400 to 1,000) through private bodies who will be given grants-in-aid for the purpose; 1,400 school-less villages with a population of 400 to 700 will be provided with schools by private bodies, and in villages with a population of 700 to 1,000, District Local Boards will be encouraged to open 300 schools on payment of grants-in-aid equal to the actual expenditure on the schools.

The total cost on this scheme for the five-year period has been estimated at Rs. 28.3 lakhs.

(c) For the construction of some 6,000 new buildings required for providing additional accommodation in the existing schools or for new schools to be opened under the compulsory elementary education scheme, the total expenditure is estimated for the five-year period at Rs. 2.13 lakhs N.R. and Rs. 5.5 lakhs R.

(d) The Provincial Government have finally decided to introduce basic education by stages in all primary schools. As a first step it is proposed to introduce the teaching of a suitable craft in every primary school as soon as it is possible to secure a teacher to teach the craft concerned. For giving effect to this proposal a sum of Rs. 138 lakhs N.R. and Rs. 60.8 R. lakhs has been estimated as the probable cost for the five-year period.

The Government proposes to ask local Authorities to convert 100 full grade primary schools into Agricultural Bias schools during 1947-52 at the rate of 20 per year. Also 20 hostels will be attached to centrally situated Agricultural Bias schools in places where there is need for such hostels.

The estimated total cost for the five-year period is Rs. 25.9 lakhs of which Rs. 8.7 lakhs will be N. R.

Secondary Education—(a) In order to improve the standard of the secondary schools, many of which depend for their finances on the fees collected and Government grants, it is proposed to give increased grants. Thereby the schools will improve the pay scales and conditions of service of teachers. A sum of Rs. 70 lakhs is the estimated cost for the five-year period.

(b) At present, Provincial Government maintains 4 Agricultural High Schools in the Province. It is proposed to raise the number to 8, and for this purpose an expenditure of Rs. 9.7 lakhs N.R. and Rs. 4.1 lakhs R. has been estimated for the five-year period.

(c) Also there is a proposal to increase the number of existing Technical High Schools from 2 to 12. An expenditure of Rs. 56.6 lakhs N.R. and Rs. 8.2 lakhs R. has been estimated for the quinquennium period.

University Education—The Government has accepted the principle of the establishment of Regional Universities in the Province for Maharashtra in 1948-49, for Gujarat and Karnataka in 1949-50 and 1950-51 respectively. On this proposal, the estimated expenditure for the five-year period is Rs. 24 lakhs N.R. and Rs. 40.9 lakhs R.

Technical, Commercial and Art Education—There are at present 39 Technical schools and 6 Technical Colleges or Institutions for advanced studies in the province. It is proposed to undertake expansion of 2 Senior Technical Institutions and the reorganisation of one Industrial School and the expansion of Apprenticeship scheme. It is also proposed to start 4 new industrial schools.

Adult Education—At present adult education classes are maintained by private bodies or individuals and given grant-in-aid by Government. Since 1945, a small area of suitable size in some 5 districts has been selected for concentrated effort and adult education classes organised. It is proposed to extend the scheme to 21 other compact areas during five year 1946-47, and to all the 190 Talukas in the whole province within 5 years from 1947-48. The annual cost of each area is Rs. 9,400 and it is intended to make about 1,000 adults literate during a year in each area.

The total cost of the scheme during the five-year period has been estimated at Rs. 58.6 lakhs.

In addition it is proposed to spend a sum of Rs. 2.4 lakhs on imparting literacy at Labour Welfare Centres.

Training of Teachers—(a) In order to increase the output of trained teachers it is proposed to expand the existing training institutions and to open 13 new training colleges 7 for men and 6 for women in addition to the 3 training colleges for men already opened in 1945-46.

The estimated expenditure on the scheme for the five-year period is Rs. 52.6 lakhs N.R. and Rs. 51 lakhs R.

(b) It is proposed to open 34 Lokshalas during the five-year period 1947-48 to 1951-52, in addition to the four opened in 1946-47, which will be attached to Government Secondary Schools or full-grade Primary Schools or Training Colleges. The total expenditure on this scheme in the five-year period has been estimated at Rs. 24.8 lakhs.

Health of the School Child—(a) It is proposed to create a School Health Service to provide for (i) the medical examination of all children in Primary and Secondary Schools once on entry into a primary school and again at the ages of 11, 14 and 17 (ii) the re-examination every year of those who are not found fit and (iii) their treatment locally or at some central place. It has also been proposed to appoint a Chief Medical Officer to make a general survey in the whole province and to submit detailed proposals for the organisation of the scheme from 1948-49. On this scheme the estimated expenditure for the five-year period is Rs. 58.6 lakhs.

(b) It is proposed to provide a light midday meal to primary school children in 10 selected backward districts of the province as an experimental measure. The total cost for the 3rd 4th and 5th year period has been estimated at Rs. 34.4 lakhs.

(c) It is proposed to hold short-term courses for the training of primary and secondary teachers in physical education, to create 32 posts of Assistant Deputy Education Inspectors, and a post of Chief Inspector of Physical Education for the province. The total estimated expenditure for the five-year period is Rs. 26.3 lakhs.

Administration—It is proposed to strengthen the existing inspecting staff by the creation of 220 additional posts of Assistant Deputy Educational Inspectors (180 for men and 40 for women) during the five-year period. The expenditure proposed for the purpose is Rs. 14 lakhs.

In addition there are certain other miscellaneous schemes for educational development.

MADRAS

Basic Education—At present there are about 3 million children at school and 4 million remain to be brought under instruction. The Provincial Government have proposed to bring about 1.33 millions of children under instruction in the course of the first five years, compulsion being applied upto the V standard, though the ultimate objective is to make education free and compulsory for both boys and girls throughout the province upto the senior basic stage (6-14 age-group) in a period of 20 years.

The total expenditure proposed on this scheme for the five-year period is Rs. 700 lakhs.

Technical, Commercial and Art Education—There are at present 84 Technical Schools and 6 Technical Colleges or Institutions for advanced studies. It is proposed in the Five-Year Plan to start 6 new Polytechnics, 2 new Engineering Colleges, 1 Research Institution and 15 new Junior Technical Schools.

Training of Teachers—(a) As additional trained teachers will be required for the introduction of compulsory elementary education in the province, it is proposed to provide additional sections in the existing training institutions, and to a limited extent to open additional training

schools, where necessary. For this purpose a sum of Rs. 60 lakhs has been proposed for the five-year period.

(b) It is proposed to train 1,250 instructors and instructresses in Physical Education in order to attach them to boys' and girls' Secondary Schools at the rate of one instructor or instructress for every 250 pupils. The total expenditure proposed on this scheme is Rs. 5.65 lakhs.

The Health of the School Child :—(a) It is proposed to provide for midday meals for children attending elementary schools. In the first year provision is required to be made for about 6 lakhs of children.

At the rate of one anna for a meal and for 220 days in a year an expenditure of Rs. 12.79 lakhs is provided under this scheme.

(b) It is proposed to make suitable arrangements for the Medical Inspection of school pupils through the agency of registered medical practitioners. So far as colleges are concerned, the medical inspectors' remuneration will be covered by fees recovered from students and in secondary schools only a portion will be met from fees receipts. The total expenditure proposed under this scheme is Rs. 60 lakhs.

Scales of Pay of Teachers :—It is proposed to introduce the minimum scales of pay suggested in the report of the Central Advisory Board of Education while the additional cost of applying the scales will fall wholly on Government in respect of institutions directly controlled by them the additional cost in respect of institutions maintained by local bodies and private management will be borne by Government to the extent to which the managing agencies cannot be made to share it. The five-year estimated expenditure on the scheme is Rs. 894 lakhs.

ORISSA

Primary Education :—(a) The aim of the Provincial Government is to introduce compulsory free education all over the province upto the junior basic stage, 6-11 age-group, in a period of 40 years. In the first five-year period compulsory free education will be introduced in all municipalities and in selected rural areas in each thana, 24,000 children will be brought to school every year from the 3rd year.

Necessary improvements and enlargement of the scope of existing primary schools is contemplated, since it is felt that all the schools are in need of improvement in the matter of building, playground, equipment and furniture.

The total expenditure proposed on these schemes in the five-year period is Rs. 102.4 lakhs (Rs. 67.7 lakhs N.K.).

In addition to the schools required under compulsory education system, 500 junior basic (Primary) schools will be opened in partially excluded areas where it may not be possible to introduce 'compulsion' at the start.

(b) In Orissa, the minimum pay of a teacher in a primary school is Rs. 10, in the case of an untrained and Rs. 13, in the case of a trained teacher inclusive of the dearness allowance of Rs. 3. It is proposed to give a minimum pay of Rs. 20-1/2-25 a month to trained teachers and of Rs. 15-1/2-20 to untrained teachers. Women teachers will be given a special pay of Rs. 5 a month each besides rent free quarters, and a special pay of Rs. 2 a month for teachers serving in urban areas.

The total expenditure proposed on this scheme is Rs. 33.73 lakhs R.

Senior Basic (Middle School) Education :—It is proposed to open mostly in partially excluded areas 25 middle English Schools for boys with a vocational class attached to each school such as carpentry, weavings agriculture, etc.; to provide each Middle English School with an additional teacher and a Physical Instructor, to introduce vocational classes in 1/4 of the existing schools and to make non-recurring grants for buildings, hostels, furniture and equipment. It is further intended to open 20 Middle English

Schools for girls in populous villages, and to effect necessary improvements in the existing aided Middle English Schools for girls.

The total estimated expenditure on these schemes is Rs. 41.81 lakhs.

High School Education :—(a) It is proposed to establish 30 high schools for boys through ad-equalerants-in-aid, to open 10 Government High Schools for girls, to improve the existing high schools for boys by providing for the teaching of Science, Manual Training, Physical Education and Playgrounds, to improve the existing high schools for girls by providing them with hostels, playgrounds, teachers' quarters and extensions to buildings. In addition, an allowance of Rs. 25 p.m. is proposed for graduate teachers in each high school to act as Career Adviser, assisted by a co-ordinating officer attached to the office of the D.P.I.

The total expenditure proposed on these schemes for the five-year period is Rs. 66.5 lakhs (Rs. 60.3 lakhs N.K.).

(b) It is further proposed to convert the existing Government Zila Schools in North Orissa into Technical High Schools, and to establish two Technical High Schools.

Expenditure proposed is Rs. 7.8 lakhs (Rs. 4 lakhs N.K.).

(c) It is proposed to spend a sum of Rs. 12.5 lakhs (N.K.) during the five-year period on the construction of quarters for teachers of existing Government High Schools for boys.

University Education :—It is proposed to give grants to private aided colleges for buildings and equipment, to start teaching of certain additional useful subjects in other colleges, to open a college for women and to construct buildings for Utkal University.

The expenditure proposed is Rs. 123 lakhs (including Rs. 104 lakhs N.K.).

Technical Commercial and Art Education :—It is proposed to establish a College of Commerce, to construct buildings for a law college, and to open a 'Savva Sadan' (Occupational Institution for women) and a School of Arts and Crafts. It is also proposed to give grants to a School of Music.

The total five-year expenditure proposed is Rs. 10.1 lakhs (Rs. 9.1 lakhs N.K.).

Adult Education :—It is proposed to make provision for the education of adults in areas in which Village Welfare Centres are started. In the first instance, illiteracy among adults will be removed.

A sum of Rs. 3.7 lakhs—recurring—is proposed for the purpose.

Training of Teachers :—(a) At present there are 13 Elementary Training Schools in which 140 pupil-teachers are admitted annually and 220 bi-annually. Now it is proposed to open 6 Elementary Training Schools to increase the output of teachers, and 2 for women teachers.

(b) It is proposed to expand the two existing Secondary Training Schools to increase the annual admission by 150. Provision has been made for a stipend of Rs. 15 a month for each candidate. It is also proposed to expand the training college at Cuttack, so as to increase the output of graduate teachers for high schools, and Sub-Inspectors of Schools.

(c) It is also intended to open a Secondary Training School for women teachers, required for the opening of a large number of girls' Middle English and High Schools.

(d) It is proposed to provide a suitable school building with modern equipment and hostel for the pupil-teachers and quarters for mistresses for the Hindu Women's Training Institute at Cuttack.

(e) It is proposed to train every year ten suitable candidates as Physical Instructors for High School who will be granted stipends of Rs. 50 p.m. In addition a College of Physical Education will be started.

(f) The total expenditure proposed on all these schemes is Rs. 33.3 lakhs Rs. 20.0 lakhs N.R.

Health of the School Child :—(a) It is proposed to provide for the physical welfare of all pupils and students by appointing 1 Chief Inspector of Physical Education, 6 Inspectors and 1 Chief Inspectress of Physical Education.

(b) It is proposed to give a subsidy to provide poor pupils in schools with midday refreshment. This will include free distribution of powdered milk, multi-vitamin tablets to deserving pupils.

The total expenditure on the two schemes is Rs. 7.4 lakhs (Rs. .9 lakhs N.K.).

Education of the Handicapped :—It is proposed to open a school for the education of blind children, to construct a building for the institution, and to provide stipends for poor students. The existing Deaf and Dumb School will be provided with new buildings and arrangements for stipends to poor students will be made.

A sum of Rs. 1.2 lakhs (Rs. .8 lakhs N.R.) is proposed.

Administration :—It is proposed to increase staff attached to the Directorate of Public Instruction, and to appoint 1 Inspector, 1 District Inspectress and 2 Deputy Inspectresses, 6 District Educational Officers and 78 Inspecting Officers in subordinate Educational Services.

The total expenditure is Rs. 20.5 lakhs (Rs. 13 lakhs N.K.).

Miscellaneous :—Provision is made for sending annually 8 graduates for higher study abroad, and 3 school teachers and inspecting officers for study in educational methods, for more scholarships, books, etc., to the students of scheduled castes, backward classes and hill tribes; awarding of 5 research scholarships and 5 post-graduate scholarships outside the province for the encouragement of higher education, and for training research workers; stipends to women students for study in certain subjects outside the province. Also it is proposed to extend female education by increasing the number of peripatetic teachers encourage Oriya literature and to give increased grants-in-aid to 'Tolc and Madrassahs, etc.

The total expenditure proposed on the Miscellaneous schemes is Rs. 19.6 lakhs (Rs. 3.6 lakhs N.K.).

UNITED PROVINCES

Basic Education In the first five-year period it is proposed to introduce compulsory free education up to the junior basic stage in 12 districts for boys and girls of the age-group 6-11. During this period, about 16 lakhs boys and girls will be brought under instruction. Provision for the extension of the scheme to other areas and to the higher age-group (11-14) is to be made in the 2nd five-year period.

Apart from Schools to be opened under the compulsory scheme 200 junior basic schools will be opened in villages not having a school which supplied recruits during the war.

It is proposed to give a scale of Rs. 30-50 to 7,774 basic school trained teachers.

It is proposed to convert 7,270 Local Bodies schools for boys and 1,319 for girls into basic schools. Government will bear all the expenses involved.

The total expenditure on all these schemes is Rs. 467 lakhs (Rs. 130 lakhs N.K. included).

Middle School Education :—(i) It is proposed to establish an Anglo-Vernacular Middle School for boys (Classes III to VIII) and 2 such schools for girls.

(ii) With a view to providing better facilities for education for the children of the soldiers, introduction of manual training in 7 selected vernacular middle schools is contemplated.

The total proposed expenditure is Rs. 4.2 lakhs,

High School Education—(a) It is proposed to open 70 new high schools for girls in the municipalities where no such schools already exist.

(b) In order to help the aided institution to come into line with the scheme of reorganisation of secondary education in the province and to raise their standards, it is proposed to give additional recurring grants to all the Intermediate Colleges and High Schools run by private bodies, as well as for their building programme.

(c) It is proposed to introduce the study of vocational subjects, e.g., like commerce and manual training in certain high schools.

The total expenditure proposed on these schemes is Rs. 1,116 lakhs (Rs. 103 lakhs N.R.).

(d) In addition there are schemes relating to the construction of building for new girls' high school and for Intermediate classes to be attached to a high school.

An expenditure of Rs. 18.1 lakhs N.R. is proposed.

(e) It is proposed to establish 5 Technical High Schools on the lines recommended by the Central Advisory Board of Education.

An expenditure of Rs. 80 lakhs (Rs. 50 lakhs N.R.) is proposed.

University Education—To enable the degree colleges to improve the staff, buildings, and to undertake research work, it is proposed to give additional recurring and non-recurring grants. It is also proposed to give similar war grants to the Universities of Lucknow and Allahabad.

The total expenditure proposed is Rs. 145 lakhs (Rs. 80 lakhs N.R.).

Adult Education—It is proposed to introduce adult education in 7 out of the 12 districts selected for the application of the compulsory primary education. The total number of adults who will come under this scheme is about 55 lakhs. This scheme provides for post-literacy work as well as 10 per cent. of the expenditure on adult literacy.

The total expenditure proposed is Rs. 1,40,81,210 N.R.

Training of Teachers—(a) It is proposed to open 10 Normal Schools for the training of teachers for compulsory primary education in specially selected areas, and to construct buildings for the schools.

(b) It is proposed to convert Primary Teachers' Certificate Course into Vernacular Teachers' Certificate Course for men teachers by advancing the period of training to 2 years with a view to improving the quality of teachers. Similarly, the senior Basic Education Refresher Course Centres will be converted into Normal Schools.

(c) To serve as a Practising School for teachers, a Middle School for girls is proposed to be attached to the Training College for women at Allahabad.

(d) Construction of buildings proposed for the existing Teachers' Training College for women at Allahabad, the Training College for Undergraduate Women Teachers at Lucknow and for five existing Normal Schools for girls.

The total expenditure proposed on these schemes is Rs. 51.8 lakhs (Rs. 30.5 lakhs N.R.).

Administration—To help the D.P.I. in carrying out the work of educational reconstruction, it is proposed to appoint an Additional Deputy D.P.I. and another Officer in Class II service.

The total expenditure proposed is Rs. 1,65,728.

Health of the School Child—Physical Education is compulsory both for Vernacular and Anglo-Vernacular Schools, and consequently there is a need for trained teachers in the subject, for whom no facilities exist at present. It is therefore proposed to establish a College for Physical Education at Allahabad where both men and women teachers will be trained for two years.

The total expenditure proposed is Rs. 2.3 lakhs (Rs. .8 lakhs N.R.).

Miscellaneous—There is a provision for six foreign scholarships for the teachers of the soldiers' sons and daughters, and for the improvement of education of scheduled caste children.

On all these schemes, the total expenditure proposed is Rs. 11.6 lakhs (Rs. 6.9 lakhs N.R.).

AJMER-MERWARA

It is proposed to introduce compulsory primary education up to junior basic stage in selected areas, to provide technical sections in a Government High School, to give stipends for poor students in existing schools, and to strengthen the inspecting and administrative staff. The teachers in training schools will get maintenance allowance, and prospective teachers scholarships. The activities of existing educational institutions will also be expanded.

The total development programme provides for an expenditure of Rs. 43 lakhs.

COORG

The post-war educational development programme of Coorg includes provision for stipends and training of 3 graduate teachers, for buildings for three high schools, for compulsory primary education in one area for a first grade college, and for remodelling and expansion of Elementary School buildings. The total expenditure proposed for the five-year period is Rs. 12 lakhs.

DELHI

The development programme includes provision for compulsory and free primary education throughout the province, for new High Schools, and two Training Schools, for adult education, improvement of scales of pay of teachers, education of handicapped, and strengthening of administrative staff. It is also proposed to provincialize all the local bodies' schools.

The total expenditure proposed on these schemes is Rs. 151.55 lakhs.

CENTRAL SCHEMES

The Central Plan provides for facilities not aimed at in Provincial Plans, and to supplement key services such as the training of teachers.

Higher Technical Institutions—(i) It is proposed to establish two high grade technical institutions, one in the Eastern and the other in the Western Zone, to provide for the training of high grade engineers, technologists (designers, planners, research workers and production experts, etc.), to take up positions of trust and responsibility in industry. Each of them will have an annual output of about 1,000 technologists.

(ii) A High Voltage Engineering Laboratory and a Power Engineering College will be established at the Indian Institute of Science, Bangalore.

(iii) The Delhi Polytechnic will be developed into a college of Technology and will eventually constitute the Technological Wing of the Delhi University.

(iv) The Overseas Scholarship Scheme to depute about 500 scholars each year to receive training in Technology and applied Science subjects.

Institute of Education—A Central Institute of Education has been established at Delhi. There are proposals for an institute for Physical Education, for increased provision for Home Science and Economics, Arts and Crafts, and Music. The Morris College of Hindustani Music (Sangit Vidyapeeth), Lucknow, and Kala Kashetra, Adyar, are being given grants by the Central Government for expansion of their activities in certain fields. There is also a proposal for the establishment of a Central College of Karnataka Music in Madras.

University Grants Committee—There are proposals for the development of Scientific Research (fundamental) in Universities and All-India Research Institutions. The scope and

functions of Delhi University are being expanded. The University Grants Committee, which was set up as an advisory body to deal with the Central Universities, i.e., Aligarh, Benares and Delhi only, has been expanded and given wider functions.

There is a consensus of opinion in the country among top-rank educationists that the improvement of existing facilities for advanced training in India in all subjects is a matter of immediate urgency, since this alone will prevent the drainage of money from this country to other countries for sending abroad a large number of trainees.

The Central Government have also proposed to set up a National Museum and a Central Reference Library, for developing the Archaeological and Anthropological Surveys, and for creating a National Cultural Trust.

INSTITUTE OF EDUCATION

In regard to the progress made in the execution of the Central Schemes, it may be pointed out that the Central Institute of Education came into being in a nuclear form during the third week of December, 1947. The Institute will not only train post-graduate teachers, but will also provide facilities for high class research in education.

The Stock of the Central Library of Educational and Cultural Films is being increased by a further addition of films. A projector has also been purchased.

A Uniform Braille Code covering all the major Indian languages including the Perso-Arabic group, devised by a Committee of experts was finally approved by the Expert Braille Committee of the Central Advisory Board of Education at its meeting held in Simla on June 17, 1947. This code known as the Uniform Indian Braille has been finally accepted by the Government of India.

The accepted Code will replace eight Braille Codes in current use and two to be introduced and this will facilitate the publishing of embossed literature for the Blind on a large scale. The Central Bureau of Education have brought out a new hand-book (Phamplet No. 16, Amended Reprint, 1947) containing ink-print codes, with a short history, and instructions for their use.

The setting up of a Central Braille Press and Central Library is also receiving active consideration of the Ministry of Education.

TECHNICAL EDUCATION COUNCIL

The progress made in the field of Technical Education may be summed up under two main headings:—

- (1) All-India Council for Technical Education.
- (2) Central Technical Institutions—Development Schemes.

On the recommendation of the Co-ordinating Committee of the All-India Council for Technical Education which met in February, 1947, five Visiting Committees were appointed to inspect some of the high grade technical institutions in the country and to make recommendations in regard to their improvement. The Reports of these committees were considered by the Council in May, 1947. As the recommendations did not appear to have been based on uniform principles, a small committee was appointed by the Council to scrutinise the reports. The Council also appointed three more Visiting Committees to inspect some other important technical institutions.

The reports of the visiting committees on several technological institutions were considered by the Co-ordinating Committee of the All-India Council for Technical Education in November, 1947 together with the recommendations of the Scrutinising Committee referred to above. The Co-ordinating Committee recommended that grants from the Central Revenues to the extent of Rs. 1.5 crores on special expenditure and Rs. 30 lakhs on recurring expenditure be made to some important high grade technical institution in the country for improvement and expansion. The committee further

recommended that these grants should be spread over a period varying from three to five years beginning with the financial year 1947-48. These recommendations have been accepted by the Government of India in principle, and advance capital grants for buildings and equipment amounting to Rs. 13,75,000 were sanctioned for some of the institutions for the year 1947-48. A few of them were also given interest-free loans, amounting to Rs. 5,78,000 in all, for construction of students' hostels. For the year 1948-49, non-recurring grants to the extent of 24 lakhs, recurring grant of one lakh and loans of 12.56 lakhs have been given under the same scheme.

Regional Committees—The question of setting up the Regional Committees of the All-India Council for technical Education had to be kept in abeyance owing to the necessity for redemarcation of the regions in the light of the new political set up and changed geographical and economical situation. This is being taken in hand now. The functions for the Regional Committees will in no way overlap those of the Provincial Governments.

At its second meeting held in May, 1947 the Council decided that:—

- (i) The All-India Diploma Courses should be equivalent in standard to the Degree Courses in Universities, but greater emphasis should be laid on the practical side.
- (ii) The All-India Certificate Courses should be equivalent in standard to the Fellowship courses and should be so designed that these can be taken mainly on a part-time basis.
- (iii) Admission qualifications should be so prescribed and rules and regulations so framed that persons engaged in full or part time occupation in appropriate branches of technology may acquire these "All-India" qualifications by taking the courses on part-time basis.

A comprehensive memorandum on the above decisions was considered by the All-India Boards of Technical Studies at their meetings held during July-August, 1947. The Boards are now engaged in working out details of the schemes in the light of the above decisions of the Council.

Co-ordination with University—To ensure co-ordinated development in the field of technical education the Council decided that the Inter-University Board should be asked to consider the advisability of appointing a committee with which a small committee of the All-India Council for Technical Education may co-operate in drawing up the general principles to be observed in regard to technical education in University and non-University institutions of technology.

The Council passed a resolution expressing the opinion that higher technical education should be under the directive of the Council and that for the promotion of higher technical education the Central Government should provide funds for the next five years at least.

Survey of facilities for technical education—A preliminary survey of the facilities for technical education available in India was conducted by the All India Council for Technical Education in 1947. The results of this survey have been published in a pamphlet entitled, "Facilities for Technical Education in India."

CENTRAL TECHNICAL INSTITUTIONS

The development scheme in regard to technical Institutions centres round the expansion of the Delhi Polytechnic and of the Indian Institute of Science at Bangalore. The expansion of the Delhi Polytechnic includes the opening of a training college of teachers in technology while the expansion of the Indian Institute of Science includes the establishment of a high-voltage engineering laboratory and of a power engineering department besides a four-year development plan of the Institute itself.

Delhi Polytechnic—With a view to making the Delhi Polytechnic a really first class techno-

logical institution, a four-year development scheme of Delhi Polytechnic, costing about Rs. 80 lakhs was accepted in principle by the Government of India in 1946. This scheme included provision for fully equipped workshop and laboratories and new buildings. The scheme could not be implemented fully on account of war-time limitations but a fair amount of progress has been made in achieving the object with which the institution was started. The Polytechnic comprises a Technical High School and six Senior Departments namely, Engineering, Architecture, Commerce, Chemical Technology, Applied Art and Textile Technology. It also provides facilities for All-India Diploma Courses in some subjects besides the Polytechnic Courses.

The proposal to introduce degree courses in certain departments, and to shift Senior Departments to a new site near Delhi University, have necessitated a revision of the original plan. The revised plan is estimated to cost Rs. 86.5 lakhs non-recurring and an ultimate recurring expenditure of Rs. 16.76 lakhs. It envisages expansion of the existing facilities, introduction of new courses and affiliation of certain Departments to the Delhi University.

The Scheme for the starting of a training college for teachers in technology could not be taken up on account of lack of accommodation at the Polytechnic. This scheme has now been merged in the revised development plan of the Delhi Polytechnic.

Indian Institute of Science—An all-round development of the Indian Institute of Science, Bangalore, is being carried out with financial assistance from the Government of India. The important development schemes in hand are briefly described below:—

| | |
|--|---------------|
| (i) Establishment of High Voltage Engineering Laboratory:— | |
| Capital cost | Rs. 23,13,000 |
| Ultimate annual recurring cost | Rs. 45,000 |

The scheme has been taken in hand and a special Officer from England has been appointed by the Council of the Institute for setting up the Laboratory.

| | |
|-----------------------------------|---------------|
| (ii) Four-year development plan:— | |
| Capital cost | Rs. 40,00,000 |
| Ultimate recurring cost | Rs. 3,59,000 |

The Plan is in the second year of its execution and steps taken so far are:—

1st year programme 1946-47.—Opening of a division of General Chemistry in the Department of Pure and Applied Chemistry.

2nd year programme 1947-48.—Expansion of the activities of the Departments of Metallurgy and Internal Combustion Engineering.

Enlarging the scope of the Departments of Pure and Applied Chemistry, Bio-Chemistry, Electrical Technology and Metallurgy;

Efficient maintenance of the water, gas and sanitary systems, roads and buildings.

| | |
|---|---------------|
| (iii) Establishment of a power Engineering Department:— | |
| Capital cost | Rs. 40,00,000 |
| Ultimate annual recurring cost | Rs. 3,00,000 |

CENTRAL ADVISORY BOARD OF EDUCATION

The thirteenth meeting of the Central Advisory Board of Education in India was held at Bombay in January, 1947. At this meeting many questions of educational importance were discussed. A short account of these is given below—

Basic English—The Board considered the report of the Committee on Basic English in relation to the Indian Education system and endorsed the views expressed therein that Basic English cannot be considered as a really satisfactory method of teaching the English

language to beginners in India nor is it an adequate medium for scientific communications and publications. The main conclusions of the Committee are:

(i) That for a period of 6 years in the first instance Basic English should be taught in some Senior Basic and Standard English in others as far as practicable under identical conditions and by equally competent and trained teachers.

(ii) At the end of 6 years, the position should be reviewed with the object of determining whether Basic English is quicker and easier to acquire and if so, whether it gives to the pupils the requisite ability to use English for purposes of everyday life.

(iii) Simultaneously, an endeavour should be made to examine and work out various plans and schemes for improving and simplifying the teaching of English at this stage.

(iv) It would be necessary to ensure that the price of books in Basic English approximates to that of other books of the same standard.

(v) It would be necessary to ensure that Basic Text Books used in India will suit Indian conditions.

(vi) In the Secondary Schools only Standard English should be taught.

(vii) The question of transition from Basic to Standard English needs very careful examination. In the 3rd or final year of the Senior Basic (Middle) Schools and in the 4th or 5th High Schools, the English course should be approximated so as to ease the transition from Basic to normal English for those who are to be transferred to High Schools from Senior Basic (Middle) schools.

(viii) Basic English cannot prove useful as a method for the teaching of standard English to beginners.

(ix) Provision should be made for the teaching of both standard and Basic English for such adults as desire to have a knowledge of English. Standard for those who desire it for cultural purposes and Basic for those who have a limited time at their disposal and who wish to acquire a knowledge of English for strictly utilitarian purposes.

(x) Basic English is not suitable for use at International gatherings.

Secondary Schools Examination Council—The Board expressed their general agreement with the recommendations of the Committee appointed to examine the formation of a Secondary Schools Examination Council for India and hoped that it would be possible to set up the proposed Council at an early date as an advisory and co-ordinating agency with a view to ensuring a proper standard in School Leaving Examination throughout the country. The main standard conclusions and recommendations of the Committee are:

(i) It should be in the public interest to have one examination at the end of the school course and every effort should be made to meet the requirements of the Universities in that Examination.

(ii) It is desirable to amend the syllabus framed by the Joint Committee of the Central Advisory Board of Education and Inter-University Board on Matriculation Examination.

(iii) The examination to be held at the end of the High School course should serve both the purposes, viz. (a) for entry into the University and (b) employment on leaving school, and as far as possible, papers should be restricted to a maximum duration of 2½ hours.

(iv) The Secondary Schools Examination Council for India should not be an examining body and should, for the present at any rate, be endowed with advisory functions only. It should be concerned with examinations at the end of the High School stage for entry to the Intermediate courses of Universities which have four-year Degree courses and examinations for entry to the three-year Degree course of Universities which have adopted such a course.

(v) The proposed All-India Council should consist of representatives of Universities, Boards

of Secondary Education and Provincial Education Departments and distinguished teachers.

National Cultural Trust—The Board were of the opinion that the formation of a National Cultural Trust for India would go a long way towards stimulating and co-ordinating cultural activities in this country. The main conclusions and recommendations of the Committee appointed to examine the proposal for the formation of such a Trust are :

(i) It is desirable to establish an autonomous body called the "Indian Cultural Trust" to stimulate and promote the cultural life of the country.

(ii) The Trust should be constituted by a Charter or an Act of the Legislature and should be handsomely endowed by Government.

(iii) The functions of the Trust should be:—

- (a) To encourage cultural education and research with particular reference to the preservation and development of traditional Indian Culture in relation to such subjects as literature, architecture, sculpture, painting, music, dramatic art and dancing.
- (b) To acquire for the State sites, monuments, manuscripts, pictures or other subjects of importance from the point of view of Indian culture.
- (c) To advise the Government of India and the provincial Governments with regard to cultural matters.
- (d) To co-operate with Indian Universities in the development of activities in the purely cultural fields.
- (e) To co-operate with the learned societies of India in order to encourage and expand the cultural side of the work now performed by them.
- (f) To publish suitable popular literature on cultural matter.
- (g) To maintain close touch with all parts of India (including the States) by holding periodical conferences.
- (h) To organise Archaeological and other cultural missions to foreign countries and generally to develop and extend existing cultural contacts between India and other countries.

(iv) The main activities of the Trust should be carried on through Academies of which the following three should be constituted in the first instance:—

- (a) The Academy of Letters which will deal with Indian Languages and Literature, Philosophy and History.
- (b) The Academy of Arts (including the Graphic, Plastic and Applied Arts) and Architecture.
- (c) The Academy of Music, Drama and Dancing.

(v) Each Academy should be an autonomous body with a separate endowment which may be supplemented by grants-in-aid from the Trust and donations from other sources.

(vi) The Trust will exercise a general control over the Academies in regard to financial matters by means of regulations. In other matters, the Academies will be independent of the Trust.

(vii) The object of these Academies will be to foster and develop the subjects with which they deal and to promote the study of those subjects with a view to maintaining the highest possible standards of achievement.

(viii) The initial endowment of the Trust should be not less than Rs. 4 crores to enable the Trustee to function properly. If the Central

Government contributed half of this sum, a quarter could be raised from the Provincial Governments and the balance from the States.

University Commission—The Board considered it desirable that the work of the Indian Universities should be reviewed that for this purpose the Government of India in consultation with other Governments concerned should appoint a Commission on the lines of the Sadler Commission to report on Indian University Education and to suggest improvements and extensions that may be desirable to suit the present and future requirements of the country. They also suggested that the Commission so appointed should mainly be composed of eminent educationists with University experience including some eminent educationists from foreign countries.

Other Important questions considered by the Board included (i) the use of Roman Script for learning Hindustani as a *Lingua Franca*, (ii) Provision for suitable broadcasts for school children, (iii) teaching of Physiology in Primary and Secondary Schools and in Colleges and Universities, and (iv) production of suitable magazines for children by the Government of India. Among the Committees appointed by the Board was one to examine the question of the formation of a National Education Commission for India and another to draw up curricula for Junior and Senior Basic Schools.

JANUARY MEETING

The fourteenth meeting of the Central Advisory Board of Education was held at New Delhi on the 13th, 14th, and 15th January, 1948. The Board's agenda consisted of 23 items. A brief account of the important ones is given below :

Basic Education :—In 1946-47 in Assam, ten men teachers and five women teachers were sent for training in the basic method of education.

In Cochin State a Compulsory Education Bill was passed by the Legislative Council, and its introduction was under consideration. There were 507 primary schools, of which 376 were under private management. The total number of children attending primary classes was 1,85,656.

In Mysore, the principles of basic education have been accepted and accordingly a training centre for teachers has been started.

In Travancore, compulsory primary education was introduced in 1946-47 in 7 out of the 30 talukas of the State. It is reported that due to the introduction of compulsory primary education, the enrolment in primary classes has risen by 50 per cent.

Development in Adult Education :—In Assam, the scheme of mass literacy movement was taken up by the successive Governments from the year 1940. During the period 1940 to 1946, about 200,000 persons were made literate. It is reported that women literacy organisations have been established practically in all the districts, but the progress of work is handicapped for want of funds.

In Bihar, literacy work was continued on an intensive scale in selected areas during the year 1946-47. In this connection, the active co-operation and support of public associations like All-India Spinners' Association, All-India Village Industries Association, Harijan Sewak Sangh, etc., was invited. The total number of voluntary workers in the literacy centres was 7,981 of whom 1,422 were teachers and 6,558 non-teachers. 1,94,185 persons passed the literacy and post-literacy tests.

In Coorg, there are no regular schools for adults, except a night school with an enrolment of 25 students. There is a keen desire among the women folk to learn Hindi.

It is reported from Cochin that a few adult education centres which were in existence during the previous year were closed down in 1946-47 on account of poor strength. A new scheme is however under consideration.

The Mysore Adult Literacy Council runs two months course for literacy and three months for post-literacy work. The teaching is done by primary school teachers who have undergone training in the teaching of adults. A Vidyapeeth has also been started for the furtherance of adult education. The course extends over five months and training is given in Agricultural, Weaving and Home Crafts, besides general education. During the year 1946-47, 4,547 literacy classes were conducted and 78,010 persons were made literate. It is reported that from the year 1941-42 when the Council started its activities, 2,35,010 persons have been rendered literate.

In Travancore, adult education work is carried on through departmental rural libraries situated in villages. During 1946-47, there were 124 such libraries. Besides there were 72 aided Libraries.

Overseas Scholarship Scheme :—It is intended to produce a sufficient number of highly trained persons, likely to be required for various development plans of the Central and Provincial Governments. In the selection of candidates greater importance is attached to their intellectual attainments and potential ability than to actual practical experience, though practical and research experience also receive considerable weight. This is essentially a short-term measure and is intended to last only so long as adequate facilities for advance training are not available in India. The Central Government pays the entire cost of training in respect of scholars selected for the centre, and meets half the total cost in respect of scholars selected on behalf of Provincial Government.

Overseas Information Bureau :—With a view to providing information and advice for students proceeding overseas the Government of India has set up an Overseas Information Bureau. The main function of this Bureau is to provide an up-to-date information service regarding various aspects of advanced studies abroad. It maintains a good reference library giving information about the universities and educational institutions in the U.K., the U.S.A. and other countries. It is available for consultation and reference. The Bureau publishes a Monthly Bulletin providing latest information regarding educational facilities available abroad, as well as all matters which would help Indian students in their studies abroad.

The Government of India have urged the Provincial Governments, University authorities and States to take steps for revitalising existing Advisory Bureaux and setting up new ones wherever they do not exist. No-one except the United Provinces have adequate organisations of this type at the present moment.

Adult Education :—Percentage of literacy in the country should be raised to at least 50 during the next three years, and in this connexion, the resources and personnel of the country should be fully mobilized. The army of teachers required, whole-time and part-time workers and volunteers, are to be recruited from among the intelligentsia in Government employment and from private bodies. The use of the radio, films, etc., will also be made. It was recommended that funds should be provided by the Central and Provincial Governments at the minimum rate of one anna per person to be educated.

Secondary Education :—It was recommended that a Commission be appointed to investigate the state of secondary education in India and to report on its aims and scope in the light of present conditions and future requirements.

Medium of Instruction :—In regard to the medium of instruction and examination in Indian Universities, suggestions were made that the present position may continue for a period of five years.

Basic Education :—It is accepted on all hands that without such education a modern democratic state cannot flourish or perform those functions which are expected of it. The scheme of Post-War Education Development prepared by the

Central Advisory Board of Education has not only been accepted by the Central and provincial Governments but steps are already under way for the implementation of the first five-year programme. But the whole programme has to be hastened. As the Minister for Education, Government of India, put it, "No one will for a moment tolerate today that 40 years must elapse before the full scheme of basic education for all the inhabitants of this land can be implemented. In fact even half that period will seem to many to savour of delay and procrastination. We must, therefore, devise measures by which the educational progress of this country can be so accelerated that we reach our objective within much shorter time".

Religious Instruction :— About Religious Education the Minister made the following Points :— "In connection with the scheme of the Basic Education the question of religious instruction had cropped up at the time. Two Committees of the Board pondered over it but they could come to no agreed decision. I should like that this question may be reconsidered in the light of the changed circumstances. For our country this question has a special importance. Our present difficulties, unlike those of Europe, are not a creation of materialistic zealots but of religious fanatics. If we want to overcome them, the solution lies not in rejecting religious instruction in elementary stages but in imparting sound and healthy religious education under our direct supervision so that misguided credulism may not affect the children in their plastic stage.

"But if religious instruction is to be a part of Basic Education, what will be the proportion? How is it to be managed? These are questions which are to be thoroughly considered. Indeed there will be difficulties in the way. If the main issue is settled, details can be tackled later on. In any case I request you to appoint a committee to go into the question *ab initio*. It may be authorised to send its recommendations directly to the Government."

Medium of Instruction :— In regard to this question the Minister said, "In future English cannot remain the medium of instruction. Whatever the change may be in this direction, it should not be sudden but gradual. In my opinion so far as Higher Education is concerned, we should come to the decision that the *status quo* may be preserved for five years. But along with it provision may be made by the Universities for the coming change.

"But in this connection a fundamental question arises with regard to Indian languages. How is the change to be brought about? Is University education to be imparted through a common Indian language or Provinces may be given an opportunity to have their own regional languages for University teaching? English was a foreign language. We were handicapped

by having it as our medium of instruction. But we were also benefited in one way that all the educated people in the country thought and expressed themselves in the same language. It cemented the national unity. It was such a great boon to us that I should have advocated its retention as the medium of instruction, had it not been fundamentally wrong to impart education through a foreign language. But obviously I should desist from offering this advice. I put it to you if only till recently a Madras or Punjabi or a Bengali felt no difficulty in receiving education through a foreign language, why should he be handicapped if he were to be educated through one of the Indian languages? Instead of English we adopt an Indian language, we shall certainly be able to retain the same intellectual unity which was created for us by the English language.

"The alternative course before us is to have regional languages for university teaching and one common compulsory language for Central Government and for Inter-Provincial communication."

INTER-UNIVERSITY BOARD

The 24th annual meeting of the Inter-University Board of India was held at Madras on the 27th and 28th December, 1948 under the Chairmanship of Dr. A. Lakshminarayanan Mudaliar, Vice-Chancellor, University of Madras. As usual questions of importance relating to University Education were discussed.

Indian National War Academy :— The Board welcomed the establishment of the Academy and noted that the syllabus for the Diploma to be instituted by the Academy compared favourably with that for the Degree Examination of an Indian University. The Board resolved to request the Universities to examine the syllabus in detail and to extend to the students of the Academy such benefits of continued study in the University as may be agreed upon based on equivalence of study and examination.

The Board decided that holders of special war certificates can be admitted to a University only after they pass the Matriculation or equivalent examination, but that conditions relating to attendance and residence may be waived for them.

Practical Bias :— In view of the need for specialised training for candidates who will be recruited for foreign services, the Board recommended that suitable courses of studies for their training should be instituted in Indian Universities for preparing persons for Political, Trade and Diplomatic services in foreign countries. For this purpose, the Government of India, Provincial Governments and States were asked to allot funds to Universities.

Administration :— In regard to the recommendation made by the Central University Grants Committee about the desirability of having a full-time Vice-Chancellor and an approved Finance Committee with the treasurer as chairman in each University for ensuring efficient administration the Board decided that

- (i) All Universities should have full-time Vice-Chancellors.
- (ii) In each University a Finance Committee should be constituted.
- (iii) The question of appointment of a Treasurer be referred to the different universities for opinion.
- (iv) The Government is requested to enlarge the scope of the University Grants Committee, and to place at its disposal more funds to enable it to make special grants to all Indian Universities for specified purposes. The grants so made should not disturb the autonomy of the Universities and the Committee should generally follow the procedure adopted by the University Grants Committee in England and Wales, for satisfying itself that the funds placed at the disposal of the University are properly spent. The Board further recommended that the Grants Committee should be remodelled on the lines of the University Grants Committee in England and Wales. In the opinion of the Board, the functions of the Grants Committee should be
 - (a) to assess and distribute grants from public funds to the Universities.
 - (b) To examine and advise upon all schemes for major developments.
 - (c) To visit the Universities once in five years and make recommendations.

Text-Books :— The Board recommended that books meant for educational institutions should as far as possible present an objective historical view and should not contain statements which have not passed the test of facts and critical judgment.

A Commission :— The Board resolved that it was desirable that the work of Indian Universities be reviewed and that for this purpose the Government of India should constitute a Commission to report on the lines of the Sadler Commission to report on the work of Indian Universities and to suggest any changes that may be deemed desirable in the light of modern conditions and changes in educational policies adopted in other countries and to suit modern requirements in India. This Commission should be mainly composed of eminent educationists with university experience including some eminent educationists from foreign countries.

[A University Commission appointed by the Central Government, toured University centres in India and is now engaged in drafting a report.

Scales of pay recommended for teachers in Schools by The Central Advisory Board of Education in India (All Pre-War Standards)

(Note: These scales are now being reviewed)

MINIMUM NATIONAL SCALES

(a) **Primary Schools (Including Infants and Nursery Schools)**—Rs. 30-1-35-3 (biennially)-50 p.m. (for men and women teachers). Teachers of Village Schools should have free houses: where this is not possible, 10 per cent. should be added to their salaries. This is the scale for normal rural areas, and may be increased upto 50 per cent. to meet the needs of areas where the cost of living or other factors necessitate a more generous scale, e.g., in Delhi or one of the provincial Capitals the initial salary for primary teachers may be raised to 45 and the maximum to 75.

(b) **Senior Basic (Middle) Schools**—Rs. 40-2-80 p.m. with the same provision as in the case of primary teachers for increasing it to the needs of more expensive areas. Men and women will get the same scales of pay.

(c) **High Schools** :

NON-GRADUATE TRAINED TEACHERS

Rs. 40-2-80 p.m. + 6½ p.c. Contributory Provident Fund. 10 per cent. house allowance in normal rural areas; possible increase up to 50 per cent. to meet higher cost of living or other special circumstances.

GRADUATE TRAINED TEACHERS IN HIGH SCHOOLS

Rs. 70-5-150 p.m. + 6½ per cent. Contributory Provident Fund. 10 per cent. house allowance

in normal rural areas; possible increase up to 50 per cent. to meet higher cost of living or other special circumstances.

[N.B. Special posts of responsibility to be created among the senior teachers in High Schools which would carry Rs. 20 p.m. in addition to ordinary salary. Such teachers would be in charge of main groups of studies, e.g., Languages,

Science, etc., or of libraries, games, hostels and important features of school life.]

SCALES FOR HEAD TEACHERS IN ALL GRADES OF SCHOOLS

[N.B. As in the case of Assistant Teachers scales may be increased up to 50 per cent in areas where cost of living by pre-war standards is more expensive.]

| Grade | Size of School | Salary scale p.m. | Remarks |
|-------|---|-------------------------------------|--|
| 1. | <i>Primary Schools</i> | | |
| A. | 1 or 2 class sections | *Rs. 10 above scale for assistants. | Same scale for men and women. Where no house is provided 10 per cent. should be added to salary. |
| B. | 3, 4 or 5 class sections | Rs. 50-4-70 | |
| C. | 5 or 6, 8 or 10 class sections | Rs. 60-4-80 | |
| D. | Above 8 or 10 class sections | Rs. 80-4-100 | |
| 2. | <i>Middle Schools (Vernacular and Anglo-Vernacular)</i> | | |
| A. | 3 or 4 class sections | Rs. 80-4-100 | Same scale for men and women. Where no house is provided 10 per cent. should be added to salary. |
| B. | 4 or 5 to 6 or 8 class sections | Rs. 90-4-110 | |
| C. | Over 6 or 8 class sections | Rs. 110-4-130 | |
| 3. | <i>High Schools</i> | | |
| A. | Upto 250 pupils on roll | Rs. 175-10-255 | Same scale for men and women. |
| B. | 251-500 pupils on roll | Rs. 250-10-350 | |
| C. | Over 500 pupils on roll | Rs. 350-15-500 | |

POST OF RESPONSIBILITY IN ALL TYPES OF SCHOOLS EXCEPT THE SMALLER ONES

Such posts to relieve head teachers of a certain amount of routine administrative responsibility and so to free them for attention to their more important duties and to act as a further incentive to the more ambitious type of teacher.

Primary Schools.

| | | |
|----------------------|------|---|
| Grades A & B | None | Rs. 5 p.m. in addition to the ordinary scale. |
| Grade C | 1 | |
| Grade D | 2 | |

Middle Schools

| | | |
|-----------------|------|--|
| Grade A | None | Rs. 10 p.m. in addition to the ordinary scale. |
| Grade B | 1 | |
| Grade C | 2 | |

High Schools

| | | |
|-----------------|---|--|
| Grade A | 2 | Rs. 20 p.m. in addition to the ordinary scale. |
| Grade B | 4 | |
| Grade C | 4 | |

Appointments to posts of special responsibility to be made for three years, the teachers in question being eligible for re-appointment subject to satisfactory service.

REMUNERATION OF SPECIALIST TEACHERS

It will be divided into two grades.

(a) Teachers of special subjects in Vernacular Middle (Senior Basic Schools), in Anglo-Vernacular Schools and in all middle classes of high schools;

(b) Graduates.

No. (a) above to be granted one year's seniority in the appropriate scale together with Rs. 2 p.m. as a personal allowance; No. (b) to receive no additional remuneration.

PENSION OR PROVIDENT FUND

It has been recommended that all recognised teaching service should ultimately become pensionable and that where no pension funds exist or can be expected to exist in the near future, contributory provident funds should be established on the basis of 50 per cent. of contribution from the teacher and 50 per cent. from the employer.

TRANSFER OF TEACHERS

Where teachers are transferred from one school to another, either in the same area or in different areas, the periods which they have spent in recognised service should be taken into account in determining their salaries in the new school or area.

SCALES FOR UNIVERSITY TEACHERS

The following minimum scales have been recommended by the Central Advisory Board of Education for different grades of teachers:

(a) UNIVERSITY DEPARTMENTS

| Professors | Readers | Lecturers | Junior Lecturers |
|--------------------|----------------|----------------|------------------|
| Rs. 1,000 to 1,250 | Rs. 500-25-800 | Rs. 300-20-500 | Rs. 210-15-300 |

(b) AFFILIATED AND CONSTITUENT COLLEGES.

| Principal | Readers | Lecturers | Junior Lecturers |
|------------------|----------------|----------------|------------------|
| Rs. 800 to 1,000 | Rs. 500-25-800 | Rs. 300-25-500 | Rs. 210-15-300 |

(In Technical and Engineering Colleges and in subjects which require a certain amount of professional experience) and for others Rs. 150-15-300.

Where a college teacher is given or allowed to retain the title of Professor, this should not automatically entitle him for the salary prescribed in the case of a University Professor. In such cases, the rate of remuneration should be settled by consultation between the University and College authorities.

No distinction is to be drawn between teachers on account of their sex, the scales mentioned above being applied to both men and women.

STATEMENT SHOWING SCALES OF PAY PRESCRIBED FOR DIFFERENT CATEGORIES OF STAFF IN GOVT. SCHOOLS, AJMER-MERWARA AND DELHI.

| Name of post. | Prescribed Scale. |
|--|---|
| 1. Principals of Higher Secondary Schools. | 350-25-500-30-590. |
| 2. Headmasters and Headmistresses of High Schools. | i) 200-10-300. ii) 300-20-400. iii) 400-20-500. |
| 3. Headmasters and Headmistresses of Vernacular and A. V. Middle Schools. | 110 10-200-E.B.- 10-300 (for more than six classes). 100 8-140 10-200 upto six classes. |
| 4. Teachers in High Schools with the qualifications M.A., B.T. or M.A. with 3 years experience in a College. | 200-10-250 15-400. |
| 5. Teachers in High Schools with the qualifications B.A., B.T. | 80-5-120-8-290-10-300 (with initial start of Rs. 120/- p.m. for B.Ts. & L.Ts. |
| 6. Graduates with Junior Training qualifications viz. S.V., J.A.V. or J.V. | 80-5-120-8-200-10-2-220. |
| 7. Matric (J. A. V., Prabhakar, Shastri, Munshi Fazil, & Adip Fazil). | 68-4-120-5-170. |
| 8. S. V. (Matric or Middle) | 68 4 120 5-170. |
| 9. Arts & Handicrafts teachers, Smithy teachers and Carpentry teachers. | 68-4-120-5-170. |
| 10. Junior Oriental teachers (Vernacular non-Matric teachers). | 50-2-60-3-90. |
| 11. Untrained teachers. | i) 35-1-50. ii) 40-2-60. 35-1-50. |
| 12. Laboratory Assistants. | 55-3-85-4-125-5-130. |
| 13. Matron in Govt. training School for Women. | i) 55 3-85-4-125 5-130. ii) 68 4-120 5-170. |
| 14. Librarians. | 55-3-85-4-125-5-130. |
| 15. Clerks. | 60-5-2-75. |
| 16. Bus Drivers. | 30-1-35. |
| 17. Peons, Sweepers, Chowkidars, Malis, Catter-Women, Waterman, etc. | 80-5-120-E.B.-8-200-10-2-220. |
| 18. Inter (Honours in Oriental Classical Languages). | 68-4-120-5-170. (with initial start of Rs. 76/- p.m.) |
| 19. Inter (Honours in Vernacular Languages.) | 68-4-120-5-170. |
| 20. Oriental Teachers (Shastries, etc.), non-matriculates, but teaching in High and Middle Departments. | 68-4-120-5-170. |
| 21. Junior Vernacular teachers— (a) Matriculates. (b) Non-Matriculates. | 68-4-120-5-170. 50-2-60-3-90. |
| 22. Drawing Masters with the qualifications :— (a) Matriculation and 2 year course in Art. (b) Intermediate with 2 year course in Art. | 68-4-120-5-170. 68-4-120-5-170. (with initial start of Rs. 76/- p.m.) |
| 23. Physical Training Instructor with the qualifications :— (a) Matriculation and certificate in Physical Education. (b) B.A. and Diploma in Physical Education. | 68-4-120-5-170. 80-5-120-8-200-10-300 (with initial start of Rs. 120/- p.m.) |
| 24. Domestic Science Teachers with the qualifications :— (a) Matric and Home Science Diploma. (b) Inter and Teachers' Training Diploma in Domestic Science. | 68-4-120-5-170. 80-5-120-E.B.-8-200-10-2-220. |
| 25. Music Teachers. | Rs. 68-4-120-5-170. |
| 26. Librarian— (a) Un-trained. (b) Graduate with Diploma in Librarian-ship. | 55-3-85-E.B.-4-125-5-130. 100-8-140-10-250. |

HISTORICAL SKETCH

Having surveyed the present position we can next pass on to a brief sketch of the history of Indian education with special emphasis on recent developments.

Indian education is in fact unintelligible except through its history. The structure is top heavy. The lower classes are largely illiterate while the middle classes who constitute the bulk of the *intelligentsia* are in point of number at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. In recent years, however, strenuous efforts have been made to remedy these defects. Primary Education Acts have been passed in several provinces in favour of the expansion of primary education among the masses. On the other hand, the numbers of students in colleges and universities have grown apace. The volume of educated unemployment had at one time reached alarming proportions, but in recent years, owing to the conditions of war and its aftermath many educated young men have been absorbed in the services; still the problem of finding suitable employment for all educated men in peace time has yet to be tackled successfully.

INTRODUCTION OF WESTERN LEARNING

In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people; and mass education was not touched.

Sources other than Government have played an important part in encouraging the desire for western knowledge in India. In 1810, David Hare, an English watchmaker in Calcutta, joined hands with the great Indian reformer, Raja Ram Mohan Roy, to institute the Hindu College for the promotion of western secular learning. Fifteen years later, the Committee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of the human body.

The Missionaries.—Another impetus to the introduction of western learning was the devotion of Christian missionaries. Carey, Marshman and Ward opened the first missionary College at Serampore in 1818; and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather on preaching and by founding his school and College in Calcutta.

Lord William Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks a somewhat tardy acceptance by Government of the new policy. Government then determined while observing neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of Western learning, to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected; still

less that the development of the vernacular should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the Press was established in 1835; English was substituted for Persian as the language of the Courts in 1837; and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received western education. In the following decade the new learning took firm root in India; and, though the Muslims still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need for improving the instruction at level of their co-religionists; and in many of the provinces of India a great impulse towards educational advance among the Muslim community is now noticeable. The Muslim University at Aligarh, more recently the Osmania University of Hyderabad, Deccan, are direct outcomes of the urge for higher education felt by the leaders of the Muslim community.

To Missionary Societies is due the initiative in the modern education of women, strongly supported by Hare and Ram Mohan Roy. The establishment of a Girls' school in Calcutta in 1849, by Drinkwater Bethune is a landmark in the history of female education in India.

WOOD'S DESPATCH

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instruction were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835, whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions. It emphasised the importance of encouraging the study of the vernaculars as the only possible media for mass education.

Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, and of Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis: it did much, through the agency of its colleges, to develop backward provinces; it accelerated the conversion of Indians to a zeal for western education; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications.

In certain important respects the recommendations in the despatch were not followed. Directors did not intend that university tests, as such should become the sole tests qualifying for public posts; they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the

establishment of university chairs for advanced study. They were aware of the dangers of a literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country.

The encouragement of the grants-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions.

THE UNIVERSITIES COMMISSION

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Government retained the power of cancelling any appointment and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects, but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connection with institutions lying outside those boundaries.

Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system.

1913 Resolution.—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian educational policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government:—"The progressive development of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Education Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions, both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large imperial grants, mainly for University, technical and elementary education.

The resolution of 1913 advocated, *inter alia*, the establishment of additional but smaller Universities of the teaching type; it reaffirmed the policy of reliance on private effort in secondary education; it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid; and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instruction and instruction in hygiene; the necessity for medical inspection; the provision of facilities for research; the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the First World War.

The Reforms Act.—The Reforms Act of 1919 altered the conditions of educational administration in India. Education became a provincial 'transferred' subject in the Governors' provinces under the charge of a Minister, but the education of Europeans was made a provincial 'reserved' subject, i.e., it was not within the charge of the Minister of Education. The introduction of provincial autonomy under the Government of India Act, 1935, brought education in these provinces under the full control of their Ministers of Education.

Broadly speaking, an educational policy for India as a whole no longer existed, but it is clear that Provinces may co-ordinate educational activities and follow a uniform policy of development, the Central Advisory Board of Education was reconstituted in 1935. This Board in which all the provincial governments are represented meets annually to discuss all matters of education, and devise an all-India educational policy. Its function is, however, purely advisory.

At the time of handing over the administration of education to the provinces, the Government of India retained under their immediate control all education in the Centrally Administered Areas. They still deal with matters relating to Universities like Aligarh, Benares and Delhi.

The Central Advisory Board of Education was revived by the Government of India in 1935, as a result of the Hartog Committee's recommendations. The Board advised the revival of the Bureau of Education, which was done in 1937. With the revival of these two Central Agencies, and especially with the enlargement in the membership, function and scope of the Central Advisory Board of Education, public opinion was once again focussed on vital educational problems and policies of an all-India character. The Board soon became a source of inspiration for systematic and co-ordinated educational development in the country as a whole; one of the most important contributions of the Board is its report on Post-War Educational Development in India, first published in 1944, which provided a blueprint for a national system of education for the country.

Following the recommendation of the Central Advisory Board of Education, the Government of India constituted a separate Department of Education with effect from 1st September 1945, consisting of several technical officers, besides Secretariat Officers. On the 15th of August 1947 the Education Department became a full-fledged Ministry of Education. With the attainment of freedom it was realised, as never before, that one of the basic steps towards national reconstruction was to improve and, if necessary, remodel the existing educational system of the country. In January, 1948, the Education Minister called an All-India Education Conference to review the existing educational activities and make recommendations for their improvement and advancement. The developments that have taken place since that time are described in the official publication 'Education in Free India, August 1947 to August 1948.'

PROVINCIAL ADMINISTRATION

The Director of Public Instruction is the permanent head of the Department of Education and acts as expert adviser to the Minister for Education or Adviser in charge of Education. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the provincial government for the administration of education. The authority of Government in controlling the system of public instruction, is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary education and education through the mother-tongue.

The Central Provinces have a High School Board and Madras has an S.S.I.C. Board for control over secondary education, while old undivided Bengal (for Dacca area only) and the United Provinces (for the whole province except the areas under the jurisdiction of Benares Hindu and Aligarh Muslim Universities) had and still have Intermediate and Secondary Education Boards which control high school and intermediate education in the areas under their control. Delhi has a Board of Higher Secondary Education. The Rajputana (including Ajmer-Merwara), Central India and Gwalior High School and Intermediate Board has jurisdiction over schools and Intermediate Colleges in Ajmer-Merwara and Central India besides such institutions in Rajputana and certain other states.

Institutions under private management are controlled by Government and by local bodies by "recognition" and by the payment of grants-in-aid, with the assistance of the inspecting staffs employed by Government and by local bodies.

PRESENT POLICY

The general Educational Policy of the Government of India has been outlined in the Report of the Central Advisory Board of Education. Post-War Educational Development in India (popularly known as Saragat's Report). The publication of this Report and the acceptance generally of principles and objects of that Report by the Government of India, make a landmark in the history of education in India.

Some of the principles underlying the new policy have already been set out in the earlier part of this Section. Other recommendations are summarised below along with the action so far taken by the Government to give effect to these recommendations.

(i) BASIC EDUCATION

The first and foremost task of the National Government is the provision of universal, free and compulsory Basic Education for all. The Report on the Post-War Educational Development in India had recommended the introduction, as speedily as possible, of a system of universal compulsory and free education for all boys and girls between the ages of 6 and 14. The plan outlined in this Report required 40 years to achieve cent per cent literacy. This was considered to be too long a period by the All-India Education Conference, convened by the Hon'ble Minister for Education in January 1948 and it was suggested that the period should be reduced. As recommended by the Conference a Committee of experts under the Chairmanship of the Hon'ble Mr. B. G. Kher, Premier of Bombay, was appointed. This Committee has now submitted its Interim Report. According to this report, universal compulsory Basic Education can be introduced within a period of 16 years by two five-year and one six-year plans. The first five-year plan will aim at bringing such education to the great majority of the children of the country within the age-group of 6-11. The second five-year plan will extend compulsion to the remaining children of the same age-group so that at the end of ten years all children between the ages of 6-11 will be under compulsory instruction. The six-year plan will then extend the scope of

compulsion to 14 so that at the end of 16 years the programme of eight years' basic education for children between 6-14, as envisaged by the C.A.B.E., will be completely realised.

The Committee also went into the question of finances and suggested that the Centre should provide 80 per cent of the expenses while the provinces and local bodies should find the remaining 70 per cent. The total expenditure incurred during the first year of the scheme would be Rs. 14,39,05,615.

The Ministry of Education have accepted this Interim Report and a sum of fifty lakhs has been provided in the budget for 1949-50 to help provinces (subject to their own contribution and under certain conditions) to make a beginning with their schemes of training for teachers.

(ii) ADULT (SOCIAL) EDUCATION

Adult Education, which is now known as Social Education, is equally important for the progress of the country. The Committee appointed by the Central Advisory Board of Education has prepared a scheme to impart education to people between the ages of 12 and 45, the target being at least 50 per cent literacy in this age group within three years. All Provincial Governments are expected to adopt the scheme or prepare similar schemes to suit their own requirements. The Government of India is required to bear half the cost of Adult Education in the Provinces and perhaps more in the case of educationally backward or economically poor areas.

According to the scheme, literacy and general education are to proceed simultaneously but greater emphasis is to be laid on general education, in order to enable every Indian to fulfil his role of citizenship in the New Order. All possible resources of the country in men and money will be mobilized to attain these objectives and whole-time workers, part-time workers and volunteers will be employed to implement the programme. Owners of mills and factories will be asked to make arrangements for the education of their workers and workers' families, and the Government will make it compulsory for all its employees to attain literacy within a period of three years.

For this programme, modern media of mass education like radio, films, and open air theatres are suggested. In order to prevent back-sliding, emphasis is also laid on further education of literates through clubs, discussion groups, summer schools and similar other agencies.

This programme will, it has been proposed be directed and co-ordinated by a Board to be called the Board of Social Education. Educationists, it is also recommended, should be sent abroad whenever necessary to study the education systems of various countries. The conscription of students, Government servants and other educated personnel has also been recommended if necessary. April 1949 was the date proposed for the launching of the scheme in Provinces and States.

The Ministry of Education have accepted the report in principle and a conference of Provincial Education Ministers was held in February 1949 to discuss the general programme of work for the next three years. A sum of one crore has been provided in the budget for 1949-50 in order to help provinces in giving effect to the proposals. It has also been decided to carry out in Delhi a co-ordinated programme of basic and social education on a more intensive scale so that the country as a whole might benefit from the results of the experiment. Some centres have been opened and three Educational Melas held which evoked great enthusiasm among the peasantry.

(iii) SECONDARY EDUCATION

The framework of Secondary Education, the link between basic schools on the one hand and the universities and technical institutes on the other, has been prepared by the Committee

appointed for this purpose by the Government of India. The main recommendations of the Committee are:

(a) Admission to the Degree course should be preceded by a course of Primary and Secondary Education for at least 12 years—of which 5 years should be spent at the Junior Basic Stage, 3 years at the Senior Basic, or Pre-Secondary and 4 years at the Secondary Stage.

(b) The teaching of the Federal language should be started at the end of the Junior Basic Stage. English should be compulsory throughout the Secondary stage so long as it remains the medium of instruction in the Universities.

(c) The pay and conditions of service of teachers should be as recommended by the Central Advisory Board of Education. The scales of pay should be revised in the light of the changes that have since taken place.

(d) Youth Movement, Scout Movement and other extra curricular activities should be encouraged in all schools.

The Central Advisory Board of Education at its 15th meeting held at Allahabad in January 1949 has recommended for the consideration of the Government that a Commission or Committee be appointed to report on Secondary Education. This Commission, it was suggested, should go into the wider question of the aim, objective and purpose of Secondary Education and its relation to Basic Education and University Education.

(iv) UNIVERSITY EDUCATION

During 1947, the Government of India took up the question of re-constituting the Universities Grants Committee to bring in its purview all universities and academic and scientific institutions in the country, ensuring co-ordinated development of University Education. This was done in 1948 and the scope of the Committee was also widened. The Committee it is proposed, should work on the lines of Universities Grants Committee in the United Kingdom and make enquiries and recommendations regarding (a) the lines on which the universities and institutions of higher learning should develop, (b) the grants-in-aid from public funds required by the universities, and (c) co-ordination of their activities to avoid unnecessary overlapping.

UNIVERSITIES COMMISSION

After considering the recommendation of the Inter-University Board, India, and the Central Advisory Board of Education (1946-47), the Government of India have appointed a Universities Commission consisting of eminent educationists from India and abroad to enquire into and report on the conditions and prospects of University education and advanced research in India and to recommend a constructive policy in relation to the problems they present and the needs of the country.

The Commission consists of the following members:—

Dr. S. Radhakrishnan, Spalding Professor of Ethics and Eastern Religion at the University of Oxford (Chairman).

Dr. Tara Chand, M.A., D.Phil. (Oxon.), Secretary and Educational Adviser to the Government of India.

Prof. J. F. Duff, Vice-Chancellor, University of Durham, Durham.

Dr. Zakir Hussain, M.A., Ph.D., Vice-Chancellor, Aligarh Muslim University, Aligarh.

Dr. Arthur E. Morgan, Lately President of Antioch College and Chairman of the Board of Tennessee Valley Authority, U. S. A.

Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor, Madras University and Chairman, Inter-University Board, India.

Dr. Meghnad Saha, D.Sc., F.R.S., Dean, Faculty of Science, Calcutta University.

Dr. K. N. Bahl, Head of the Department of Zoology, Lucknow University.

Dr. John J. Tigert, *Lately Commissioner of Education, U. S. A. and President, Florida University.*
 Prof. N. K. Sidhanta, *Dean, Faculty of Arts, Lucknow University, Lucknow.*

The terms of reference of the Commission are to consider and make recommendations in regard to:—

- (i) The aims and objects of University Education and Research in India.
- (ii) The changes considered necessary and desirable in the constitution, control, functions and jurisdiction of universities in India and their relations with Governments, Central and Provincial.
- (iii) The finance of Universities.
- (iv) The maintenance of the highest standard of teaching and examination in the Universities and Colleges under their control.
- (v) The courses of study in the Universities with special reference to the maintenance of a sound balance between the Humanities and the Sciences and between pure science and technological training and the duration of such courses.
- (vi) The standards of admission to University courses of study, with reference to the desirability of an independent University entrance examination and the avoidance of unfair discriminations which militate against Fundamental Right 23(2).
- (vii) The medium of instruction in the Universities.
- (viii) The provision for advanced study in Indian culture, history, literature, language, philosophy and fine arts.
- (ix) The need for more Universities on a regional or other basis.
- (x) The organisation of advanced research in all branches of knowledge in the Universities and Institutes of higher research in a well-co-ordinated fashion avoiding waste of effort and resources.
- (xi) Religious instruction in the Universities.
- (xii) The special problems of the Banaras Hindu University, the Aligarh Muslim University, the Delhi University and other institutions of an all-India character.
- (xiii) The qualifications, conditions of service, salaries, privileges and functions of teachers and the encouragement of original research by teachers.
- (xiv) The discipline of students, hostels, and the organisation of tutorial work and any other matter which is germane and essential to a complete and comprehensive enquiry into all aspects of University education and advanced research in India.

The Commission is at present touring and visiting the various universities of the country.

(v) TECHNICAL EDUCATION

The need for adequate facilities for technical education is as necessary as that for basic education. If vast programmes of expansion in industry, agriculture and commerce are to be put into effect successfully, there must exist within the country facilities for technological and scientific studies of the highest order. It goes without saying that sufficient funds for nation-building projects in regard to education and health cannot be available unless the country's industrial output is increased through adoption of improved technological methods.

The Central Advisory Board of Education had recommended that all technical education beyond school stage other than that given in

the technological departments of universities should be placed under a Central Controlling Body (to be called All-India Council for Technical Education) having representatives of all the interests concerned.

In pursuance of this recommendation the Government of India set up in November 1945 an All-India Council of Technical Education to advise Government on effective organisation and planning of higher technical education on an all-India basis and to secure all-India co-operation for the new projects. Under the auspices of the Council the following committees have been formed:

(a) All-India Boards of Technical Studies, for each of the main subjects in technology, for achieving a uniformly high standard of education in technological subjects. These Boards are required to frame regulations governing the grants of All-India Diplomas, Certificates and the Higher Diplomas of Higher Technical Institutions, and prescribe conditions for recognition of such technical institutions as may wish to prepare students for All-India Diplomas and Certificates.

(b) Regional Committees of the Council for the different regions, to perform in general the functions assigned to the Council, and supervise the work of the proposed Higher Technical Institutions, and such other technical institutions, as are not affiliated to the Universities, and may, with the approval of the Provincial Governments concerned, join in All-India schemes.

(c) A Co-ordinating Committee to co-ordinate the activities of the above Committee and to act as the executive organ of the Council.

An *ad hoc* committee called the Higher Technological Education Committee was also set up under the Chairmanship of Mr. N. R. Sarkar to advise on the provision of facilities for technical education in India. This Committee was of the opinion that both in quality and quantity, existing facilities fall short of India's need to produce high grade engineers and technologists. The Committee recommended the early establishment of four Regional Higher Technical Institutions on the lines of the Massachusetts Institute of Technology, each of them to provide a wide range of facilities for post graduate study and research in addition to producing about 350 graduates per year in engineering and technology. Steps are also being taken by the Government of India to improve the existing facilities for advanced study and research in technology and engineering.

(vi) SCIENTIFIC EDUCATION AND OVERSEAS SCHOLARSHIPS

With a view to providing a sufficient number of trained personnel for the various development projects of the Government of India, the Overseas Scholarships Scheme was started in 1945. Under this scheme scholarships have been awarded to scholars sponsored exclusively by the Central Government and also to those sponsored by the Provincial Governments and the Central Government co-jointly. The expenses in respect of the latter are shared equally by the Central and the Provincial Governments.

During the three years the scheme has been in operation, 940 scholars were selected. Of these 804 have already been sent abroad. Another 23 have secured admission and are awaiting passages, while 54 selected students are awaiting admission in suitable Universities abroad.

In 1947 a Committee was appointed by the Hon'ble Minister of Education under the Chairmanship of Dr. B. C. Roy to examine the entire question with a view to effecting improvement in the Overseas Scholarship Scheme. It was also felt that a general survey of the scientific and technological resources and requirements of the country should be made and a committee called the Scientific Man-Power Committee was entrusted with this task.

All these committees have recommended that immediate steps must be taken to strengthen the existing technological institutions in the country and start new institutions for imparting instruction of the highest standard. This would generally obviate the necessity of sending large numbers of students abroad. Till such time, however, as arrangements for imparting instruction up to the highest standard are complete the despatch of students abroad must not cease.

The Government of India have generally accepted the recommendations of both these Committees and drawn up a modified scheme of Overseas Scholarships which will aim both at strengthening the teaching personnel in our universities and Scientific and Technological Institutions and providing the necessary staff for carrying through the industrial development of the country.

(vii) SCHOLARSHIPS FOR BACKWARD CLASSES

The Government of India had introduced with effect from 1944-45 a five-year scheme of Scheduled Castes Scholarships in order to enable students belonging to that community to pursue courses of study beyond Matriculation stage in scientific and technological subjects in India. This scheme involved an expenditure of Rs. 3 lakhs annually. In the year 1948-49, the Government introduced, as an experimental measure, a scheme for similar scholarships for students belonging to the Aboriginal and Hill Tribes, at an annual grant of Rs. 50,000. For the year 1949-50, the Government of India have enlarged the scope of this scheme. This year students desiring to pursue courses beyond the Matriculation stage, belonging to (a) Scheduled Castes, (b) Aboriginal and Hill Tribes, and (c) Backward Classes, recognised as such by Provincial Governments, will be eligible for the Scholarships. Funds to the extent of Rs. 10 lakhs have been provided for the purpose and will be administered by the Central Government in consultation with a Board appointed for the purpose.

(viii) TRAINING OF TEACHERS.

The present output of Matriculates is too small to meet the needs of basic schools. Eight years continuous education in a basic school imparted in an Indian language, is sufficient to make a scholar reach the present matriculation standard except English. Two to three years further education in a training institution gives to these students will enable them to become suitable teachers for junior basic classes. In order to accelerate the rate of progress of education, and make it possible for Government to open a school in every village, having sufficient children of school going age, within the shortest possible time, it is necessary that the best products from senior basic schools are encouraged to become teachers, alongside of willing matriculates.

The Ministry of Education have, therefore, formulated schemes for training of teachers, specially for the Centrally Administered Areas and smaller Provinces.

Arrangements have been made with the authorities of the Jamia Millia Islamia, Delhi, and the Visva-Bharati, Santiniketan, for the training of teachers for Basic Schools. There is provision for training 30 teachers annually at the Jamia Millia. The building of the Training Institute is also nearly complete. At the Visva-Bharati, there is provision to train teachers not only in Basic education but also in: (i) Arts and Crafts, and (ii) Music and Dancing. Arrangements have been made for the training of 40 teachers in Basic education, 30 for Arts and Crafts and 30 for Music and Dancing. Some of these teachers are selected by the Centre and some by the Provinces. During 1947-48 a group of such teachers was sent on a study tour to educational centres like Wardha, Pipli, Banaras, Allahabad and Jaipur to study the Basic system, and methods employed in the teaching of Arts and Crafts at these places. After training the candidates are required to serve their respective Governments.

In December 1947, the Ministry started the Central Institute of Education, Delhi, under its direct administration. This Institute is not only meant to train teachers for schools and Training Institutions, but also to provide for research in all important aspects of education. Fifty students were trained in the B.T. course during the period December, 1947, to August, 1948. Eighty students have been admitted to the B.T. class this year and fifteen in the M.Ed. course. It is expected to undertake the construction of a building for the Institute very soon. A provision of Rs. 18 lakhs has been made for building the college as well as hostels for men and women.

PRESENT SITUATION

The future plans have already been described earlier. The rest of the section will be devoted to a brief description of the present situation from the pre-primary to the university stage.

Pre-Primary Education.—At present the facilities available for this kind of education are negligible; there are a few schools scattered here and there in the Bengal area. In some provinces, pre-primary classes for children of the age-group 4-5 are attached to primary schools.

Middle School Education.—At present there are two types of middle schools: (i) Middle English Schools, with 1 to 8 classes generally; English is taught as a compulsory subject in the middle stage; and these schools are feeders for high school education. (ii) Middle Vernacular Schools or Indian Middle Schools, where the teaching is in the mother tongue, English is not taught as a compulsory subject, and education in these schools has a rural bias, and is of a practical nature. The teachers for primary schools are generally selected from the output of these schools, and receive a 2-year course of training in a normal, or an elementary training school.

High School Education.—The existing high school education system flows into three streams. In certain provinces high schools have primary, middle and high classes; in some middle and high classes, while in certain cases, notably the North-West Frontier Province, the Punjab area and the United Provinces, high classes are also attached to the intermediate classes constituting 'Intermediate Colleges'.

Again in some provinces a high school stage consists of two classes IX—X (Punjab, N.W.F.P. and United Provinces); in some three, IX, X & XI (C.P., Madras and Orissa), while in some four classes. Against this unhomogeneous and non-uniform system, the Central Advisory Board of Education has recommended that high schools should be treated as distinct units differing in outlook and objective from the ordinary Senior Basic (Middle) schools, and that in future the High School Course should cover six years from about the age of eleven. Primary Departments, even if housed in the same premises as high schools should be regarded as entirely distinct units and organised separately.

In the re-organised system of education, high schools will be of two main types—(i) the Academic High Schools, and (ii) the Technical High Schools. The former are required to impart instruction in arts and pure Sciences, while the latter to provide training in the applied sciences, and in industrial and commercial subjects. In both types of schools, the course in the junior department, i.e., middle stage, will be very much the same, with a common core of the 'humanities' throughout. There will be no differentiation between boys and girls high schools except that in the latter class of schools, Domestic Science will be added to the courses of study.

University Education.—Though the Central Advisory Board of Education has recommended as an essential and urgent reform the introduction of a three-year degree course in place of the existing two-years' one with the consequence that the one year of the intermediate stage will be added to the University course, and the

other to the high school course, this change has not so far been effected in any province except Delhi. It appears that other Universities will fall in step with Delhi only if this experiment proves successful.

The Board had estimated that under the national system of education now proposed, roughly 11 lakhs out of an estimated total of over 33 lakhs of pupils in the Senior department of high schools, will be leaving school every year. They believed that at least one in fifteen of those leaving the high school would be able to reach the level of attainments required for and to be prepared to embark on a university course. In the year 1944-45, 52,938 boys and 6,324 girls were in the 1st year of the collegiate stage, showing that there is yet great room for the expansion of university education, the need for which will be accentuated when the high school education system has sufficiently developed, as recommended by the Board.

CENTRAL ADVISORY BOARD OF EDUCATION

The 15th meeting of the Central Advisory Board of Education was held on the 7th, 8th and 9th January, 1949 at Allahabad. The Board made the following recommendations for the consideration of the Government of India.

1. Secondary Education.—That a Commission or Committee be appointed to report on Secondary Education. This Commission, it was suggested, should go into the wider question of the aim, objective, and purpose of Secondary Education and the relation of Secondary Education to Basic Education and University Education.

2. Medium of Instruction.—In view of the appointment of the Universities Commission which is expected to consider the question of Medium of Instruction the Board postponed its consideration, but suggested that the aim of Universities should be the replacement of English by an Indian language as the Medium of Instruction as early as possible consistent with the maintenance of standards of teaching particularly in scientific and technical subjects.

3. Basic Education.—The Board considered the recommendations of the Standing Committee regarding the 'Report of the Committee on Ways and Means of Financing Education' and generally approved of them. The following suggestions were made:—

(a) The State should undertake the responsibility of providing universal compulsory education for children of 6-11 age group within a period of ten years without, however, detriment to facilities for Secondary and Higher Education.

(b) The basic initial salary of a trained teacher should be Rs. 40/- per mensem in a graded scale.

(c) Some increase in the fees in the post-compulsory stage of education may be allowed, provided a number of free places is made available to meritorious pupils in straitened circumstances.

(d) The Government may enact that an adequate percentage of income of charitable trusts of all religious denominations should be allocated towards the expenses of education provided the Government may exempt certain specified types of trusts, for example Medical Trusts from the application of such law.

(e) About 70% of the expenditure on Basic Education should be borne by the Local Bodies and Provinces and the remaining 30% by the Centre.

(f) The expenditure incurred on education by industrial or business concerns should also, if approved by the Provincial or Central Government, be treated as establishment expenses for purposes of income-tax and steps be taken to see that buildings and land used exclusively for educational purposes be free of all taxes—governmental or local.

(g) It was necessary (i) to examine how far the problem of educational finance can be solved by the adoption of the Basic system of Education

which involves the principle of earning while learning; (ii) to undertake a study of the experience gained in Wardha, Bilar and Orissa where the income from craft work of the pupils has met a part of the school expenditure; and (iii) to advise all Provincial Educational Departments to explore with due regard to the educational interests of the pupils this remunerative aspect of the Basic Education Scheme.

4. Physical Education.—With reference to the Interim Report of the Committee on Physical Education the Board recommended that in preparing the Final Report, the Committee should keep in mind (a) in allocation of expenditure between Central and Provincial Governments the contribution of the Centre should be 50% and not 30%; (b) the co-operation of the Ministry of Defence should be secured for furthering the development of Physical Education in the country and full benefit be taken of the Physical Training Schools maintained at Poona and other centres.

5. Educational Statistics.—The Board gave its general approval to the proposal for legislation for securing the necessary statistical information for educational purposes.

6. Technical Education.—The Board recommended that—

(a) the certificates granted at the end of courses in Technical High Schools should be accorded appropriate recognition; and

(b) the Government of India and Provincial Governments should draw the attention of appropriate authorities to take necessary action for recognition of such certificates for purposes of admission into Universities and Higher Technical Institutions.

The Board further recommended to the Government—

(a) to take an early decision on the question of the total grants to be paid to the existing Technological Institutions for strengthening and improving them.

(b) to take immediate steps to organise adequate and suitable practical training facilities for students from Technical Institutions; and

(c) to set up the Regional Committees of the All India Council for Technical Education and appoint a special Technical Officer for each of them, as they were essential for the proper organisation of Technical Education and Training.

The Board was of opinion that all forms of Technical Education including training in crafts and cottage industries should be under the direct supervision of the Ministry of Education of the Government of India or the Department of Education in the Provincial Governments.

7. Juvenile Literature.—The Board recommended that the Government of India should appoint a Committee to work out details of the scheme for production of Juvenile Literature in accordance with the memorandum of the Government of Bombay.

8. Education of the Handicapped.—The Board recommended that there should be at least one properly staffed school for mentally or physically handicapped children in each Province.

THE NATIONAL PLANNING COMMITTEE

The report of the Sub-Committee of the National Planning Committee, outlining a national system of Technical Education and Scientific Research in Indian states that the system in the Wardha scheme of a child learning a craft by the end of the school career to start a vocational life, is spiritually harmful to the child, as the vocation becomes the principal object of education. This gives a narrow and shallow knowledge of the subjects taught.

While accepting the syllabus for the primary schools under the Wardha scheme as satisfactory, the committee suggests that algebra should be taught side by side with arithmetic, and British units of length, area, volume, weight and currency may be avoided and Indian units substituted.

The report is not in favour of what is known as the exchange motion under the Wardha scheme, according to which current expenditure of the school is expected to be met by the sale of the goods produced in the technical section by the students. The report emphasizes that these schools should be a direct burden on the State.

Primary education covering a period of seven years, according to the report, should be free and compulsory for all children and may be co-educational, the medium of instruction being the mother tongue.

After the primary course of seven years, secondary schools of general arts and sciences of three or four years' course should be established, and these three or four years should prepare students for admission to the university or higher technical or professional courses. Secondary schools, admission to which is not to be compulsory, should provide the study of Western languages, preferably English, the medium of instruction remaining the mother tongue.

A regular sifting of students is to be made after completion of the primary school course. Only those intellectually fitted will enter the secondary schools and the rest will enter what are called "continuation schools" for training in arts and crafts and industries such as drawing, artistic designs, general economics, civics, accounts and physical culture and gymnastics.

EDUCATION IN THE INDIAN ARMY

Before the war the Indian Army had a system of education whereby all soldiers received instruction as an integral part of their training. Their school knowledge, if any, was revised and extended. Illiterate recruits were taught to read and write in Roman Urdu and further graded instruction was given upto roughly the Matriculation standard.

The outbreak of war and the consequent expansion of the army brought in large numbers of recruits, many of them illiterate, of different races, and speaking different languages. These had to be educated in a short time up to the standards required for the ranks they might hold and the parts they would have to play in a complicated mechanised army. And they had to be considered not merely as units of a machine but as individuals and prospective civilians of a developing State.

To deal with the problems that arose, the Army Educational Corps on whom the responsibility for their educational training devolved was expanded—largely by the intake of Indian Officers. And the educational training of the men was divided into two parts—normal and wartime.

Normal education is a development of the pre-war system, simplified and intensified. Wartime education, in spite of its title, dealt with war and peace. The technique adopted was that of the discussion group, within the unit, led by the platoon Comdr., under supervision of an officer of the unit.

The unit discussions and associated activities are based on handbooks and periodical pamphlets issued by the Directorate of Army Education at General Headquarters (India).

On cessation of hostilities, an elaborate educational plan was put into operation by the Army—THE RELEASE PERIOD EDUCATION SCHEME (INDIAN TROOPS)—The object of the scheme was to use the time between the cessation of hostilities and the date fixed for the soldier's release from service to prepare him for return to civil life as a better, more useful citizen educationally, more capable of obtaining a better position in civil life. The scheme not only constituted a powerful drive against illiteracy, but also included graded instruction from the literacy stage in a man's own vernacular to the Matriculation stage in English. The I.A. SPECIAL certificate of Education, the highest certificate obtainable in the I.A. is now recognised by most universities in India as equivalent to their Matriculation standard. The scheme also

provided for intensive instruction in the principles of citizenship and rural and urban development.

THE DOON SCHOOL

This School which is established in the Chand Bagh and Skinner's Estates at Dehra Dun owed its origin to the initiative and enthusiasm of S. R. Das. The aim of the school is to develop in an atmosphere of Indian culture and social environment the best features of English Public Schools. The school prepares the boys for the Senior Cambridge Examination (Cambridge School Certificates) and for the Intermediate of the Board of High School and Intermediate Examinations of the United Provinces. Some boys take the Cambridge Higher School Certificate. The school is open to all boys without distinction of caste, creed, or social position and aims at providing a thorough general education from 11-13 to 18 years. Particular emphasis is laid on games, extra curricular activities and the management of school affairs as far as possible by the boys themselves. The annual inclusive fee is Rs. 1,800.

THE INDIAN PUBLIC SCHOOLS CONFERENCE

The conference was founded in 1939. It is composed of the heads of certain institutions which set out to give an all-round training of the character, emotions and body as well as of the mind, under conditions somewhat similar to those of the best Public Schools in England. All of the present member-schools are mainly boarding schools, though several of them admit day-boys also; but there is nothing in the rules of the Conference to exclude a Day School. Many of the schools started life as Chiefs' Colleges, but they have now bound themselves to abolish social exclusiveness as a qualification for entrance and all social privileges and distinctions within their walls.

Members of the Conference meet yearly in rotation normally at one another's schools and discuss matters of common interest.

The general views of the Conference on education can be found in their Pamphlet "The Indian Public School" (O.U.P.). Membership is at present confined to the following schools:—

The Doon School, Dehra Dun; The Daly College, Indore; The Scindia School, Gwalior; The Rajkumar College, Raipur; The Rajkumar College, Rajkot; The Shivaji Military School, Poona; St. Xavier's School, Patna; The Sadul School, Bikaner.

INDIA & UNESCO

India is a founder member of UNESCO (UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION) and has been represented on the Executive Board of the Organisation since its establishment. In both these capacities, India has played an important role in the deliberations of UNESCO and in the formation of its aims and objects. Last year Dr. S. Radhakrishnan was elected Chairman of the Executive Board.

Due to the huge problems created by partition, India could not till recently implement one of the conditions of UNESCO. According to this every member nation is required to set up a national commission or co-operating body for giving practical shape to the various recommendations of UNESCO. It was only in July, 1948 that the Ministry of Education, Government of India, appointed a committee under the chairmanship of Mr. B. G. Kher to advise the Government on the composition of the proposed National Commission. The committee recommended the appointment of a 78 member National Commission, representing educational, scientific and cultural institutions in the country and also representing Central, Provincial and State Governments. This report was approved by the Central Advisory Board of Education, and Government then proceeded with the formation of the Commission.

The first session of the Commission was held in the Council House, New Delhi, on April 9, 1949, and was inaugurated by the Prime Minister of India, Pandit Jawaharlal Nehru. During its two-day session, the Commission established three Sub-Commissions on Education, Science and Culture, with Dr. S. Radhakrishnan, Dr. S. N. Saha and Mr. K. M. Munshi as their respective Chairmen. Maulana Abul Kalam Azad, Minister for Education, Government of India, was elected President of the Commission.

The main function of this Commission is to serve as a liaison agency between UNESCO and national institutions working in India for the progress of education, science and culture. It is also to act in advisory capacity to Indian delegates to UNESCO. In the words of its President, Maulana Azad, the "Commission will serve as a focus of educational, scientific and cultural activities of the nation and will contribute to the enrichment of national life in all these fields as well as better co-operation and understanding with other countries."

EDUCATIONAL STATISTICS

The progress made in education measured in terms of statistics is given in the succeeding tables. The latest figures available are for the year 1946-47:

| Type of Institution. | No. of Institutions.* | | Scholars. | |
|---|-----------------------|---------------|--------------------|--|
| | For Males. | For Females. | Males. | Females. |
| GENERAL EDUCATION : | | | | |
| Universities | 16 | .. 59 | 1,40,452 | 17,648 |
| Arts and Science Colleges | 359 | 576 | 13,81,038 | 1,78,341 |
| High Schools | 3,061 | 1,187 | 9,44,838 | 1,77,784 |
| Middle Schools | 7,083 | 14,330 | 76,92,847 | 28,33,006 |
| Primary Schools | 1,20,536 | | | |
| SPECIAL EDUCATION : | | | | |
| Professional and Technical Colleges | 76 | 3 | 37,182 | 1,768 |
| Training Colleges | 22 | 11 | 1,814 | 660 |
| Training Schools | 339 | 188 | 23,522 | 10,483 |
| Other Special Schools | 8,596 | 594 | 2,78,437 | 27,864 |
| Unrecognised Institutions | 6,324 | 537 | 2,38,220 | 46,604 |
| Total | 1,46,396 | 17,485 | 1,07,38,330 | 32,94,248 |
| Grand Total | 1,63,897 | | | 1,40,32,578 |
| | | | | [Not counting students in universities.] |

Expenditure — Rs. 44,85,01,656.

* Five Boards of Secondary or Intermediate Education in the Dominion are not included in this table.

Statement showing the Numbers of Institutions during 1945-46 & 1946-47.

| Province. | 1945-46* | | | | | | 1946-47. | | | | | |

TECHNICAL AND ART EDUCATION

The existing provision in this respect is meagre: in certain provinces proper facilities do not exist for Medical education, in some for Engineering, or for Agricultural education while in others for all types of higher Technical Education. The position is summed up in the statistical statement below :—

COLLEGES, 1946-47.

| Province | Agricultural and Forestry Colleges | | Commercial Colleges | | Engineering Colleges | | Law Colleges | | Medical and Veterinary Colleges | | | |

The expansion of technical and professional side of education has engaged the attention of provincial Governments. The indications are that they will give this side a proper place in their educational development programme.

The Training of Teachers.—The available facilities in respect are meagre in some provinces while in others they are quite abundant. The tables below show the position:

| Province. | Training Colleges. | | | Training Schools. | | | | Output of Trained Graduates, 1916-47. | |
|----------------------------------|----------------------|----------------------------|------------------------------|----------------------|---------------------|---------------|-----------------|---|---|
| | No. of Institutions. | No. of Men under training. | No. of Women under training. | No. of Institutions. | | Enrolment. | | Men. | Women. |

* N.B.—The figures include undergraduates as well.

A REVIEW OF THE YEAR (1948 May-1949 April)

POLITICALLY it has been on the whole a good year for India. Internal peace was firmly maintained, a solution was found for the knotty problem of Hyderabad, fighting stopped in Kashmir, communal feeling greatly abated, relations between India and Pakistan vastly improved, and the process of integration of the former States with the Dominion came very near completion.

In striking contrast with the political record the achievement on the economic front was less impressive. Labour unrest persisted, strikes in essential services threatened, confidence among investors and businessmen was slight, production was low and food and cloth were both scarce and dear. In spite of the 'Grow More Food' campaign there was no appreciable increase in the production of food and large quantities of wheat, rice and other grain had to be imported from abroad. Financially too, Government was not in a happy position with commitments involving food imports, military operations in Kashmir and the rehabilitation and relief of refugees. Enormous sums of money were thus spent on items that brought little or no economic return.

Decontrol which had come into force in December 1947 added to the general confusion and aggravated the tendency to inflation. Towards the close of the year the position slightly improved. Government reintroduced control and put through various measures designed to check inflation. Meanwhile the industrial truce had begun to bear fruit in fewer strikes and increased production. Search for funds to finance the various development schemes was a major preoccupation of Provincial Governments. But in spite of financial difficulties and in the face of a clear warning from the Central Government Provincial authorities pressed forward in varying degree social measures, such as prohibition and the abolition of the Zamindari system.

INFLATION

From the point of view of the Central Government the major problem, as already mentioned, was inflation, in the solution of which Government proceeded very carefully. They first called into consultation representatives of economic groups and professional economists. Then they put the recommendations which the various interests had made before a committee of the Congress Legislature Party for a general review and opinion. What emerged out of all these deliberations was an odd mixture of administrative devices held together by some new lines of policy. The most important among Government's anti-inflationary measures was an intimation to Provincial Governments that deficits incurred in the enforcement of prohibition or the abolition of Zamindari would not be made good by subvention from the Centre. Other anti-inflationary measures included a re-scrutiny of development projects, a proposal to limit the dividends of public companies, a more vigorous drive to increase small savings, the early introduction of legislation to levy death and estate duties and the issue of short-term Treasury Deposit Receipts. Part of the same scheme—one of its most important parts, in fact—was a proposal to set up some kind of statutory authority at the Centre to review provincial labour awards, the purpose of which was to secure uniformity in the principles governing wages, hours of work, bonus and so on. The anti-inflation scheme was on the whole a cautious and realistic document calculated to restore confidence both among business and working class interests. The industrial policy statements made on behalf of the Government of India in April and December 1948 concerning nationalization and the role of private enterprise had much the same object in view—to reassure business interests whose confidence was badly shaken. To sum up, it was clear that on economic issues, at any rate, Government were firmly set on a middle-of-the-road course.

GROUP JEALOUSIES

As the year was drawing to a close leading communal organizations plucked up courage. The Hindu Mahasabha changed its policy but insisted on its right to take part in the political life of the country. The Indian Union Muslim League asked that some of the old privileges like communal representation enjoyed by the Muslim community in undivided India should be restored. Some Sikhs put forward a demand for a redrawing of the boundaries of East Punjab Province, while in the South the principle of communal representation in the services was fully re-established. Communal and provincial jealousies in fact seemed to be as tenacious as ever. Neither the report of the Dar Committee which questioned the whole basis of linguistic provinces, nor the recommendations of the three-man Congress Committee which only asked for a postponement of the issue were well received in the South. A number of Provincial Congress Committees, for instance, reasserted their faith in the original Congress policy, which aimed at demarcating provincial boundaries by linguistic differences. The most insistent of these Provincial Committees was the Maharashtra Provincial Congress Committee.

Personal and group jealousies also hampered the working of parliamentary institutions in some of the newly-formed State Unions. Vidhya Pradesh, for instance, was taken over by the Central Government after only a short spell of local autonomy. Trouble was endemic in the Patana and East Punjab Union while a ministerial crisis was an ever-present possibility in the Madhya Bharat Union. Even in some of the older Provinces which had had a far longer experience of parliamentary democracy administration did not go smoothly. Factional differences led to changes in leadership in the Cabinet in Madras, and in East Punjab the composition of a ministry seemed to depend upon the size of the following which individual ministers enjoyed. In short, while the apparatus of democracy existed everywhere the democratic temper was more often than not absent.

INTER-DOMINION RELATIONS

Inter-Dominion relations recorded a marked improvement, though the Kashmir issue continued to evade solution. The truth of the matter is that while political differences tended to drive the two Dominions further and further apart economic interests worked to bring them closer together. Thus one day the relations between the two Governments would appear to be extremely friendly. And another day one found them exchanging acrimonious notes. There were in all five inter-Dominion conferences during the period under review beginning with the Calcutta Conference of May 1948 and ending with the New Delhi Conference of April 1949. The most important of these was the Conference at Calcutta which by its agreement on the exchange of essential commodities laid the foundation for economic co-operation between the two Dominions. A second step forward was taken when at the Delhi Conference of December 6, liaison machinery was set up to keep track of the progress that was being made in implementing the terms of previous agreements. Among the more important decisions which emerged out of the inter-Dominion Conferences was one to appoint a judicial tribunal to settle boundary disputes between East and West Bengal, East Bengal and Assam and East Bengal and Tripura State. The two Dominions also agreed on a procedure to evaluate and dispose of evacuee property. This last question was acquiring renewed importance because of a fresh wave of migration of Hindus from East Bengal which had started a short time before.

COMMONWEALTH

The work of constitution-making made some progress, and a way was found for keeping republican India within the Commonwealth. This was not as difficult as it had seemed at first

sight. For though India had decided to become a republic she did not wish to leave the Commonwealth. And the other Dominions for their part were just as anxious to keep India within the Commonwealth whatever form her constitution might take. The aim of both parties being identical, all that was needed was a formula which was easily found.

India played a leading role in assisting the cause of the Indonesian Republic. Later she once again took the lead in organizing help to the Government of Burma hard-pressed by Karen and Communist rebels. India also secured from the UN General Assembly a resolution calling upon South Africa, India and Pakistan to settle their differences at a Round Table Conference. The aims of India's foreign policy were the same as before—end of colonial rule, the achievement of race equality and the preservation of world peace.

HYDERABAD

Far and away the most important single event in the history of India during this period was the police action in Hyderabad. It put to the test the whole foundation on which the edifice of the new young state of India was reared. The attitude of minorities, the future of the States, the efficiency of the Army and the strength of the country's centripetal forces, all the elements in fact which were decisive for the whole course of Indian history came into a sudden dazzling focus in the five days between September 13 and September 17, during which the action lasted. With on the fifth day the news of the Nizam's surrender came through there was a tremendous outburst of popular rejoicing throughout the country.

The Hyderabad issue had taken a long time to come to a head. The negotiations started even before the advent of freedom. At the beginning the points at issue were accession and the constitution of the Nizam's State. Later as the Razakars menace grew and grew the central issue took on a more fundamental aspect, the peace and security of the whole Dominion. The country remained in an agony of suspense while the emissaries of the Nizam shuffled back and forth between Hyderabad and New Delhi, weaving and unweaving a veritable Pegasus's web of negotiations. All the time the Government of India was watching with helpless exasperation the atrocities that were daily committed on the local population by the Razakars. At last the Government decided to strike. They asked the Nizam that they should be allowed to re-garrison the cantonment at Secunderabad. The Nizam rejected the Government of India's request and on the morning of September 12 at 4 o'clock the police action began.

Leading articles in most British newspapers and some American papers were very critical of the action that the Government of India took. Conservative M.P.'s asked angry questions in Parliament and the Foreign Secretary, Mr. Ernest Bevin, made a statement in which among other things he said he was sorry that 'the new Dominion was developing a war-like mentality'. On the Security Council too the representatives of a number of Powers took up a frankly hostile attitude and insisted on debating the Hyderabad issue in the face of vigorous Indian protest. All this caused much resentment in India.

Meanwhile the Hyderabad regime collapsed with the very first blows struck against it, and in less than five days all resistance ceased. The old Government was deposed and Major-General Chaudhry took over the administration of the State as Military Governor. What is more important the fabric of the new Indian State held firmly together thus falsifying the prophecies of those who declared that India was due for political and military disintegration. When the question seemed as good as settled, opinion in the British press and in the Security Council quickly readjusted itself and most people agreed that there was much misunderstanding about the Hyderabad State.

SOME NOTABLE DATES (April 1948-March 1949)

April 1948

- April 1: Communists arrested in Madras.
 April 2: Mr. S. A. Dange arrested in Bombay.
 April 3: Parliament approves motion to eliminate communal organizations.
 April 4: The State of Vindhya Pradesh inaugurated; Dr. Subbarayan resignation as Minister accepted.
 April 6: Mr. C. H. Bhabha resigns from the Government of India; Government of India's Industrial Policy explained.
 April 7: Mysore Constituent Assembly meets; Parliament approves Government's Industrial Policy.
 April 8: National Cadet Corps Bill passed by Parliament.
 April 11: Responsible Government introduced in Baroda.
 April 12: Foundation stone of Ilirakud Dam laid by Pandit Nehru.
 April 13: Foundation of new capital of Orissa at Bhubaneswar laid by Pandit Nehru.
 April 15: Inter-Dominion Conference meets at Calcutta.
 April 16: Agreement to decide future of French India by plebiscite arrived at; Simla Hill States taken over by the Central Government.
 April 18: Rajasthan Union inaugurated by Pandit Nehru; Udaipur joins Union.
 April 19: Indo-Pakistan Pact on minorities concluded.
 April 21: Political prisoners released in Hyderabad.
 April 22: Covenant of Madhya Bharat signed.
 April 24: A.I.C.C. meets in Bombay.
 April 25: Draft Constitution of Congress adopted.
 April 26: A.I.C.C. goes into secret session on Hyderabad.
 April 29: Scales of pay of administrative services personnel fixed.
 April 30: Responsible government announced in Bhopal by Ruler.

May 1948

- May 1: Mr. K. C. Neogy becomes Commerce Minister.
 May 2: Dr. Jayakar and Sir Jagadish Prasad make joint appeal against secession from the British Commonwealth.
 May 3: A Home Ministry communiqué announces that Mr. C. Rajagopalachari will succeed Lord Mountbatten when the latter relinquishes office.
 May 5: East Punjab States Union covenant signed.
 May 6: New Cabinet formed in West Bengal by B. C. Roy.
 May 11: S.I.L. strike ends.
 May 19: Government of India decides to put an end to one-way evacuee movement.
 May 22: Razakars attack Bombay-Madras Mail at Gankapur.
 May 24: Razakars loot train near Vijayawada.
 May 25: Madras Government passes Ordinance to suppress lawlessness.
 May 26: Indo-Pakistan pact to exchange essential goods on short term basis signed.
 May 27: Mahatma Gandhi murder case opens.
 May 30: Central Government outlines plan to control cloth.

June 1948

- June 1: U.N.E.C.A.F.E. meets in Ootacamund.
 June 4: Hyderabad Majlis declares against accession to India; S.I.L. strike called off.
 June 6: Talks between India and Hyderabad open in New Delhi.

- June 8: Mr. Mohanlal Saxena assumes charge as Minister for Rehabilitation.
 June 9: Talks between India and Hyderabad break down.
 June 12: Plans for State Insurance for Delhi workers announced; E.C.A.F.E. session ends.
 June 13: India Government rejects Nizam's new proposals; C. P. Police chase Itazakar marauders into Nizam's territory.
 June 15: Khan Abdul Gaffur Khan arrested.
 June 16: Three-man commission (Dhar Commission) appointed to report on linguistic redistribution.
 June 17: Prime Minister warns Hyderabad Government at press conference.
 June 20: India bids good-bye to the Mountbattens.
 June 21: Mr. C. Rajagopalachari assumes charge as Governor-General of India.

July 1948

- July 1: Ordinance bans transfer of securities held by Nizam.
 July 2: Air link with Hyderabad cut; Government of India bans export of gold or currency to Hyderabad.
 July 4: Brig. Usman killed in action in Kashmir.
 July 5: 'Achilles' transferred to the R.I.N.
 July 6: Further financial sanctions against Hyderabad announced.
 July 7: Pathankot-Jammu Road opened by Pandit Nehru; parcels for despatch from Hyderabad not accepted by Indian post-offices in state; U.N. Commission on Kashmir arrives in Karachi.
 July 8: Reports of unrest in Waziristan consequent on the arrest of Khan Abdul Gaffur Khan begin to come in.
 July 9: Agreement on sterling balances between England and India signed.
 July 10: Kashmir Commission arrives in New Delhi.
 July 15: Sardar Patel withdraws old terms offered to Nizam.
 July 16: Sir Stafford Cripps explains various provisions of the Sterling Agreement.
 July 17: India asks United Nations to take up South African issue; women eligible for public services.
 July 18: Sidney Cotton secretly breaks through into Hyderabad.
 July 21: Nizam denies India's right to fly aeroplanes over Hyderabad.
 July 22: U. N. formulates cease-fire plan for Kashmir.
 July 24: Mr. Joshi, Hyderabad Minister resigns, in protest against Government attitude to Razakars.
 July 25: Pandit Nehru lays foundation stone of Electro-chemical Research Institute at Karaikudi.
 July 26: Nizam's letter to King George discovered at customs check-up in New Delhi.
 July 27: Indian Union troops to stay on in Nannai in the Nizam's Dominions to ensure safety of civil and military traffic.
 July 30: Debate on Hyderabad in the House of Commons; stocks of textile goods in mills freed; Pakistan Government takes possession of part of Jodhpur Railway.

August 1948

- August 1: Henry Cottons flying license suspended by British Government.
 August 3: Pakistan Government publicly admits participation in Kashmir fighting.
 August 4: India protests to Britain against use of British officers in Kashmir fighting.

- August 6: Failure of talks on Hyderabad announced; Nizam's Government replaces Agent in New Delhi.
 August 7: Attack on train bound for Hyderabad by armed gangs.
 August 8: Prime Minister reviews Kashmir and Hyderabad questions at party meeting.
 August 9: Session of Central Assembly begins; Baroda Ruler's abdication demanded in Baroda Assembly.
 August 10: Government of India publishes White Paper on Hyderabad.
 August 12: Prince Moazzam Jah resigns post as President of Hyderabad Improvement Trust.
 August 16: Mr. R. K. Shanmukham Chetty resigns his post as Minister of Finance in the Government of India.
 August 17: Mr. Shanmukham Chetty explains reasons for his resignation.
 August 18: India protests to Pakistan against military intervention in Kashmir.
 August 19: Hyderabad Government decides to refer Hyderabad vrs. India issue to the U. N. Assembly.
 August 24: Hyderabad issue placed before U. N.
 August 26: About 30 Pakistani Muslims arrested in New Delhi.
 August 27: Government of India's reactions to the reference of Hyderabad issue to the U. N. made public.
 August 29: Baroda Ruler announces grant of full responsible government to the people.
 August 30: Razakar raid beaten off and raiders chased into State territory.

September 1948

- September 1: Parliament passes Bill to provide for setting up of territorial army in India; popular Ministry formed in Baroda.
 September 2: Reserve Bank Bill passed by Parliament.
 September 4: Mr. Laik Ali, Prime Minister of Hyderabad reiterates his Government's position in speech to Legislature.
 September 6: Full responsible government introduced in Baroda.
 September 8: Prime Minister makes important statement on Government's decision to restoration Indian troops in Secunderabad; Governor-General-Nizam correspondence released.
 September 9: Europeans evacuate Nizam's Dominions; Sir Zafarullah Khan justifies presence of Pakistan troops in Kashmir.
 September 10: President Truman refuses Nizam's request for mediation in the Hyderabad dispute; Governor-General makes final appeal to Nizam to accept India's terms.
 September 11: Nizam rejects India Government's terms; death is announced of Qaid-e-Azam Mohamed Ali Jinnah, the Governor-General of Pakistan.
 September 12: Indian troops enter Hyderabad territory in three-pronged drive on Secunderabad.
 September 13: Bridges on Tungabhadra River captured.
 September 15: Prime Minister welcomes India's new flagship H.M.I.S. "Delhi" in speech in Bombay.
 September 16: Aurangabad surrenders; Governor-General promulgates Public Safety Ordinance.
 September 17: Nizam orders cease-fire; Hyderabad Army lays down arms.
 September 18: Hyderabad put under military administration with Major-General Choudhury as Military Governor; conference of Food Ministers decides on food control.
 September 20: Nizam orders withdrawal of case from U. N.

September 21: Press Trust of India Ltd. formed.
 September 22: Central Government advises Madras Government to postpone Zamindari Bill.
 September 23: Dr. John Mathai assumes charge as Finance Minister; Nizam personally sends cable to Security Council withdrawing case.
 September 28: Mr. K. Santhanam appointed Minister of State in Central Government.

October 1948

October 1: Sardar Patel attacks past record of the Security Council.
 October 2: The whole of the Madras Presidency goes dry.
 October 5: Pandit Nehru leaves for London to attend meeting of Commonwealth Prime Ministers.
 October 6: Nizam authorizes legal proceedings to recover state money in London bank.
 October 11: Conference of Commonwealth Prime Ministers meets in London.
 October 12: A special connection of Kashmir State Conference advocates permanent accession to India.
 October 15: Remittances to the tune of 6 crores of Rupees to Pakistan officials from Hyderabad disclosed at enquiry.
 October 17: Pandit Nehru meets M. Vyshinsky at Paris session of U. N.
 October 18: Cabinet of five formed in Hyderabad.
 October 19: Muslim leaders in Hyderabad decide to join State Congress.
 October 20: Pandit Nehru and Mr. Liaquat Ali Khan meet in the British Prime Minister's Chamber in effort to solve Kashmir issue; Kashmir Government declares Pakistan to be enemy territory.
 October 21: French Government rejects Government of India's proposal to postpone municipal elections in French India.
 October 22: Conference of Commonwealth Prime Ministers ends.
 October 24: Break-down announced of the British Prime Minister's effort to solve the Kashmir issue at joint meeting with Indian and Pakistan Prime Ministers.
 October 26: Dr. Pattabhi Sitaramayya elected President of Indian National Congress.
 October 27: Madras Assembly passes Zamindari Abolition Bill.
 October 28: French troops arrive in Mahe; Mr. Churchill makes attack on Government of India's general policy.
 October 29: Talks on Hyderabad open in Bombay; Pandit Nehru meets Mr. Churchill at Mr. Attlee's party.
 October 30: Sardar Patel's 74th birthday celebrated in Bombay.

November 1948

November 1: Pandit Nehru leaves London.
 November 3: Pandit Nehru addresses U. N. Assembly in Paris.
 November 4: Dr. Ambedkar moves consideration of Draft Constitution in Constituent Assembly.
 November 6: Pandit Nehru arrives in India.
 November 7: Pandit Nehru presents report on Commonwealth Ministers Conference to Congress Legislators.
 November 8: Godse confesses to murder of Mahatma but denies existence of conspiracy.
 November 9: Constituent Assembly passes first reading of Draft Constitution.
 November 14: Pandit Nehru's 60th birthday celebrated.

November 10: Governor-General promulgates Ordinance to enable banks to furnish relevant facts in cases of tax evasion.

November 21: Plans for setting up of appellate industrial tribunal announced.

November 22: Cyclone in Bombay paralyses life in city; Indo-Pakistan talks begin in New Delhi.

November 23: Air Navigation conference meets in New Delhi; interim report on Kashmir published.

November 24: Dr. Shyam Prasad Mookerjee resigns membership of Mahasabha executive.

November 25: Kolapur Ruler agrees to merger with Bombay; Indian delegates walk out of U. N. Council as discussion on Hyderabad starts.

November 26: Sir Zafarullah Khan's charges against India dismissed in U. N.
 November 28: U.N.E.C.A.F.E. meets in Australia.

November 29: Constituent Assembly adopts article on equality and abolition of untouchability; Stand Still Agreement between India and Hyderabad extended with modifications.

December 1948

December 1: Vijayawada station of A.I.R. inaugurated.
 December 2: Syria fails in attempt to re-introduce Hyderabad issue in U. N.
 December 3: Mr. R. R. Diwakar appointed Minister of Information.
 December 4: General Cariappa appointed Commander-in-Chief of Indian Forces.
 December 6: Inter-Dominion talks open in New Delhi.
 December 8: Constituent Assembly adopts Article concerning cultural and educational rights of minorities.
 December 10: E.C.A.F.E. session in Australia concludes.
 December 13: Dhar Commission Report on linguistic redistribution of Provinces published.
 December 14: Inter-Dominion conference in New Delhi concludes.
 December 17: Nizam's private army disbanded; Kashmir plebiscite commission panel arrives.
 December 18: Fifty-fifth Congress session opens in Jaipur.
 December 23: India, Pakistan and Ceylon ban Dutch air lines.
 December 25: Pandit Nehru and Nizam meet in Hyderabad.
 December 27: Constituent Assembly resumes session.
 December 30: Indonesian envoy confers with Pandit Nehru.
 December 31: Saurashtra State rulers decide to integrate with Bombay.

January 1949

January 1: Censorship ordered in Kashmir.
 January 2: Orissa Government take over administration of Mayurbhanj State.
 January 3: Indian Science Congress opens at Allahabad.
 January 6: U. N. Commission outlines plan for plebiscite in Kashmir.
 January 11: Dacca conference formulates agreement to end border incidents.
 January 13: Kashmir truce terms clarified; race riots break out in Durbani.
 January 11: Formation of Union of Rajasthan announced.

January 15: General Cariappa assumes charge as C-in-C.

January 16: Pakistan Government views on Kashmir truce made public.

January 19: I.S.S. Satyagraha movement called off unconditionally.

January 20: Asian conference meets in New Delhi; death occurs of Sir Tej Bahadur Sapru.

January 23: Security Council apprised of Delhi Conference decisions on Indonesia.

January 30: Anniversary of Mahatma's death.

January 31: Baroda and Kolhapur decide to merge with Bombay Province; Nawab of Bhopal personally takes over administration of state.

February 1949

February 1: Budget session begins in Parliament.
 February 6: Land reform plans announced in Hyderabad; Nizam gives up personal estate.
 February 9: Governor-General inaugurates steamer service between Tuticorin and Colombo.
 February 10: Judgment delivered in Mahatma Gandhi murder trial.
 February 12: More R.S.S. and Mahasabha leaders arrested in Bombay.
 February 13: Prime Minister lays foundation stone of Vallabhnagar.
 February 15: Railway Budget introduced in Parliament.
 February 16: Railway Men's Federation Council decides to stay action on strike ballot; Rulers of Rajasthan sign covenant of Rajasthan State.
 February 19: Master Tara Singh and other Akhali leaders arrested.
 February 20: Nizam's private lands taken over by State.
 February 23: Bombay Assembly passes resolution urging linguistic redistribution of Provinces.
 February 24: Postal and Telegraph workers withdraw strike notice.
 February 25: Bill to ban strikes introduced in Parliament.
 February 26: Armed gang raids Dum Dum aerodrome.
 February 27: Sardar Patel and Nizam meet; New Delhi Conference on Burma.
 February 28: Indian budget presented in Parliament.

March 1949

March 1: Kolhapur State merges into Bombay Province.
 March 2: H. E. Mrs. Sarojini Naidu, Governor of the U.P. dies in Lucknow.
 March 3: Debate on the budget opens in Parliament.
 March 4: President Truman invites Pandit Nehru to visit the U.S.A.
 March 6: The Socialist Party meets in conference in Patna.
 March 13: S.I.L. Labour Union gives up strike idea.
 March 21: Admiral Chester Nimitz is appointed plebiscite Administrator for the Kashmir and Jammu State by the U.N.O.
 March 23: Shrimati Vijayalakshmi is appointed India's Ambassador to the U.S.A.
 March 29: Forestry and Timber Utilization Conference for Asia and the Pacific opens in Mysore.
 March 30: Sardar Patel inaugurates the Union of Greater Rajasthan at Jaipur.

GOVERNMENT OF INDIA

THE Indian Independence Act 1947 created two Dominions—India and Pakistan. The Act further, authorized the Governors-General of the two Dominions, to issue necessary orders, under the Act, in order to amend the Government of India Act 1935. Such amendments were necessary to enable the Dominions to have a form of government, consistent with their constitutional status. The Government of India Act 1935 was thus considerably amended. This amended Act, the orders issued by the Governor-General and the Indian Independence Act, together with certain conventions, supply the legal basis of the Government of India to-day. The Government functions as a dominion government, with a cabinet, collectively responsible to the legislature.

H.E. Chakravarty Rajagopalachari,
Governor-General of India

The territories of Indian Dominion are :

(1) **GOVERNORS' PROVINCES** : Nine in all. Bombay, Madras, Central Provinces and Berar, United Provinces, Orissa, Assam, Bihar, East Punjab and West Bengal.

Berar is legally a part of the territory of H.E.H. the Nizam of Hyderabad. It was administered as a part of Central Provinces under an agreement entered into with the Nizam in 1936. Clause 7 of the Indian Independence Act put an end to the agreement and Berar *de jure* reverted to Hyderabad. However the Governor-General issued Indian (Provincial Constitution) Order in 1947 as a result of which Berar has come to be governed together with the Central Provinces, as one Governor's Province.

(2) **CHIEF COMMISSIONERS' PROVINCES** :—Delhi, Ajmer-Merwara, Coorg, Andaman and Nicobar Islands, and the area known as Panth Piploda (a small tract in Central India). Provision is also made for possible creation of other provinces. Chief Commissioners' Provinces are administered by the Governor-General, through chief commissioners appointed by him.

(3) **CENTRALLY ADMINISTERED AREAS** :—Himachal Pradesh, Cutch, Bilaspur and Bhopal.

(4) **LACCADIVE ISLANDS** which form a part of Indian territory.

(5) **STATES AND STATES UNIONS**, that have acceded to the Indian Dominion. These are all parts of India, politically and geographically, though constitutionally they have their own form of government.

[NOTE :—The territorial limits of Orissa, C.P. and Berar, Bihar, Madras, East Punjab and Bombay have been considerably enlarged with the merger of a number of states, during 1948. For details see the table.]

| | Province. | Number of States merged. | Area in sq. miles. | Population in lakhs. | Revenue in lakhs. |
|----|------------------------|--------------------------|--------------------|----------------------|-------------------|
| 1. | Orissa | 23 | 23,637 | 40.46 | Rs. 98.74 |
| 2. | C.P. and Berar | 15 | 31,749 | 28.34 | 88.31 |
| 3. | Bihar | 2 | 623 | 2.08 | 6.45 |
| 4. | Madras | 2 | 1,444 | 4.83 | 30.81 |
| 5. | East Punjab | 3 | 370 | .80 | 10.38 |
| 6. | Bombay | 174 | 26,951 | 43.67 | 307.15 |

Executive

The executive authority of the Dominion is exercised, on behalf of His Majesty by the Governor-General. He is appointed by His Majesty on the recommendation of the Prime Minister of the Dominion. He is the head of the state, but the responsibility of day-to-day administration rests with the Council of Ministers, popularly known as the Cabinet. All the members of the cabinet are appointed by the Governor-General and hold office during his pleasure. All the Ministers are members of the Legislature. They are led by the Prime Minister, who presides over Cabinet meetings. The ministers are responsible for their own departments to the Prime Minister and to the Legislature. A majority of the ministers hold cabinet rank, but a few styled as ministers of state have no cabinet rank. In short, all the essential features of Dominion Government are also prevalent in India on the strength of conventions. The Governor-General is merely the constitutional head and the cabinet works on the principle of collective responsibility.

Under the Indian Independence Act, the Governor-General is authorised to issue orders, with a view to amending the Government of India Act 1935. The orders relating to India issued so far, are mentioned below :—(1) The Executive Council (Transitional Provisions) Order, 1947; (2) The Joint Defence Council Order, 1947; (3) The Federal Court Order, 1947; (4) The High Courts (Bengal) Order, 1947; (5) The High Courts (Punjab) Order, 1947; (6) The High Courts (Calcutta) Order, 1947; (7) The High Courts (Lahore) Order, 1947; (8) The Indian Independence (Partition Councils) Order, 1947; (9) The Arbitral Tribunal Order, 1947; (10) The Crown Representative (Transfer of Property and Liabilities) Order, 1947; (11) The Indian Independence (Legal Proceedings) Order, 1947; (12) The Indian Independence (Income-tax Proceedings) Order, 1947; (13) The Indian Independence (Miscellaneous Transitional Provisions) Order, 1947; (14) The India (Provisional Constitution) Order, 1947; (15) The India (Provincial Legislatures) Order, 1947; (16) The India (Adaptation of Existing Indian Laws) Order, 1947; (17) The Indian Independence (International Agreements) Order, 1947; (18) The Indian Independence (Rights Property and Liabilities) Order, 1947; (19) The Indian Naval Forces (Temporary Governance) Order, 1947; (20) The Provincial Constitution and Provincial Legislatures (Amendment) Order, 1947; (21) The Bengal State Prisoners Regulation (Adaptation) Order, 1947; (22) The India Provisional

(Constitution (Amendment) Order, 1947; (23) The India Provisional Constitution (Second Amendment) Order, 1947; (24) The Indian Independence (Miscellaneous Transitional Provisions) (No. 2) Order, 1947; (25) The India Provincial Legislatures (Amendment) Order, 1947; (26) The Joint Defence Council (Amendment) Order, 1947; (27) The India (Adaptation of Income tax, Profits tax and Revenue Recovery Acts) Order, 1947; (28) The Indian Independence (Special Tribunals) Order, 1947; (29) Indian Independence (East Punjab Legislative Assembly) Order, 1948; (30) The India Provisional Constitution (Amendment) Order, 1948; (31) The India Provisional Constitution (Second Amendment) Order, 1948; (32) The Indian Railways Act (Adaptation) Order, 1948; (33) The Indian Independence (Adaptation of Central Acts and Ordinances) Order, 1948; (34) The India Provisional Constitution (Third Amendment) Order, 1948; (35) The India Provincial Legislatures (Amendment) Order, 1948; (36) The Indian Independence (Adaptation of Bengal and Punjab Acts) Order, 1948; (37) The Indian Independence (Liabilities) Order, 1948; (38) The Pakistan Monetary System and Reserve Bank (Amendment) Order, 1948 (joint order of the Governors-General of India and Pakistan).

Following are the departments (Ministries) of the Government of India :—(1) Ministry of Home Affairs; (2) Ministry of External Affairs; (3) Ministry of Defence; (4) Ministry of Commerce; (5) Ministry of Communications; (6) Ministry of Finance; (7) Ministry of Transport; (8) Ministry of Railways; (9) Ministry of Education; (10) Ministry of Health; (11) Ministry of Agriculture; (12) Ministry of Food; (13) Ministry of Industry and Supply; (14) Ministry of States; (15) Ministry of Law; (16) Ministry of Works, Mines and Power; (17) Ministry of Labour; (18) Ministry of Information and Broadcasting; (19) Ministry of Relief and Rehabilitation; (20) Ministry without Portfolio.

Legislature

The Dominion Legislature consists of the Governor-General and the Constituent Assembly (Legislative). The Legislative Assembly and the Council of State, elected in 1934, under the Act of 1919, ceased to exist on 15th August 1947, as a result of Section 8 of the Indian Independence Act. The section lays down, "The powers of the Federal Legislatures or Indian Legislatures, under the Government of India Act 1935, as in force in relation to each Dominion shall in the first instance be exercisable by the Constituent Assembly of the Dominion." These

legislative powers of the Constituent Assembly are in addition to the constitution-making power. The present Constituent Assembly was elected in 1946 in an indirect manner. The members of the Provincial Legislatures formed electoral colleges for respective provinces, and elected the representatives of the province, by the method

of proportional representation with single transferable vote. Each province, was allotted a total number of seats proportional to its population, roughly in the ratio of one to a million. The following table shows the revised strength of the Constituent Assembly for India.

COMPOSITION OF CONSTITUENT ASSEMBLY

| Province | General | Muslim | Total seats |
|-----------------------------------|------------|-----------|-------------|
| Madras | 45 | 4 | 49 |
| Bombay | 19 | 2 | 21 |
| United Provinces | 47 | 8 | 55 |
| Bihar | 31 | 5 | 36 |
| Central Provinces & Berar | 16 | 1 | 17 |
| Orissa | 9 | 0 | 9 |
| West Bengal | 15 | 4 | 19 |
| East Punjab | 6 | 4 | 10 |
| Assam | 6 | 1 | 7 |
| TOTAL | 194 | 29 | 223 |

In order to represent the chief Commissioners' Provinces, one seat is allotted to Delhi, Ajmer-Merwara and Coorg each, thus bringing the total to 223+3=226. (See also, page 76 for States representatives).

Powers of Assembly—The Dominion Legislature is summoned to meet once at least in every year and not more than twelve months can intervene between the last sitting in one session and the date appointed for the first sitting in the next session. The President of the legislature has the power of summoning and proroguing the legislature. The Governor-General may address and send messages to the legislature. The members of the legislature are entitled to allowances and enjoy certain privileges. The legislature controls the executive. It has the power of passing the demands for grants for various departments, put forward by the ministers concerned. It is the forum where public grievances are expressed. It legislates for the Dominion, within the limits laid down by statutes. It is a law-making body, though not a sovereign law-making body. As Clause 2, Section 8 of the Indian Independence Act lays down: "Except in so far as other provision is made by or in accordance with a law made by the Constituent Assembly of the Dominion under Sub-section (1) of this section, each of the new Dominions and all Provinces and other parts thereof shall be governed as nearly as may be in accordance with the Government of India Act 1935 and the provisions of that Act and of the orders in Council, rules and other instruments made thereunder shall, so far as applicable, and subject to any express provisions of this Act, and with such omissions, additions, adaptations and modifications as may be specified in orders of the Governor-General."

Schedule seven to the Government of India Act contains three lists. They are:—The Federal Legislative list, containing subjects with respect to which the Dominion Legislature is competent to legislate, the Provincial Legislative list which mentions the jurisdiction of the Provincial Legislature, and the Concurrent Legislative list which includes subjects of common interest; as such both the Legislatures have power to legislate with respect to these subjects. A bill passed by the Legislature becomes law only on receiving the assent of the Governor-General.

Legislative Powers of Governor-General—The Governor-General may in cases of emergency make and promulgate ordinances for the peace and good government of the Dominion or any part thereof, and any ordinance so made shall, for the space of not more than six months from its promulgation, have the like force of law as an Act passed by the Dominion Legislature; but the power of making ordinances under this section is subject to the like restrictions as the power of the Dominion Legislature under this Act to make

laws and any ordinance made under this section may be controlled or superseded by any such Act" (section 42 of the Government of India Act, 1935).

FEDERAL LEGISLATIVE LIST

The Federal Legislative list and the Concurrent Legislative list are given below.

1. His Majesty's naval, military and air forces borne on the Indian establishment and any other armed force raised in India by the Crown, not being forces raised for employment in Indian States or military or armed police maintained by Provincial Governments; any armed forces which are not forces of His Majesty, but are attached to or operating with any of His Majesty's naval, military or air forces borne on the Indian establishment; central intelligence bureau; preventive detention in British India, for reasons of State connected with defence, external affairs, or the discharge of the functions of the Crown in its relations with Indian States.
2. Naval, military and air force works; local self-Government in cantonment areas (not being cantonment areas of Indian State troops), the constitution and powers within such areas of cantonment authorities; the regulation of house accommodation in such areas, and, within British India, the delimitation of such areas.
3. External affairs; the implementing of treaties and agreements with other countries; extradition, including the surrender of criminals and accused persons to parts of His Majesty's Dominions outside India.
4. Ecclesiastical affairs, including European cemeteries.
5. Currency, coinage and legal tender.
6. Public debt of the Federation.
7. Posts and telegraphs, including telephones, wireless, broadcasting, and other like forms of communication; Post Office Savings Banks.
8. Federal Public Services and Federal Public Service Commission.
9. Federal pensions, that is to say, pensions payable by the Federation or out of Federal revenues.
10. Works, lands and buildings vested in, or in the possession of His Majesty for the purposes of the Federation (not being naval, military or air force works), but, as regards property situate in a Province, subject always to Provincial legislation, save in so far as Federal law otherwise provides, and, as regards property in a Federal State held by virtue of any lease or agreement with that State, subject to the terms of that lease or agreement.
11. The Imperial Library, the Indian Museum, the Imperial War Museum, the Victoria Memorial, and any similar institution controlled or financed by the Federation.

12. Federal agencies and institutes for the following purposes, that is to say, for research, for professional or technical training, or for the promotion of special studies.

13. The Benares Hindu University and the Aligarh Muslim University.

14. The Survey of India, the Geological, Botanical and Zoological Surveys of India; Federal meteorological organisations.

15. Ancient and historical monuments; archaeological sites and remains.

16. Census.

17. Admission into, and emigration and expulsion from, India, including in relation thereto the regulation of the movements in India of persons who are not British subjects domiciled in India, subjects of any Federated State, or British subjects domiciled in the United Kingdom; pilgrimages to places beyond India.

18. Port quarantine; seamen's and marine hospitals, and hospitals connected with port quarantine.

19. Import and export across customs frontiers as defined by the Federal Government.

20. Federal railways; the regulation of all railways other than minor railways in respect of safety, maximum and minimum rates and fares, station and service terminal charges, interchange of traffic and the responsibility of railway administrations as carriers of goods and passengers; the regulation of minor railways in respect of safety and the responsibility of the administrations of such railways as carriers of goods and passengers.

21. Maritime shipping and navigation, including shipping and navigation on tidal waters; Admiralty jurisdiction.

22. Major ports, that is to say, the declaration and delimitation of such ports, and the constitution and powers of Port Authorities therein.

23. Fishing and fisheries beyond territorial waters.

24. Aircraft and air navigation; the provision of aerodromes; regulation and organisation of air traffic and of aerodromes.

25. Lighthouses, including lightships, beacons and other provision for the safety of shipping and aircraft.

26. Carriage of passengers and goods by sea or by air.

27. Copyright, inventions, designs, trademarks and merchandise marks.

28. Cheques, bills of exchange, promissory notes and other like instruments.

29. Arms; firearms; ammunition.

30. Explosives.

31. Opium, so far as regards cultivation and manufacture, or sale for export.

32. Petroleum and other liquids and substances declared by Federal law to be dangerously inflammable, so far as regards possession, storage and transport.

33. Corporations. That is to say, the incorporation, regulation and winding-up of trading corporations, including banking, insurance and financial corporations, but not including corporations owned or controlled by a Federated State and carrying on business only within that State or co-operative societies, and of corporations, whether trading or not, with objects not confined to one unit [but not including Universities].

34. Development of industries, where development under Federal control is declared by Federal law to be expedient in the public interest.

35. Regulation of labour and safety in mines and oilfields.

36. Regulation of mines and oilfields and mineral development to the extent to which such regulation and development under Federal

control is declared by Federal law to be expedient in the public interest.

37. The law of insurance, except as respects insurance undertaken by a Federated State, and the regulation of the conduct of insurance business, except as respects business undertaken by a Federated State; Government insurance, except so far as undertaken by a Federated State, or, by virtue of any entry in the Provincial Legislative List or the Concurrent Legislative List, by a Province.

38. Banking, that is to say, the conduct of banking business by corporations other than corporations owned or controlled by a Federated State and carrying on business only within that State.

39. Extension of the powers and jurisdiction of members of a police force belonging to any part of British India to any area in another Governor's Province or Chief Commissioner's Province, but not so as to enable the police of one part to exercise powers and jurisdiction elsewhere without the consent of the Government of the Province or the Chief Commissioner, as the case may be; extension of the powers and jurisdiction of members of a police force belonging to any unit to railway areas outside that unit.

40. Elections to the Federal Legislature, subject to the provisions of this Act and of any Order in Council made thereunder.

41. The salaries of the Federal Ministers, of the President and Vice-President of the Council of State and of the Speaker and Deputy Speaker of the Federal Assembly; the salaries, allowances and privileges of the members of the Federal Legislature; and, to such extent as is expressly authorised by Part II of this Act, the punishment of persons who refuse to give evidence or produce documents before Committees of the Legislature.

42. Offences against laws with respect to any of the matters in this list.

43. Inquiries and statistics for the purposes of any of the matters in this list.

44. Duties of customs, including export duties.

45. Duties of excise on tobacco and other goods manufactured or produced in India except—

- (a) alcoholic liquors for human consumption;
- (b) opium, Indian hemp and other narcotic drugs and narcotics; non-narcotic drugs;
- (c) medicinal and toilet preparations containing alcohol, or any substance included in sub-paragraph (b) of this entry.

46. Corporation tax.

47. Salt.

48. State lotteries.

49. Naturalisation.

50. Migration within India from or into a Governor's Province or a Chief Commissioner's Province.

51. Establishment of standards of weight.

52. Ranchi European Mental Hospital.

53. Jurisdiction and powers of all courts, except the Federal Court, with respect to any of the matters in this list and, to such extent as is expressly authorised by Part IX of this Act, the enlargement of the appellate jurisdiction of the Federal Court, and the conferring thereon of supplemental powers.

54. Taxes on income other than agricultural income.

[54-A. The matters specified in the proviso to sub-section (2) of section one hundred and forty-two A of this Act as matters with respect to which provision may be made by laws of the Federal Legislature].

55. Taxes on the capital value of the assets, exclusive of agricultural land, of individuals and companies; taxes on the capital of companies.

56. Duties in respect of succession to property other than agricultural land.

57. The rates of stamp duty in respect of bills of exchange, cheques, promissory notes, bills of lading, letters of credit, policies of insurance, proxies and receipts.

58. Terminal taxes on goods or passengers carried by railway or air; taxes on railway fares and freights.

59. Fees in respect of any of the matters in this list, but not including fees taken in any Court.

CONCURRENT LIST

And here is the prescribed concurrent Legislative List containing subjects in regard to which both the Central Government and the Provincial Governments enjoy legislative powers.

PART I

1. Criminal law, including all matters included in the Indian Penal Code at the date of the passing of this Act, but excluding offences against laws with respect to any of the matters specified in List I or List II and excluding the use of His Majesty's naval, military and air forces in aid of the civil power.

2. Criminal Procedure, including all matters included in the Code of Criminal Procedure at the date of the passing of this Act.

3. Removal of prisoners and accused persons from one unit to another unit.

4. Civil Procedure, including the law of Limitation and all matters included in the Code of Civil Procedure at the date of the passing of this Act; the recovery in a Governor's Province or a Chief Commissioner's Province of claims in respect of taxes and other public demands including arrears of land revenue and sums recoverable as such, arising outside that Province.

5. Evidence and oaths; recognition of laws, public acts and records and judicial proceedings.

6. Marriage and divorce; infants and minors adoption.

7. Wills, intestacy, and succession, save as regards agricultural land.

8. Transfer of property other than agricultural land; registration of deeds and documents.

9. Trusts and Trustees.

10. Contracts, including partnership, agency, contracts of carriage, and other special forms of contract, but not including contracts relating to agricultural land.

11. Arbitration.

12. Bankruptcy and insolvency; administrators-general and official trustees.

13. Stamp duties other than duties or fee collected by means of judicial stamps, but not including rates of stamp duty.

14. Actionable wrongs, save in so far as included in laws with respect to any of the matters specified in List I or List II.

15. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list.

16. Legal, medical and other professions.

17. Newspapers, books and printing presses.

18. Lunacy and mental deficiency, including places for the reception or treatment of lunatic and mental defectives.

19. Poisons and dangerous drugs.

20. Mechanically propelled vehicles.

21. Rollers.

22. Prevention of cruelty to animals.

23. European vagrancy; criminal tribes.

24. Inquiries and statistics for the purpose of any of the matters in this Part of this List.

25. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

PART II

26. Factories.

27. Welfare of labour; conditions of labour; provident funds; employers' liability and workmen's compensation; health insurance, including invalidity pensions; old age pensions.

28. Unemployment insurance.

29. Trade unions; industrial and labour disputes.

30. The prevention of the extension from one unit to another of infectious or contagious diseases or pests affecting men, animals or plants.

31. Electricity.

32. Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such waterways carriage of passengers and goods on inland waterways.

33. The sanctioning of cinematograph films for exhibition.

34. Persons subjected to preventive detention under Dominion authority.

35. Inquiries and statistics for the purpose of any of the matters in this Part of this List.

36. Fees in respect of any of the matters in this Part of this List, but not including fees taken in any Court.

AMENDMENTS

By an amendment passed in 1939, it was provided *inter alia* that in the event of a war emergency being proclaimed by the Governor-General the Central Government may assume executive in addition to legislative authority over any field and can also with the specific sanction of the Governor-General empower Federal officers to perform functions ordinarily the concern of provincial administrations.

Another amending Act was passed in 1940 (introduced in Parliament in 1939) to make certain readjustments found necessary in the operation of the 1935 Act. To safeguard provincial exchequers taxes on mechanical or other road vehicles or on the sale or consumption of electricity were added to the Provincial list.

In order to validate a scheme of attaching the smaller States to bigger States, to ensure better administrative facilities, Parliament in the spring of 1944 enacted a measure which marks a departure from some of the provision of the Government of India Act of 1935. The measure was called the India (Attachment of States) Act of 1944. Here is the text:—

1. At the instance, or with the consent of His Majesty's Representative for the exercise of functions of the Crown in its relations with Indian States, any Indian State not mentioned in divisions I to XVI of the table of seats appended to part 2 of the First Schedule to the Government of India Act, 1935 (as in force at the passing of this Act), may be attached to any other Indian State and in connection with the attachment, provision may be made for:—

(a) The exercise by, or transfer to Courts and officers of the second mentioned Indian State, with or without limitations or conditions, of any powers or jurisdiction in or in relation to the first mentioned State which were or could have been exercised by or on behalf of the Crown therein before attachment.

(b) The relinquishment, as a consequence of attachment, of any such powers or jurisdiction of the Crown as aforesaid; and

(c) The transfer of cases pending at the date of attachment before courts or officers of the Crown, and this sub-section shall have effect notwithstanding anything in the Foreign Jurisdiction Act of 1890, the Government of India Act of 1935, any other Act for the time being in force, or any Letters Patent, Orders in Council, or other instruments.

2. This section shall be deemed always to have had effect. Provided that His Majesty's Representative for the exercise of the functions of the Crown in its relations with Indian States may give such directions, if any, as he thinks proper for rendering valid or lawful anything done or omitted before the passing of this Act which would be invalid or unlawful by virtue of the provisions of this sub-section.

3. The Act may be cited as the India (Attachment of States) Act, 1944.

In March 1945 Parliament amended the Constitution Act to enable the Legislatures in India to authorise the imposition of estate duty and provided for the manner in which the proceeds were to be distributed.

In October of the same year Parliament passed an Act to remedy the anomalous situation in which persons who had been on war service lost their voting rights in some cases by failing to retain their "residential qualification."

In February 1946 an amending Act authorised the Central Legislature, when a Proclamation of emergency under section 102 of the Constitution Act is in force, to make laws upon matters which are not included in any of the Legislative Lists.

By this time the war was over and it was proposed to revoke the Proclamation of emergency under section 102. But the Centre would then have lost their war-time powers in matters which normally fall within the Provincial sphere. As the economic dislocation created by the war still persisted, it was desired that, in the interests of a smooth transition from the conditions of war to those of peace, the emergency powers of the Centre in regard to certain matters should continue for some time more. The Parliamentary Act referred to above accordingly continued temporarily for a maximum period of 5 years certain powers in respect of foodstuffs and some substances essential for the civil population such as paper, textiles, iron and steel, etc.; unemployment among war-workers; and the requisitioning of land and buildings.

JUDICIARY

The Federal Court was established on 1st October 1937. It has at present a Chief Justice and five other judges. The judges are appointed by the Governor-General and hold office until the age of sixty-five years. The salary of the judges is charged on the revenue of the Federation. There cannot be any discussion on the conduct of any judge on the floor of any legislature. The Federal Court has got, to the exclusion of any other court, original jurisdiction between any two or more of the following parties, that is to say the Dominion, any of the Provinces or any of the Acceding States, and in so far as the dispute involves, any question (whether of law or fact) on which the existence or extent of a legal right depends.

"An appeal shall lie to the Federal Court from any judgment, decree or final order of a High Court, if the High Court certifies that the case involves a substantial question of law as to the interpretation of this Act or any Order in Council made thereunder before the date of the establishment of the Dominion or any order made thereunder on or after that date, or as to the interpretation of the Indian Independence Act, or any order made thereunder, and it shall be the duty of every High Court to consider in every case whether or not any such question is involved and of its own motion to give or to withhold a certificate accordingly." An appeal

also lies to the Federal Court from a High Court in an Acceding State on the ground that a question of law has been wrongly decided, provided the question concerns the interpretation of the Government of India Act, 1935, or any Order in Council made thereunder or the Indian Independence Act or the Instrument of Accession. The appeal shall be by way of a special case to be stated for the opinion of the Federal Court.

The Dominion Legislature has considerably enlarged the appellate jurisdiction of the Federal Court. As a result almost all civil appeals now lie to the Federal Court.

The following appeals alone lie to the Judicial Committee of the Privy Council (1) An appeal against the judgment of the Federal Court in its original jurisdiction (2) An appeal in criminal matters (3) An appeal against the judgment of a Judicial Commissioner, in a Chief Commissioner's Province. The judgments of the Federal Court are declaratory judgments and the law declared by the Court is binding on all the Courts in India. All authorities, civil and judicial, throughout the Dominion shall act in the aid of the Federal Court. The Federal Court has advisory jurisdiction also. "If at any time it appears to the Governor-General that a question of law has arisen or is likely to arise, which is of such a nature and of such public importance that it is expedient to obtain the opinion of the Federal Court upon it, he may refer the question to that Court for consideration, and the Court may after such hearing as it thinks fit report to the Governor-General thereon."

THE FEDERAL PUBLIC SERVICE COMMISSION is a statutory body. The chairman and members of it are appointed by the Governor-General. It is necessary that at least one-half of the members of the Commission must be persons, who at the date of their appointments have held office, for at least ten years under the crown. It is the duty of the F.P.S.C. to conduct examinations for appointments to the services of the Dominion. The Commission also interviews the candidates and submits its recommendations to the government. If the recommendations are unacceptable to the Government, the matter is referred to a Committee of the cabinet and its decision is final. The Commission must be consulted on all matters of recruitment to civil services and for civil posts, on the principles to be followed in making promotions and transfers from one service to another, on all disciplinary matters affecting a person, serving His Majesty in a civil capacity in India. However, the Commission is not to be consulted as respects the manner in which appointments and posts are to be allocated as between the communities. The expenses of F.P.S.C. are a charge on the revenue of the Federation.

PROVINCES

The Government of India Act 1935 introduced Provincial Autonomy in all the Provinces in India. The executive authority of a Province extends to all the matters included in the Provincial Legislative list and to the matters in the Concurrent Legislative list, if a law in that behalf is passed by the Provincial Legislature. The executive authority is exercised on behalf of his Majesty by the Governor. Before the Indian Independence Act the Governor had special Responsibilities in certain matters. But now he is merely a constitutional head. He is no longer required to act as an agent of the Governor-General. The day to day administration is carried on by a cabinet responsible to the Legislature. But all executive action of Government is expressed to be taken in the name of the Governor. The Governor appoints an Advocate-General to give advice to the Provincial Government upon legal matters. The Governor summons, prorogues and dissolves the Legislature, and has a right to address it and send messages, if necessary. No bill becomes law unless assented to by the Governor, after its passing,

through the Legislature. The Governor has also the power of promulgating Ordinances, during the recess of the Legislature.

The Legislature

The Act provides that there shall for every Province be a Provincial Legislature consisting of His Majesty represented by the Governor and (a) In the Provinces of Madras, Bombay, the United Provinces and Bihar two Chambers and (b) in the other Provinces one Chamber, the two Chambers being called the Legislative Council and the Legislative Assembly and where there is only one Chamber the Legislative Assembly.

Every Legislative Council is to be a permanent body not subject to dissolution but as near as may be one-third of its members are to retire every third year. Every Legislative Assembly of every Province unless sooner dissolved is to continue for five years.

Representation in the Legislative Assembly is by separate electorates for each community based on the provisions of the Communal Award as modified by the Poona Pact of September 25, 1932, under which a number of seats out of the seats classified as general seats are reserved to the Depressed Classes.

While there are no nominated members and no officials in the Assembly—all members of the Lower House are elected—the Governor has the right to fill some seats in the Provincial Council wherever one exists.

The constituencies, with a few exceptions are territorial and the qualification for franchise is in general based on considerations of property. The non-territorial constituencies are, Commerce, Industry, Landholders and Labour.

The Government of India Act enfranchises 14% of the total population; 29,000,000 males and 6,000,000 females. Under the 1919 Act only 3% of the total population had a right to vote. The Simon Commission recommended the enfranchisement of at least 10% of the people. The Round Table Conference favoured the suggestion to enfranchise 25% of the people.

The constitution assigns to the Provinces a certain exclusive share of the activities of Government. All subjects have been transferred to the control of the legislature. Subjects which are classified as provincial are indicated below, exclusively dealt with by the Provincial Government which have power to make laws for peace and good government. There are no more "reserved" subjects. All subjects are "transferred." The subjects include public order, courts, police, prisons, education, health and sanitation, public works, agriculture, forests, land revenue, excise, tolls, unemployment and certain classes of taxation.

Both the Upper and Lower Houses have power to initiate legislation except that Money Bills can be initiated in the Lower House only. Should there be a difference of opinion between the two Houses with regard to a Bill the Governor has power to convene a joint session of the two Houses. Any Bill affirmed by the majority in the joint session shall be taken to have been duly passed.

Provincial List

The Act provides for a new division of functions between the Central and Provincial authorities and the following is the new Provincial Legislative List, which came into operation on 1st April 1937 as amended and adapted.

1. Public order (but not including the use of His Majesty's naval, military or air forces in aid of the civil power); the administration of justice; constitution and organisation of all courts, except the Federal Court, and fees taken therein; preventive detention for reasons connected with the maintenance of public order; persons subjected to such detention.

2. Jurisdiction and powers of all courts except the Federal Court, with respect to any of the matters in this list; procedure in Rent and Revenue Courts.

3. Police, including railway and village police.

4. Prisons, reformatories, Borstal institutions and other institutions of a like nature, and persons detained therein; arrangements with other units for the use of prisons and other institutions.

5. Public debt of the Province.

6. Provincial Public Services and Provincial Public Service Commission.

7. Provincial pensions, that is to say, pensions payable by the Province or out of Provincial revenues.

8. Works, lands and buildings vested in or in the possession of His Majesty for the purposes of the Province.

9. Compulsory acquisition of land.

10. Libraries, museums and other similar institutions controlled or financed by the Province.

11. Elections to the Provincial Legislature subject to the provisions of this Act.

12. The salaries of the Provincial Ministers, of the Speaker and Deputy Speaker of the Legislative Assembly, and, if there is a Legislative Council, of the President and Deputy President thereof, the salaries, allowances and privileges of the members of the Provincial Legislature; and, to such extent as is expressly authorised by Part III of this Act, the punishment of persons who refuse to give evidence or produce documents before Committees of the Provincial Legislature.

13. Local government, that is to say, the constitution and powers of municipal corporations, improvement trusts, district boards, mining settlement authorities and other local authorities for the purpose of local self-government or village administration.

14. Public health and sanitation; hospitals and dispensaries; registration of births and deaths.

15. Pilgrimages, other than pilgrimages to places beyond India.

16. Burials and burial grounds.

17. Education, including Universities other than those specified in paragraph 13 of List I.

18. Communications, that is to say, roads, bridges, ferries, and other means of communications not specified in List I; minor railways subject to the provisions of List I with respect to such railways; municipal tramways; ropeways; inland waterways and traffic thereon subject to the provisions of List III with regard to such waterways; ports, subject to the provisions in List I with regard to major ports; vehicles other than mechanically propelled vehicles.

19. Water, that is to say, water-supplies, irrigation and canals, drainage and embankments, water storage and water power.

20. Agriculture, including agricultural education and research, protection against pests and prevention of plant diseases; improvement of stock and prevention of animal diseases; veterinary training and practice, pounds and the prevention of cattle trespass.

21. Land, that is to say, rights in or over land, land tenures, including the relation of landlord and tenant, and the collection of rents; transfer, alienation and devolution of agricultural land;

land improvement and agricultural loans; colonization; Courts of Wards; encumbered and attached estates; treasure trove.

22. Forests.

23. Regulation of mines and oilfields and mineral development subject to the provisions of List I with respect to regulation and development under Dominion control.

24. Fisheries.

25. Protection of wild birds and wild animals.

26. Gas and gasworks.

27. Trade and commerce within the Province; markets and fairs; money-lending and money-lenders.

28. Inns and innkeepers.

29. Production, supply and distribution of goods; development of industries, subject to the provisions in List I with respect to the development of certain industries under Dominion control.

30. Adulteration of foodstuffs and other goods; weights and measures.

31. Intoxicating liquors and narcotic drugs that is to say, the production, manufacture, possession, transport, purchase and sale of intoxicating liquors, opium and other narcotic drugs, but subject, as respects opium, to the provisions of List I and as respects poisons and dangerous drugs, to the provisions of List III.

32. Relief of the poor; unemployment.

33. The incorporation, regulation and winding-up of corporations not being corporations specified in List I or Universities; unincorporated trading, literary, scientific, religious and other societies and associations; co-operative societies.

34. Charities and charitable institutions, charitable and religious endowments.

35. Theatres, dramatic performances and cinemas, but not including the sanction of cinematograph films for exhibition.

36. Betting and gambling.

37. Offences against laws with respect of any of the matters in this list.

38. Inquiries and statistics for the purpose of any of the matters in this list.

39. Land revenue, including the assessment and collection of revenue, the maintenance of land records, survey for revenue purposes and records of rights, and alienation of revenue.

40. Duties of excise on the following goods manufactured or produced in the Province and countervailing duties at the same or lower rates on similar goods manufactured or produced elsewhere in India:—

(a) alcoholic liquors for human consumption;

(b) opium, Indian hemp and other narcotic drugs and narcotics; non-narcotic drugs;

(c) medicinal and toilet preparations containing alcohol or any substance included in sub-paragraph (b) of this entry.

41. Taxes on agricultural income.

42. Taxes on lands and buildings, hearths and windows.

43. Duties in respect of succession to agricultural land.

43A. Estate duty in respect of agricultural land.

44. Taxes on mineral rights, subject to any limitations imposed by any Act of the Federal Legislature relating to mineral development.

45. Capitation taxes.

46. Taxes on professions, trades, callings and employments, subject, however, to the provisions of section 142A of the Act.

47. Taxes on animals and boats.

48. Taxes on the sale of goods and on advertisements.

48A. Taxes on vehicles suitable for use on roads, whether mechanically propelled or not, including tractors.

48B. Taxes on the consumption or use of electricity, subject, however, to the provisions of section 154A of the Act.

49. Cesses on the entry of goods into a local area for consumption, use or sale therein.

50. Taxes on luxuries, including taxes on entertainments, amusements, betting and gambling.

51. The rates of stamp duty in respect of documents other than those specified in the provisions of List I with regard to rates of stamp duty.

52. Dues on passengers and goods carried on inland waterways.

53. Tolls.

54. Fees in respect of any of the matters in this list, but not including fees taken in any Court.

[NOTE: A Gazette of India Extraordinary Notification issued on October 29, 1947 announces as follows:—

"In exercise of the powers conferred by section 101 of the Government of India Act 1935, as adapted by the India (Provisional Constitution) Order 1947, the Governor General hereby empowers all Provincial Legislatures to enact laws with respect to the requisitioning of land, being a matter not enumerated in any of the Lists in the Seventh Schedule to the said Act."

LEGISLATIVE COUNCILS

| Province | Total seats | General seats | Muslims | Indian Christians | Seats to be filled by Legislative Assembly | Seats to be filled by Governor |
|--------------------------|-------------|---------------|---------|-------------------|--|--------------------------------|
| Madras | 53-55 | 35 | 7 | 3 | .. | 8-10 |
| Bombay | 28-29 | 20 | 5 | .. | .. | 3-4 |
| United Provinces | 57-59 | 54 | 17 | .. | .. | 6-8 |
| Bihar | 28-29 | 9 | 4 | .. | 12 | 3-4 |

LEGISLATIVE ASSEMBLIES

| Province | Total seats | General | | Seats for representatives of backward Areas and Tribes | Sikh | Muslim | Anglo-Indian | Indian Christian | Representatives of Commerce, Industry, Mining and Planting | Landholders | University seats | Labour | Seats for women | | | | |
|------------------|-------------|------------------------|---|--|------|--------|--------------|------------------|--|-------------|------------------|--------|-----------------|------|--------|--------------|------------------|
| | | Total of general seats | General seats reserved for scheduled castes | | | | | | | | | | General | Sikh | Muslim | Anglo-Indian | Indian Christian |
| Madras .. | 212 | 146 | 30 | 1 | .. | 28 | 12 | 8 | 6 | 6 | 1 | 6 | 6 | .. | 1 | .. | 1 |
| Bombay .. | 172 | 114 | 15 | 1 | .. | 29 | 12 | 3 | 7 | 2 | 1 | 7 | 5 | .. | 1 | .. | .. |

| C. P. & Berar .. | 111 | 84 | 20 | 1 | .. | 14 | 1 | .. | 2 | 3 | 1 | 2 | 3 | .. | .. | .. | .. |
| Assam .. | 71 | 37 | 5 | 9 | .. | 16 | .. | 1 | 4 | .. | .. | 3 | 1 | .. | .. | .. | .. |
| Orissa .. | 60 | 44 | 6 | 5 | .. | 4 | .. | 1 | 1 | 1 | .. | 1 | 2 | .. | .. | .. | .. |

Note.—In Bombay seven of the general seats are to be reserved for Marathas.

In Assam and Orissa the seats reserved for women are to be non-communal seats.

This table does not include the additional seats allotted to States after their merger with Dominion Provinces. In respect of Bombay Province the strength of the Assembly is expected to go up by 68.

JUDICIARY

At the top of the Provincial Judiciary is the High Court. Every High Court shall be a Court of record and shall consist of a Chief Justice and such other judges as the Governor-General may from time to time deem it necessary to appoint. Every judge of the High Court shall be appointed by the Governor-General and shall hold office until he attains the age of sixty years. Every High Court shall have superintendence over all courts in India for the time being subject to its appellate jurisdiction and may do any of the following things, that is to say:—(a) call for returns; (b) make and issue general rules and prescribe forms for regulating the practice and proceedings of such Courts; (c) prescribe forms in which books, entries and accounts shall be kept by the officers of any such Court; and (d) settle table of fees to be allowed to the sheriff, attorney, and all clerks and officers of Courts. Until otherwise provided by Act of the appropriate Legislature, no High Court shall have any original jurisdiction in any matter concerning the revenue. Extra-provincial jurisdiction may be conferred on any High Court by the Governor-General.

There is a PROVINCIAL PUBLIC SERVICE COMMISSION for each Province unless however two or more Provinces agree that there shall be one Public Service Commission for that group of Provinces, or that the Public Service Commission for one Province serves the needs of all the Provinces. The Public Service Commission for the Dominion if requested so to do by the Governor of a Province may, with the approval of the Governor-General agree to serve all or any of the needs of the Province. The Chairman and other members of a Public Service Commission shall be appointed by the Governor of the Province. The functions of Provincial Public Service Commissions are similar to those of Dominion Public Service Commission.

INTER-UNIT RELATIONS

The Act makes provision for regulating the administrative relations between the Dominion, the Provinces and the Acceding States. Such provision was necessary, as the form of the Government is federal. The executive authority of every Province and Acceding State must be so exercised as to secure respect for the laws of the Dominion Legislature, which apply in that Province or State. However due regard has to be had to the interest of that Province or State, provided it does not prejudice any other provisions of the Part VI of the Act. The Dominion Government may confer powers on

the Provincial Government or Ruler of State, with their consent, in relation to any matter to which the executive authority of the Dominion extends. The Dominion Government may give directions to a Province as to the carrying into execution therein of any Act of the Dominion Legislature which relates to a matter specified in Part II of the Concurrent Legislative List. The executive authority of the Dominion also extends to the giving of directions to a Province as to the construction and maintenance of means of communication, declared to be of military importance, and as to the manner in which the executive authority thereof is to be exercised for the purpose of preventing any grave menace to the peace or tranquillity of India or any part thereof. The Ruler of an Acceding State is required to exercise his executive authority in such a way as not to impede or prejudice the exercise of the executive authority of the Dominion so far as it is exercisable in the State by virtue of a law of the Dominion Legislature which applies therein. If the Ruler fails to carry out this obligation the Governor-General may issue such directions to the Ruler as he thinks fit.

DRAFT CONSTITUTION

The Indian Constituent Assembly, set up on the recommendation of the Cabinet Mission, appointed a Committee (Aug. 29, 1947) consisting of Dr. B. R. Ambedkar, Mr. N. Gopalaswamy Iyyengar, Mr. K. M. Munshi, Salyid Mohamed Saadullah, Mr. N. Madhava Rao and the late Dr. P. Khaitan with Dr. B. R. Ambedkar as Chairman to draft a constitution for India. This committee submitted its report to the President of the Constituent Assembly on Feb. 21, 1948. Though there may be difference in detail the main features of the new Constitution will probably be the same as those proposed by the Draft Committee. Here is a summary of the draft constitution now under discussion in the Constituent Assembly.

Preamble.—The preamble which closely follows the Objectives Resolution of the Constituent Assembly declares that the aim of the new Constitution is to constitute India into a Sovereign Democratic Republic; to secure to all its citizens justice, social, economic and political; liberty of thought, expression, belief, faith and worship; equality of status and of opportunity; and to promote among all Fraternity assuring the dignity of the individual and the unity of the Nation. In a foot-note to the Draft, the Committee explains that the question of the relationship between this Democratic Republic and the British Commonwealth of Nations remains to

be decided subsequently. The reference to "Fraternity" in the preamble is of especial significance at the present moment as the need for fraternal concord and good-will in India is never greater than now.

Part I deals with the Union and its territory and jurisdiction.

India is described as a Union of States and for the sake of uniformity the Units of the Union have been described as 'States' whether they are known at present as Governors' Provinces or Chief Commissioners' Provinces or Indian States. The States have been divided into three classes:—

- States enumerated in Part I of the First Schedule which correspond to the existing Governors' Provinces;
- States enumerated in Part II of the First Schedule which correspond to the existing Chief Commissioners' Provinces; and
- States enumerated in Part III of the First Schedule which correspond to the Indian States which have acceded to the Dominion.

In addition, the territory of India includes the Andaman and Nicobar Islands enumerated in Part IV of the First Schedule and any other territory which may be acquired by the Union.

Provision has been made for the admission, establishment and formation of new States.

CITIZENSHIP

Part II deals with citizenship.

Article 5 of the Draft lays down who shall be a citizen of India at the date of the commencement of the new Constitution. Every person who or either of whose parents or any of whose grandparents was born in the territory of India as defined in the Constitution and who has not made his permanent abode in any foreign State after the first day of April, 1947; and every person who or either of whose parents or any of whose grandparents was born in India as defined in the Government of India Act, 1935 (as originally enacted), or in Burma, Ceylon or Malaya, and who has his domicile in the territory of India as defined in the Constitution, shall be a citizen of India, provided that he has not acquired the citizenship of any foreign State before the date of commencement of the Constitution. The main principle embodied in this Article is that in order to be a citizen of the Union at its inception a person must have some kind of territorial connection with the Union, whether by birth or descent or domicile. The Article also

keeps in view the requirements of the large number of displaced persons who have had to migrate to India within recent months and provides for them a specially easy mode of acquiring domicile and, thereby, citizenship; for, under the Explanation to the Article, a person shall be deemed to have his domicile in the territory of India if he would have had his domicile in such territory under Part II of the Indian Succession Act, 1925, had the provisions of that Part been applicable to him, or if he has, before the date of commencement of the Constitution, deposited in the office of the District Magistrate a declaration in writing that he desires to acquire such domicile and has resided in the territory of India for at least one month before the date of the declaration.

The acquisition of citizenship after the date of commencement of the Constitution has been left to be regulated by law by the Parliament of the Union.

FUNDAMENTAL RIGHTS

Part III deals with Fundamental Rights.

The Fundamental Rights are based on the decisions of the Constituent Assembly.

These rights have been grouped as follows: rights of equality, rights relating to religion, cultural and educational rights, right to property and right to constitutional remedies. There is an express prohibition of discrimination on grounds of religion, race, caste or sex. All citizens are assured of equal opportunity in matters of public employment. 'Untouchability' is abolished and its practice in any form is forbidden. The State is prohibited from conferring any title and no citizen is to accept any title from any foreign State. Certain rights regarding freedom of speech, freedom to assemble peaceably and without arms, to form associations or unions, to move freely throughout the territory or to reside or settle in the territory of India or to acquire, hold and dispose of property or to practise any profession, or to carry on any occupation, trade or business are protected. It is declared that all persons are equally entitled to freedom of conscience and the right to profess, practise and propagate religion. Traffic in human beings and *begar* and other similar forms of forced labour are prohibited. The cultural and educational interests of minorities are also protected. The right to move the Supreme Court for the enforcement of the Fundamental Rights is guaranteed.

STATE POLICY

Part IV deals with the Directive Principles of State Policy and contains provisions which though not enforceable by any Court are nevertheless fundamental in the governance of the country and it is specifically provided that it shall be the duty of the State to follow these principles in making laws. The new State is to promote the welfare of the people by establishing and maintaining a social order in which justice, social, economic and political, shall inform all the institutions of national life. This Part also contains various injunctions regarding the right to education, to just and humane conditions of work, to a living wage for workers, and so forth.

THE UNION

Part V deals with the Union.

The Union Executive.—The head of the State is to be the President of India. All executive power of the Union is vested in the President, to be exercised by him on the advice of responsible Ministers. He is to be elected by the members of an electoral college consisting of the members of both Houses of Parliament, and the elected members of the Legislatures of the States. He is to hold office for a term of five years and is eligible for re-election once, but only once. The President must be a citizen not less than thirty-five years of age and qualified for election as a member of the Lower House of Parliament. The President may be impeached

for violation of the Constitution. The Draft makes provision for a Vice-President also. He is to be the ex-officio Chairman of the Council of States and is to be elected by the members of both Houses of Parliament assembled at a joint sitting in accordance with the system of proportional representation by means of the single transferable vote. He is to hold office for a term of five years. Whenever the office of President becomes vacant, the Vice-President discharges its duties until another President is elected. All doubts and disputes arising out of or in connection with the election of a President are to be inquired into and decided by the Supreme Court whose decision is to be final. The Draft provides for a Council of Ministers with the Prime Minister at the head, to aid and advise the President in the exercise of his functions. The Council is to be collectively responsible to the House of the People. All executive action of the Government of India is to be expressed to be taken in the name of the President. It is the duty of the Prime Minister to furnish information to the President relating to the administration of the affairs of the Union and proposals for legislation whenever the President may call for the same. Provision has been made also for the appointment of an Attorney-General corresponding to the Advocate-General for India under the existing Constitution.

The Union Parliament.—The Union Parliament is to consist of a President and two Houses to be known respectively as the Council of States and the House of the People. The Council of States is to consist of 250 members of whom 15 members are to be nominated by the President to represent literature, art, science, etc., and the remainder are to be the representatives of the States. The House of the People is to consist of not more than 500 representatives of the territories of the States elected on the basis of adult suffrage, and there is to be not less than one representative for every 750,000 of the population and not more than one representative for every 500,000 of the population.

The Council of States will not be subject to dissolution, but as nearly as possible one-third of the members will retire on the expiration of every second year.

The House of the People is to continue for a period of five years and the expiration of that period operates as its dissolution, but provision has been made for extension of the duration of the House of the People for a period not exceeding one year during any emergency.

The usual provisions for the summoning, prorogation and dissolution of the Houses of the Union Parliament, the conduct of business therein, the disqualifications of members thereof and the Legislative procedure of the two Houses, including procedure in financial matters have been included generally on the lines of similar provisions contained in the Government of India Act, 1935. It has however been provided, following the practice prevalent in the Parliament of the United Kingdom that at the commencement of every session the President shall address both Houses of Parliament assembled together and inform Parliament of the cause of its summons.

A special procedure has been prescribed with regard to Money Bills on the lines of the practice in the Parliament of the United Kingdom.

It has been also provided that in the Union Parliament business shall be transacted in Hindi or English but that the Presiding Officer of the House may permit any member, who cannot adequately express himself in either of these languages, to address the House in his mother tongue.

Legislative Powers of the President.—Power has been given to the President to promulgate Ordinances at any time except when both the Houses of Parliament are in session. The President will promulgate such Ordinances on the advice of his Ministers, and such Ordinances will cease to operate at the expiration of six weeks from the re-assembly of the Union Parliament.

Federal Judicature.—There will be a Supreme Court of India consisting of a Chief Justice of India and not less than seven Judges. Provision has been made for the appointment by the Chief Justice of India of Judges of High Courts as *ad hoc* Judges at the sittings of the Supreme Court for specified periods following the practice prevalent in the Supreme Court of Canada. Provision has also been made for the attendance of retired Judges at sittings of the Supreme Court as in the United Kingdom and in the United States of America. Any person who has held office as a Judge of the Supreme Court (or of a High Court) is prohibited from practising in any court in India.

The Supreme Court is to have original, appellate and advisory jurisdiction. Its original jurisdiction extends to disputes between the Union and a State or between two States, if and in so far as the dispute involves any question whether of law or fact on which the existence or extent of a legal right depends. Disputes arising out of certain agreements have, however, been left out of the purview of the Supreme Court. The appellate jurisdiction of the Court extends to cases involving the interpretation of the Constitution and to all other cases from which an appeal now lies to the Federal Court or to His Majesty-in-Council. The minimum pecuniary limit of the subject matter of the dispute in the case of civil appeals has been fixed at Rs. 20,000. The Supreme Court has advisory jurisdiction in respect of questions which may be referred to that Court by the President for opinion.

Provision has been also made for special leave to appeal to the Supreme Court from any judgment, decree or final order in any Cause or matter passed or made by any court or tribunal in the territory of India.

In a footnote the Committee has observed that in the Supreme Court of the United States of America all the Judges of the Court are entitled to participate in the hearing of every matter, that the Court never sits in divisions and that the Judges of that Court attach the greatest importance to this practice. The Committee has expressed the opinion that this practice should be followed in India at least in two classes of cases, namely, those which involve questions of interpretation of the Constitution and those which are referred to the Supreme Court for opinion by the President, and that whether the same practice should not be extended to other classes of cases may be left to be regulated by Parliament by law.

Auditor-General of India.—Provisions similar to those existing in the Government of India Act, 1935, have been made for an Auditor-General of India.

STATES

Part VI deals with States which correspond to Governors' Provinces.

The Executive in such States.—Each State will have a Governor and the executive power of the State is vested in him.

As to the mode of selection of the Governor, the Draft contains alternative provisions. One alternative, following the decision of the Constituent Assembly, provides that the Governor shall be elected by direct vote of all persons who have the right to vote at a general election for the Legislative Assembly of the State. The other alternative, favoured by some of the members of the Committee who feel strongly that the co-existence of a Governor elected by the people and a Chief Minister responsible to the Legislature might lead to friction and consequent weakness in administration, provides that the Governor shall be appointed by the President from a panel of four persons (who need not be residents of the State concerned) elected by the Legislature of the State.

The term of office of the Governors is to be five years. Provision has been made for impeachment of a Governor for violation of the Constitution.

The Committee has not thought it necessary to make any provision for Deputy Governors, because a Deputy Governor will have no function to perform so long as the Governor is there. At the Centre, the position is different, because the Vice-President is also the ex-officio Chairman of the Council of States; but in most of the States there will be no Upper House and it will not be possible to give the Deputy Governor functions similar to those of the Vice-President. There is a provision in the Draft enabling the Legislature of the State (or the President) to make necessary arrangements for the discharge of the functions of the Governor in any unforeseen contingency.

Provision has been made for a Council of Ministers with the Chief Minister at the head to aid and advise the Governor in the exercise of his functions. The Governor is to act on the advice of his Minister, except in respect of certain matters, such as, the summoning and dissolving of the Legislature, the appointment of the Chairman and members of the State Public Service Commission and the Auditor-in-Chief of the State and the issue of a proclamation suspending the constitution in case of grave emergency threatening the peace and tranquillity of the State. This last mentioned power can be exercised only for a period not exceeding two weeks and the Governor is required to report the matter to the President. All executive action of the Government of the State is to be taken in the name of the Governor. It is the duty of the Chief Minister to furnish information to the Governor relating to the administration of the affairs of the State and proposals for legislation whenever the Governor may call for the same.

Advocate-General for the State. There is to be an Advocate-General in every State whose functions are similar to those of the Advocate-General of the corresponding Province under the Government of India Act, 1935. The Advocate-General is to retire from office upon the resignation of the Chief Minister of the State.

THE STATE LEGISLATURE

The State Legislature is to consist of the Governor and two Houses (Legislative Assembly and Legislative Council) in a few States and one House (Legislative Assembly) in all other States. The names of the States which will have two Houses have been left blank for the present.

The Legislative Assembly is to consist of members (not being in any case more than 200 or less than 60) who are to be chosen by direct election on the basis of adult suffrage in territorial constituencies. There is to be not more than one member for every lakh of the population except in the case of certain areas known as the "Autonomous districts" of Assam.

The total number of members of the Legislative Council of a State having such a Council is not to exceed 25 per cent of the total number of members in the Legislative Assembly of the State. One-half of the members of the Council are to be chosen from panels on functional basis and one-third of the members to be elected by the members of the Legislative Assembly in accordance with the system of proportional representation by means of the single transferable vote and the remainder are to be nominated by the Governor.

The Legislative Assembly is to continue for five years and the expiration of that period operates as its dissolution. The Legislative Council will not be subject to dissolution but as nearly as may be one-third of the members will retire on the expiration of every third year.

The usual provisions for summoning, proroguing and dissolving the House or Houses of the Legislature of the State, the conduct of business therein, the disqualifications of members thereof and the legislative procedure, including procedure in financial matters, have been included.

It has been provided that in the Legislature of a State business shall be transacted in the

language or languages generally used in that State or in Hindi or English but that the Presiding Officer of the Legislature may permit any member who cannot adequately express himself in any of these languages, to address the Legislature in his mother tongue.

Legislative Powers of the Governor.—Power has been provided for the promulgation of Ordinances by the Governor of a State at any time except when the Legislature of the State is in session. The Governor will promulgate such Ordinances on the advice of his Ministers and they cease to operate at the expiration of six weeks from the re-assembly of the Legislature of the State.

Provision in cases of grave emergencies.—Provision has been made empowering the Governor in cases of grave emergency threatening the peace and tranquillity of the State to issue a proclamation suspending certain provisions of the Constitution for a period of two weeks only, and the Governor is required to report the matter to the President. Upon receipt of the report the President may either revoke the proclamation or issue a fresh proclamation of his own, the effect of which will be to put the Central Executive in place of the State Executive and the Central Legislature in place of the State Legislature, or, in other words, the State concerned will become a centrally administered area for the duration of the proclamation. This replaces the "Section 93 regime" under the Act of 1935.

Scheduled and tribal areas.—Special provision has been made in the Fifth and Sixth Schedules to the Draft Constitution for the administration, respectively, of the Scheduled areas in the States other than Assam and of the tribal areas in Assam, which mostly correspond to the excluded and partially excluded areas under the Government of India Act, 1935.

The High Courts in States.—The provisions with regard to High Courts in States corresponding to the Governors' Provinces and the Chief Commissioners' Provinces are mostly the same as in the Government of India Act, 1935. It has however been provided that a Judge of a High Court may hold office until he attains the age of 60 years or such higher age not exceeding 65 years as may be fixed in this behalf by the Legislature of the State. It has also been provided that a person who has held office as a Judge of a High Court shall be prohibited from practising in any court or before any authority within the territory of India.

Provision has also been made for the employment of retired Judges at sittings of the High Court following the practice in the United Kingdom and in the United States of America.

It has also been provided that the Union Parliament may by law extend the jurisdiction of a High Court to or exclude the jurisdiction of a High Court from any State other than the State in which the Court has its principal seat.

Auditors-in-Chief.—The person performing the functions of an Auditor-General in a State is to be designated as Auditor-in-Chief to distinguish him from the Auditor-General of India and provisions similar to those contained in the Government of India Act, 1935, in respect of Auditors-General for the Provinces have been made with respect to Auditors-in-Chief for the States.

CHIEF COMMISSIONERS' PROVINCES

Part VII deals with States which correspond to the Chief Commissioners' Provinces of Delhi, Ajmer-Merwara, Coorg and Panth Piploda which are at present administered by the Centre. Provision has been made for the administration of these States either through a Chief Commissioner or a Lieutenant-Governor, or through the Governor or the Ruler of a neighbouring State. What is to be done in the case of a particular area is left to the President to prescribe by order. He will, of course, in this, as in other matters, act on the advice of the responsible Ministers. The President has also been empowered to set

up local legislatures and councils of advisers for these areas and to prescribe their Constitution and powers.

It has also been provided that Indian States (such as those of the Orissa group) which have ceded full authority, jurisdiction and power to the Central Government may be administered as if they were centrally administered areas, i.e., through a Chief Commissioner or a Lieutenant-Governor or through the Governor or the Ruler of a neighbouring State, according to the requirements of each case.

Part VIII deals with the administration of the territories which are comprised within the territory of India but are not States, e.g., the Andaman and Nicobar Islands. These territories will be administered by the President through a Chief Commissioner or any other authority appointed by the President. The President will have power to make regulations for the peace and good government of these territories.

UNION-STATES RELATIONS

Part IX deals with the legislative and administrative relations between the Union and the States. For the most part the Drafting Committee has made no change in the Legislative Lists as recommended by the Union Powers Committee and adopted by the Constituent Assembly.

The Committee has, however, provided that when a subject which is normally in the State List assumes national importance, then the Union Parliament may legislate upon it. To prevent any unwarranted encroachment upon State powers it has been provided that this can be done only if the Council of States, which may be said to represent the States as Units, passes a resolution to that effect by a two-thirds majority.

The Committee has also considered it desirable to put into the Concurrent List the whole subject of "succession" instead of only "succession to property other than agricultural land."

The Committee has also included in the Concurrent List all matters in respect of which parties are now governed by their personal law, so that the enactment of a uniform law in India in these matters may be facilitated. While putting land acquisition for the purposes of the Union into the Union List and land acquisition for the purpose of a State in the State List, the Committee has provided that the principles on which compensation for acquisition has to be determined shall in all cases be in the Concurrent List in order that there may be some uniformity in this matter.

In addition, in view of the present abnormal circumstances which require central control over essential supplies, it has been provided, on the lines of the India (Central Government and Legislature) Act, 1946, that, for a term of five years from the commencement of the Constitution, trade and commerce in, and the production, supply and distribution of, certain essential commodities, such as, cotton textiles, foodstuffs, and petroleum, as also the relief and rehabilitation of displaced persons, shall be on the same footing as Concurrent List subjects.

As regards the administrative relations between the Union and the States provision has been made for enabling a State which corresponds to an Indian State to enter into agreement with the Union or with any State which corresponds to a Governor's Province for the undertaking of executive, legislative and judicial powers in the former State by the Union or the latter State. Provision for settlement of the disputes regarding inter-State water-supplies on the lines of the existing provision in the Government of India Act, 1935, has also been included.

As respects inter-State trade and commerce, all preferences or discrimination to one State over another have been prohibited. Provision has, however, been made to enable any State to impose reasonable restrictions in the public interest.

Provision has also been made for the appointment by the President of an Inter-State Council for the settlement of disputes between the States and for the better co-ordination of policy.

FINANCE, PROPERTY

Part X deals with Finance, Property, Contracts and Suits.

Provisions relating to the distribution of revenues between the Centre and the States and the grant of financial aid to the States have been retained for the present as in the Government of India Act, 1935. A provision has been included for the appointment of a Finance Commission at the end of five years from the commencement of the new Constitution to make recommendations as to the distribution of such revenues and other matters between the Union and the States.

The other provisions in this Part are mostly the same as in the Government of India Act, 1935.

EMERGENCY POWERS

Part XI deals with Emergency Powers. The President has been given power to issue a Proclamation of Emergency when a grave emergency exists whereby the security of India is threatened whether by war or domestic violence. The provisions relating to the Proclamation of Emergency are modelled on the existing provisions in the Government of India Act, 1935.

SERVICES

Part XII deals with services. Detailed provisions as to the services have been left to be regulated by Act of the appropriate Legislature.

Provisions for the Union and the State Public Service Commission have been included on the lines of the existing provisions in the Government of India Act, 1935.

ELECTIONS

Part XIII deals with Elections. Provision has been made for the superintendence, direction and control of all elections to Parliament by an Election Commission to be appointed by the President and of all elections to the Legislatures of States by an Election Commission to be appointed by the Governor of the State. The Committee has not thought it necessary to incorporate in the Constitution electoral details including delimitation of constituencies, and these have been left to be provided by auxiliary legislation.

MINORITIES

Part XIV deals with the safeguards for minorities. Provision has been made for the reservation of seats for the Muslim community, the Scheduled Castes, the Scheduled Tribes and the Indian Christians (in Madras and Bombay only) in the House of the People and in the Legislative Assemblies of the States for a period of ten years. Special safeguards for the continuance of certain rights in respect of services and educational grants for the Anglo-Indian community have been provided for a period of ten years.

Provision has also been included for the appointment of a special officer for minorities both for the Union and for the States and for the appointment of a periodic Commission to investigate the conditions of the backward classes. Provision has also been made for the appointment of a Commission to report on the administration of scheduled areas (which mostly correspond to the excluded and partially excluded areas in the present Constitution) and the welfare of scheduled tribes.

Part XV contains miscellaneous provisions.

Protection of the President and Governors.—Provision has been included in this Part for the protection of the President and the Governors from civil and criminal process during the term of their office.

AMENDMENTS TO CONSTITUTION

Part XVI contains provisions for the amendment of the Constitution. Ordinarily such amendment will require a two-thirds majority of the members of each House of the Union Parliament present and voting as well as an absolute majority of the total membership of each House. In the case of an amendment to make any change in the Legislative Lists or the representation of States in Parliament or the powers of the Supreme Court, the amendment will also require ratification by the Legislatures of not less than one-half of the States which correspond to the Governors' Provinces and not less than one-third of the States which correspond to the Indian States.

Provision giving limited constituent powers to the State Legislatures in respect of certain definite matters has also been included.

TRANSITIONAL PROVISIONS

Part XVII deals with temporary and transitional provisions. It has been provided that all existing laws shall continue in operation subject to such adaptations made by the President by order as may be necessary, to bring them into conformity with the provisions of the new Constitution. It has also been provided that until the Houses of Parliament have been duly constituted and summoned to meet, for the first session, the Constituent Assembly itself will exercise the powers of the Union Parliament. Such person as the Constituent Assembly of the Dominion of India shall have elected in this behalf will be the provisional President of India until a President has been duly elected in accordance with the provisions of the new Constitution.

Ministers for the Dominion immediately before the commencement of the new Constitution will become Ministers of the provisional President under the new Constitution.

Similar provisions have also been made in respect of the Governors, Legislatures, and Ministers in the States corresponding to Governors' Provinces.

Judges of the Federal Court shall, unless they have elected otherwise, become Judges of the Supreme Court, and the Judges of the High Courts, unless they have otherwise elected, shall become Judges of the High Courts in the corresponding States.

Provision has been made for enabling the President to remove difficulties by order made under this Part; such orders may be made until the first meeting of the Union Parliament after the Parliament has been duly constituted under the new Constitution.

Part XVIII deals with commencement and repeals. The date on which the Constitution shall come into operation has been left blank to be filled in afterwards. The Indian Independence Act, 1947, and the Government of India Act, 1935, and all other enactments amending or supplementing the latter Act will cease to have effect on the commencement of the new Constitution.

SCHEDULES

First Schedule.—The First Schedule contains four Parts. Part I mentions the States which are at present the Governors' Provinces. Part II mentions the States which are at present Chief Commissioners' Provinces. Part III will contain the names of all the States which have acceded to the Dominion of India immediately before the commencement of the new Constitution. Part IV mentions the territory of the Andaman and Nicobar Islands.

Second Schedule.—This deals with the salaries, allowances, etc., to be paid to the President, the Governors, the Ministers, and the Judges of the Supreme Court and the High Courts.

Third Schedule.—This contains forms of oaths of office and secrecy to be taken by the Ministers for the Union and the States and of the declarations to be made by the members of the Union Parliament and the Legislatures of the States and the Judges of the Supreme Court and High Courts.

Fourth Schedule.—This Schedule contains the Instrument of Instructions for the Governors of the States. This follows the existing Instrument of Instructions to the Governors under the Government of India Act, 1935.

Fifth and Sixth Schedules.—These Schedules contain, respectively, provisions with respect to the scheduled areas and the scheduled tribes, in the States other than Assam and tribal areas in Assam.

Seventh Schedule.—This contains the Legislative Lists already referred to.

Eighth Schedule.—This contains the lists of scheduled tribes in the different States which correspond to Governors' Provinces.

HISTORICAL SURVEY

The impulse which drove the British to the sub-continent was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1699, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the east and west coasts of the sub-continent, and in the Bengal area, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

The collapse of government in the sub-continent consequent on the decay of Moghul power and the intrigues of the French on the east coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power.

In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity.

Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended again by the Charter Act of 1793.

Under the Charter Act of 1833 the Company was compelled to close its commercial business and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments.

After the outbreak of 1857, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in the sub-continent, but the Governor-General, as representing the Crown,

became known as the Viceroy. The Governor-General was the sole representative of the Crown; he was assisted by a Council, composed of high officials, each of whom was responsible for a special department of the administration.

The distribution of these great functions between the Central Government and the provincial administrations has fluctuated. It was definitely regulated by the Reform Act of 1919, and the democratic principle then widely implanted is greatly developed in the constitutions for the Provinces and the Centre enacted by the British Parliament in 1935.

THE REFORMS OF 1919 AND 1935

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921, having received the Royal Assent on 23rd December 1919. (For detailed treatment see *The Indian Year Book*, 1936-37 and preceding years).

Still vaster changes in the direction of Indian self-government and of Dominion Status were brought about by the Government of India Act, 1935, which received the Royal Assent on 2nd August 1935. The new Act embodied two main principles—(1) Provincial Autonomy, with a Government responsible to an elected Legislature in every Province, and (2) at the centre a dyarchic form of Government, based on a federation of British Indian Provinces and Indian States. Detailed provisions for the whole scheme were made in the Act of 1935, which includes 321 sections and 10 schedules and was the largest and most complex legislative enactment of the kind ever negotiated on a statute book.

Still more momentous changes were later made by the Indian Independence Act, 1947, which finally transferred all power to the two Dominions of India and Pakistan.

Formally inaugurated in April 1937, the provincial part of the new constitution of 1935 functioned for about two and a half years with a fair amount of smoothness, but at the end of that period it broke down in seven out of the eleven provinces because of the resignation of their officers by the Congress Ministries on the war issue. Thereupon the Governors of those provinces assumed sole charge of the Administration aided by Advisers responsible to them. The constitution remained virtually suspended in those provinces.

At the end of the war Congress Ministries were re-established in eight provinces and in another (the Punjab) the Congress participated in a coalition.

The federal part of the constitution could not be inaugurated according to plan owing to diverse factors: the difficulties experienced by the Princes in acceding to Federation except on the fulfilment of certain conditions, the internal, political and communal differences in British India and, above all, by the declaration of war which militated against any major changes in the governmental machinery at the Centre.

The Viceroy openly announced that steps for the enforcement of the federal part of the constitution would remain suspended, although he also expressed the hope that conditions, internal as well as external, would so settle down as to permit of a reconsideration of the position at an early date. Apart from the war situation, which precluded any major undertaking relating to the Indian constitution, the steadily deteriorating internal political situation pushed into the background measures for the revival of the Federation envisaged by the Government of India Act.

The Provincial Constitution was suspended in seven out of eleven provinces as the indirect result of the war—the popular Ministries in those provinces having resigned on the war issue

and rendered the formation of other Ministries in their places impossible owing to the numerical disposition of the party strength.

The constitution was restored in one of the provinces, namely, Orissa, in the autumn of 1941, due to the successful efforts of the Opposition to wean away certain members from the majority party. This Ministry fell in 1944 and the Governor was once again forced to take over the administration.

Assam faded out of the picture during Christmas week in 1941. Following the resignation of one of his principal supporters in the Cabinet, the Premier of Assam resigned and the Governor, finding it impossible to form a stable Ministry, took over the reins of administration by invoking section 93 of the Government of India Act. Eight months later the same Premier succeeded in forming a Coalition Ministry and obtaining adequate support for it.

Similarly in 1943 a Ministry was formed in the North-Western Frontier Province, where, too, the operation of section 93 of the Act was resorted to. Old undivided Bengal, which had had a fairly good run of provincial autonomy, came under a cloud in 1944 when consequent on the failure of the Ministry to command the confidence of the legislature, the Governor applied section 93 to the province. Subsequent to the general elections held in the cold weather of 1945-46, ministerial Government was restored in all the Provinces.

SEARCH FOR SOLUTION

During all these years, attempts were made by the British Government, through their representatives to solve the constitutional problem of India. In August 1940, the then Viceroy offered to increase the size of the Executive Council with a view to including additional popular representatives. He also referred to the possibility of setting up a body, representative of the principal elements in national life in order to devise the framework of the new constitution for India. The Executive Council was reorganised in July 1941. The European and official majority in the Council disappeared, and a Council with a joint responsibility for all the business, that came before it was born. But the main political parties in the country Indian National Congress and the Muslim League—did not co-operate with the Government. Hence another effort had to be made.

CRIPPS OFFER

In 1942, Sir Stafford Cripps was sent to India, with authority to make a definite offer. The main provisions of the offer may be summarised as follows:—

(1) The object of His Majesty's Government was the creation of a new Indian Union, which shall constitute a Dominion associated with the United Kingdom and other Dominions by a common allegiance to the Crown, but equal to them in every respect, in no way subordinate in any respect of its domestic and external affairs.

(2) A Constitution-making body will be established immediately upon the cessation of hostilities. Indian States will participate in that body. The Constitution framed by that body will be implemented by His Majesty's Government, provided the Provinces are at liberty to decide, whether to enter or not, the Federation which was expected to result.

(3) A Treaty will be signed by His Majesty's Government and the Constitution-making body. The treaty will cover all necessary matters, arising out of the complete transfer of responsibility from British to Indian hands, making special provision for the protection of racial and religious minorities in accordance with the undertakings given by His Majesty's Government.

(4) The Constitution-making body will be elected by the system of proportional representation. The electoral college for this purpose

will be formed by the members of the Lower Houses of Provincial legislatures. Indian States shall be invited to appoint representatives in the same proportion and with the same powers as British Indian members.

(5) There will be revision of treaties with Indian States so far as it may be required by the Constitution.

(6) During the period of war, the British Government must inevitably bear the responsibility for the defence of India. However His Majesty's Government desire and invite the immediate and effective participation of the leaders of the principal section of the Indian people in the counsels of their country, of the Commonwealth and of the United Nations.

The Congress rejected the offer. It objected strongly to the position of the States and demanded that their representatives should be chosen by the people and not nominated by the Ruler. The provision, that enabled the Provinces to opt out was also objected to. Finally a demand was made to the effect that the control of the Indian Government should be handed over without reservation of any sort. The Muslim League also declined to accept the proposal as it did not concede the ideal of Pakistan. It was also rejected by the Hindu Mahasabha, the Liberals and the Sikhs. The plan was therefore abandoned. However subsequently the Executive Council was enlarged to a maximum of fifteen members which included an Indian Defence Minister.

WAVELL PLAN

The next milestone in the constitutional progress of the Country was the Wavell plan. In the middle of 1945 Lord Wavell made a declaration. He said, "The offer of March 1942 (Cripps Offer) stands in its entirety without change or qualification" and "the working out of India's new constitutional system can only be carried through by the Indian people themselves." He went on to propose an interim arrangement. The Executive Council was to be reconstructed and the Viceroy was in future to make his selection for appointment to his Executive Council from amongst acknowledged leaders of Indian political life at the centre and in the provinces, in such proportion as would give a balanced representation to the main communities, and provide for equal representation to Muslims and Caste Hindus. This Council in its turn was to agree to co-operate wholeheartedly in support of the war effort and carry through the war against Japan to a victorious conclusion. All the members of the Council were to be Indians, with the exception of the Viceroy and the Commander-in-Chief. External affairs were to be in the hands of an Indian. The plan did not touch the relations of the Crown with the States.

A conference of the leaders of the political parties and others was held at Simla in 1945, to consider the proposals; but owing to absence of unanimity among them, the plan failed. Later in September 1945 Lord Wavell made another declaration reiterating the intention of His Majesty's Government to convene as soon as possible a Constitution-making body.

CABINET MISSION

Soon after the Labour Government took office it initiated measures to end the political deadlock in the sub-continent. They first sent out a Parliamentary Delegation consisting of eight members to ascertain the views of Indian leaders and convey to them the broad general attitude of the political parties in Britain. After some time the British Government sent out a Cabinet Mission consisting of Lord Pethwick-Lawrence, Sir Stafford Cripps and A. V. Alexander who were authorised by the Cabinet to negotiate and settle within the broad framework of the British Government's policy the constitutional and political problems of India in association with the Viceroy. The Mission arrived in India on March 23, 1946 and remained in the country for about three months. (It left on June 30).

After prolonged consultations which showed that there was no agreement among the two major political parties on such fundamental issues as one state or two, the Cabinet Mission formulated its own proposals for the setting up of a machinery to draw a constitution for the sub-continent. These proposals were published on May 16.

At the outset the mission flatly declared that they were against the division of the sub-continent into two independent States but at the same time recognized the need for meeting the point of view of the Muslim League.

Inevitably the proposals took the form of a compromise both as regards the nature of the final constitution as well as of the machinery for drafting it. Broadly speaking, the Mission suggested what has been called a three-tier constitution consisting of a Union centre, the Provinces, and an intermediate authority formed by grouping contiguous Provinces according to a certain pattern.

The procedure for drafting such a constitution was also in the nature of a compromise. First there was to be a Constituent Assembly formed by representatives drawn from the Provincial Assemblies, the number of representatives to

be proportional to the numerical strength of the community in the respective Provinces. Only three elements were to be recognized for purposes of representation, the Muslims, the Sikhs, and the rest grouped together and called general. After a preliminary meeting to decide general business, etc., the Provincial representatives in the Constituent Assembly were to divide up into three sections, one formed, broadly speaking, by those coming from the north-west, a second by those coming from the east, and a third by those coming from the rest of the country. These sections were then to settle Provincial constitutions for the Provinces included in each section and also to decide whether any group constitution was to be set up and if so with what Provincial subjects the group authority was to deal. In other words, the Constituent Assembly was a sovereign law-making body within certain limits and could frame whatever constitution it liked. India could remain within the Commonwealth, or if she so desired she could leave it.

At this point it would be interesting to set out the composition of the Constituent Assembly as proposed by the Mission, for it is this very same Assembly shorn of its representatives from Pakistan that is functioning today both as a Constituent Assembly as well as a parliament for the Dominion of India.

integral parts of a single formula. The League retorted that as the Congress had accepted neither the letter nor the spirit of the Mission proposals the League had as good a right to stay in the Cabinet as the Congress. A conference in London (December 5), availed little, except to make confusion worse confounded. The whole situation was fast getting out of hand and when at last the Congress bluntly demanded that the League must leave the Government and the League equally bluntly asked for the dissolution of the Constituent Assembly it was quite clear that a decision could no longer be postponed.

WITHDRAWAL PLAN

One way of trying to make the two sides agree was for Britain to declare that she would leave India by a certain fixed time regardless of whether the two sides had come to an agreement or not by then. This Britain at last did through an announcement made by the Prime Minister in Parliament. The date fixed by the British Government for withdrawal was June, 1948. It is worthwhile reproducing the relevant parts of the declaration made by Mr. Attlee on February 20, 1947 as it constitutes a landmark in the progress of India towards independence:

"It has long been the policy of successive British Governments to work towards the realisation of self-government in India. In pursuance of this policy, an increasing measure of responsibility has been devolved on Indians, and today the civil administration and the Indian armed forces rely to a very large extent on Indian civilians and officers. In the constitutional field, the Acts of 1919 and 1935 passed by the British Parliament each represented a substantial transfer of political power. In 1940, the Coalition Government recognised the principle that Indians should themselves frame a new constitution for a fully autonomous India, and in the offer of 1942 they invited them to set up a Constituent Assembly for this purpose as soon as the war was over.....

JUNE 1948

"The Declaration of the Prime Minister of March 15 last, which met with general approval in Parliament and the country, made it clear that it was for the Indian people themselves to choose their future status and constitution and that, in the opinion of His Majesty's Government, the time had come for responsibility for the Government of India to pass into Indian hands.

"The present state of uncertainty is fraught with danger and cannot be indefinitely prolonged. His Majesty's Government wish to make it clear that it is their definite intention to take necessary steps to effect the transference of power to responsible Indian hands by a date not later than June, 1948.....

"His Majesty's Government are anxious to hand over their responsibilities to a Government which, resting on the sure foundation of the support of the people, is capable of maintaining peace and administering India with justice and efficiency. It is therefore essential that all parties should sink their differences in order that they may be ready to shoulder the great responsibilities which will come upon them next year.

"After months of hard work by the Cabinet Mission a great measure of agreement was obtained as to the method by which a constitution should be worked out. This was embodied in their statements of May last. His Majesty's Government there agreed to recommend to Parliament a constitution worked out in accordance with the proposals made therein by a fully representative Constituent Assembly.

"But if it should appear that such a constitution will not have been worked out by a fully representative Assembly before the time mentioned, His Majesty's Government will have to consider to whom the powers of the Central Government in British India should be handed over, on the due date, whether as a whole to some form of Central Government for British India, or in

NOTE.—In order to represent the Chief Commissioners' Provinces there was added to Section A the member representing Delhi in the Central Legislative Assembly, the member representing Ajmer-Merwara in the Central Legislative Assembly and a representative elected by the Coorg Legislative Council. To Section B was added representative of British Baluchistan.

INTERIM GOVERNMENT

India also needed a new Government having popular support to carry through some of the heavy tasks with which the Administration was faced. So the Cabinet Mission also proposed that while the Constitution-making proceeded, an interim Government consisting of leaders drawn from the major political parties was to be immediately formed.

Such, in outline were the main recommendations of the Cabinet Mission to help solve the political problem. Neither the Congress nor the League gave these recommendations wholehearted acceptance. Both sides expressed doubts and fears so that on a number of occasions the Mission had to come out with statements intended to clarify some point or other. Another factor which served to complicate the situation

was that neither the Congress nor the League believed in the good faith of the other: each claimed that it had accepted the proposals while the other had rejected them. The problem of forming an Interim Government also presented enormous difficulty. After prolonged negotiations conducted by the Viceroy, however, the Congress agreed to accept office and an Interim Government was at last formed on Sept. 2. But the League continued to stand out and violent demonstrations occurred all over the country. The Viceroy followed up with further negotiations and, at last the League too agreed to join the Government (October 15), but refused to co-operate with the work of the Constituent Assembly on the ground that the Congress had not really accepted the Mission proposals in regard to certain points in the procedure.

Meanwhile temper both inside the Government and out in the country continued to rise, making any compromise between the two points of view impossible. The Congress argued that if the League did not co-operate in the work of the Constituent Assembly it could not stay in the Interim Government as the Constituent Assembly and the Interim Government were

some areas to the existing Provincial Governments, or in such other ways as may seem most reasonable and in the best interests of the Indian people."

PROCEDURE

This declaration did not by any means put an end to conflict. For though the British offered to withdraw they did not say to whom power was to be transferred in any particular area in case no agreement had meanwhile been reached among the major parties in the country. Worse still, there were one or two passages in the statement which led one to infer that power would be transferred to those who happened to be in actual possession of it at the time of the withdrawal. This led to a mad struggle for power through mass movement in such of those Provinces as had a Muslim majority but a non-Muslim League Government. A mass movement in Assam too appeared to be imminent. Matters had undoubtedly come to a head and if an explosion was to be avoided yet another attempt had to be made to bring the two parties together and agree on a common solution. The instrument through which a common solution was at last reached was the person of Lord Mountbatten who had meanwhile taken the place of Lord Wavell as Viceroy and Governor-General (March 24, 1947). As soon as he assumed office Lord Mountbatten opened fresh negotiations with the Congress and the League and after prolonged talks with both sides succeeded in bringing about an agreement based on the division of India, the partition of the Punjab, Bengal and Assam, and the early transfer of complete power on the basis of Dominion Status. The procedure to be followed for dividing the country was simultaneously announced in London and in India on June 3.

The Provincial Legislative Assemblies of Bengal and the Punjab (excluding the European members) were each to be asked to meet in two parts, one representing the Muslim majority districts and the other the rest of the Province. For the purpose of determining the population of districts, the 1911 census figures were to be taken as authoritative.

The members of the two parts of each Legislative Assembly sitting separately would be empowered to vote whether or not the Province should be partitioned. If a simple majority of either part decided in favour of partition, division would be made accordingly.

Before the question as to the partition is decided, it is desirable that the representatives of each part should know in advance which Constituent Assembly the Province as a whole would join in the event of the two parts subsequently deciding to remain united. Therefore if any member of either Legislative Assembly so demands, there should be held a meeting of all members of the Legislative Assembly (other than Europeans) at which a decision would be taken on the issue as to which Constituent Assembly the Province as a whole would join if it were decided by the two parts to remain united.

In the event of partition being decided upon, each part of the Legislative Assembly would, on behalf of the areas they represent, decide which of the alternatives mentioned above to adopt.

For the immediate purpose of deciding on the issue of partition, the members of the Legislative Assemblies of Bengal and the Punjab would sit in two parts according to Muslim majority districts and non-Muslim majority districts.

This was only a preliminary step of a purely temporary nature as it was evident that for the purpose of a final partition of these Provinces a detailed investigation of boundary questions would be needed; and as soon as a decision involving partition had been taken for either Province a boundary commission would be set up by the Governor-General, the membership and terms of reference of which would be settled in consultation with those concerned. It would be instructed to demarcate the boundaries of the

two parts of the Punjab on the basis of ascertaining the contiguous majority areas of Muslims and non-Muslims.

It would also be instructed to take into account other factors. Similar instructions would be given to the Bengal Boundary Commission. Until the report of a boundary commission had been put into effect, the provisional boundaries indicated in the Appendix (not given here) would be used.

Sind.—The Legislative Assembly of Sind (excluding the European members) would at a special meeting also take its own decision on the alternatives mentioned above.

N.W.F.P.—The position of the N.W.F.P. was exceptional. Two of the three representatives of this province were already participating in the existing Constituent Assembly. But it was clear, in view of its geographical situation, and other considerations, that if the whole or any part of the Punjab decided not to join the existing Constituent Assembly, it would be necessary to give the N.W.F.P. an opportunity to reconsider its position.

Accordingly, in such an event, a referendum would be made to the electors of the present Legislative Assembly in the N.W.F.P. to choose which of the alternatives mentioned above they wished to adopt. The referendum would be held under the aegis of the Governor-General and in consultation with the Provincial Government.

British Baluchistan.—British Baluchistan had elected a member but he had not taken his seat in the existing Constituent Assembly. In view of its geographical situation, this Province would also be given an opportunity to reconsider its position and to choose which of the alternatives mentioned above to adopt.

Assam.—Though Assam was predominantly a non-Muslim Province, the district of Sylhet which was contiguous to Bengal was predominantly Muslim. There had been a demand that, in the event of the partition of Bengal, Sylhet should be amalgamated with the Muslim part of Bengal. Accordingly, if it was decided that Bengal should be partitioned, a referendum would be held in Sylhet district under the aegis of the Governor-General and in consultation with the Assam Provincial Government to decide whether the district of Sylhet should continue to form part of the Assam Province or should be amalgamated with the new Province of Eastern Bengal, if that Province agreed.

If the referendum resulted in favour of amalgamation with Eastern Bengal, a Boundary Commission with terms of reference similar to those for the Punjab and Bengal would be set up to demarcate the Muslim majority areas of Sylhet district and contiguous Muslim majority areas of adjoining districts, which would then be transferred to Eastern Bengal. The rest of the Assam Province would in any case continue to participate in the proceedings of the existing Constituent Assembly.

If it was decided that Bengal and the Punjab should be partitioned, it would be necessary to hold fresh elections to choose their representatives on the scale of one for every million of population according to the principle contained in the Cabinet Mission's Plan of May 16, 1946. Similar elections would also have to be held for Sylhet in the event of its being decided that this district should form part of East Bengal. The number of representatives to which each area would be entitled was as follows:—

| Province | General Muslims | Sikhs | Total |
|-----------------|-----------------|-------|-------|
| Sylhet District | 1 | 2 | Nil |
| West Bengal .. | 15 | 4 | Nil |
| East Bengal .. | 12 | 29 | Nil |
| West Punjab .. | 3 | 12 | 2 |
| East Punjab .. | 6 | 4 | 2 |

In accordance with the mandates given to them, the representatives of the various areas would either join the existing Constituent Assembly or form a new Constituent Assembly.

INDIAN INDEPENDENCE ACT

Such were the terms of the procedure agreed upon for effecting the constitutional changes. The terms relating to independence announced by Lord Mountbatten were embodied in an Act called the Indian Independence Act which was introduced into Parliament on July 5, passed on July 15 and became law at 10.45 A.M. on July 18. The more important clauses of the Act are reproduced below:

Clause 1, Section 1: As from August 15, 1947, two independent Dominions shall be set up in India, to be known respectively as India and Pakistan.

Section 2: The said Dominions are hereafter in this Act referred to as 'the new Dominions' and the said 15th day of August is hereafter in this Act referred to as 'the appointed day'.

Clause 2, Section 1: Subject to the provisions of sub-sections (3) and (4) of this section the territories of India shall be the territories under the sovereignty of His Majesty which, immediately before the appointed day, were included in British India except the territories which, under sub-section (2) of this section are to be the territories of Pakistan.

Pakistan Territories.—Section 2: Subject to the provision of sub-section 3 and 4 of this section, the territories of Pakistan shall be: the territories which, on the appointed day, are included in the Provinces of East Bengal and the West Punjab, as constituted under the two following sections; the territories which, at the date of the passing of this Act, are included in the Province of Sind and the Chief Commissioner's Province of British Baluchistan; and if, whether before or after the passing of this Act but before the appointed day, the Governor-General declares that the majority of the valid votes cast in the referendum which at the date of the passing of this Act is being or has recently been held in that behalf under his authority in the North-West Frontier Province are in favour of representatives of that Province taking part in the Constituent Assembly of Pakistan, the territories which, at the date of the passing of this Act, are included in that Province....

Section 5: For each of the new Dominions, there shall be a Governor-General, who shall be appointed by His Majesty and shall represent His Majesty for the purpose of the Government of the Dominion.

Provided that, unless and until provision to the contrary is made by a law of the legislature of either of the new Dominions, the same person may be Governor-General of both the new Dominions.

Legislature.—Section 6, Sub-section 1: The legislature of each of the new Dominions shall have full power to make laws for that Dominion, including laws having extra-territorial operation.

Sub-section 2: No law and no provision of any law made by the legislature of either of the new Dominions shall be void or inoperative on the ground that it is repugnant to the law of England, or to the provisions of this or any existing or future Act of Parliament of the United Kingdom, or to any Order, Rule or Regulation made under any such Act; and the powers of the legislatures of each Dominion include the power to repeal or amend any such Act, Order, Rule or Regulation in so far as it is part of the law of the Dominion.

Sub-section 3: The Governor-General of each of the new Dominions shall have full power to assent in His Majesty's name to any law of the legislature of that Dominion and so much of any Act as relates to the disallowance of laws by His Majesty, or the reservation of laws for the signature of His Majesty's pleasure thereon or the suspension of the operation of laws until the signature of His Majesty's pleasure thereon shall not apply to laws of the legislature of either of the new Dominions.

Status.—Section 7, Sub-section 1. As from the appointed day:

(a) His Majesty's Government in the United Kingdom have no responsibility as respects the Government of any of the territories which, immediately before that day, were included in British India.

(b) The suzerainty of His Majesty over the Indian States lapses, and with it, all treaties and agreements in force at the date of the passing of this Act between His Majesty and the Rulers of Indian States, all functions exercisable by His Majesty at that date with respect to Indian States, all obligations of His Majesty existing at that date towards Indian States or the Rulers thereof, and all powers, rights, authority or jurisdiction exercisable by His Majesty at that date in or in relation to Indian States by treaty, grant, usage, sufferance or otherwise.

Constituent Assemblies.—Section 8, Sub-section 1: In the case of each of the new Dominions, the powers of the legislature of the Dominion shall, for the purpose of making provision as to the constitution of the Dominion, be exercisable in the first instance by the Constituent Assembly of that Dominion, and references in this Act to the legislature of the Dominion shall be construed accordingly.

Sub-section 2: Except insofar as other provision is made by, or in accordance with a law made by the Constituent Assembly of the new Dominion under sub-section 1 of this section, each of the new Dominions and all Provinces and other parts thereof shall be governed as nearly as may be in accordance with the Government of India Act of 1935, and the provisions of that Act, or the Orders-in-Council, Rules and other instruments made thereunder, shall, so far as they are applicable, and subject to any express provisions of this Act, and with such omissions, additions, adaptations and modifications as may be specified in orders of the Governor-General under the next succeeding section, have effect accordingly.

Provided that—

(a) The said provision shall apply in relation to each of the new Dominions and nothing in this sub-section shall be construed as continuing on or after the appointed day any Central Government or legislature common to both the new Dominions.

(b) Nothing in this sub-section shall be construed as continuing in force on or after the appointed day any form of control by His Majesty's Government in the United Kingdom over the affairs of the new Dominions, or of any Province or other parts thereof.

(c) So much of the said provisions as requires the Governor-General or any Governor to act in his discretion or exercise his individual judgment as respects any matter shall cease to have effect as from the appointed day.

(d) As from the appointed day, no provincial Bill shall be reserved under the Government of India Act, 1935, for the signature of His Majesty's pleasure, and no provincial Act shall be disallowed by His Majesty thereunder.

(e) The powers of the Federal legislature or Indian legislature under that Act, as in force in relation to each Dominion, shall in the first instance be exercisable by the Constituent Assembly of the Dominion, in addition to the powers exercisable by that Assembly under sub-section 1 of this section.

Sub-section 3: Any provision of the Government of India Act, 1935, which is applied to either of the new Dominions by sub-section 2 of this section and the order therein referred to, operates to limit the power of the legislature of that Dominion shall, unless and until other provision is made by, or in accordance with a law made by the Constituent Assembly of the Dominion in accordance with the provisions of sub-section 1 of this section, have the like effect as a law of the legislature of the Dominion limiting for the future the powers of that legislature.

Instruments of Instructions.—Section 16, Sub-section 4: It is hereby declared that the Instruments of Instructions issued before

the passing of this Act by His Majesty to the Governor-General and the Governors of Provinces lapse as from the appointed day, and nothing in this Act shall be construed as continuing in force any provision of the Government of India Act, 1935, relating to such Instruments of Instructions.

Sub-section 5: As from the appointed day so much of any enactment as requires the approval of His Majesty-in-Council to any rules of court shall not apply to any court in either of the new Dominions.

TWO DOMINIONS

The Act, in short, established two independent Dominions, called India and Pakistan as from August 15, 1947 and transferred all power and authority in the respective areas to the Constituent Assembly of India which was already in existence, and the Constituent Assembly of Pakistan which was yet to be formed.

Pending the drafting and promulgation of the new constitution, the form of administration continued as under the 1935 Act as adapted by orders made by the Governor-General.

CONSTITUENT ASSEMBLY OF INDIA

President.—The Hon'ble Dr. Rajendra Prasad.
Vice-President.—The Hon'ble Dr. H. C. Mukerjee.

Speaker.—The Hon'ble Shri G. V. Mavalankar.
Deputy Speaker.—M. Ananthasayanam Ayyangar.

Secretary.—M. N. Kaul, M.A. (Cantab.), Bar-at-Law.

Deputy Secretary.—A. J. M. Atkinson.

Asst. Secretary I.—N. C. Nandi.

Asst. Secretary II.—C. V. Narayana Rao.

MADRAS (19)

General (45).—O. V. Alagesan; Shrinati Ammu Swaminathan; M. Ananthasayanam Ayyangar; Moturi Satyanarayana; Shrinati Dakshayini Velayudhan, M.L.C.; Shrinati G. Durgabai; The Hon'ble Shri N. GOVERNORS-GENERAL OF INDIA

Name Assumed charge of office

Lord William Cavendish Bentinck, G.C.B., G.C.H., P.C. .. 14 Nov. 1834

Sir Charles Metcalfe, Bart. (a) (Offg.) .. 20 Mar. 1835

Lord Auckland, G.C.B., P.C. (b) .. 4 Mar. 1836

Lord Ellenborough, P.C. (c) .. 28 Feb. 1842

William Wilberforce Birt (Offg.) .. 15 June 1844

The Right Hon. Sir Henry Hardinge, G.C.B. (d) .. 23 July 1844

The Earl of Dalhousie, P.C. (e) .. 12 Jan. 1848

Viscount Canning, P.C. (f) .. 29 Feb. 1856

(a) Afterwards (by creation) Baron Metcalfe.

(b) Created Earl of Auckland, 21 Dec. 1839.

(c) Afterwards (by creation) Earl of Ellenborough.

(d) Created Viscount Hardinge, 2 May 1846.

(e) Created Marquess of Dalhousie, 25 Aug. 1846.

(f) Afterwards (by creation) Earl Canning.

NOTE.—The Governor-General ceased to be the direct Head of the Bengal Government from the 1st May, 1854, when the first Lieutenant-Governor assumed office. On 1st April 1912, Bengal was placed under a separate Governor and the appointment of Lieutenant-Governor was abolished.

Viscount Canning, P.C. (a) .. 1 Nov. 1858

The Earl of Elgin and Kincardine, K.T., G.C.B., P.C. .. 12 March 1862

Major-General Sir Robert Napier, K.C.B. (b) (Offg.) .. 21 Nov. 1863

Colonel Sir William T. Denison, K.C.B. (Offg.) .. 2 Dec. 1863

The Right Hon. Sir John Lawrence, Bart, G.C.B., K.C.S.I. (c) .. 12 Jan. 1864

The Earl of Mayo, K.P. .. 12 Jan. 1869

John Strachey (d) (Offg.) .. 9 Feb. 1872

Lord Napier of Merchiston, K.T. (e) (Offg.) .. 23 Feb. 1872

Lord Northbrook, P.C. (f) .. 3 May 1872

Lord Lytton, G.C.B. (g) .. 12 Apr. 1876

The Marquess of Ripon, K.G., P.C. .. 8 June 1880

The Earl of Dufferin, K.P., G.C.B., G.C.M.G., P.C. (h) .. 13 Dec. 1884

The Marquess of Lansdowne, G.O.M.G. .. 10 Dec. 1888

The Earl of Elgin and Kincardine, P.C. .. 27 Jan. 1894

Baron Curzon of Kedleston, P.C. .. 6 Jan. 1899

Baron Amthill (Offg.) .. 30 Apr. 1904

Baron Curzon of Kedleston, P.C. (i) .. 13 Dec. 1904

The Earl of Minto, K.G., P.C., G.C.M.G. .. 18 Nov. 1905

Baron Hardinge of Penshurst, P.C., G.C.B., G.O.M.G., G.O.V.O., I.S.O. (j) .. 23 Nov. 1910

Lord Chelmsford Apr. 1916

Marquess of Reading Apr. 1921

Baron Irwin Apr. 1926

The Earl of Willington Apr. 1931

The Marquess of Linlithgow Apr. 1936

Field-Marshal Viscount Wavell of Cyrenaica and Winchester 1943.

The Rt. Hon. Sir John Colville, P.C. (Offg.) 4th June 1945 for 3 months.

(a) Created Earl Canning, 21 May 1859.

(b) Afterwards (by creation) Baron Napier of Magdala.

(c) Afterwards (by creation) Baron Lawrence.

(d) Afterwards Sir John Strachey, G.C.S.I., C.I.E.

(e) Afterwards (by creation) Baron Napier of Ettrick.

(f) Afterwards (by creation) Earl of Northbrook.

(g) Created Earl of Lytton, 28 April 1880.

(h) Created Marquis of Dufferin and Ava, 12 Nov. 1888.

(i) Created an Earl, June 1911.

(j) During tenure of office, the Viceroy is Grand Master and First and Principal Knight of the two Indian Orders (G.M.S.I. and G.M.I.E.). On quitting office, he becomes G.C.S.I. and G.C.I.E.; with the date of his assumption of the Viceroyalty.

Rear-Admiral the Rt. Hon. Viscount Mountbatten of Burma, K.G., G.C.S.I., G.C.I.E., G.C.V.O., K.C.B., 24, March 1947 to June 21, 1948.

Shri Chakravarthi Rajagopalachari (Acting) Nov. 10, 1947—Nov. 26, 1947; Confirmed, June 1948.

COMMANDERS-IN-CHIEF IN INDIA

Name Assumed charge of office

Lieut.-General Sir John Claverling .. 1774

Lieut.-General Sir Eyre Coote .. 1779

Lieut.-General Sir Robert Sloper .. 1785

General Earl Cornwallis .. 1786

Major-General Sir Robert Abercromby .. 1793

Major-General Sir Alured Clarke .. 1798

Lieut.-General Gerard (Lord Lake) .. 1801

General Marquis Cornwallis (2nd time) .. 1805

Lieut.-General Lord Lake .. 1805

Lieut.-General Sir G. Hewitt .. 1807

Field-Marshal Sir William Birdwood .. 1925

Field-Marshal Sir Phillip Chetwode .. 1930

Field-Marshal Sir Robert Archibald Cassels .. 1935

General Sir C. J. E. Auchinleck .. 1941

Field-Marshal Sir Archibald P. Wavell .. 1941

Field-Marshal Sir C. J. E. Auchinleck .. 1943

Lt.-Gen. R. M. Macdonald Lockart, C.B., C.I.E., M.C. .. Aug. 15, 1947.

Lt.-Gen. F. R. R. Francis Robert Roy Bucher .. Jan. 1, 1948.

General K. M. Cariappa .. Jan. 16, 1949.

The Indian Legislature

The following is a list of Acts, passed by the Legislature between August 31, 1948 and March 10, 1949. The date given is the date on which the Acts became law. For 1948 Acts passed before August see 1948 Year Book.

1. The Gandhi National Memorial Fund Donation (Companies) Act, August 31, 1948.
2. The Bombay, Calcutta & Madras Port Trust (Constitution) (Amend.) Act, August 31, 1948.
3. The Census Act, September 3, 1948.
4. The Continuance of Legal Proceedings Act, September 3, 1948.
5. The Indian Registration (Amend.) Act, September 3, 1948.
6. The Indian Matrimonial Causes (War Marriages) Act, September 3, 1948.
7. The Diplomatic and Consular Officers (Oaths and Fees) Act, September 3, 1948.
8. The Indian Merchant Shipping (Amend.) Act, September 3, 1948.
9. The Indian Army (Amend.) Act, September 3, 1948.
10. The Durgah Khawaja Sahab (Amend.) Act, September 3, 1948.
11. The Indian Telegraph (Amendment) Act, September 3, 1948.
12. The Coal Mines Provident Fund and Bonus Schemes Act, September 3, 1948.
13. The Displaced Persons (Institution of Suits) Act, September 4, 1948.
14. The Income-tax and Business Profits Tax (Amendment) Act, September 8, 1948.
15. The Taxation on Income (Investigation Commission) (Second Amend.) Act, September 8, 1948.
16. The Cantonments (Amend.) Act, September 8, 1948.
17. The Imperial Library (Change of Name) Act, September 8, 1948.
18. The Bombay Public Security Measures (Delhi Amendment) Act, September 8, 1948.
19. The Mines and Minerals (Regulation and Development) Act, September 8, 1948.
20. The Electricity (Supply) Act, September 10, 1948.
21. The Indian Income-tax (Amend.) Act, September 10, 1948.
22. The Territorial Army Act, September 10, 1948.
23. The Indian Navy (Discipline) (Amend.) Act, September 10, 1948.
24. The Exchange of Prisoners Act, September 10, 1948.
25. The Indian Cotton Cess (Amendment) Act, September 10, 1948.
26. The Resettlement of Displaced Persons (Land Acquisition) Act, September 20, 1948.

27. The Central Silk Board Act, September 20, 1948.
28. The Reserve Bank (Transfer to Public Ownership) Act, September 23, 1948.
29. The Factories Act, September 23, 1948.
30. The Essential Supplies (Temporary Powers) (Amendment) Act, September 23, 1948.
31. The Indian Railways (Second Amendment) Act, September 23, 1948.
32. The Delhi and Ajmer-Merwara Land Development Act, September 24, 1948.
33. The Indian Tariff (Amendment) Act, September 24, 1948.

1949

1. The Indian Tariff (Amendment) Act, February 11, 1949.
2. The Mangrol and Manavadar (Administration of Property) Act, February 14, 1949.
3. The Indian Emigration (Amendment) Act, February 16, 1949.
4. The United Provinces Provincial Armed Constabulary (Extension of Laws) Act, February 16, 1949.
5. The Protective Duties (Amendment) Act, February 16, 1949.
6. The Public Debt (Central Government) (Amendment) Act, February 16, 1949.
7. The Scheduled Securities (Hyderabad) Act, February 16, 1949.
8. The Seaward Artillery Practice Act, February 17, 1949.
9. The Code of Criminal Procedure (Amendment) Act, February 24, 1949.
10. The Banking Companies Act, March 10, 1949.

ORDINANCES

The following is a list of the Ordinances promulgated between May 25, 1948 and January 31, 1949. For a list of 1948 Ordinances passed before May see 1948 Year Book.

1. The Transfer of Property (India) (Amendment) Ordinance, May 25, 1948.
2. The Continuance of Legal Proceedings Ordinance, May 28, 1948.
3. The Indian Income-tax (Amendment) Ordinance, May 31, 1948.
4. The Bombay Public Security Measures Act (Delhi Amendment) Ordinance, June 14, 1948.
5. The Taxation on Income (Investigation Commission) (Amendment) Ordinance, June 30, 1948.
6. The Securities (Hyderabad) Ordinance, July 1, 1948.
7. The Influx from West Pakistan (Control) Ordinance, July 19, 1948.
8. The Displaced Persons (Institution of Suits) Ordinance, July 21, 1948.

9. The Indian Army (Amendment) Ordinance, July 21, 1948.
10. The Resettlement of Displaced Persons (Land Acquisition) Ordinance, August 2, 1948.
11. The Payment of Taxes (Transfer of Property) Ordinance, August 6, 1948.
12. The Mangrol and Manavadar (Administration of Property) Ordinance, August 16, 1948.
13. The National Service (Temporary and Released Persons) Ordinance, September 11, 1948.
14. The Public Safety Ordinance, September 14, 1948.
15. The Banking Companies (Control) Ordinance, September 18, 1948.
16. The Patents (Extension of Term) Ordinance, October 1, 1948.
17. The Excess Profits Tax (Amendment) Ordinance, October 9, 1948.
18. The Merchant Shipping (Acceding States) Ordinance, October 11, 1948.
19. The Public Companies (Limitation of Dividends) Ordinance, October 23, 1948.
20. The United Provinces Provincial Armed Constabulary (Extension of Laws) Ordinance, November 3, 1948.
21. The Essential Supplies (Temporary Powers) (Amendment) Ordinance, November 8, 1948.
22. The Code of Criminal Procedure (Amendment) Ordinance, November 9, 1948.
23. The Indian Tariff (Amendment) Ordinance, November 9, 1948.
24. The Influx from Pakistan (Control) Ordinance, November 10, 1948.
25. The Taxation on Income (Investigation Commission) (Amendment) Ordinance, November 19, 1948.
26. The Gandhi National Memorial Fund Donations (Companies) Amendment Ordinance, December 14, 1948.
27. The Scheduled Securities (Hyderabad) Ordinance, December 31, 1948.
28. The Indian Income-tax (Amendment) Ordinance, December 31, 1948.

1949

1. The Central Excise and Salt (Amendment) Ordinance, January 1, 1949.
2. The East Punjab Evacuees' (Administration of Property) Delhi and Ajmer-Merwara Amendment Ordinance, January 25, 1949.
3. The Durgah Khawaja Sahab Committee of Inquiry Ordinance, January 26, 1949.
4. The Governor-General's Salary (Exemption from Taxation) Ordinance, January 26, 1949.
5. The Recovery of Abducted Persons Ordinance, January 31, 1949.

ASSAM PROVINCE

THE Province of Assam is composed of eleven districts—Sibsagar, Lakhimpur, Nowgong, Tarrang, Kamrup, Goalpara, K. & J. Hills, Naga Hills, Cachar, Lushai Hills and Garo Hills.

Population—The total population of the Province in 1941 was 10,204,733, of which nearly 4½ millions were Hindus, over 3½ millions Muslims, 2½ millions belonged to tribal groups.

With the partition, the whole of the District of Sylhet except four thanas became part of East Bengal. Hence the area as well as the population have been correspondingly reduced. The following is a rough estimate of the present position: area in square miles 49,599.29; total population 7,404,094 out of which 3,023,750 are males and 3,480,344 are females. The number of Hindus is 2,947,989, of Muslims 1,710,423, of Sikhs 3,742, of Christians 35,724. The density of the population is 149.53.

40 per cent of the population are recorded as speaking Assamese and about 24 per cent Bengali. Other languages spoken in the province are Hindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Burman languages.

Agricultural Products—The river basins are naturally fertile and present in the main few difficulties to the cultivator. Rice is the staple food crop, nearly 4,003,543 acres in 1947-48 being devoted to this crop. Rainfall being high, the problem in general is to dispose of the surplus water and to control the action of floods rather than irrigation in the usual sense. Tea and jute are the most important crops grown for export. The area under Tea and Jute in 1947-48 was 437,380 and 209,730 acres respectively. About 60,042 acres are devoted to sugar-cane. Besides, Potatoes are also cultivated in Assam. The area under this crop was in the neighbourhood of 57,528 acres during 1947-48. A good deal of short staple cotton is grown in the hills.

Meteorological Conditions—Rainfall is everywhere abundant, and ranges from 50 to 258 inches a year leaving aside the highest recorded rainfall in this part of India with the maximum reached at Cherrapunji in the Khasi Hills (569.50); this is one of the wettest places in the world. Temperatures are moderate. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Accounts of the occurrence of petroleum in Assam have been published in the memoirs of the Geological Survey of India. The petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and the Surma. This belt is traceable over a distance of some 800 miles from N. E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S. S. E. trend.

Mines and Minerals—The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. Petroleum output during 1946-47 was 6,48,77,535 gallons; coal output 3,22,942 tons; and limestone output 9,84,677 tons. The most extensive coal measures hitherto worked are in the Naga Hills and the Lakhimpur district. Important deposits also exist in the Garo Hills. Limestone is quarried in the Khasi and Jaintia Hills. Petroleum is worked only in Lakhimpur and Cachar, and refined only in Lakhimpur.

MANUFACTURES AND TRADE

Silk is manufactured in the Assam valley, also cotton weaving prevails as a cottage industry, women playing a predominant part. In this valley there are no caste weavers. In the Surma Valley weavers carry on a brisk manufacture on a commercial scale; These handloom products find a ready market on account of the great scarcity of mill made goods. Tea is of course the main industry, but there is a large petroleum mining concern and also some

H. E. Sri Prakasa

coal mines. There is a big match manufacturing concern at Dhubri. Boat-building, brass and metal and earthenware, and limestone burning, cane and bamboo work, furniture making, soda lat, smithy, brick making, mustard oil pressing, rice and saw mills are other industries but agriculture employs about 80 per cent of the population. Assam carries on a considerable trade with the adjoining hill tribes and countries.

Communications—Much of the trade of Assam is carried by river. The extensive system of river communications makes the province less dependent upon roads than other parts of India but there has been much advance in recent years in road communication. A fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plys on the rivers in both Valleys. There is a day service of passenger-boats between Tezpur and Namanati.

The open mileage of railway has also shown a steady improvement and several branch lines to the Bengal Assam Railway (A. B. zone) system have been added in recent years. The main Bengal Assam Railway (A. B. zone) line runs from Chittagong Port, in East Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibru-Sadiya Railway, and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the Eastern end of the Surma Valley and another runs west down the Assam Valley from Lumding to Pandu where it effects a junction with the Bengal Assam Railway (A. B. zone). The Bengal Assam Railway (E. B. zone) connects Assam with the Bengal system via the Valley of the Brahmaputra. The railroad is now at Rangapara north of Tezpur. Both Bengal Assam Railway and Eastern Bengal Railway have been amalgamated from 1st January 1942 and have been named Bengal Assam Railway.

Since August 15, 1947 the Bengal Assam Railway has been divided into two separate sections. The section within Assam has been called Assam Railway with headquarters at Pandu. The Government of India are taking steps to link up Assam with the rest of India by railway without touching the Dominion of Pakistan.

The first direct link by air between Calcutta and Gauhati was established on December 14, 1947. This air service was originally on a non-scheduled basis but very soon it became a daily service which has since been extended to Dibrugarh on a frequency of three days a week.

The Assam Government have undertaken an experiment in transport organization with the

nationalisation of motor transport on a 75-mile long road connecting Gauhati and Nowgong.

ROAD IMPROVEMENT

Post-war road improvement programme envisages an expenditure of Rs. 5 crores over a period of 5 years. It covers not only construction of new roads but also includes improvement of existing roads to a better standard. The scheme also embraces a large bridging programme.

Approximately 919 miles of roads classified as village roads and 210 miles of District roads have been taken up for improvement upto 1948-49. A stretch of 230 miles of road classified as strategic, connecting Shillong with Silchar without touching the Pakistan territory has been taken up and is already jeppable in most sections. It is expected to be jeppable throughout the entire length sometime in 1949. Another motorable road from Medhpara to Philbari and Philbari to Tura has been constructed to connect them to the headquarter station of the Garo Hills, and the road is now motorable. A motorable road is also being constructed from Silchar to Ajlaj in the Lushai Hills. In the beginning of 1948 the construction of a new road from Assam boundary to Agartala (Tripura State) was also undertaken at the instance of the Government of India. The total length of this road is about 125 miles. It is expected to be jeppable by the end of 1949 thus giving direct access to Agartala from Assam. Yet another achievement of the Government of Assam is the construction of a most important road connecting Assam with the rest of India through Cooch Behar, without going through Pakistan.

The road Programme has its special significance in that it is being designed with a view to making Assam self-sufficient in the matter of having its export and import to and from other parts of the Indian Dominion transported quickly without having to pass through the Pakistan Dominion. At the same time communications within the province have also been improved by provision of necessary feeder roads from and to the arterial road system of the Province with a view to securing good market for the surplus produce of certain localities.

ADMINISTRATION

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1906, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912; the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota-Nagpur and Orissa were formed into a separate province, while the old Province of Assam was reconstituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked with the older major provinces of India.

After Independence the Province has been and is being administered according to the Government of India Act of 1935 as modified by subsequent Governors' ordinances under the Indian Independence Act.

The capital of Assam is Shillong, which has for a number of years been growing rapidly and is now in parts overcrowded. The town has grown up on somewhat rustic lines in very beautiful country, on the slopes of the Shillong Range which rises to a height of 6,430 feet above the sea. It was destroyed in the earthquake of 1897 and was rebuilt with methods of construction more fitted to withstand the shocks of earthquake.

THE FINANCES OF ASSAM

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1935. The present financial position for 1949-50 is set out in the following table:—

| HEADS OF REVENUE. | Budget estimates, 1949-50. | HEADS OF EXPENDITURE. | Budget Estimate for 1949-50. |
|---|----------------------------|--|------------------------------|
| | (In thousands of Rupees.) | | (In thousands of Rupees.) |
| A.—Principal heads of Revenue— | | A—Direct Demands on the Revenue — | |
| I—Customs | 36.29 | 4. Taxes on income other than Corporation Tax .. | 58 |
| IV—Taxes on Income other than Corporation tax | 1,57.25 | 7. Land Revenue | 25.45 |
| VII—Land Revenue | 1,62.31 | 8. Provincial Excise | 11.20 |

GOVERNOR

His Excellency Shri Sri Prakasa, B.A., LL.B.,
Bar-at-Law.

PERSONAL STAFF OF HIS EXCELLENCY THE GOVERNOR.

Adviser to the Governor for Tribal and Excluded Areas and States, N. K. Rustomji, I.C.S.

Dy. Adviser to the Governor for Tribal Areas and States, K. V. Subrahmanian, I.A.S.

Assistants to the Advisers for Excluded Areas and States, M. C. Bhorali, B.A.; S. C. Purkayastha; S. K. Dutta.

Secretary to the Adviser for Tribal Areas, H. Dutta, M.A.

Military Secretary, Major J. C. Dhanilja (Indian Signals).

Private Secretary, T. S. Krishnamurti.

Aide-de-Camp, Lieut. Capt. Maharajkumar Jai Sing.

COUNCIL OF MINISTERS.

Hon'ble Srijiit Gopinathi Bardoloi, M.A., B.L.,
Premier, Prime Minister (Home, Education, Transport, Industries and Co-operation).

Hon'ble Srijiit Bishnu Ram Medhi, M.Sc., B.L.,
Finance, Revenue, Legislative.

Hon'ble Maulavi Abdul Matlib Mazumdar, M.A., B.L., Local Self-Government, Agriculture, Veterinary.

Hon'ble Rev. J. J. M. Nichols-Roy, B.A., Public Works.

Hon'ble Srijiit Ramnath Das, B.L., Medical, Public Health, Electricity.

Hon'ble Srijiit Rupnath Brahma, B.L., Forest, Judicial, Registration.

Hon'ble Srijiit Omeo Kumar Das, B.A., Food Supply, Labour.

Hon'ble Maulana Md. Tayyebulla, B.L., Exercise, Publicity, Jails.

SECRETARIES, ETC., TO GOVERNMENT.

Chief Secretary, S. L. Mehta, I.C.S.
Additional Chief Secretary, D. C. Das, I.C.S.
Secretary to Government, Finance and Revenue Departments, S. J. Duncan.
Secretary to Government, Education and Local Self-Government Departments, Mahomed Sultan, M.A.
Secretary to Government in the Legislative Department, S. M. Lahiri, M.A., B.L.
Secretary to Government in the Department of Supply, S. K. Datta, I.C.S.
Secretary to Government in the Rural Development, Cottage Industries, Co-operative and Sericulture and Weaving Departments, T. T. S. Hayley, I.C.S.
Under-Secretary to Government, Finance Department, Ganesh Ch. Phookan, M.A., B.L.
Deputy Secretary to Government in the Education and Local Self-Government Departments, Ashutosh Dutta, B.L.
Secretary to the Legislative Assembly, Ralindra Nath Barua, M.Sc., B.L.
Secretary to Government in the Public Works Department, R. Chandra, B.Sc., C.E. (Hons.), M.I.E. (Ind.), I.S.E. Also Chief Engineer.
Secretary to Government in the Transport Department, K. Balachandram, I.C.S.
Joint Secretary to Government in the Home Department, J. E. Reid, O.B.E., E.D., I.P.
Under Secretary to Government in the Co-ordination Department, B. C. Kapur, I.A.S.
Additional Under Secretary in the Finance Department, Dillip Chandra Das.
Under-Secretary to Government in the Departments, under the Chief Secretary, S. C. Kapri, B.Sc., A.C.S.
Under-Secretary to Government in the Education and Local Self-Government Departments, Anwar Hussain, B.A., A.C.S.
Director of Publicity, S. C. Bhattacharjee.
Under-Secretary to Government in the P.W.D., M. C. Chaudhuri.
Parliamentary Secretaries, Srijut Mahendra Mohan Chaudhuri, B.L., Srijut Himadiprasad Chaltia, Srijut Parmananda Chetia, B.A., Srijut Horeswar Das, B.L.

Deputy Director of Supply (Accts.), Rai Sahib K. M. De.
Under-Secretary to Govt. in the Textile Dept., M. E. St. John Perry.
Assistant Secretary to Government in the P.W.D., Musebuddin Chaudhuri.
Assistant Secretary to Government in the Co-ordination Department, Kaumudi Kanta Chaudhuri, B.A.
Assistant Secretary to Government in the Textile Department, S. J. Gopikanta Barua.
Assistant Secretary to Government in the Supply Department, Hemendra Kumar Gupta.
Registrar, Assam Secretariat (Civil), Puniram Salaria.
Registrar, Assam Secretariat (P.W.D.), Binod Behari Ghose.

ASSAM PUBLIC SERVICE COMMISSION

Chairman, Srijut Kanewar Das, M.Sc., B.L.
Member, Josingh Rynjah, B.A.
Superintendent, P. N. Deb Goswami, B.A.
Advocate-General, F. A. Ahmed, Bar-at-Law.

HEADS OF DEPARTMENTS

Director of Land Records & Surveys, I. G. Registration, etc., N. N. Phukan, B.A.
Director of Rural Development, Cottage Industries, Sericulture and Weaving and Registrar of Co-operative Societies and Village Authorities, T. T. S. Hayley, I.C.S.
Director of Agriculture, R. C. Woodford, O.B.E.

ASSAM LEGISLATIVE ASSEMBLY

Speaker :—The Hon'ble Mr. Laksheswar Boroah, B.L.

Deputy Speaker :—Mrs. Bonily Khongmen, B.A.
Raja Ajit Narayan Dey of Silli, M.A., B.L. (Dhubri North); Beliram Das, B.L. (Kamrup Sadr. North Reserved seat); Bipin Chandra Medhi, B.L. (Mangaldai North); Bhadra Kanta Gogoi (Dibrugarh Central); Babu Bidyapati Singha, B.A. (Hailakandi); Bijoy Chandra Bhagavati (Tezpur East); Bejoy Chandra Saikia (Dibrugarh West); Himadiprasad Chaltia (Sibsagar West); The Hon'ble Srijut Bishnuram Medhi, M.Sc., B.L. (Kamrup Sadr. Central); Dandewar Hazarika, B.L. (Golaghat South); Gauri Kanta Talukdar, B.L. (Nalbari); The Hon'ble Srijut Gopinath Bardeol, M.A., B.L. (Kamrup Sadr. South); Mahadhar Bhuyan (Nongong West); Harendra Nath Sarma, B.L. (Indian Planting Assam Valley); Harewar Das, M.A., B.L. (Goalpara North-West); Harinarayon Batauli (Jorhat South); Hem Chandra Hazarika, B.L. (North Lakhimpur); Dr. Jitram Das (Barpeta North); Babu Kamini Kumar Sen, B.L. (Karimgang East); Babu Khagendra Nath Samadhar (Nongong North-East Reserved seat); The Hon'ble Mr. Laksheswar Boroah, B.L. (Dibrugarh East); Lakshmidhar Boroah, B.L. (Kamrup Sadr. South); Mahendranath Choudhury, B.L. (Barpeta South); Manisankar Basumatari (Goalpara South-East); Motiram Bora, M.A., B.L. (Nongong South-East); Prof. Niharan Chandra Laskar, M.A. (Silchar Reserved seat); Nilmani Phukan, B.A. (Jorhat North); The Hon'ble Srijut Omko Kumar Das, B.A. (Tezpur West); Kedarnath Brahmin (Indian Commerce and Industry); Parandhar Sarma, M.A., B.L. (Mangaldai South); Purna Chandra Sarma, B.L. (Nongong North-East); Purnananda Chetia, B.A. (Sibsagar East); Rajendra Nath Barua, B.L. (Golaghat North); The Hon'ble Srijut Raim Nath Das, B.L. (Jorhat North Reserved seat); Babu Ranesh Chandra Das (Chowdhury (Karimgang East Reserved seat); Santosh Kumar Barua, B.A. (Dhubri South); Sarat Chandra Sinha, B.Sc., LL.B. (Dhubri Central); Satindira Mohan Dey (Silchar); Siddhi Nath Sarma, B.L. (Kamrup Sadr. North); Maulavi Abul Majid Ziaosh Shams, B.L. (Dhubri West); Maulavi Muhammad Abul Kashem, B.A. (Dhubri South); Maulavi Abdul Hai, M.Sc., B.L. (Kamrup North); Maulavi Abdul Halim (Lakhimpur); Maulavi Abdul Kuddus Khan (Goalpara East); The Hon'ble Maulavi Abdul Matlib Mazumdar, M.A., B.L. (Hailakandi); Maulavi Syed Abdul Rouf, B.L. (Barpeta); Maulavi Afazuddin Ahmed (Nongong East); Dr. Emran Hussain Chaudhury, D.Sc., Pol.

(Berlin) (Sibsagar); Maulavi Makabir Ali Mozumdar, B.L. (Silchar); Maulavi Md. Maksud Ali, B.A. (Dhubri North); Moulana Md. Mufazzal Hussain (Karimgang South); Maulavi Md. Nazmul Haque, B.L. (Goalpara West); Maulavi Muhammad Rounque (Nongong West); Maulavi Saiful Muhammad Saadulla, M.A., B.L. (Kamrup South); The Hon'ble Moulana Mahomed Tayyebulla, B.L. (Darrang); Vacant (European Planting); J. S. Hardman (European Commerce & Industry); Mrs. Bonily Khongmen, B.A. (Women's Shillong); Binode Kumar J. Sarwan (Labour, Bismarath Dist. Darrang); Chanoo Kheria (Labour Nazira Dist. Sibsagar); Dalbir Singh Lohar (Labour, Tinsukia Dist. Lakhimpur); Dharamdhar Basumatari (Kamrup Tribal Plains); Dhirsing Dauri (Nongong Tribal Plains); The Hon'ble Rev. J. J. M. Nicholas-Roy, B.A. (Backward Areas Hills, Shillong); Karka Dalay Miri (Lakhimpur and Majuli Tribal Plains); Khorsing Terang Maazadar (Backward Areas Hills, Mikir Hills); Larsingh Khyrem (Backward Areas Hills, Jowai); Jangjin Sungma Laskar, M.B.E. (Backward Areas Hills, Garo Hills North); Mantram Parak (Backward Areas Hills, Garo Hills South); P. M. Sarwan, M.A. (Indian Christian); The Hon'ble Srijut Rupnath Brahma, B.L. (Goalpara Tribal Plains).

BIHAR PROVINCE

BIHAR lies between 20°-30' and 27°-30' N. latitude and between 82°-31' and 88°-26' E. longitude and includes the provinces of Bihar and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of West Bengal; on the east by West Bengal and the Bay of Bengal; on the south by the province of Orissa; and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the territories which constitute the Governorship of Bihar is 69,348 square miles. The Province comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters west Bengal near Rajmahal. South of Bihar lies Chota Nagpur. Following the main geographical lines there are four Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur and Ranchi (for Chota Nagpur). The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

Recently the States of Serakela and Kharswan have been incorporated into the Province after prolonged dispute with Orissa. Bihar has also put forward claims along with C.P. to two other States, Sarguja and Jashpur.

THE PEOPLE

The Province has a population of 36,340,151 persons. Even so with 521 persons per square mile, Bihar is more thickly populated than Germany. There are only four towns, which can be classed as cities, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing. Hindus form an overwhelming majority of the population. Though Muslims form about one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 5.7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north-easterly direction.

INDUSTRIES

Although there is a great deal of mineral wealth in Chota Nagpur and important industries are developing in connection with it, still for the bulk of the population of the province agriculture continues to be the basic occupation. Over 30 per cent. of the population depends wholly on agriculture, while only 7.8 depends on industries.

The soil throughout the whole of that portion of the Indo-Gangetic plain lying within the provincial boundaries is extremely fertile, particularly in North Bihar, in parts of which the density of the population is more than 900 people to the square mile. The province occupies a transitional position between Ganges delta with its damp climate so suitable for the paddy crop and the provinces to the north and west where large irrigation schemes have had to be provided to enable the soil to produce its bounty. As in the delta of the Ganges, rice is by far the most important crop as it occupies normally an area of approximately 12 million acres or about 52 per cent. of the net cropped area of the province. The area under rice is about 9,300,000 acres. As canal irrigation is available only in the Sonae valley and to a moderate extent in Champaran district, the importance of the south-west monsoon to the province of Bihar cannot be over-estimated.

H.E. Madhao Shrihari Ancy

In addition to the rice crop, however, other grain crops are grown on a tolerably large scale. Of the monsoon cereals, maize is grown in a normal area of about 16 lakhs of acres while in the cold weather wheat and barley are extensively grown and occupy approximately 13 lakhs of acres. The cultivation of oilseeds like castor, mustard and linseed forms a large and important part of the agriculture of Bihar, the normal area under spring oilseeds being estimated at more than 17 lakhs of acres. The areas under maize, wheat, barley and spring oilseeds are about 1,513,100 acres, 1,220,800 acres, 1,270,100 acres and 1,504,300 acres respectively.

After the United Provinces, Bihar is the most important white-sugar area in India, some 26 per cent. of the total production of white sugar in the country being turned out in Bihar factories. The importance of the agricultural aspect of the industry cannot be overestimated. In 1942-43, for instance, 4 crore of rupees were paid to the growers for cane purchased and crushed by the factories. Apart from this numbers of young graduates and a large labour force find employment at the factories from year to year. The number of factories in the province has risen from 12 in 1931-32 to 31 at the present time.

Jute is also an important crop and is confined almost entirely to the Purnea district on the West Bengal border where about 95 per cent. of the total crop in the province is produced. The total area under jute crop is about 202,200 acres but little of the produce is manufactured within the province.

Tobacco is a crop of increasing importance in the province and one which is likely to expand in importance. The area under the crop is about 110,000 acres. There are two factories at present in the province.

MANUFACTURES

Opium was formerly, with Indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory was closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company

of India, Agricultural Implements, Ltd., Enfield Cable Company of India, Enamelled Ironware, Limited, and Indian Steel Wire Products. The population of Jamshedpur has passed the 100,000 limit and it consumes 13 million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both West Bengal and Bihar with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karampura in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palamau, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac, the latter of which is exported from India to the value of ten crores annually. Cement is the other important industry of the province which is produced from the lime-stones available in Palamau and Shahabad.

ADMINISTRATION

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. It was raised to the status of a Governorship, with an Executive Council and Ministers, under the Reform Act of 1919. The principles of the provincial administration are fully explained elsewhere.

PUBLIC WORKS

The Public Works Department and Irrigation Department are now separate Departments of Government. There are four Chief Engineers, viz. Chief Engineer (Roads & Buildings), Chief Engineer (Irrigation), Chief Engineer (Public Health Engineering Department) and Chief Electrical Engineer & Chief Electric Inspector, Bihar.

Chief Engineer (Buildings & Roads), is in charge of the Buildings and Roads including Aviation and Railways; Chief Engineer (Irrigation), is in charge of the Irrigation and Lift Irrigation; Chief Engineer (Public Health Engineering Department) is in charge of the Public Health Engineering Department. This post has recently been created on a temporary basis for 3 years from the 1st February, 1949.

A new post of Chief Electrical Engineer and Chief Electric Inspector, Bihar, has also been created recently and the Chief Electrical Engineer is in charge of the Electrical Department. In addition to the Chief Engineers who are now heads of Departments, the following officers are attached to the offices of the Chief Engineers, (Irrigation) and (Buildings and Roads):—

Irrigation Section.—Deputy Chief Engineer (Irrigation); Special Officer (Irrigation).

Roads and Buildings.—Special Officer (Communications); Special Officer of Materials & Plant; Bridge Designing Officer; Government Architect & Town Planner.

A personal Assistant to each of the Chief Engineer (Buildings and Roads) and Chief Engineer (Irrigation) of Executive Engineer's rank has also been sanctioned.

The whole organisation of the Public Works Department and Irrigation Department is now under a non-technical Secretary to Government who is assisted by the Deputy Secretary (Non-technical), Under Secretary (Technical) and Additional Under Secretary (Non-technical) in his Secretariat work.

JUSTICE

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsifs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, more important or complicated cases being referred to the District Magistrate who is responsible for the peace of the district. In the Santal Parganas and in the Chota Nagpur Division the Deputy Commissioners and their subordinates hear rent suits. In the Santal Parganas the Deputy Commissioner and his subordinates also exercise civil powers.

LAND TENURE

The whole of the land tenure system will be completely changed by the enactment of the Bihar Abolition of Zamindaris Bill which was passed by both the Houses of the Bihar Legislature in May, 1948. The Bill seeks to provide for the transference to the crown of interests of proprietors and tenure holders in land including their interests in trees, forests, fisheries, "jalkars", ferries, "hats" and "bazzars".

The Bill has been referred to the Government of India for the assent of the Governor-General which is being awaited and in the meanwhile, in view of the urgency of establishing direct relationship between Government and the tenants, Government have decided that pending acquisition of Zamindaris, the estates and tenures should be taken over for management by way of transitional arrangement. Accordingly, the Bihar State Management of Estates and Tenures Bill, 1949 was introduced in the Bihar Legislative Assembly on 7th March, 1949 and the Bill has now been referred to a Select Committee.

At present almost the whole of the province of Bihar is covered by the permanent Settlement of 1793. A number of estates are held direct by Government, having come into the direct management of Government in various ways. Other estates are managed temporarily by the Board of Revenue under the Court of Wards Act, while in Chota Nagpur a number of estates are managed by Managers appointed under the Chota Nagpur Encumbered Estates Act. There are two Tenancy Acts in force in the Province:— In Bihar the Bihar Tenancy Act is in force. This is the same as the Bengal Tenancy Act, 1885, with a number of important differences consequent on recent amendments of the Act. In Chota Nagpur, which is largely inhabited by aboriginal peoples, the Chota Nagpur Tenancy Act, 1908, an Act specially adopted to their requirements, is in force. It has also recently undergone several important amendments beneficial to the people of Chota Nagpur. There is a third tenancy system in the Santal Parganas where the tenancy law is contained in Regulation III of 1872 and II of 1886 and the record-of-rights prepared in the settlement. Finally in a small part of South Bihar where there is a large aboriginal population a special chapter of the Bihar Tenancy Act designed to prevent alienation of land by aborigines is in force.

Throughout the province a system of periodic settlements is in vogue. In these settlements the maps and cadastral ledgers are revised and fair rents settled. In many districts the settlement records are now out of date and in one or two it is nearly 40 years since the last settlement was undertaken.

In the greater part of the Santal Parganas and in many parts of Chota Nagpur the headmen system prevails. The usual practice is that the headmen are responsible for the collection of the rents and their payment to landlords after deduction of a percentage as their remuneration. Special steps have been taken in the settlements to record the rights and duties of the headmen, and the special rights and privileges of certain privileged classes of tenants among the aboriginals.

POLICE

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are five Deputy Inspectors-General and 24 Superintendents. There are also 24 Assistant Superintendents of Police and 48 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. There is a college for the training of

officers and two schools for the training of recruit constables. Both the institutions have selected Police officers on their staff. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. Under this department three Bureaus are working, i.e., Finger Print Bureau, Photo Bureau and the Handwriting Bureau. There are 7 battalions of Unmounted Military Police and seven troops of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties. The battalions of Unmounted Military Police are under the charge of commandants and officers of S.P.'s rank.

EDUCATION

Implementation of important post-war educational schemes has been entrusted to the Director of Public Instruction with a special staff. The Province has made notable progress in the development of basic education.

The mass literacy movement launched in 1938 is being further expanded under an Adult Education Board with its publication and publicity sections working in co-operation with various Departments of Government. The percentage of literacy is 9.2 according to the 1941 census.

The Province has one University, the University of Patna.

INSTITUTIONS

| | 1941-42. | 1946-47. | 1947-48. |
|-------------------------------------|-------------|-------------|-------------|
| Number of arts and science colleges | 16 | 23 | 23 |
| Number of high schools | 204 | 409 | 453 |
| Number of middle schools | 1,230 | 1,542 | 1,644 |
| Number of upper primary schools | 3,845 + 13* | 4,114 + 13* | 4,255 + 13* |
| Number of lower primary schools | 18,418 | 16,133 | 16,582 |

* European schools.

SCHOLARS

There has been likewise a rapid increase in the number of pupils reading in these institutions except primary schools, as table below indicates :

| | 1941-42. | 1946-47. | 1947-48. |
|---|----------|----------|----------|
| Number of scholars in arts and science colleges | 6,497 | 12,767 | 15,155 |
| Do in high schools | 85,120 | 1,40,904 | 160,668 |
| Do in middle schools | 1,53,443 | 2,02,504 | 2,23,476 |
| Do in primary schools | 9,07,970 | 9,06,396 | 9,98,138 |

PERCENTAGE

The percentage of pupils attending schools to the total population has correspondingly increased as the table below will show :

| Percentage of pupils to the total population. | 1941-42. | 1946-47. | 1947-48. |
|---|----------|----------|----------|
| Male | 5.66 | 6.17 | 6.42 |
| Female | .86 | .88 | .91 |
| Total | 3.24 | 3.54 | 3.67 |

EXPENDITURE

The direct expenditure from all sources has also increased as will appear from the figures given below :

| | 1941-42. | 1946-47. | 1947-48. |
|--------------------|-----------|-----------|-------------|
| | Rs. | Rs. | Rs. |
| In arts colleges | 13,44,624 | 20,60,766 | 23,76,340 |
| In high schools | 33,62,825 | 55,47,223 | 74,05,463 |
| In middle schools | 26,47,296 | 40,13,028 | 53,91,837 |
| In primary schools | 54,56,903 | 83,07,424 | 1,23,73,463 |

PUBLIC FUNDS

The net expenditure from public funds, unlike the previous quinquennium, appreciably increased during the present quinquennium as figures below show :

| | 1941-42. | 1946-47. | 1947-48. |
|---------------------------------------|-------------|-------------|-------------|
| | Rs. | Rs. | Rs. |
| Expenditure from Government funds .. | 85,30,094 | 1,14,94,447 | 1,90,50,155 |
| Expenditure from Boards' own funds .. | 20,57,275 | 42,38,820 | 41,86,068 |
| Total public funds .. | 1,05,87,369 | 1,57,33,076 | 2,32,36,223 |

WOMEN'S EDUCATION

The rate of progress in girls' education has been rather slow during the quinquennium as will be clear from the following figures :

| | 1941-42. | 1946-47. | 1947-48. |
|---|----------|----------|----------|
| Number of institutions for girls .. | 2,395 | 2,110 | 2,072 |
| Total number of girls reading in all institutions for boys and girls .. | 1,56,130 | 1,59,297 | 1,78,644 |
| Percentage of girls receiving education to total female population of the province .. | ·86 | ·88 | ·91 |

EXPENDITURE

The table below gives the average expenditure per pupil per year for all kinds of institutions :

| | 1936-37. | 1941-42. | 1942-43. | 1943-44. | 1944-45. | 1945-46. | 1946-47. | 1947-48. |
|------------------------------------|----------|----------|----------|----------|----------|----------|----------|-----------|
| | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. | Rs. a. p. |
| Expenditure, per pupil per year .. | 17 13 | 16 1 | 18 3 | 20 3 | 18 9 | 22 8 | 23 4 | 28 15 |

MEDICAL

The Medical Department is under the control of the Inspector-General of Civil Hospitals. Under him there are 16 Civil Surgeons and one Senior Executive Medical officer of the rank of Civil Surgeon at Saharsa Sub-District who are responsible for the medical work of the districts at the headquarters of which they are stationed. Sixty one hospitals & Dispensaries are maintained by Government in addition to 693 hospitals, and Dispensaries maintained by Local Bodies, Railways, private persons, etc. About 55,00,000 patients including 1,15,000 in patients are treated in all the dispensaries every year. The total expenditure on the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounts to about 47,13,000 a year.

There is a large mental hospital named as Inter Provincial Mental Hospital, formerly known as European Mental Hospital, for Europeans and Indians at Ranchi receiving patients from Assam, Bihar, W. and E. Bengal, Baluchistan, the C. P., the N.W.F.P., Orissa, W. and E. Punjab and the United Provinces and another similar institution for Indians for the treatment of mental patients from Bihar, Orissa and W. and E. Bengal. A sanatorium has been established at Itki in the district of Ranchi for the treatment of tuberculosis. The question of the transfer of patients belonging to Pakistan undergoing treatment at the Inter-Provincial Mental Hospital is under the consideration of the Government of India. There is a Medical College at Patna with a large and well equipped hospital attached to it including an institute for Radium treatment. There is a Medical College at Darbhanga which also has a large hospital attached to it. Centres for anti-rabic treatment have been opened at Patna and other suitable places in the province. Admission to the Medical School at Darbhanga has been stopped since 1946 and a new Medical College for M.B., B.S., students has also been started at Darbhanga from 1946 onwards.

The province has a laboratory for the preparation of cholera-phage and bacterio-phage which are supplied to other provincial Governments for use in the prevention of epidemics.

PUBLIC HEALTH

The Public Health Department aims at the promotion of the well being and the health of the people by the prevention of the epidemic diseases, improvement in sanitation, and nutritional state of the people. All factors that have bearing on health come within the purview of this department. The department is under the control of the Director of Public Health, Bihar. For purposes of efficient public health administration the province has been divided into three circles, known as North Bihar, South Bihar and Chota Nagpur Circle with their headquarters at Muzaffarpur, Patna and Ranchi. The Assistant Directors of Public Health act as reporting and inspecting officers of Government on matters pertaining to the health and sanitation of their respective circles. They also inspect and supervise the working of the public health administration under the local bodies.

There are sixteen districts in the province, each one of them is provided with a Health Officer, who is in direct charge of the Health Administration of the district. Local bodies are responsible for health administration in their own areas. Out of fifty-four Municipalities, eight are provided with Health Officers.

A Senior Officer of this department known as Senior Executive Medical Officer is placed in-charge of the flood affected areas of the Kosi where a special scheme of medical and Public Health relief has been introduced.

The other public health services, maintained by the department are the offices of the Chemical Analyst, Nutrition Department, Bacterio-phage and that of Excise Chemist, which are all located in Public Health Laboratory.

All supplies of vaccine lymph are manufactured at the Vaccine Institute, Namkum. The department maintains two depots, main one at Patna and the Sub-depot at Ranchi where anti-malarial drugs, vaccines, disinfectants and equipments are stocked for supply to local bodies in the province. The department takes special measures for control of epidemics, malaria, kala-azar and plague.

For the medical inspection of schools, four School Medical Officers, one in charge of each of the four divisions of the province are main-

tained. A lady school Medical Officer for the inspection of girl schools is also employed.

The Department carry out Public Health Propaganda by means of leaflets, pamphlets, posters, health exhibitions, slides and films.

The budget of the Public Health Department is about rupees forty lacs every year.

FINANCE

The total revenue of the Province is 22.70 crores (Revised 1948-49) and 24.44 crores (Budget 1949-50) and the total expenditure on the revenue account is 22.80 crores (Revised 1948-49) and 19.17 crores (Budget 1949-50).

I. The main heads of revenue are as follows:—
(Revised 1948-49).

| | |
|---|---------|
| (i) Taxes on Income other than Corporation .. | 6,28.31 |
| (ii) Land Revenue .. | 1,40.00 |
| (iii) Provincial Excise .. | 4,25.00 |
| (iv) Stamps .. | 1,80.00 |
| (v) Other Taxes and Duties .. | 2,62.14 |
| (vi) Extraordinary Receipts .. | 2,40.72 |

II. The main heads of expenditure on beneficial Departments:—

| | |
|------------------------|--------------------|
| | (Revised 1948-49). |
| (i) Education .. | 1,37.35 |
| (ii) Medical .. | 87.07 |
| (iii) Public Health .. | 68.41 |
| (iv) Agriculture .. | 1,08.19 |
| (v) Veterinary .. | 10.97 |
| (vi) Co-operation .. | 32.57 |
| (vii) Industries .. | 33.73 |

ADMINISTRATION

GOVERNOR.

His Excellency Sri Madhao Shrihari Aney.

PERSONAL STAFF.

Secretary to Governor, R. P. N. Sahi.

Military Secretary to Governor, Major R. D. Chandavarkar.

Aide-de-Camp, Captain N. G. Kulkarni.

Honorary A. D. C., Risaldar Major and Hon'y. Capt. Abdul Latif, Khan Bahadur, O.B.I., I.D.S.M., late 2nd Royal Lancers (Gardener's Horse).

CABINET MINISTERS.

Prime Minister, Home Affairs, The Hon'ble Dr. Sri Krishna Sinha.

Minister of Finance, Labour and Supply and Price Control, The Hon'ble Dr. Anugrah Narayan Sinha.

Minister for Development and Transport, The Hon'ble Dr. Salyid Mahmud.

Minister for Public Health and Harijan Welfare, The Hon'ble Mr. Jasraj Chaudhury.

Minister for Irrigation, Public Health (Engineering), Electrification and Legislative, The Hon'ble Mr. Ranchitar Singh.

Minister of Education and Information, The Hon'ble Mr. Budri Nath Verma.

Minister for Revenue, Forest, Excise, and Welfare, The Hon'ble Mr. Krishna Ballabh Sahay.

Minister of L. S. G. and Medical, The Hon'ble Mr. Bhodanand Jha.

Minister for P.W.D. (Roads and Buildings), Cottage Industries and Rehabilitation, The Hon'ble Mr. Abdul Qayyum Ansari.

SECRETARIAT.

Chief Secretary to Government, Political and Appointment Departments, L. P. Singh, I.C.S.

Secretary to Government, Finance Department, P. P. Agarwal, I.C.S.

Secretary to Government, Supply & Price Control Dept., B. D. Pandey, I.C.S.

Secy. to Govt. Res. and Labour Dept., Sinheshwar Prasad Singh.

Secretary to Government, Judicial Department, T. G. N. Ayyar, I.C.S.

Secretary to Govt. P.W.D., T. P. Singh, I.C.S.

Chief Engineer to Govt., M. L. Bahl, I.S.E.

Chief Engineer (Irrigation), D. Mehta, I.S.E.

Dy. Chief Engineer and Dy. Secy. to Govt. (Communications), H. K. Nivas, I.S.E.

Secretary to Government Education Department, Mahabir Prasad.

Secretary to Government, Local Self-Government Department, Muzaffarnagar Division.

Secretary to Government, Legislative Department, Khalilur Rahman.

Secy. to Govt., Development Dept., H. Lal, I.C.S.

Secy. to Govt., Welfare Dept., Pushkar Thakur.

Secy. to Govt., Relief & Rehabilitation Dept., S. N. Roy.

PUBLIC SERVICE COMMISSION (FOR BIHAR & ORISSA)

Chairman, Rajanidhar Singh, C.I.E.

Members, Kanai Prasad, M.S.E. (Cal.), B.A. (Cant.), E. K. Barho, M.A., LL.B.

Secretary, U. Das, B.A. (Hons.), Dip in Edu.

BIHAR LEGISLATURE

President, Bihar Legislative Council, The Hon'ble Mr. Shyamna Prasad Sinha.

Deputy President, Bihar Legislative Council, Shah Muhammad Omar Munani.

Speaker, Bihar Legislative Assembly, The Hon'ble Mr. Vinodheshwar Prasad Varma.

Deputy Speaker, Bihar Legislative Assembly, Deva Shatan Singh.

Secretary, Bihar Legislature, Raghu Nath Prashad.

Deputy Secretary, Bihar Legislature, S. C. Lal.

BOMBAY PROVINCE

THE Bombay Province stretches along the west coast of India, from Gujarat in the north to Kanara in the south. It has an area of 1,14,548 square miles and a population of 29,450,000. These figures are inclusive of the area and population of the Deccan States, the Gujarat States and Kolhapur and Baroda which have all merged with the Bombay Province.

H.E. Sir Maharaj Singh

The Province embraces a wide diversity of soil, climate and people. In the Province there are the rich plains of Gujarat, watered by the Nerbudda and the Tapi, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the Province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Beyond the Ghats are the Deccan districts; south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice growing tract, intercepted by creeks which make communication difficult.

The rainfall of the Province is derived chiefly from the south-west monsoon between June and October. The amount of rainfall varies widely in different areas from 30" to about 150".

THE PEOPLE

The population varies as markedly as soil and climate. Gujarat has remained true to Hinduism although long under the domination of powerful Muslim kings. Here there is an amplitude of caste divisions, and the people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been poisoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it. The population of the Deccan is much more homogeneous than that of Gujarat thirty per cent. being Mahatras. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Three main languages are spoken. Gujarati, Marathi and Konkani with Hindustani a rough *lingua franca* where English has not penetrated. The main castes and tribes number about five hundred.

The following figures give the distribution of population according to communities. (These figures are not inclusive of the States which have merged with Bombay Province):

| | |
|--------------------------|------------|
| Scheduled Castes | 1,855,148 |
| Other Hindus | 14,700,242 |
| Sikhs | 8,011 |
| Jains | 266,231 |
| Buddhists | 1,433 |
| Muslims | 1,920,308 |

| | |
|----------------------|-----------|
| Christians | 375,486 |
| Zoroastrians | 86,270 |
| Jews | 14,741 |
| Tribals | 1,014,298 |
| Others | 7,882 |

AGRICULTURE

The principal occupation is agriculture, which supports sixty-four per cent. of the population. In Gujarat the soils are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugar-cane. The Konkan is a rice land, where the crop is grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailling rainfall in the Ghats, is gradually nearing completion, and this will ultimately make the Deccan immune to serious drought.

More than any other part of India the Bombay Province has been scourged by famine and plague. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

The area actually under cultivation is about 30 million acres of which 1 million acres bear more than one crop.

Details of the acreage under different crops for the total cropped area are as shown below:—

| Food Crops. | Acreage (Figures in thousands) |
|---|-----------------------------------|
| Jowari | 8,073 |

FISHING

Fishing in the Bombay Province is almost entirely confined to an area in the immediate proximity to the coastline. This is due to the frail, dockless fishing craft and the small sized fishing gear used. The coastline is mostly frequented by small varieties of fishes and those in immature stage of development.

Pomfrets, Mackrel and Bombay ducks provide the greatest and most remunerative turnover to the fishermen of this Province.

(For more details see under 'Fisheries').

LIVESTOCK

Information as available with regard to the number and classification of livestock in the Bombay Province is as under:—

| | |
|--|------------|
| Bulls and Bullocks | 3,324,280 |
| Cows | 2,028,729 |
| Calves (young stock) | 2,094,916 |
| Male buffaloes | 229,434 |
| Cow buffaloes | 1,270,311 |
| Buffaloes calves (young stock) | 1,013,824 |
| Sheep | 1,681,205 |
| Goats | 2,108,918 |
| Horses and Ponies | 116,590 |
| Mules, Donkeys, Camels, etc | 73,561 |
| | 13,941,798 |

Per head of bulls and bullocks in the Province there are 8.6 acres of net cultivated land and per head of cow buffaloes and cows in the Province there are 5.4 persons.

The main burden of milk supplies falls on the buffalo.

Bombay is now an important forest. Province being next only to the C.P. and Madras. The total area under forest is 42,998 sq. miles or about 8.3 million acres.

INDUSTRY

The Province of Bombay is not only the leading Province in commerce and trade but is industrially perhaps the most advanced Province in India.

It is one of the most important textile centres of the world. Out of the 117 textile mills in India, 208 mills are located in the Province.

Large scale industry is concentrated in large cities such as Bombay, Ahmedabad, Sholapur, Poona and Satara. Several important industries are carried on, on a cottage scale, all over the Province.

The total number of factories under Sub-Section 2(j) of the Factories Act, 1934, is 2,890.

The major items are textiles, toilet and dress, wood, building, ceramics, metals, chemical products, food industries, hides and skins, furniture industries, production and transmission of mechanical force, and construction of means of transport.

The Province is also richly supplied with resources of hydro-electric power. Though not all these are developed there is still considerable production of electric energy in this Province.

The units sold for industrial purposes are estimated approximately at 400,000,000 a year.

Besides electricity, gas, steam and oil are also used for power purposes. The use of gas is confined to Bombay City. In the mofussil, oil and steam engines play an important part.

With the exception of building stones, salt and manganese ore, this Province does not possess any minerals of commercial importance. Traces of iron have been reported in some of the districts of the Province. Bauxite, so important in the manufacturing of aluminium is reported to be available in three districts of the Province.

The major port is Bombay; other ports of major and minor importance are Mormoa (Portuguese territory), Broach, Surat, Bulsar on the Gujrat coast and Ratnagiri, Dabhol, Malwan, Vengurla and Honavar on the Konkan coast.

The following form the important items of export through and import to, the Bombay port.—

| Export. | Import. |
|------------------|----------------------|
| Cotton. | Bullion. |
| Hides and skins. | Cotton manufactures. |
| Twist and yarn. | Hardware. |
| Grain and seeds. | Metals. |
| Mauganese ore. | Machinery. |
| | Kerosene oil. |

The total mileage of railway in the Province is 2,300 miles, which is a little less than 6 per cent of the total mileage in India. The railway lines are the G.I.P., B.B. & C.I. and M. & S.M.

All over the Province motor transport has made very rapid progress. According to a Bulletin issued by the Indian Roads and Transport Development Association, the total number of motor vehicles in operation in the Province in 1948 March was over 38,826 which included 10,246 private cars, 1,616 taxis, 249 diesel engines and 2,975 petrol run buses, 11,333 lorries and 3,408 motor cycles.

TEXTILE INDUSTRY

Bombay is one of the important centres for the manufacture of cotton textiles in the world and it is the leading Province in India so far as this industry is concerned.

The size and extent of the industry is indicated by the figures given in the following table :—

| | No. of Mills | No. of spindles installed | No. of looms installed | Average No. of hands employed | Approx. quantity of cotton consumed (Cwts) | Approx. yarn production (Lbs.) | Approx. cloth production (Million yards) |
|---|--------------|---------------------------|------------------------|-------------------------------|--|--------------------------------|--|
| Bombay Province including Indian States | 208 | 5,903,167 | 136,196 | 278,179 | 9,373,644 | 899,742,000 | 3,030 |
| Rest of India | 209 | 4,334,964 | 66,198 | 231,599 | 7,808,955 | 746,420,000 | 1,770 |
| Total for India | 417 | 10,238,131 | 202,388 | 509,772 | 17,188,599 | 1,646,162,000 | 4,800 |

HANDLOOMS

The most important of all cottage industries in the Province are the handloom and powerloom weaving industries. Out of the 2 million handlooms in the whole of India Bombay Province has 94,690 handlooms employing about 420,000 members of the weaving community. Out of a total production of about 1,500 million yards in

the whole of India the production for Bombay is about 134 million yards.

Handlooms in the Bombay Province consume about 43 million lbs. of mill yarn and 3.06 million lbs. of handspun yarn.

In addition to the above number of handlooms, there are about 14,000 powerlooms working in cottage and small factories.

There are 34 artificial silk mills in the Province using silk and artificial silk for the manufacture of cloth. The quantity of artificial silk required for handlooms and powerlooms is about 600,000 lbs. per month.

The number of woollen mills, production, etc. in the Province and in India are given in the following table :—

| | No. of Mills | No. of spindles | No. of looms in Mills | No. of handlooms | No. of Powerlooms | Production of yarn (lbs.) | Production of cloth (lbs.) |
|-------------------------|--------------|-----------------|-----------------------|------------------|-------------------|---------------------------|----------------------------|
| Bombay Province | 5 | 28,124 | 440 | 5,600 | 440 | 2,574,144 | 4,707,499 |
| Rest of India | 15 | 59,376 | 2,362 | 99,202 | 1,860 | — | — |

The woollen mills in Bombay Province generally produce woollen and worsted piece goods, woollen and worsted yarn, knitting yarn and hosiery. The handlooms in the Province generally produce coarse blankets (Kambli) of 50" x 108" to the extent of 2.6 million yards valued at Rs. 30.2 lakhs.

and about 12 other small establishments each employing from 6 to 50 workmen. From the point of view of the value of products manufactured, it is estimated that out of the total production in India amounting to nearly Rs. 1,25,00,000, one establishment alone located in Bombay contributes as much as Rs. 1,00,00,000.

There are three firms in India manufacturing cycles on a large scale. One of these which is the largest, is situated in Bombay City. The production capacity of this firm is more than 70,000 cycles per annum but this figure has not so far been attained.

CHEMICAL INDUSTRIES

The Chemical Industries are fairly well developed in this Province, there being a variety in production from commercial chemicals to fine chemicals. In fact so far as commercial chemicals are concerned Bombay Province is, perhaps the only Province engaged in their manufacture. This is so possibly because the consuming industries mainly the Textile Industry which requires a variety of chemicals for dyeing, bleaching and printing is located in this Province.

Bombay has an up-to-date plant for producing sulphuric acid, a heavy chemical most essential for the manufacture of various other commercial chemicals. The production is of the order of ten to twelve thousand tons per year.

Manufacture of salt from sea water by solar evaporation is another industry which exists at a number of centres in this Province.

Industries depending upon the use of salt such as caustic soda, chlorine, soda ash, etc., have also been established.

Bombay and Ahmedabad being the main industrial centres for the textile industry a number of chemical concerns are concentrated at these places. In other places too the industry has been developed on a modern scale mainly for supplying the local requirements.

Fine Chemicals such as are required in Industries are made only on a moderate scale mainly at Bombay, Baroda and Barajadi near Ahmedabad on a moderate scale. This is done with the help which the local industries receive from the technical staff of the educational institutions.

The glass industry has made considerable progress in this Province during the last five to ten years. Most of the requirements of other industries for glass containers have been met from local sources. In fact during the war some of the factories were engaged in supplying the requirements of the Military Department, Royal Indian Navy, Railways, the Bombay Gas Co., etc. They have supplied glass bottles in thousands to the pharmaceutical concerns.

The production capacity of the hollowware is very large and the Province may be in a position to export bottles, and other hollowware.

There are a few firms of repute which have been manufacturing toilet and washing soaps the quality of which compares well with soap of foreign origin.

From the inedible oils paints have been manufactured in large quantities in the Bombay factories. The Industry has grown quickly during war-time and has supplied the requirements of War Departments and the Railways.

MINOR INDUSTRIES

Below are given short notes on a number of minor industries.

In machine tools the main line of production in the Bombay Province are capstan lathes, screw cutting and surfacing lathes, shaping machines, planing machines, drilling machines, polishing machines, sheet metal working machines, sewing machines and a number of power presses. Of the remaining firms, only one manufactures radial drilling machines to Grade II specifications and two more manufacture vertical drilling machines and shaping machines to Grade III specifications. Some concerns manufacture a variety of Grinding machines, lathes, shaping machines, milling machines, etc., all of which are ungraded machine tools. Speaking in general terms, the "Share" of the Bombay Province in respect of Grade I machine tools manufactured in India, both large and small, irrespective of their size and value, comes to nearly 40 per cent.

In 1945 a Bombay firm produced nearly 20,000,000 batteries and dry cells. Another Bombay firm manufactured nearly 13,000 ceiling fans in the same year.

The production of steel safes and cabinets is mainly concentrated in Bombay City. There is one large establishment one medium-scale unit

Good quality varnishes have also been manufactured in fairly large quantities by utilising mainly the linseed oil available in the Province.

During war-time owing to the shortage of supply of pharmaceutical preparations a number of concerns undertook to produce a variety of medical preparations including vaccines, sulphadiazine, liver extracts, injections, etc.

It may also be mentioned that an ammunition factory engaged in the manufacture of war chemicals is located in this Province.

There is a large number of bakeries of small capacity scattered all over the Province. There are, however, no bakeries producing bread on a very large scale.

The number of biscuit factories in the Province is 6 with a total capacity of 6,500 tons per annum.

There are 2 well established concerns with up-to-date machinery and efficient methods of production for the manufacture of sugar confectionery.

Bombay is a surplus Province in respect of 'Vanaspatti' production. There are 6 factories with a combined capacity of 84,000 tons per annum situated in Bombay City, and one situated at Pochora, and 2 factories with a combined capacity of 9,000 tons per annum in Baroda and Porbandar respectively.

The number of Sugar factories in the Bombay Presidency is 12: 3 in Ahmednagar, 2 in Solapur, one in Poona and Satara, 2 in Nasik and 2 in the former Indian States now merged with Bombay.

The daily crushing capacity of each of these factories varies from 1,000 tons to 350 tons. Some of the above factories are also engaged in producing refined spirit from molasses.

There are four paper mills operating in the Province with a maximum capacity of 8,000 tons, and six mills manufacturing boards, with a total capacity of 1,600 tons.

The scope for the production of paper in the Province is almost unlimited. Bamboo can be used as a raw product for making pulp required for paper manufacture. This is available in large quantities in the Kanara Forests, where a pulp mill for manufacturing pulp for producing about 10 to 20 tons per day of paper can be located. Cheap wrapping paper and straw-boards could possibly be manufactured in the West Khandesh District out of grass.

There are 7 big match factories in the Province with a total production in gross boxes of 6.35 million.

TANNING AND LEATHER

There are 29 licensed tanneries in the Province of Bombay mostly located in the city of Bombay at Dharyav. The production is mostly half-tanned leather from goat and sheep skins and cow hides. Except 3 large tanneries where the chrome tanning process is used, the other tanneries adopt the vegetable tanning method. The estimated production of hides and skins in the Province is as follows:—Cow and Buff kind, 900,000; Goat skins, 2,400,000; and Sheep skins, 1,500,000.

The tanning and leather working industries are mostly carried on a cottage scale in the Province and production of hides is not sufficient to meet the demands of the tanners and cottage workers. Therefore, hides have to be imported from other Provinces.

The production of pit-tanned leather is about 300 hides a day and that of chrome-uppers about 300 pieces.

Bombay City is well advanced in the production of specially dressed leather, i.e., case hides, Morocco, roller skins, etc.

The following types of leather goods are manufactured:—Footwear; Travelling requisites and fancy leather goods; Leather goods requirements for Services, i.e., Posts, Police, Railway and Military; and Industrial leather goods for textile mills. There are no large-scale factories for the

manufacture of footwear and other goods but the industry is carried on everywhere in the Province on a cottage scale. It is estimated that about 1 million pairs of Western type of shoes and 5 million pairs of indigenous type of shoes were produced in the Province per annum during the pre-war years. There are also about 30 factories in the cities of Bombay and Ahmedabad manufacturing industrial leather goods such as pickers, for textile and putty mills and about 5 to 7 factories manufacturing picking bands.

COTTAGE INDUSTRIES

The important cottage industries which are carried on in practically every District of the Province are, cotton textiles, tanning and leather work, mechanical and metal, carpentry, wood-work, bamboo and cane work, vegetable oils and pottery.

The production of cocoons have been started on a cottage scale in the Belgaum-Dharwar area and a flature unit is being established. There is scope for the expansion of silk industry in the near future.

The coir industry is carried on an unorganised basis in the Konkan. As a very small percentage of coconut husk is being utilised, there is considerable scope for the expansion of the industry.

A bee-keeping industry has been established in the North Kanara District.

ADMINISTRATION

The Province is divided into three Divisions (each comprising a group of certain number of Districts), i.e., the Northern, Central and the Southern each in charge of a Commissioner. The way the Districts are grouped into Divisions is shown below:

Northern Division:—Ahmedabad; Kaira; Panchmahal; Broach; Surat; Thana; Bombay Sahyadri District; Banaskantha; Sabarkantha; Dangs.

Central Division: East Khandesh; West Khandesh; Nasik; Ahmednagar; Poona; Satara; Solapur.

Southern Division:—Belgaum; Bijapur; Dharwar; Kanara; Ratnagiri; Kolaba.

With the introduction of Provincial Autonomy on April 1, 1937, the administration of the province has been largely altered at the top. There is now a Governor and a Council of Ministers to aid and advise him in all matters. The executive power of the province extends to all matters in which it may legislate.

In the legislative sphere Bombay has a bicameral legislature. One Chamber is known as the Bombay Legislative Assembly and the other as the Bombay Legislative Council. The Council is a permanent body. One third of the members retire every three years and the Assembly, unless sooner dissolved, lasts for five years. The strength of the Assembly is 175 members of whom 39 are Muslims, 3 Indian Christians, 2 Anglo-Indians, 3 Europeans, 2 Landholders, 7 Commerce and Industry, 7 Labour, 1 University and the remaining 120 are Hindus including 15 Scheduled Castes men and 7 Mahatras. There are also six women.

The Legislative Council contains not less than 20 and not more than 30 members of whom not less than three and not more than four are nominated by the Governor. Twenty are elected by general constituencies, 5 by Muslim and 1 by European.

The senior of the Civilian Secretaries is entitled the Chief Secretary.

The Government is in Bombay from November to the end of August; and in Poona from September to October; but the Secretariat always remains in Bombay.

Under the Local Government the Province is administered by three Commissioners namely, the Commissioner for the Northern Division, with headquarters at Ahmedabad, the Central

Division with headquarters at Poona, and the Southern Division with headquarters at Belgaum. Each District is under a Collector who has under him one or more Assistant Collectors, and or Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenue belongs to the State. The village officers are the patil, who is the head of the village both for revenue and police purposes; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each taluka or group of villages is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate has jurisdiction over the whole District. The Commissioners exercise general control over the Districts in their Divisions.

JUSTICE

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and puisne judges, either Civilian, Barristers, or Indian lawyers. Of the lower civil courts, the court of the first instance is that of the Civil Judge recruited from the ranks of local lawyers. The Court of first appeal, is that of the District or Assistant Judge, or of a civil judge (senior division) with special powers. District and Assistant Judges are Indian Civilian or members of the Provincial Service or the Bar.

In cases exceeding Rs. 5,000 in value an appeal from the decision of the Civil or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Province but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates. Capital sentences are subject to confirmation by the High Court.

In some of the principal cities a group of 22 Special Magistrates exercise summary jurisdiction (Bombay has 7 Presidency Magistrates) and a Court of Small Causes, corresponding to the English County Courts.

In the Greater Bombay area two new courts have been established from 16th August 1948 i.e., the Bombay City Civil Court and the Sessions Court for Greater Bombay. The City Civil Court tries civil suits from the Greater Bombay area of value not exceeding Rs. 10,000 while the sessions court for Greater Bombay area cases arising from that area which were formerly tried by the High Court. Appeals from the decisions of these courts lie to the Bombay High Court.

LOCAL SELF-GOVERNMENT

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a district and the latter over a city or town. These bodies are composed of members elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvement. Their funds are derived from cesses on the land revenue, the toll, ferry funds, local taxes and Government grants. The tendency in recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own Chairmen, whilst larger and larger grants are made from the general revenues for water-supply and drainage.

The Bombay Municipal Boroughs Act of 1925 made a great advance in the matter of local self-government in the Province. The Act provided more adequate basis for Municipal Administration in the larger cities of the Bombay Province. The larger municipalities are now styled as Municipal Boroughs and are 32 in number. The executives of these Borough Municipalities are invested with larger powers than before. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings or buildings with an annual rental values of Rs. 12 or with capital value of not less than Rs. 200.

Mention must be made here of the recent amendment of the Bombay Village Panchayat Act, 1933 by which each village panchayat is now entitled to a grant equal to 15 per cent. of the land revenue, or 25 per cent. of the local Fund cess whichever is greater provided the panchayat levies one or other of a list of special taxes. The power of the Nyaya Panchayats which dispense justice to villages have also recently been widened. It is hoped that in the next few years 5,000 self-sufficient and self-reliant village panchayats would come into being to play their proper role in the life of the nation.

A shift in the control of primary education which has vitally affected the powers of local authority has also to be noted. This came about through some of the provisions of the Primary Education Act which was passed by the Assembly at its Poona session in 1947. The new legislation divests district local boards of responsibility for administering primary education in the rural areas because competent authorities hold these local bodies to be incapable of bearing the financial burden and would in any case be inefficient in the administration of education. Although there was a strong case for Government taking complete control of primary education a compromise was agreed to by which local bodies were asked to elect school boards the chairman of which would be associated with the administration of primary education.

A third point which deserves mention is the proposal to build up a Greater Poona and Ahmedabad and endow the whole areas with a Municipal Corporation on the same lines as those of the Bombay Corporation. It is expected that legislation towards this end would be shortly undertaken.

The Public Works Department is under the control of a Chief Engineer who acts as Secretary to the Government. Under him are Superintending Engineers in charge of Circles and Executive Engineers in charge of divisions, and the Electrical Engineer.

There is a chain of protective irrigation works, originating in reservoirs in the dhāt regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhakat, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhindardara, the Mutha canals fed by Lake Fife at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur Madhmeshwar and the Gokak Canal.

POLICE

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Province proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General, of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Fingerprint Bureau. The executive management of the Police in each district and on Railways in the Province proper is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police.

For purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub-divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, or a Deputy Superintendent of Police. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the

Commissioner of Police who is administratively under the control of the Inspector-General of Police.

A sort of voluntary auxiliary police force to help in the maintenance of law and order during a difficult time has been formed in several places in the Bombay Presidency, particularly in the City of Bombay and in Ahmedabad. This force is popularly known as Home Guards. During the communal disturbances towards the end of 1946 and the early months of 1947 it was found that the normal strength of the police was not sufficient to cope with the situation, and to permanently enlarge the force would mean placing a heavy burden on the revenues of the province. The answer to the situation appeared to be the formation of a voluntary body who can be called upon to help the police in moments of grave disorder. Thus the Home or Civic Guards organization was formally constituted in November 1947 in Bombay with headquarters at Churchgate Reclamation, 'F' Road. The strength of the Home Guards in Greater Bombay is about 2,500.

HOME GUARDS

The Home Guards Organisation was started in Greater Bombay on 6th November 1946, by an ordinance known as the Bombay Home Guard Ordinance, as the disturbed conditions in the city owing to communal feeling pointed to the urgent need of securing fuller assistance from the members of public in the maintenance of law and to supplement the ordinary police. The Home Guards Ordinance was later replaced by the Bombay Home Guards Act, 1947. The organisation was started later on in all the Districts of the Province.

The organisation consists of a Commandant-General in charge of the whole force in the Province, a Commandant for each district and such other staff officers as the Commandant-General may consider necessary. The appointment of the Commandants is made by Government from among suitable public men and the posts are purely honorary carrying no remuneration. The Home Guards is a non-political and non-communal organisation. All members have an enrolment, to sign a pledge to the effect that they will, well and truly, serve the Government of Bombay without favour of affection, malice or ill-will or communal or political bias, and will assist to the best of their abilities in the maintenance of peace and prevention of crime against persons and property.

Any person who is between the ages of 20 and 50 and who has studied upto the IV Standard in any of the Regional Languages is eligible for recruitment to the organisation.

Home Guards are trained in squad drill, baton drill, use of arms, control of traffic, elementary law, mob fighting, unarmed combat and guard and escort drill. In addition to these, Home Guards are also trained in First Aid and Fire Fighting. The guards are encouraged to take up social work and lectures are arranged for those who show an aptitude for such type of work.

The Home Guards when called out on duty under Section 4 of the Bombay Home Guards Act, have the same powers, privileges and protection as an officer of police appointed under any Act for the time being in force. The functions of Home Guards mainly consist of guarding of public buildings, patrolling for the prevention of crime and assisting the Police in their ordinary duties. Home Guards are issued with uniforms consisting of two Khaki shirts, two trousers, two caps, one short, ankle boots, anklets, etc.

Although the Home Guards Organisation is a purely voluntary body the members of it are paid a duty allowance of Rs. 2-8-0 per diem whenever they are called on duty under Section 4 of the Act. They are also given a conveyance allowance upto Rs. 5 p.m. for attending parades, etc. in big cities like Bombay, Ahmedabad and Poona, and arrangements are made for washing of uniforms at Government cost.

The present strength of Home Guards in the Province is about 16,000. Half of these have received training in foot and arms drill and in the use of all kinds of weapons such as rifles, sten guns, etc. More attention is paid to the quality of the men recruited and to thorough and efficient training than to the numerical strength of the organisation. A large number of men have been trained in the Regulation of Traffic, First Aid and Fire Fighting.

The Home Guards were called out to assist the police on several occasions in the past. They were called out for the first time during the communal trouble of April 1947. They were then posted in the worst affected areas of Bombay and carried out their duties satisfactorily. They were again called out on the occasion of the Anti-Pakistan Day disturbances and during the disturbances following the assassination of Mahatma Gandhi in January-February 1948, and on several other occasions. The last time they were called out was during the Hyderabad Emergency in September 1948.

The work hitherto done by the Prohibition Guards is now transferred to the Home Guards.

EDUCATION

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Amherst, Ahmedabad and Dhawar. Other Colleges maintained by Government are the Grant Medical College, the Medical College at Poona and Ahmedabad, the Poona and Ahmedabad Colleges of Engineering, the Agriculture College, Veterinary College, School of Art, Law College and the Sydenham College of Commerce. Most of the secondary schools are in private hands. The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City.

The total number of institutions at the end of the year 1946-47 was 23,991. The total number of pupils in recognised institutions was 2,991,115. The recognised institutions consisted of 32 Arts and Science Colleges including the University School of Economics and Sociology, 21 Professional Colleges, 1,181 Secondary Schools and 18,992 Primary Schools and 3,175 special Schools.

There are 21,657 towns and villages in this Province of which 13,433 possessed schools. The area served by a town or village with school was 5.7 square miles.

Altogether there were 2,114,905 pupils under instruction at the end of the year 1946-47. The percentage of pupils in recognised institutions to the total population of the Province was 10.03 as against 9.41 in the preceding year.

The total expenditure on public instruction was Rs. 960.1 lakhs. Out of this amount 46 per cent. was met from Provincial Revenues, 14.8 per cent. from Local Funds, 28.3 per cent. from fees and 10.9 per cent. from other sources.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Province is controlled by the Bombay University which was established in 1857. The constitution of the University underwent considerable changes in virtue of the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing it into closer association with the public and the industrial and commercial and civic life of the people of the Province, to enable it to provide greater facilities for higher education in all branches of learning including Technology and to undertake on a larger scale than before post-graduate teaching and research, while continuing to exercise dual control over the teaching given by colleges affiliated to it from time to time.

The new University Department of Chemical Technology was started in 1953. The authorities of the University, as now constituted, are chiefly the Chancellor, the Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 114 of whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academic questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

With a view to decentralizing higher education Government has accepted in principle the establishment of regional Universities. The Poona University has since begun to function and the universities for the other two regions namely Karnatak and Gujarat will be established shortly.

MEDICAL

The Surgeon-General is the head of the Medical organisation which is essentially a hospital organisation designed to render medical relief to the general population with auxiliary specialist sections providing for medical relief, medical education, laboratory assistance and research. The medical organisation which is the framework of the scheme, is based on the district, as the primary unit. Excluding Bombay City and Suburbs, there is at every district headquarters a hospital styled the 'Civil Hospital' which is owned, staffed, financed and controlled by Government. The Civil Hospital is in charge of a Civil Surgeon and is the centre of the official organisation of medical relief and caters to the needs of the population of the whole district. Subsidiary to it are some Government cottage hospitals and State-aided dispensaries which are scattered throughout the districts. The total number of hospitals and dispensaries in Bombay Province is 449 rural and 316 urban.

Government is particularly anxious to promote medical relief in rural areas. In all 333 centres of Subsidised Medical Practitioners have been opened and more and more centres are started as and when the requisite medical personnel becomes available.

Government has sanctioned the opening of a Homeopathic Hospital in Bombay.

The Bombay Nursing Homes Registration Act, 1949 has been passed and the Bombay Medical Practitioners' Act, 1938 has also been suitably amended.

Formerly there was only one Government Medical College in this Province. With the up-grading of the two Government Medical Schools at Ahmedabad and Poona which formerly prepared students for a Licentiate Diploma into full fledged colleges, preparing students for the M.B.B.S. and post-graduate medical degrees of the University, there are now 3 Government Medical Colleges and with the merger of the Baroda State and the addition of the Medical College at Baroda, there are now four such Government colleges—admitting ordinarily in all 250 students every year. Government has also decided to start one male Medical College in Karnatak.

Provision also exists for the training of nurses and Government maintain two Colleges of Nursing for preliminary training of nurses and will open a third one as soon as accommodation is found for it. There are also schools for the training of nurses at most of the Government Hospitals.

Under the Medical Department is also the Haemkine Institute which is the main centre for medical research and of essential biological products in this Province. The Institute has very well equipped departments for Anti-toxins, Sera and Chemotherapy and also well-organised sections for the manufacture of Vitamin tablets, and solutions for intravenous use, such as Protein Hydrolysate and glucose saline. It also provides for anti-rabies treatment, and clinical pathological service, and serves as the principal laboratory for testing drugs.

PUBLIC HEALTH

The Public Health Department is under the Director of Public Health. For purposes of administration, the Province is divided into 3 Registration Districts, comprising of 6 to 7 revenue districts. Each Registration District is under the charge of an Assistant Director of Public Health. In addition to the three regional Assistant Directors of Public Health, there are four functional Assistant Directors of Public Health, viz., one each for Malaria, Plague, Public Health, Laboratory and Vaccine Institute. There are District Health Officers and subordinate staff under them for most of the revenue districts now.

The Public Health Department is mainly concerned with taking adequate measures for safeguarding the health of the people of this Province. To achieve this object, Subsidised Medical Practitioners are trained in sanitary and public health work; facilities have been provided for training more Sanitary Inspectors; comprehensive schemes for Malaria Control with D.D.T. are under operation in some parts of the Province. Mobile Hospital Units and Hygiene Units are maintained for facilitating measures needed to fight epidemics like Cholera, Plague, Smallpox, etc.; combined Medical and Public Health Units have been opened in several districts to serve the needs of rural areas for providing maternity services at home and hospitalisation of maternity cases, besides arrangements for general medical treatment and training of the rural population in matters affecting health and hygiene generally. Extensive rural Public Health Propaganda is also carried out by the P.H.D. staff through the medium of silent and talkie films, publicity vans, etc.

PUBLIC WORKS

The Public Works Department is under the control of two Chief Engineers—one for Roads and Buildings and the other for Irrigation—

who act as Secretaries to Government. Under them there are Superintending Engineers in charge of Circles and Executive Engineers in charge of Divisions. The Chief Engineers have also under them the Electrical Commissioner with the Government of Bombay, the Electrical Engineer to Government, the Public Health Engineer to Government and the Architect to Government.

There is a chain of protective irrigation works; originating in reservoirs in the Ghat regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha canals fed by Lake Fife at Khadakvasha, the Godavari Canals fed by Lake Beale at Nandur, Madhmeshwar, the Girna Canal fed by Chankapur and the Gokak Canal.

The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16, and the Pravara Canals in 1926-27. The Nira Right Bank Canal was completed in 1937-38 and the Girna Canal in 1909-10. The Wilson Dam at Bhandardara, the second highest yet constructed by engineers the world over, was opened in 1926. The Lloyd Dam at Bhatgar which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened in 1928. It cost Rs. 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 214 million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but it contains only 19 million cubic feet. It cost also nearly 50 per cent. more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch to a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

BUDGET 1949-50

Estimated Revenue for 1949-50—(in thousands of Rupees).

| PRINCIPAL HEADS OF REVENUE. | | Irrigation, Navigation, Embankment, and Drainage Works. | |
|--|----------|---|------------|
| | Rs. | | Rs. |

THE CENTRAL PROVINCES AND BERAR

THE Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 131,686 sq. miles, of which 80,766 are Indian Dominion proper, 17,808 (viz. Berar) held on perpetual lease from H.E.H. the Nizam and the remainder 33,112 held by Feudatory Chiefs. The total population is 16,813,584. Various parts of the Central Provinces passed under British control at different times in the wars and the tumults in the first half of the 19th century and the several parts were amalgamated after the 1861 upheaval into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with H.E.H. the Nizam for the maintenance of the Hyderabad Contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Nizam.

With the taking over of the Mahratt State (Hoshangabad) and the 14 Chhatishgarh States the area of the Province has increased by 33,112 sq. miles, the population by about 4 million and the revenue by about 14 crores.

THE COUNTRY

The Central Provinces may roughly be divided into three tracts of inland, with two intervening ones of plain country. In the north-west, the Vindhya plateau is a broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the most important cotton tracts of India and the wealthiest part of the C. P. proper. The eastern half of the plain lies in the valley of the Wainganga and is mainly a rice-growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Farther east is the far-reaching rice country of Chhatishgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The States of Bastar and Kanker lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

THE PEOPLE

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of the Central Provinces being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new-comers are indicated by the language divisions of the province. Hindi brought in by the Hindustani-speaking peoples of the North, prevails in the North and East, Marathi in Berar and the West and centre of the Central Provinces. Urdu is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent and Gondi 7 per cent.

The effects of invasion are curiously illustrated in Berar, where numbers of Muslims have Hindu names, being descendants of former Hindu officials who on the Muslim invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising

H. E. Mangaldas Mancharam Pakvasa

of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

INDUSTRIES

When Sir Richard Temple became first Chief Commissioner of the C. P., the province was land locked. The only road was that leading in from Jabulpore to Nagpur. The British administration has constructed roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have led to vigorous progress in every department of life.

The prime industry is, of course, agriculture, which is assisted by an agricultural department, which is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the malguzari, or landlord system, ranging with numerous variations, from the great feudatory chiefships, which are on this basis to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay raiyatwari system.

27,540 square miles of the C.P. is Government Reserved forest; in Berar the forest area is about 3,335 square miles, the total forest area being four-seventeenth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste, 65 per cent. of the total land is under cultivation; for the two most advanced districts in the Central Provinces, the proportion averages 81 per cent., while the average figure for the Berar districts is 75 per cent. The cultivated area has extended almost continuously except for the temporary checks caused by bad seasons. Rice is the most extensive single crop of the Central Provinces, covering nearly 40 per cent. of the cropped area. Juar comes next with about 10 per cent., and then wheat with over 7 per cent. Pulses and other cereals used for food and oil-seeds cover nearly 40 per cent. and cotton nearly 3 per cent. In Berar cotton is 34 per cent. and juar 27 per cent., respectively. And then cereals and other cereals and oil-seeds of the cropped area. More than half the working population engaged in agriculture is female.

COMMERCE AND MANUFACTURES

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise also on the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, managed by Messrs. Tata Sons Ltd., were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1942 employed 29,395 persons and raised 6,43,773 tons. Then follows coal mining with an output of 18,36,522 tons and 17,350 persons employed. The Jabulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kind legally so described was 1,208 and 1,217 in 1944 and 1945 respectively the latest period for which returns are available and the number of people employed in them 1,00,850 and 1,10,263 respectively. The same economic influences which are operating in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and industries are fading away, a large development of trade has taken place.

After the introduction of Food Controls, the movements of food crops under the Government of India's Basic Plans, were as under. Exports are indicated (—) and the imports (+). The figures are in tons:—

| Year | Rice | Juar | Wheat |
|-----------------------|---------|---------|---------|
| 1st April—31st March. | | | |
| 1943-44 | 145,000 | —7,000 | +34,000 |
| 1944-45 | 214,000 | —69,000 | +80,000 |
| 1945-46 | 204,000 | —49,000 | +46,000 |
| 1946-47 | 75,000 | +400 | +48,000 |

ADMINISTRATION

The administration of the Central Provinces and Berar is conducted by a Governor who is appointed by the Crown. He is assisted by sixteen Secretaries and fourteen Under-Secretaries. Under the provisions of the Government of India Act, 1935, the administration is conducted by a Governor with a council of ministers, chosen and summoned by him and sworn as members of the council.

This Province, which has a unicameral Legislature, consists of 111 members distributed as follows:—

| Class of constituency or constituencies— | | |
|--|----|------------|
| General Urban | 10 | No. seats. |
| General Rural | 74 | 84 |
| Muhammadian Urban | 2 | |
| Muhammadian Rural | 12 | |
| Women | 3 | |
| Anglo-Indian | 1 | seat. |
| Backward areas & Tribes. | 1 | |
| Commerce | 2 | seats. |
| Landholders | 3 | |
| Labour | 2 | |
| University | 1 | seat. |

Of the 84 General seats 20 seats are reserved for members of the Scheduled castes.

Till the 15th of August 1947 the Legislative Assembly of the Province consisted of 112 elected members but since the 15th of August it consists of 111 members, the European constituency having been abolished as a result of constitutional changes.

The C. P. are divided for administrative purposes into twenty-two districts, each of which is controlled by a Deputy Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector-General of Registration, and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer, the Director of Veterinary Services and a Chief Engineer, Public Works Department, Buildings and Roads and Irrigation Branches, Commissioner of Food Supplies.

The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon (except Mandla, Drug and Balaghat where there are Assistant Surgeons), who is generally also Superintendent of the District Jail except at Nagpur and Jabalpur and District Jails at Raipur, Narsinghpur and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also the Marriage Registrar provided he is of the Christian faith and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; and Indian Administrative Service; (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, including a few Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service.

The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambarid or representative of the proprietary body is executive headman.

JUSTICE

The High Court of Judicature at Nagpur, which was established in January 1936, is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar and the States therein acceded including proceedings against European British subjects and persons jointly charged with European British subjects.

Subordinate to the High Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of civil Judges of the first and second class.

LOCAL SELF-GOVERNMENT

Municipal Administration was first introduced under the Punjab Municipal Act and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope and the C. P. Municipalities Act passed towards the end of the year 1922 has considerably increased the powers of the Municipal Committees. The C. P. Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 22 such bodies in the Province. It is proposed to establish Municipal Corporations at Nagpur and Jabalpur and the bill for this purpose has been passed by the Legislature but has not yet received the assent of the Governor and Governor-General.

The Central Provinces and Berar Village Panchayats Act, 1920 has now been repealed and its place is taken by the Central Provinces and Berar Panchayats Act, 1946 (I of 1947). Under this Act the Village Panchayat is designed to be made a centre of all social, economic and development activities. 3,984 Gram Panchayats and 930 Nyaya Panchayats have been established in the whole province. More panchayats will be shortly established in the integrated Indian States and in the districts of Berar. In the place of Village Panchayat Officer the Director of Panchayats, C.P. and Berar has been appointed with effect from the 10th October 1947.

Under the Central Provinces and Berar Local Self-Government Act of 1920 the units of Local Self-Government administration in the rural areas were District Councils; generally one District Council for one district and a local Board for each tahsil. With the passing of the Central Provinces and Berar Local Government Act of 1948 in the middle of 1948 the District Councils and Local Boards have been abolished and they have been replaced by Janapada Sabhas—one Janapada Sabha for each tahsil or taluq which is now the administrative unit called Janapada under the new Janapada scheme of local self-government. 14 Janapada Sabhas under the new Act were constituted in the integrated Central Provinces States from 1st July 1948 and 82 in the remaining province from the 15th August 1948. The new system seeks to correct the defects of the old system under the British rule which were as follows:—

- (1) The units of administration namely districts (each consisting of several tahsils or taluqs) were too large to admit of intensive and close control.
- (2) Legislative (bye-law making power) and executive functions were concentrated in the same body namely the District Council.
- (3) Efficient and expert administrative staff was not available to the District Councils without an expenditure which was beyond their means and resources.
- (4) The artificial orthodox division between subjects of general district Government administration and subjects of Local Self-Government—the one administered by Government District staff, and the other by District Councils—did not evoke the interest and enthusiasm of the people.
- (5) The District Councils suffered from lack of adequate resources.
- (6) The franchise was limited.

A brief description of the constitution and functions of Janapada Sabhas is given below:—

The jurisdiction of a Janapada Sabha will be confined to a tahsil or taluq—roughly an area of 1,500 to 2,000 square miles and a population of about 2 to 3 lakhs. Big tahsils may be divided into smaller units. A Janapada Sabha will consist of 20 to 40 councillors roughly on the basis of one councillor for 10,000 people. The councillors will be elected both from rural and urban areas of the Janapada on the basis of adult franchise. The Act also provides for securing representation for Harijans, Women and aboriginals. The first constituted Janapada Sabhas are however nominated bodies. The Sabha will be only a deliberative body and concerns itself in important matters. There will be six small Standing committees formed out of the councillors of the Sabha. These committees will deal with administrative matters. There will be a Chief Executive Officer for each Sabha through whom the actual execution of the Janapada work or measures will be carried on. He will be Government servant and will be paid by Government. He will be the Chief Revenue Officer and Chief Magistrate of the Janapada area. He will have under him a Deputy Chief Executive Officer in the person of the local Tahsildar—also a Government servant paid by Government. The Chief Executive Officer will

have the advice and assistance of other Government officers under various departments of Government serving in the Janapada area as far as possible.

The former District Councils had certain compulsory and optional functions to perform. These functions have been considerably enlarged in the new Janapada set up. In addition the Provincial Government would gradually entrust to the Sabhas most of the varied governmental functions pertaining to the local area except matters of law and order, police and revenues of Government. In respect of entrusted Governmental subjects the Sabhas will act as the agents of Government and will be bound to carry out Government policy and instructions.

Janapada Sabhas will have close association with other local authorities in the Janapada area namely the Panchayats, Municipal Committees, regulated Market Committees. These will work independently in their own spheres but the Sabhas will have certain supervisory functions in relation to these. The village Panchayats are actually an integral part of the Janapada scheme and the Sabhas will have general powers of inspection, supervision and control over them.

The Central Provinces and Berar Village Panchayats Act, 1920 has now been repealed and its place taken by the Central Provinces and Berar Panchayats Act, 1946 (I of 1947). Under this Act the Village Panchayat is designed to be made a centre of all social, economic and development activities. 3,984 Gram Panchayats and 930 Nyaya Panchayats have been established in the whole province. More Panchayats will be shortly established in the integrated States and Berar. In the place of Village Panchayat Officer the Director of Panchayats, C.P. and Berar has been appointed with effect from the 10th October 1947.

PUBLIC WORKS

The Public Works Department, which comprises Buildings and Roads and Irrigation Branches, is under the control of the Chief Engineer. There are three permanent and one temporary Superintending Engineers who between them supervise the work of both branches. The Province is fairly well served by a network of roads, but in a number of cases they are not fully bridged and are therefore impassable to traffic at times during the rains.

State irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-03). During the last forty-five years a sum of Rs. 7.25 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula, Mahanadi, Kharung and Manari canals and also Murram Nalla tank, Aree and Chinchbund projects. The last two are under construction.

Three works, viz., the Mahanadi and Wainganga Canals and the Asola Mendha tank, were sanctioned originally as productive works and the remainder were all sanctioned as unproductive works. The three works sanctioned as productive all failed to justify their classification in that category and were transferred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 7,50,428 acres, mainly rice and the income from these works covers more than the expenditure incurred on their maintenance and management.

POLICE

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonnments and the Municipalities, is under one force. The strength is equal to one man per 5.3 square miles of area. The superior officers comprise an

Inspector-General, whose jurisdiction extends to Berar, four Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendent and subordinate officers.

On railways, special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. There is a Police College under the control of a Superintendent of Police at Nagpur and Constables' Schools under the control of Deputy Superintendents at Nagpur and Jabulpore. A special Armed Force of 4,500 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police consisting of 1 Head Constable and 7 Constables for the escort of His Excellency the Governor.

The Central Provinces has no rural police as the term is understood in other Parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

During the war there was an expansion of the District Police and the special Armed Force and the formation of a battalion of special armed constabulary.

EDUCATION

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, assisted by 6 Deputy Directors of Public Instruction, viz. (i) Basic and Primary, (ii) Secondary, (iii) Development, (iv) Technical, (v) Social Education, (vi) Literature, and (vii) Accounts Officer and (viii) a Personal Assistant. The Deputy Directors of Public Instruction, Secondary (Basic and Primary) and Secondary are assisted by Technical Assistant and Deputy Director of Public Instruction (Development) by Assistant. The Deputy Director of Public Instruction (Technical) is assisted by Inspector of Technical Education. The Deputy Director of Social Education is assisted by 1 Educational Publicity Officer, 4 Field workers, 2 Artists, 1 statistician at the centre and 22 Additional District Inspectors of Schools and 66 Assistant District Inspectors of Schools in the districts. Deputy Director of Public Instruction (Literature) is assisted by 4 sub-editors, 4 writers and 1 Manager, 1 Officer-in-charge of Films, 2 cameramen, 2 Film cameramen and 1 Sub-Editor has been sanctioned for centre and 4 organizers, 4 Librarians, 4 curators, 4 Artists, 4 Musicians and 4 tabachis have been sanctioned for Divisional Centres but not appointed yet. In Divisions and Circles he is assisted by 8 Divisional Superintendents of Education and 3 Inspectresses of Schools who are mainly in charge of High and Normal Schools and in Districts by 22 District Inspectors and 7 District Inspectresses of Schools assisted by 130 Assistant District Inspectors of Schools and 8 Assistant District Inspectresses of Schools respectively.

The Secretary to Government and the Under-Secretary to Government in the Education Department are officers of the Central Provinces Educational Service only.

Schools.—Schools are divided into (a) schools for general education and (b) schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main division of schools for general education is into Primary and Secondary. In the Primary Schools teaching is conducted wholly in recognised Indian languages of the province and these schools are known as Primary Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Middle Schools in which instruction is given (a) mainly in a recognised Indian language or (b) mainly in a recognised Indian language

with the option of English as an additional language, or Indian English Middle Schools in which instruction is given in a recognised Indian language but English is a compulsory subject. In the High School classes instruction has been and is being given through the recognised Indian language since 1922 but for the convenience of pupils whose mother tongue is not a recognised Indian language of the locality as also for those who otherwise desire to learn through English, a few English medium sections are still maintained.

Primary Education is mostly under the control of Janapada Municipal Committees and Notified Area Committees. The Primary Education Act empowers local authorities to introduce compulsion and this is in force in several areas.

Technical Education.—Among the schools for Technical education are the Government Engineering School, Nagpur, Technical High School, Jabulpore, and five Government Schools of Handicraft and eight aided Industrial Schools and one reformatory school. The Engineering School teaches up to the diploma standard in Civil, Automobile Engineering, Electrical Engineering, Art and Architecture and is affiliated to the Nagpur University. The Schools of Handicrafts, Industrial Schools have recently been transferred to the Education Department from the Commerce and Industry Department and teach carpentry, blacksmithy, tailoring, shoe-making, cotton-weaving, carpet and durrie-making, toy making and lacquer work, cement and basic manufacturing. They are under the administrative control of the Director of Public Instruction who is assisted by a Deputy Director of Public Instruction (Technical).

Higher Education is under the control of the Nagpur University of which the following are constituent colleges: at Nagpur—Morris College, National College, College of Science, Bishop College, Lavasa Sarayan Technological Institute, City College, Agriculture College (under the Agriculture Department), University College of Law, Central College for Women; and University Training College (for teachers); at Jabulpore—Robertson College, Hitarani City College, Spence Training College (for teachers) and Hitarani Law College; at Amraoti—King Edward College; at Wardha—Commerce College; at Akola—Berar Arts College; at Raipur—Chaitanyashree Arts College and at Bilaspur—Shree Bhagwan Rameshwar Lal Arts College. There is also a Medical School at Nagpur under the Medical Department.

Secondary Education is under the control of the Board of High School Education, on which the University is represented. The Director of Public Instruction is the *Ex officio* Chairman of the Board and is assisted by a Secretary. The High School Certificate awarded by the Board qualifies for entrance to the University.

MEDICAL

The Medical and Public Health Services of the Province are respectively controlled by the Inspector General of Civil Hospitals and Director of Public Health. The Medical Department has made some progress since the year 1911. A striking advance has been made in recent years with urban sanitation. As a medical college has been opened at Nagpur from July 1947, the 1st year and 2nd year students of the Robertson Medical School, Nagpur have been admitted to the Medical College. The 4 years' course in the Robertson Medical School will be abolished after the year 1950. In order to provide medical relief in rural areas, a three years Medical Course has been started from November, 1948 in the Robertson Medical School for Matriculates. The principal medical institutions are the Mayo Hospital at Nagpur (opened in 1874) with accommodation for 222 in-patients; the Victoria Hospital at Jabulpore (opened in 1886) with accommodation for 177 in-patients; the Daga Memorial (Dufferin) Hospital and the Mure Memorial Hospital at Nagpur and the Lady Elgin Hospital

and the Crump Children's Hospital at Jabulpore, these last four being for women and children and can together accommodate 341 in-patients. In addition to these, hospitals for women exist at Chhindwara, Gondia, Saugor, Khandwa, Amraoti, Murizapur, Shegaon and Khamgaon and at all district headquarters where no separate women's hospitals exist, sections have been opened at the main hospitals for the treatment of women by women doctors.

The Mayo Hospital at Nagpur was provincialised in 1923, the Irwin Hospital at Amraoti in 1925, the Victoria Hospital at Jabulpore in 1926 and the Silver Jubilee Hospital at Raipur in 1928. In accordance with recent policy 182 out of 255 local fund dispensaries have been transferred to the administrative and executive control of local bodies or Janapada Sahas concerned. With the object of bringing medical relief within easy reach of the rural population, Government have sanctioned (i) subsidising 22 medical practitioners (allopathic) one in each district; (4); (ii) subsidising 83 vaidyas and hakims, one in each tahsil (14); (iii) establishment of 83 Ayurvedic and Unani dispensaries in each tahsil (58). (The figures in brackets indicate the number in actual operation at present). The Province has one Mental Hospital at Nagpur. Four tuberculosis clinics at Nagpur, Jabulpore, Raipur and Amraoti exist and 40 beds have been reserved at the Pandra Road Sanatorium for the treatment of patients sent by Government.

There is a great deal of eye diseases in the Province and the problem is receiving special attention. An eye mobile dispensary has been started in Nagpur for the Nagpur Division. The C.P. and Berar Blind Relief Association is doing propaganda work and helping the blind. So far, 25 Assistant Medical Officers have been given training in eye work for six months at the Mayo Hospital, Nagpur. These specially trained officers are posted to eye centres in the Province. Anti-rabic treatment is now available at 14 centres in the Province, viz. Nagpur, Jabulpore, Raipur, Akola, Wardha, Hoshangabad, Saugor, Chanda, Chhindwara, Khandwa, Ycetmal, Amraoti, Mungeli, Bilaspur. Nurses training schools exist in 11 hospitals in the Province and these will be enlarged and improved when staff increases.

PUBLIC HEALTH

The Public Health services of the province are controlled by the Director of Public Health. In 1939, a separate cadre of Sub-3 Assistant Health Officers was sanctioned by the Government. An appreciable advance has been made in rural sanitation. The principal institutions working under the Department are:—

1. The Central Provinces Vaccine Institute which was founded in the year 1913. Here, small-pox vaccine lymph is manufactured for the whole province and the neighbouring integrated states. Vaccinators are also trained at the Institute.
2. Public Health Institute established in the year 1928 undertakes the examination both chemical and bacteriological, of samples of water and food stuffs under the Food Adulteration Act. Facilities also exist for the examination of pathological specimens and clinical material of indigent cases of infectious diseases free of charge.
3. There is a Health School at Nagpur, where Health Visitors are trained.
4. The problem of leprosy is being energetically tackled in the province and the department has a leprosy specialist who is in charge of treatment, propaganda and survey work. There are 27 leprosy Assistant Health Officers who are running 56 leprosy centres. Of these, 6 centres are run by the British Empire Leprosy Relief Association (Provincial Branch). Recently the Provincial Government has taken over the Leprosy Home and Hospital at Raipur formerly run by the Raipur Mission to Lepers.

5. There are 116 Assistant Health Officers in charge of epidemic dispensaries (One in each Tahsil).

6. One mechanised travelling dispensary in charge of an Assistant Health Officer with a trained compounder is working under the department. This dispensary visits roadside villages and renders medical aid to the aboriginals.

7. A scheme for eradicating the disease of Yaws is in operation in Chanda and Bilaspur districts where the incidence of Yaws is high. The results are satisfactory.

8. A Nutrition Officer has been appointed. The first task of this Officer is to carry out diet surveys on standard lines, gauge the extent of mal-nutrition and to tackle other problems concerning Nutrition. In addition he has been appointed temporarily as medical supervisor to carry out industrial surveys with a view to improving the health of the industrial concerns in the Province.

9. The following sections have been opened as post-war measures:—

(i) Maternity and Child Welfare Section under Assistant Director of Public Health (M. & C.W.) to reduce infant and maternal mortality in the Province.

(ii) Malaria Section under A.D.P.H. (Malaria) to reduce the incidence of Malaria in the Province by carrying out malaria surveys and control measures. Five anti-malaria units are now operating in highly malarious parts in the Province and four new units are being formed for the integrated States.

(iii) Public Health Engineer Section to assist municipalities in preparing water drainage, town planning and housing schemes and the Janapada Sabhas with regard to the provision of adequate water supply in rural areas.

Training classes for Stockmen-cum-Health Assistants have been opened at Wardha with a view to enabling the trained personnel to render both veterinary and medical first aid in rural areas. In addition they will be carrying certain Public Health Duties like vaccination, inoculation, disinfection of water supply and collection of vital statistics.

Vaccination is compulsory in 114 towns and 27,750 villages out of a total of 119 towns and 38,985 villages respectively.

1949-50 BUDGET

The revenue is estimated at Rs. 18,99.64 lakhs which includes Rs. 1,80 lakhs, as a grant from the centre for development and grow more food schemes and a grant of Rs. 3,27.77 lakhs by way of reimbursement of expenditure to be incurred by the Provincial Government on relief of refugees. The expenditure is estimated at Rs. 18,79.58 lakhs. The year is expected to close with a surplus of Rs. 20.06 lakhs.

New taxes proposed, are revision of the sales tax by curtailing the list of exempted articles and by transferring suitable items from the ordinary list to the list of luxury items, the levy of entertainments duty at an uniform rate of 50 p.c. of the value of the ticket without any exemption, the levy of profession tax at an enhanced rate of Rs. 50 p.a. for incomes above Rs. 10,000, the levy of Money-lenders' Registration fees at Rs. 12 per annum, the enhancement of taxation on private motor vehicles and the levy of a duty on electricity consumed for other than power purposes. Steps have been taken to augment fees and other receipts so as to equate as far as possible the income from fees with the expenditure on the services for which the fees are levied. It has also been decided to enhance the rate of interest on loans to local bodies from 3½ to 4 per cent per annum. The industrial development of the province is the dominating feature of the budget which includes Rs. 40 lakhs for investment in the National Newsprint and Paper Mills Ltd., Rs. 20 lakhs in the Manganese Industry, Rs. 1 lakh in the Gondwana Paints and Minerals Ltd., Rs. 25 lakhs in the New Hindustan Cements Ltd. and Rs. 15 lakhs for the opening up of the Korba and Kamptee Coal Fields. A small provision of Rs. 21,000 has been made for the development of gum and industry.

Education and other grants.—Besides the usual maintenance grants to non-Govt. colleges, provision has been made for an equipment grant to the Nagpur Shikshan Mandal and maintenance grant to the Nagpur University Training College. The Social education scheme designed to impart education for citizenship and enlightened living, the introduction of military education in secondary schools and colleges through the National Cadet Corps are the two distinguishing features of the educational activities of the province. Substantial provision has been made for primary and basic education. In the field of Medical and Public Health administration the encouragement of Ayurveda has been given practical shape by providing for the opening of an Ayurvedic section in the provincialised hospitals and a depot for Indian medicinal herbs. It is proposed to depute some allopathic doctors for training in Ayurveda and a token provision has been made for opening of an Ayurvedic school in the province, to which a 50-bedded hospital will be attached.

In the Agriculture department the scheme for food production will be continued at an increased tempo and for this purpose adequate provision has been made. The construction and repairs of wells, tanks and field embankments, reclamation of weed infested land by mechanical cultivation, the development and manufacture of palm gur and installation of power pumping plant on the river banks are some of the important schemes worthy of mention.

In the Veterinary Department twenty more dispensaries are proposed to be opened in outlying places and it is proposed to introduce as an experimental measure an artificial insemination centre in the province.

In the sphere of co-operation provision has been made for the establishment of a provincial marketing and supply society to enable agriculturists to obtain better prices for their produce and substantial provision has been made for grants to the Co-operative Institutes for education and supervision of primary societies. A token provision has been made for the staff for the administration of the C. P. and Berar Agricultural Warehouse Act, 1917 to provide suitable facilities for storage of agricultural produce.

Secretary to Govt., Food Dept., S. P. Mishra.

Public Service Commission (C. P. and Berar), Chairman, M. B. Moya.

Secretary, Dr. H. C. Seth, M.A., Ph.D.

Members, K. B. L. Agnihotri, K. N. Dave.

T. C. S. Jayaraman, L.C.S. (Offg.), President.

Board of Revenue, C. P. and Berar.

S. W. G. Ophers, Forester, L.C.S., Secy to Governor, C. P. and Berar.

HEADS OF DEPARTMENTS.

Commissioner of Settlements, Director of Land Revenue, Revenue General of Births, Deaths and Marriages and Inspectors-General of Registration, H. R. Mishra.

Chief Conservator of Forests, G. B. Bakshi.

Excise Commissioner and Superintendent of Stamps, H. R. Mishra.

Commissioner of Income-tax, P. D. Swaminathan.

Postmaster-General, Lt.-Col. J. W. C. Lincoln-Gordon.

Accountant-General, T. S. Subramania Iyer.

Inspector-General of Prisons, Lt.-Col. A. S. Garwal.

Inspector General of Police, P. C. Saxena, I.P.

Director of Public Instruction, E. W. Franklin.

Inspector General of Civil Hospital, Lt.-Col. A. S. Garwal.

Director of Public Health, Lt.-Col. A. S. Garwal.

Director of Agriculture, P. D. Nair.

Registrar, Co-operative Societies, G. C. Muktnar.

Chief Engineer, C. B. Ray, I.C.E.

Director of Industries, Dr. K. A. N. Rao, D.S.C.

Director of Veterinary Services, H. B. Suali.

M.R.C.V.S., F.V.M.

CHIEF COMMISSIONERS.

Colonel E. K. Elliot

Col. J. K. Spence (Officiating)

R. Temple (Officiating)

Colonel L. K. Elliot

A. Rizvi (Raipur-Bilaspur-Durg); Dewan Saif Ali Khan (Bhandara-Bhandara-Sena); Hidayat Ali (Amraoti); M. H. Abdulla (Akola); Syed A. R. Shah (Fatehpur); M. Abdur-Rahman Khan (Bhandara); Shrimati Vimalabai Deshpande (Nagpur City); Shrimati Sudha Kumari Chauthan (Jubbulpore); Shrimati Radhabai Goenka (Amraoti-Akola); Major P. Bernard (Anglo-Indian); Thakur Phul Bhanu Shah (Backward Tribes); A. M. Tatherali (Central Provinces, Commerce); S. Singi (Berar Commerce); Beohar Rajendra Sinha (Central Provinces, Northern Landholders); Lt.-Col. Raje P. Rao Bhojle (Central Provinces, Southern Landholders); B. M. Bhandari (Berar Landholders); R. S. Rukar (Trade Union Labour); V. R. Kalappa (Factory Labour); Dr. Syed Minhajul Hasan (University).

EAST PUNJAB PROVINCE

THE East Punjab is the western-most province of the Indian Union. It is in fact the Union's frontier province. Created in the middle of August 1947 it came into being as a result of the partition of the

H. E. Sir Chandulal Trivedi

Punjab. The old Punjab was the land of the five rivers. East Punjab is the land of the two rivers, Sutlej and Beas.

BOUNDARIES

On the north, the boundary starts at the point where the west branch of the Ujh river enters the Punjab Province from the State of Kashmir. The boundary follows the line of that river down the western boundary of Pathankot tehsil to the point where the Pathankot, Shakargarh and Gurdaspur tehsils meet. From this junction of the three tehsils, the boundary follows the line of the Ujh river to its junction with the river Ravi and therefore in line of the river Ravi along the boundary between the tehsils of Batala and Shakargarh, the boundary between the tehsils of Batala and Narowal, the boundary between the tehsils of Ajnala and Narowal and boundary between the tehsils of Ajnala and Shahdara to the point on the river Ravi, where the district of Amritsar is divided from Lahore.

From this point the boundary turns southwards following the boundary between the tehsils of Ajnala and Lahore and then the tehsils of Barn Taran and Lahore to the point where the tehsils of Kasur, Lahore and Barn Taran meet. The line then turns south-westward along with the boundary between the tehsils of Lahore and Kasur to the point where that boundary meets the north-east corner of village Thel Jharollan. It then runs along the eastern boundary of that village to its junction with village Chantianwala, turns along the northern boundary of that village and then runs down the eastern boundary to its junction with village Waigal. It then runs along the eastern boundary of village Waigal to its junction with village Kalla and then along the southern boundary of village Waigal to its junction with village Panhuwan. The boundary then runs down the eastern boundary of village Panhuwan to its junction with a village Gaddoke. The line then runs down the eastern border of villages Gaddoke, Katuni Kalan, to its junction with village Kals and Mastgarh.

It then runs along the southern boundary of Katuni Kalan and then western boundary of

village Kals to its junction with village Khem Karan. The line then runs along the western and southern boundaries of village Khem Karan to its junction with village Maewala. It then runs down the western and southern boundaries of village Maewala proceeding eastward along the boundaries between village Mahulpur on the north and villages Sheikhupura Kuhua, Kamalpuran, Fatehwala and Mahewala. The line then turns northward along the western boundary of village Sajhra to its junction with villages Mahulpur and Machhike. It then turns north-westward along the boundaries between villages Machhike and Sajhra and then proceeds along the boundary between villages Ratoke and Sajhra to the junction between villages Ratoke, Sajhra and Mabbuke. The line then runs north-east between the villages Ratoke and Mabbuke to the junction of villages Ratoke, Mabbuke and Gajjal. From that point the line runs along the boundary between villages Mabbuke and Gajjal, and then turns south along the eastern boundary of village Mabbuke to its junction with village Nagar Aimanpur. It then turns along the north-eastern boundary of village Nagar Aimanpur and runs along its eastern boundary to its junction with village Mastoke. From there it runs along the eastern boundary of village Mastoke where it meets the boundary between the tehsil of Kasur and Ferozepore.

The line then runs in a south westerly direction down the Sutlej river on the boundary between the districts of Lahore and Ferozepore to the point where the districts of Ferozepore, Lahore and Montgomery meet. It continues along the boundary between the districts of Ferozepore and Montgomery to the point where this boundary meets the border of Bahawalpur State. The district boundaries and not the actual course of the Sutlej river in each case constitutes the boundary between the East and West Punjab.

The East Punjab Province is bounded on the north by the State of Kashmir. In the east it extends as far as the river Jamuna. In the south it is bounded by Rajasthan.

East Punjab now includes Jullundur and Ambala Divisions and the Amritsar District of Lahore Division and part of Gurdaspur and Lahore Districts. Altogether it contains 13 districts as compared with 29 in the old undivided Punjab. The names of the Districts are (in the Ambala Division) as follows: Hissar, Rohtak, Gurgaon, Karnal, Ambala and Simla and in the Jullundur Division Kangra, Hoshiarpur, Jullundur, Ludhiana, Ferozepur, Amritsar, Gurdaspur (excluding Shakargarh Tehsil) and certain portions of Kasur Tehsil have also been allotted to East Punjab.

The territory is not homogeneous. In the north-east lie the hill ranges of Shivalak and the Kangra Valley. The Jullundur division contains rich alluvial soil while parts of Ambala Division or Haryana have dry and waterless tracts. Linguistically too the Province is not homogeneous. Punjabi, Western Hindi, Pahari and Rajasthani are all spoken in the different parts of the Province.

The total area of East Punjab is about 35,600 sq. miles and the total population according to the 1941 census figures is 12,409,924. These figures do not, of course, take into account the recent migrations between East and West Punjab. Broadly speaking, however, as many Muslims have left East Punjab as non-Muslims have come in, so that on balance the relative population remains unchanged.

The main languages of the Province are, as already mentioned, Punjabi and Western Hindi, that is to say, Hindustani with an accent. Punjabi is spoken in the whole of the Jullundur Division and part of Ambala District while Western Hindi is the chief language in the

Ambala Division. Two minor languages are 'Eastern Pahari' spoken in the hill tracts of Gurdaspur, Kangra and Simla and Rajasthani spoken in the Western parts of Hissar District bordering on Rajputana. All States in East Punjab have acceded to the Indian Union, and have merged together to form the Patiala and East Punjab States Union. Some States have merged into the Province. With the inauguration of the Dominion the offices of Residents in the States and of Agents to the Governor-General, Punjab States have been abolished.

The thirteen districts of East Punjab offer tremendous possibilities of development. It has been estimated that in the field of agriculture the famine-stricken areas of Rohtak, Hissar and Gurgaon will be turned into thriving and flourishing canal colonies with the construction of the Bhakra Dam at Bhakra on the Sutlej in Bilaspur (now a Chief Commissioner's Province). In addition to irrigation, the project will also generate electric power. The Bhakra and Nanang schemes will open up the south east parts of the Province and provide scope for new industries.

A word about the capital of the new Provinces will not be out of place here. The provisional capital is, of course, Jullundur. The permanent capital, however, it has been decided, will be located in the sub-mountainous area between Rupar and Chandigarh.

The selected site is about 20 miles from Ambala Cantonment on the south of the road which connects Panchkoola with Khara a tehsil headquarters.

The nearest railway station is Chandigarh, at a distance of three miles on the Ambala-Kalka section of the East Punjab railway.

According to an expert engineer, the completion of the capital will take about three years.

The climate of East Punjab is one of extremes. The rainfall in most districts ranges from 15 inches to 25 inches and it is usually sufficient for cultivation without recourse to artificial irrigation. But in the greater part of Ambala Division the margin is so small that except where artificial means exist any material reduction in rainfall means famine.

AGRICULTURE

With the exchange of population, it is not possible to state what percentage of the population depends on Agriculture. Similarly the position regarding the ownership, etc., of the land cannot be indicated unless definite decision is arrived at about the lands vacated by Muslims. The area preserved as forest land in the hills and elsewhere has been reduced to a large extent, being about 7.5 lakh acres as against 12 lakh acres in West Punjab.

Despite many changes due to partition, agriculture continues to be the staple industry of the Province, affording the main means of subsistence to a large proportion of the population. Of the crops grown, wheat is the most important so far as production is concerned. Next in importance to wheat in the matter of total yield is gram.

According to village papers, the total area in the East Punjab in the year 1946-47 was 22,963,800 acres, and its classification under various heads was as follows:—

| | Acres |
|--|------------|
| Forests | 769,400 |
| Not available for cultivation | 6,155,400 |
| Other uncultivated lands excluding current fallows | 2,410,400 |
| Current fallows | 1,639,200 |
| Net area sown during the year | 11,989,400 |

The total area of crop sown in the province was 14,283,400 acres (irrigated 5,219,700 and unirrigated 9,063,700) acres. The area and outturn of principal crops was as shown below:—

| | Area in acres. | Outturn in tons. |
|-------------------|-------------------|---------------------|
| Rice | 465,900 | 197,900 |
| Wheat | 3,113,300 | 1,618,300 |
| Barley | 474,400 | 111,100 |
| Jowar | 488,800 | 52,500 |
| Bajra | 1,829,500 | 212,000 |
| Maize | 887,200 | 336,800 |
| Gram | 2,873,400 | 603,200 |
| Rabi Oil Seeds .. | 347,900 | 47,500 |
| Sugarcane | 342,000 | 414,200 |
| Cotton (Cleaned)— | | |
| Desi | 293,500 | 163,300 |
| Americana | 71,100 | 25,100 |
| | | (in bales) |

The area irrigated by various sources was as follows:—

Government canals 2,760,900; private canals 368,500; tanks 9,800; wells 1,999,800 and other sources 32,000 acres.

The development of irrigation on the completion of Bhakra Dam is expected to lead to a great expansion of the area under wheat. Other important crops are bajra, maize, barley, rice, jowar, oil-seeds (sarsun, taramira, toria, groundnut and sesamum) cotton and sugarcane. The short staple indigenous varieties predominate in East Punjab, the American cotton covering only about 1/3rd of the total area under cotton.

LAND TENURE

The great mass of the landed property in the East Punjab is held by small proprietors, who cultivate their own land in whole or part. The chief characteristic of the tenure generally is, that these proprietors are associated together in village communities, having, to a greater or lesser extent, joint interest; and under the present system of cash payments, limited so as to secure a certain profit to the proprietors, jointly responsible for the payment of the revenue assessed upon the village lands. It is almost an invariable incident of the tenure, that if any of the proprietors wishes to sell his rights, or is obliged to part with them in order to satisfy demands upon him, the other members of the same community have a preferential right to purchase them at the same price as could be obtained from outsiders.

2. In these communities with partial or entire separation of proprietary title, the measure of the rights and liabilities of the proprietors vary very much. It sometimes depends solely upon original acquisition and the operation of the laws of inheritance; in other cases definite shares in the land of a village or sub-division, different from those which would result from the law of inheritance, have been established by custom; in yet other cases, revenue is made not to shares in lands, but to shares in a well or other source of irrigation; and there are also many cases in which no specified shares are acknowledged but the area in the separate possession of each proprietor is the sole measure of his interest.

3. In the Simla hills and in the more mountainous portions of Kangra district the present village communities consist of numerous small hamlets, each with its own group of fields and separate lands, and which had no bond of union until they were united for administrative purposes at the time of the Land Revenue Settlement.

4. In some cases the village communities, while holding and managing the land as proprietors, are bound to pay a quit rent to superior proprietors under whom they hold. The Settlement is made according to circumstances, either with the superior proprietor, who collects the Government revenue as well as his quit rent from the communities, or with the communities in actual possession of the land, who pay the land

revenue to Government and the quit rent to the superior proprietor. In either case the amount which the superior proprietor is entitled to collect is determined at Settlement as well as the amount of land Revenue demand.

5. There are sometimes also proprietors holding lands within the estates of village communities, but who are not members of the communities, and are not entitled to share in the common profit nor liable for anything more than the revenue of their own lands. They are called "Mallikani Qabza". They pay village charges as well as quit rent if any to the proprietary body of the village. The most common examples of this class are the holders of plots at present or formerly revenue free, in which the assignees were allowed to get proprietary possession in consequence of having planted gardens or made other improvements or because they had other claims to consideration in the part of the village community.

The official classification of village tenure is as below:—

- | | |
|---------------|---------------------------------|
| (1) Zamindari | (a) Landlord (Khalis or Wahid). |
| | (b) Communal (Mushtarka). |
| (2) Pattidari | (a) Perfect (Mukamil). |
| | (b) Imperfect (Ghair Mukamil). |
| (3) Bhalchara | (a) Perfect (Mukamil). |
| | (b) Imperfect (Na-Mukamil). |

The Province being preponderantly agricultural, a considerable proportion of the wealth of the people lies in livestock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kangra district and throughout the plains generally. Though the trade in hides and skins has a bright future, for the East Punjab as a whole the industry is not likely to flourish in the new set-up.

INDUSTRY

The industrial economy of the East Punjab is well on its way to recovery after the collapse suffered due to partition. There is a steady improvement in the production of the old concerns and appreciable progress is also being made in the establishment of new factories. Money conditions continue to be difficult but the position in respect of transport and labour has somewhat eased. The number of registered factories in the province has gone up during the last year from 647 to 713 and although accurate figures regarding the workers employed in these factories are not yet available their number is estimated to be well over 40,000. Over 60 per cent of the registered factories and 60 per cent of their workers are concentrated in the border district of Amritsar, Gurdaspur and Ferozepore.

There is a relatively small number of large scale factories in the province. Topping the list is the New Egerton Woollen Mill, Dhariwal, which normally gives employment to about 60,000 workers and produces about one fourth of the total woollen fabrics made in India. The Batala Engineering Co., which is one of the eight biggest concerns in India for the manufacture of machine tools, agricultural implements and certain precision instruments has recently resumed production after about 1½ years of inactivity caused by the disorganization resulting from the partition. Other industrial concerns of note in the province are embroidery mills, absorbent cotton and antiseptic dressing factories, glass and carpet factories and chemical factories at Amritsar, metal foundries at Batala and Jullundur, a paper and pulp mill, a starch factory and a sugar mill at Abdullapur, a plywood factory at Ludhiana, factories manufacturing nuts and bolts at Jullundur and Ludhiana, steel rolling mills at Amritsar, Khanna, Ludhiana and Karnal, tanneries and engineering workshops at Jullundur, fruit preservation factories at Pathankot and factories for the manufacture of scientific apparatus at Ambala and Amritsar.

Ludhiana which is the centre of hosiery industry in East Punjab occupies premier position in this industry in the whole of India. The sports goods industry at Sialkot (now in Pakistan) which has won world wide fame is being re-established at Jullundur where the majority of the non-Muslim financiers and executives responsible for the success of the industry at Sialkot are being resettled.

The small scale and cottage industries in the province are quite numerous and varied. Handloom weaving ranks foremost in importance among these industries and is carried on in almost every village. The most notable among the other cottage industries are the manufacture of blankets and rugs at Panipat, utensil making at Rewari and Jagadhri, hosiery industry at Ludhiana and tanning and wood working in Jullundur and Hoshiarpur. The sericulture industry is expanding gradually and a large number of agriculturists in the sub-mountain districts are increasingly taking to it. The artistic products of the East Punjab e.g. the ivory work of Amritsar and lacquer work of Hoshiarpur is marked by the distinctive genius of the province in craftsmanship and skill. Gold and silver workers are found all over the province.

HEALTH SERVICES

The Medical Department is controlled by the Inspector-General of Civil Hospitals, Punjab. He is assisted by an Assistant Inspector-General of Civil Hospitals, Punjab, and an officer on Special Duty, who are Officers of the Provincial Civil Medical Service of the rank of a Civil Surgeon; and a Personal Assistant of Gazetted rank.

The following health personnel are responsible for the prevention and control of disease and for the carrying out of work designed to improve the health of the people:—

Deputy Director of Health Services (Public Health); Superintendent Vaccine Institute; Officer Incharge, Epidemiological Bureau; Inspectress, Health Centres; Statistical Officer; Provincial Leprosy Officer and Entomologist.

Public Health work is organised in 2 "Ranges" each in charge of an Assistant Director of Public Health. The 13 districts of East Punjab are included in these Ranges.

The basic public health staff for a District is:—

- 1 District Medical Officer of Health, 4 Sanitary Inspectors, 1 Superintendent of Vaccination, 16 Vaccinators.

The basic district staff is reinforced from the following cadres organised for special work:—

A Public Health Corps concerned primarily with the control of epidemic diseases and sanitation in villages.

There are 12 units in the corps each consisting of:—

- 1 Sub-Assistant Health Officer, 1 Sanitary Inspector, 2 Sanitary Supervisors, 12 Sanitary Patrols (Labourers).

One such unit is normally attached to each district.

An anti-malaria organization under the supervision of an Assistant Director of Public Health, Malariaology is functioning in the Province. It consists of 12 units each consisting of:—

- 1 Sub-Assistant Health Officer or Entomological Assistant or Sanitary Inspector; 2 Sanitary Supervisors; 14 Sanitary Patrols; one mistri and 1 Junior Laboratory Assistant.

Problems relating to nutrition are investigated by specially trained staff which includes:—

- 1 Nutrition Officer; 1 Sub-Assistant Health Officer and a Lady Doctor.

Increasing effort is being directed towards ensuring that food-stuffs sold throughout the Province are of good quality. Sixteen Govern-

ment Food Inspectors are employed, in addition to those appointed by local bodies, who regularly sample wholesale and retail stocks. Samples are examined at a Headquarters Laboratory at Ambala.

Government have recently expanded maternity and child welfare work. There are now throughout the Province 65 maternity and child welfare centres staffed by fully trained lady health visitors, who attend to ante-natal and post-natal cases and train the indigenous dais and supervise their work.

An Inspectress of Health Centres supervises the work carried out at the Maternity and Child Welfare Centres and makes her suggestions for further improvement. It is hoped shortly to make a further expansion in the number of existing centres.

Hookworm.—A special organisation for the prevention and treatment of Hookworm disease is in operation in the areas in which this disease is prevalent.

The following personnel carry out the work:—

Eight Units each consisting of 1 Sub-Assistant Health Officer, 1 Dispenser and 1 Peon with an additional Sanitary Inspector for survey work when necessary.

An Anti-leprosy cadre consists of:—

1 Provincial Leprosy Officer, 1 Assistant Leprosy Officer for Kulu, 1 Nurse Dai.

Leprosy surveys are undertaken and measures instituted for the control of the disease.

Whole-time Municipal Medical Officers of Health are employed in the following towns:—

Amritsar, Ferozepore, Jullundur, Ludhiana, Hissar, Rohtak, Ambala, and Simla.

All District & Municipal Medical Officers of Health are Inspectors under the Factories Act and are responsible for ensuring that the rules laid down for safeguarding the health of workers are observed.

There is a Public Health Branch of the Public Works Deptt., which is concerned with the planning and carrying out of work in connection with the provision of water-supplies and drainage and sewerage schemes in towns and villages.

EDUCATION

As a result of partition there has been an unprecedented rush on the Educational Institutions in the East Punjab. Practically all the institutions were overcrowded and in many cases admission to colleges had to be refused to students desiring to study science subjects. Many institutions formerly in the parts now included in West Punjab have started functioning in the East Punjab. Although a majority of educational institutions is under private control, Government maintains 7 Arts Colleges (including two for women), 2 training colleges, one for men and the other for women. One normal school for men, and 6 for women, 75 secondary schools for boys and girls and many centres for Vocational Training. There is one higher grade Medical College. In addition there are 25 technical and industrial schools, for boys and girls, spread all over the province.

The Department of Education is under the charge of the Hon'ble Minister of Finance, who is assisted in the work of administration by the Director of Public Instruction.

POLICE

The Police force is divided into District Police, Railway Police, Criminal Investigation Department and Provincial Armed Police. The combined force is under the control of the Inspector-General, who is a member of the gazetted force has under him two Deputy Inspectors-General in charge of ranges comprising several districts. The Criminal Investigation Department is controlled by the Deputy Inspector-General, who is also in charge of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur in charge of a Principal of the rank of Superintendent of Police. The Railway Police is under an Assistant Inspector-General. The Provincial Armed Police is controlled by a commandant. The District Police are controlled by Superintendents each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

As a Security Measure a National Volunteer Corps has also been created. It is under the control of a Provincial Commandant.

JUSTICE

The administration of Justice is entrusted to a High Court, which is the highest court in East Punjab and Delhi in civil cases, final appellate authority in criminal cases and original civil jurisdiction in special cases.

The Court sits at Simla and is composed of a Chief Justice, five puisne Judges and one additional Judge (either Civilian or Barristers or Advocates). Subordinates to the High Court are the District and Sessions Judges (10 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts.

GOVERNMENT

Prior to the amendment of the Government of India Act in 1919 the head of the administration then covering both the Punjab, East and West was a Lieutenant-Governor, drawn from the ranks of the Indian (Civil) Service. Under the Act of 1919 the province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. With the introduction of part III of the Government of India Act, 1935, this Executive Council has been substituted by a Council of Ministers and the Legislative Council by an enlarged Legislative Assembly with wide powers of legislation and control. With the passing of the Indian Independence Act of 1947, the Province was partitioned and thus the new Province of East Punjab came into existence.

The business of Government as before is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, (4) Medical and Local Government and Industries and (5) Civil Supply Department, four Under-Secretaries, and two Assistant Secretaries. In the Public Works Department, there are five Chief Engineers, two in the Buildings and Roads Branch, one in the Electricity Branch and two in the Irrigation Branch while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The head of the Police Department is Joint Secretary and of the Education Department a Secretary to Government. Under the Governor the province is administered by two Commissioners for Jullundur and Ambala divisions, who exercise general control over the 12 Deputy Commissioners in districts.

The principal heads of Department in the province are given below.

ADMINISTRATION

GOVERNOR, H. E. SIR CHANDULAL MADHAVLAL TRIVEDI, K.C.S.I., C.I.E., O.B.E., I.C.S.

PERSONAL STAFF

Private Secretary, S. K. Chhabra, I.A.S.
Military Secretary, Major P. S. Mehta,
Aide-de-Camp, Captain P. M. Pasricha.

COUNCIL OF MINISTERS

Premier—The Hon'ble Shri Bhim Sen Sachar (Minister for Finance, Excise and Taxation).
Education, Medical and Public Health—The Hon'ble Dr. Gopi Chand Bhargava.

Minister for Public Works Department (Irrigation, Buildings and Roads, including Public Health Engineering and Transport)—The Hon'ble Ch. Lahri Singh.

Minister for Local Self-Government and Labour, —The Hon'ble Shri Prithvi Singh Azad.

Minister for Civil Supplies, Electricity and Industries—The Hon'ble Sardar Ujjal Singh.

Minister for Land Revenue and Relief and Rehabilitation—The Hon'ble Sardar Jogendra Singh Mann.

Minister for Development (Forests, Agriculture, Veterinary and Co-operative Societies)—The Hon'ble Sardar Gurbachan Singh Bajwa.

CIVIL SECRETARIAT

Chief Secretary—M. R. Sachdev, C.I.E., O.R.E., I.C.S.

Secretary, Medical, Local Government and Industries, Departments—A. J. Fletcher, I.C.S.

Secretary, Civil Supplies Department—M. R. Sachdev, C.I.E., O.R.E., I.C.S.

Secretary, Finance Department—K. S. Malhotra, I.A. & A.S.

Home Secretary and Provincial Transport Controller—M. R. Bhaskar Singh.

Additional Secretary, Civil Supplies Department—E. N. Mangat Rai, I.C.S.

Finance Commissioner, Revenue and Development Departments—P. K. Kaul, I.C.S.

Financial Commissioner, Refugees & Rehabilitation Departments—P. N. Thapar, C.I.E., I.C.S.

PUBLIC WORKS DEPARTMENT

Irrigation Branch

Secretary—(General), R. B. Shri Gita Ram Garg, Secretary—(Projects), S. B. Salder Sarup Singh.

Buildings and Roads Branch,
Secretary—(1) E. B. Brij Mohan Lal, I.S.E.
Secretary—(2) P. L. Varma, I.S.E.

MISCELLANEOUS DEPARTMENTS

Director of Agriculture—S. B. S. Lal Singh.
Director of Land Records—Pandit Lakshmi Chander Vashista, P.C.S.

EAST PUNJAB LEGISLATIVE ASSEMBLY

Speaker—Sardar Kapoor Singh, B.A., LL.B.

Secretary—Sardar Abnasha Singh, Bar-at-Law.

Hon'ble Dr. Gopi Chand Bhargava (University); Sardar Swarn Singh, B.A., LL.B. (Jullundur West, Sikh Rural); Sardar Partap Singh, M.A. (Amritsar South, Sikh Rural); Captain Ranjit Singh (Hissar South, General Rural); Hon'ble Shri Prithvi Singh Azad (Ambala and Sindh, Reserved Seat); Sardar Kartar Singh (Ex-member, West Punjab Assembly, representing North-Eastern Towns, General Urban); Chaudhri Krishna Gopal Dutt (Ex-member, West Punjab Assembly, representing North-Eastern Towns, General Urban); Sardar Bachan Singh (Ludhiana Central, Sikh Rural); Badlu Ram Chaudhri (Rohatk Central, General Rural); Thakur Beli Ram, B.A., LL.B. MADRAS PROVINCE

THE Madras Presidency occupies the whole southern portion of the Peninsula, and, with the merger of Banganapalle and Podunkottah, has an area of 125,807 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,250 miles; on the south, on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, and perhaps of Cochin and Vizagapatam are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central tableland on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country; but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

POPULATION

The population of the Presidency was returned at the census of 1941 as 49,840,564, an increase of 5,181,826 over the figure of 1931. With the merger of the two States the population has risen to 50,323,564. The increase between 1931 and 1941 was not uniform. The districts which had suffered most in 1931 tended to show large increases in 1941—Bellary and Agencies were marked illustrations. As a natural corollary to an increase in population the Presidency density has risen. Hindus account for 80.7 per cent. of the Madras population, Muslims 7 per cent. and Christians 4 per cent. The actual number in other communities is inconsiderable. The vast majority of the population is of the Dravidian race and the principal Dravidian languages Tamil and Telugu are spoken by 19 and 18 million persons respectively, 40 per cent. of the population talk Tamil, 37.4 per cent. Telugu, 7.9 per cent. Malayalam, Oriya, Kanarese, Hindustani, Tulu follow in that order with percentages above 1.

The executive authority of the Province is exercised by the Governor who is aided by a Cabinet of 11 Ministers.

The Government of Madras have now taken over the administration of Saurashtra State.

AGRICULTURE AND INDUSTRIES

The principal occupation of the province is agriculture engaging about 68 per cent. of the population. The principal food crops are rice, cholam, ragi and cumbu. The industrial crops are cotton, sugarcane and groundnut. Agricultural education is rapidly progressing in the Presidency. The activities of the Agricultural Department in matters educational consist in the running of two colleges, one at Coimbatore affiliated to the University of Madras, and another at Bapatla in the Guntur District affiliated to the Andhra University, four farm labourer schools, and numerous demonstration farms. Short practical courses in farm management and allied subjects have been instituted at the Agricultural College.

H. E. The Maharaja of Bhavnagar

While paddy which is the staple food of the population, occupies the largest cultivable area, cotton and sugarcane are by no means inconsiderable crops of the province and are receiving close attention at the hands of the local agricultural authorities. The area under cotton irrigated and unirrigated was 1,566,330 acres in 1946-47 and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. From existing good staple areas, improved varieties have been systematically introduced.

A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as an unregistered body under the title of "The United Planters' Association of South India," on which are represented coffee, tea, rubber and a few other minor planting products.

The imports of private merchandise under the head of Seaborne foreign trade was valued in 1947-48 at Rs. 71.32 crores and the exports at Rs. 64.51 crores. As in other provinces, the forest resources are exploited by Government. There are close upon 18,778 square miles of reserved forests.

Forty-seven cotton spinning mills were at work during 1947 with 11,48,257 spindles, eleven cotton weaving mills with 10,125 power looms and forty-five cotton and power loom factories with 1,521 power looms. The number of jute mills at work was four. At the close of the year 1947 the number of the other factories in the Presidency was 3,770. These consisted of oil-mills, rope works, tile works, etc. Tanning is one of the principal industries of the Presidency. Exports of tanned hides, amounted to 15,850 tons valued at Rs. 730.72 lakhs during 1945-46. The manufacturing activities which are under the direction of the Department of Industries are mainly confined to the production of flature silk soap and shark liver oil and ceramic ware. There are a number of indigenous match factories run on cottage lines. It is slowly becoming recognised that the Madras Presidency is one of the most suitable parts of India for sugarcane cultivation and that the several deep-rooted varieties of cane which have been evolved at Coimbatore and require very little water are especially suited for the

conditions which obtain in several areas of the Presidency where they grow better than in the north. The departments of Industries and Agriculture assist the development of the sugar industry by demonstration of the methods of manufacture of white sugar by centrifugals by getting trained sugar technologists, by the award of scholarships and by investigating schemes for starting sugar factories.

EDUCATION

There were at the end of the official year 1946-47 about 37,811 public institutions, ranging from village primary schools to arts and professional colleges, their total strength being about 3,989,685. Special efforts are being made to provide education for boys belonging to the communities eligible for help by the Labour Department. The total expenditure of the Province on education is in the neighbourhood of Rs. 1,296 lakhs.

The principal educational institutions in the province are the Madras, Andhra and Annamalai Universities, the Presidency College, the Christian College, the Loyola College, the Pachaiyappa's College, the Law College, the Queen Mary's College for Women and the Government Muhammadan College, Madras; the Vivekananda College, Mysapore; the St. Joseph's College, Trichinopoly; the American College, Madras; the Madura College, Madura; the St. Aloysius College, Mangalore; the Government College, Kumbakonam; the Government College, A n a n t h p u r; the Government College, Rajahmundry; the Victoria College, Palghat; the Government College, Mangalore; the Government Brown College, Bellary; the Government College, Coimbatore; the Municipal College, Salem; the St. John's College, Palamkottah; the Marine College, Varuycumbal; the Agricultural College, Coimbatore; the Veterinary College, Madras; the Madras Medical College; the Stanley Medical College, Rayapuram (Madras); the Andhra Medical College, Vizagapatam; the Engineering College at Madras (Guindy); the Engineering College, Coimbatore; the Engineering College, A n a n t h p u r; the Engineering College, Vizagapatam; the Teachers' College, Saidapet; the Lady Willington Training College for Women, Madras; the Government Training College, Rajahmundry; the C. R. I. College, Ellore; the Bhimavaram College, Bhimavaram; the Veerasaiva College, Bellary; the Devasthanam College, Tirupathi; the Agricultural College at Bapatla; the Andhra University College of Law, Masulipatam; the V. R. College, Nellore; the Arthur Hopu College of Technology at Coimbatore. The percentage of literacy in the Presidency is 8.1.

CO-OPERATION

The year 1947-48 was one of marked progress. The number of societies increased from 17,057 to 18,933, their membership from 22.10 lakhs to 25.38 lakhs, the working capital from Rs. 5,097.51 lakhs to Rs. 5,660.33 lakhs, the loans issued from Rs. 4,722.85 lakhs to Rs. 4,984.40 lakhs and the divisible profits from Rs. 32.65 lakhs to Rs. 38.88 lakhs. The collections by Central Banks were satisfactory and the percentage of overdues was 5.05 as against 5.2 in 1946-47. There was an increase in the loan business of Land Mortgage Banks, agricultural credit societies and sale societies.

The activities of the Co-operative Stores continued to expand. The sales turnover of both the primaries and the wholesales amounted to Rs. 39.81 crores. There were 1,740 primary stores with 1,474 branches or depots. Their purchases and sales amounted to Rs. 1,863.36 lakhs and Rs. 2,353.76 lakhs as against Rs. 1,713.55 lakhs and Rs. 1,814.93 lakhs, respectively in the previous year. The trade of the wholesales

stores also recorded a fall, the purchases and sales amounting to Rs. 1,391.22 lakhs and Rs. 1,627.59 lakhs against Rs. 1,818.57 and Rs. 1,945.34 lakhs respectively in 1944-45. Some of the important features of the working of the stores were their participation in schemes of statutory rationing and procurement, their sales to non-members, formation of stores societies for the benefit of industrial labourers and extension of the consumers movement in rural areas. The chief reason for the fall in the business of the wholesale stores was the abolition of controls and rationing during the latter part of the year.

The total deposits and borrowings of the Madras Provincial Co-op. Bank increased from Rs. 542.42 lakhs to Rs. 560.54 lakhs in common with all other banks in the country. There was a decrease in its loan business (from Rs. 428.32 lakhs to Rs. 435.54 lakhs) mainly due to the inflow of deposits in most central banks which were able to finance societies in an increasing measure with their own resources. By virtue of its position as the apex bank, the Provincial Bank continued to guide, supervise and control the financial policy of central

banks. The working capital of central banks increased from Rs. 1,384.26 lakhs to Rs. 1,406.96 lakhs. Their total profits increased from Rs. 9.13 lakhs to Rs. 11.81 lakhs. The Madras Co-op. Central Land Mortgage Bank Ltd. made a rapid recovery in its loan business which increased from Rs. 47.66 lakhs in 1946-47 to Rs. 61.55 lakhs in 1947-48. The maximum amount for which the Government have guaranteed the debentures of the Bank is Rs. 450 lakhs. The value of debentures in circulation at the end of 1947-48 was Rs. 341.55 lakhs. A new series of debentures for 50 lakhs was issued by the Bank during the year. Government continued to give short-term advances to the Bank, whenever required.

LAW AND ORDER

The Superior Court for Civil and Criminal Judicial work in the Presidency is the High Court at Madras, which consists of a Chief Justice and fifteen puisne Judges of whom two are temporary. The existing order provides for a maximum of 15 puisne Judges. For the administration of criminal justice there are 31 Sessions Judges

in the Mofussil (including 6 for agency tracts). Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrate, the Subordinate Magistrates and Honorary Magistrates. The administration of civil justice carried on by 26 District Judges and 39 Subordinate Judges and 141 District Munsiffs. In the Presidency Town there are a City Civil Court consisting of two Judges and a Small Cause Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 225 persons in 1947.

The Police department is under an Inspector-General who has six deputies, four in charge of ranges of the Presidency, one in charge of the Railway Police and the Criminal Investigation Department and one in charge of the Madras City Police as Commissioner of Police. A Superintendent is stationed at each district. The sanctioned strength of the Permanent Police Force is 36,939 excluding the Malabar Special Police and the Special Armed Police Units.

BUDGET FOR 1949-50

It is estimated that the present year would close with a deficit of 366 lakhs, which would be made good by a transfer from the Revenue Reserve Fund. Next year there would be a deficit of Rs. 3.9 crores and new taxation would be necessary to make this good. The measures advocated to balance the budget were a removal of exemptions from the payment of sales tax by certain commercial crops, increase of the purchase tax on groundnut and cashewnuts, withdrawal of the exemption enjoyed by tea to tax-free export, the imposition of a tax on cotton sales, a tax of 25 per cent on the increase of properties when sold, a 12½ per cent surcharge on bus fares, a surcharge of 12½ per cent on house tax, a special tax on electricity to be collected from all consumers, a tax on advertisements and crossword puzzles, and a Provincial tax on coffee hotels boarding houses and cinemas.

The following table shows the budget position at a glance :

REVENUE AND EXPENDITURE ON REVENUE ACCOUNT

(ALL FIGURES IN THOUSANDS OF RUPEES)

| | Accounts, 1947-48 | Budget Estimate, 1948-49 | Revised Estimate, 1948-49 | Budget Estimate, 1949-50 |
|--|----------------------|--------------------------------|---------------------------------|--------------------------------|
| (1) Revenue— | | | | |
| Normal (i.e., excluding transfer from the Revenue Reserve Fund). | 50,71,10 | 50,32,31 | 53,38,37 | 51,75,32 |
| (2) Expenditure— | | | | |
| Normal (i.e., excluding transfer to the Revenue Reserve Fund). | 45,58,56 | 55,93,60 | 57,04,08 | 55,66,09 |
| (3) Surplus (+) or Deficit (—) | +5,12,54 | —5,61,29 | —3,65,71 | —3,90,77 |
| (4) Amount transferred to the Revenue Reserve Fund. | —5,10,00 | .. | .. | .. |
| (5) Amount transferred from the Revenue Reserve Fund. | .. | +5,62,00 | +3,66,00 | .. |
| (6) Proceeds of new taxes | .. | .. | .. | +4,00,00 |
| (7) Final surplus | 2,54 | 71 | 29 | 9,23 |

TRANSACTIONS OUTSIDE THE REVENUE ACCOUNT

| | | | | |
|---|---------|-----------|-----------|-----------|
| (1) Receipts (Open market loans and loans from the Central Government). | 6,00,00 | .. | 3,00,00 | .. |
| (NOTE.—Minus figures represent excess of receipts over disbursements). | | | | |
| (2) Disbursements— | | | | |
| (a) Capital expenditure | 6,22,32 | 10,45,68 | 10,36,42 | 12,38,85 |

ADMINISTRATION

THE GOVERNOR

H. E. Commodore Maharaja Rao Shri Sir Krishna Kumarasinhji Bhavsinhji, K.C.S.I., Maharaja of Bhavnagar.

THE GOVERNOR'S PERSONAL STAFF

Private Secretary, Palat Govindan Nair, I.O.S.
Military Secretary, Major Cattamanchi Sivananda Reddy, Maharatta Light Infantry.
Surgeon to His Excellency the Governor, Dr. Etak-lavan Korath Padmanabhan Nambiar, M.B.B.S.
Aide-de-Camps, Captain Rajkumar D. E. Doraiswamy, Maharatta Light Infantry and Captain O. K. Karunakaran, R.I.A.S.C.
Indian Aide-de-Camp, Kisalder C. Narayanaswamy, late of His Excellency the Governor's Body Guard.
Honorary Aide-de-Camps, Lt. Sankaran Pillai, Nilakantan Nair.

THE MINISTRY

Prime Minister, Public & Police, P. Kumaraswamy Raju.
Hindu Religious Endowments and Food, Dr. T. S. S. Rajan.
Public Works and Information, M. Bhaktavatsalam.
Finance, Commercial Taxes, Elections, Agencies, Motor Transport & Registration, B. Gopal Reddy.
Prisons, Court, Law, Forest and Agriculture, K. Madhava Menon.
Land Revenue and Labour, H. Sitarama Reddy.
Education and Public Health, A. B. Shetty.
Local Administration and Co-operation, K. Chandramouli.
Firma Development, Khadi, Cottage Industries, Fisheries, Cinchona and Harijan Uplift, B. Parameshwaran.
Prohibition and Housing, Sanjeeva Reddy.
Industries, C. Perumalswamy Reddlar.

SECRETARIAT

Chief Secretary to Government, K. Ramunni Menon, C.I.E., I.C.S.
Private Secretary to His Excellency the Governor, P. Govindan Nair, I.C.S.
Secretary, Home Department, O. Pulla Reddy, I.C.S.
Secretary, Finance Department, T. N. S. Raghavan, I.C.S.
Secretary, Revenue Department, G. Venkateswara Iyer, O.B.E., I.C.S.
Secretary, Local Administration Department, Rao Sahib R. D. Paul.
Secretary, Education and Public Health Department, M. V. Subramaniam, I.C.S.
Secretary, Public Works Department, T. A. Varghese, I.C.S.
Secretary, Development Department, Vacant.
Secretary, Food Department, Rao Bahadur M. A. Kuttalalugam Pillai.
Secretary, Legal Department, K. V. Rajagopalan.
Secretary, Firma Development Department and Principal Secretary to Honourable Premier, Rao Sahib M. S. Jayanmayakulu Nayudu.

THE DEMANDS FOR GRANTS

The following statement shows at a glance the demands for grants for 1949-50 under the several heads of the budget as compared with the demands made in the Budget for 1948-49 :

EXPENDITURE ON REVENUE ACCOUNT

| | 1948-49 Rs. | 1949-50 Rs. |
|--|---------------------|---------------------|
| Land Revenue | 29,11,300 | 83,94,000 |
| Provincial Excise | 59,57,000 | 76,89,300 |
| Stamps | 20,13,100 | 21,54,000 |
| Forest | 83,56,900 | 83,55,100 |
| Registration | 50,76,700 | 50,16,300 |
| Motor Vehicles Act | 5,13,500 | 5,48,900 |
| Other Taxes and Duties | 1,11,25,400 | 1,23,06,900 |
| Irrigation | 2,12,86,900 | 3,48,35,100 |
| Heads of Provinces, Ministers and H.Q. Staff | 53,71,800 | 49,95,600 |
| Legislative Bodies | 11,26,900 | 28,63,600 |
| District Administration and Miscellaneous | 6,23,08,100 | 5,37,77,000 |
| Administration of Justice | 1,36,28,500 | 1,21,43,800 |

MADRAS LEGISLATIVE COUNCIL

President :—The Hon'ble Rai Bahadur Ramakrishna Rajalinggaru.

Jy. President :—K. Venkataswami Nayudu.

Abdul Latif Farookhi Sahib (*Madras North, Central, Muhammadan*); S. B. Adityan, M.A., Bar-at-Law (*Nominate*); K. T. M. Ahmed Ibrahim Sahib, B.A., B.L. (*Madras South, Muhammadan*); B. Bhima Rao, B.A., B.L. (*Bellary, General*); Mrs. M. S. Chibwala, M.B.E. (*Nominate*); Adusumilli Gopalakrishnaiah (*Krishna, General*); A. Govindacharyulu (*West Godavari, General*); Dr. S. Gurubatham; A. Hameed Sultan Maricar Sahib (*Madras South, Central, Muhammadan*); Mrs. M. Hensman, M.B.E. (*Nominate*); H. M. Jaganathan (*Nominate*); S. Jayaram Reddy, B.A. (*Ramanad, General*); Dr. A. K. John (*Indian Christian*); Rai Bahadur D. Krishnamoorti (*Nominate*); Medai Dalavoy Kumaraswami Mudaliyar (*Tamilnadu, General*); Diwan Bahadur Dr. Sir A. Lakshmanaswami Mudaliyar, M.D., M.B., D.Sc., F.R.C.S., F.A.C.S. (*Nominate*); The Hon'ble Sri K. V. K. Raghaviah Madhava Menon, B.A., B.L. (*Madhya, General*); D. Manjaya Hegde (*South Kanara, General*); K. Manuhasanatha Desai (*Tanjore, General*); K. Muhammed Rahmatullah (*Madras North, Muhammadan*); A. V. S. N. At. Nacappu Chettiyar (*Ramanad, General*); M. Narayana Menon (*Malabar, General*); Motilal Narayana Rao (*West Godavari, General*); B. Narayanaswami Nayudu (*Krishna, General*); K. Natarajan, B.A., B.L. (*Tanjore, General*); The Hon'ble C. Perumalswami Reddiyar (*North Arcot, General*); A. R. L. Pathy (*Nominate*); Thiruvaz Purushotham (*East Godavari, General*); The Hon'ble Dr. T. S. S. Rajan (*Trichinopoly, General*); Nadiappall Ramabhadharaju (*East Godavari, General*); M. S. Sundarama Iyer (*Madura, General*); R. Ramakrishna Nayudu (*Coimbatore, General, Nilgiris, General*); The Hon'ble Rai Bahadur Ramakrishna Rajalinggaru (*Chittoor, General*); S. A. S. Rm. Ramanathan Chettiyar (*Tanjore, General*); Dr. U. Rama Rao (*Madras City, General*); O. P. Ramaswami Reddiyar (*South Arcot, General*); N. Ranga Reddi (*Cuddapah, General*); J. L. P. Roche Victoria (*Indian Christian*); A. S. T. F. Rodriguez (*Indian Christian*); N. Sankara Reddi (*Kurnool, General*); S. K. Satagopa Mudaliyar (*Salem, General*); P. R. K. Sarma (*Nominate*); S. K. Shaik Rowther Sahib (*Madras, West Coast, Muhammadan*); L. Subbarama Reddi (*Nellore, General*); Madri Sundarasanam (*Guntur, General*); R. Surayadasa Rao (*Nominate*); Dr. Seed Tajuddin Sahib (*Madras South, Central, Muhammadan*); K. Upi Sahib (*Madras West Coast, Muhammadan*); Colluru Veerabhadra Rao (*Vizianagaram, General*); P. Veerabhadraswami (*Vizianagaram, General*); Bikkinu Veeraswami (*East Godavari, General*); N. Venkatasubramanian (*Vizianagaram, General*); G. Venkata Reddi, B.A., B.L. (*Anantapur, General*); K. Venkataswami Nayudu (*Madras City, General*).

MADRAS LEGISLATIVE ASSEMBLY

Speaker: The Hon'ble Sri J. Sivashanmukham Pillai.

Deputy Speaker: Srimathi C. Ammannappa Iyengar.

Secretary: D. K. V. Raghava Varma, B.A., B.L.

Deputy Secretary—Secretary to the Council: M. Surya Rao, B.A., B.L.

Assistant Secretary: T. Hanumanthappa, B.A. (Hons.), B.L.

Alladi Aaron Rao (*Guntur cum Nellore, Indian Christian*); Khan Sahib Abdul Hameed (*Kurnool, Muhammadan, Rural*); Haji Mouli (*Abdul Kader Jami Sahib, Ramanad, Muhammadan, Rural*); M. S. Abdul Mujib Sahib, B.A. (*Chingleput cum South Arcot, Muhammadan, Rural*); Abdul Rahman (*Tinnevely, Muhammadan, Rural*); Haji K. M. Ahmad Kutty Sahib (*Malappuram, Muhammadan, Rural*); Srimathi C. Ammannappa Iyengar (*Ellore Town,*

Women, General, Rural); K. Ananda Nambiar (*Railway Trade Union, Labour*); B. Ananthachari (*Hospet, General, Rural*); Srimathi Anjali Ammal (*Cuddalore, Women, General, Rural*); N. ORISSA PROVINCE

H. E. Asaf Ali

LIKE Sind, Orissa was constituted a separate Province on April 1, 1936, by the Government of India (Constitution of Orissa) Order, 1936. Whereas Sind was a separate geographical, ethnological and linguistic unit inside the administrative boundary of the Bombay Presidency, the new Province of Orissa is the result of partial amalgamation of various Oriya-speaking peoples who had till then belonged to three separate Provinces, viz., Madras, Bihar and Orissa and Central Provinces.

HISTORY

The Oriyas trace their traditions as far back as the days of Mahabharata when there was a kingdom of Utkal embracing a wide territory. Through successive conquests and annexations in the historical period, the kingdom of Kalinga, the later name of Utkal, extended in the 12th century from the River Ganga in the north to the River Godavari in Madras Presidency in the south. Besides, there were kingdoms in the far south upto the banks of the River Cauvery which bore allegiance to the Kings of the Ganga dynasty of Orissa.

Tradition says that the Oriyas of those days were a great race whose maritime traders established colonies in Java, Bali and Sumatra, etc., in the East Indies and on the Maraban coast in Burma. There are ruins of Orissa architecture in these places which fully bear out the tradition.

The art, architecture and literature of the period also were of a very high order. The temples of Lord Jagannath at Puri, of Sun-God at Konarak and that of Siva at Bhubaneswar and the stone embankments of the Rivers Mahanadi and Kathjori at Cuttack are still considered to be marvels of engineering skill surpassed by none either in the ancient or the modern world. Puri still remains among the greatest spiritual centres of the Hindu world.

Orissa lost its Independence in 1565 A.D. and the kingdom was broken up. The dismembered people under alien rule gradually lost race consciousness, although common language and literature continued to act as a link to bind them together.

Orissa ceded to the Marhattas by Alivardi Khan in 1751, was conquered by the British in 1803. In 1804, a Board of two Commissioners was appointed to administer the Province but in the following year it was designated the District of Cuttack and was placed in charge of a Collector, Judge and Magistrate. In 1823 it was split up into the three regulation districts of Cuttack, Bala-

sore and Puri. The non-regulation Tributary States continued to be administered by their own chiefs under the aegis of the British Government. Angul, one of these Tributary States, was annexed in 1847 and with the Khondmals, ceded in 1835 by the Tributary chief of the Bhaudh State, constituted a separate non-regulation district. Sambalpur was transferred from the Central Provinces to Orissa in 1905. These districts formed an outlying tract of the Bengal Presidency till 1912 when they were transferred to Bihar constituting one of its divisions under a Commissioner. Thus as we already stated Orissa proper, considered as a linguistic and cultural whole, was long divided between Bihar, Central Provinces and Madras.

Race consciousness was, however, revived with the spirit of education under the British regime and after the great famine of 1866, Sir Stafford Northcote suggested the separation of Orissa from Bengal. The proposal was turned down but the patriotic fervour underlying the new move persisted and gave rise to a series of fresh demands.

AMALGAMATION WITH BIHAR

The first stage of success was achieved in 1912 when the Orissa portion separated from Bengal together with the district of Sambalpur separated from Central Provinces, was amalgamated with Bihar to form what came to be known as the Province of Bihar and Orissa. Although the position of the Oriyas and of the States of Orissa improved the formation of the new Province of Bihar and Orissa, it fell far short of the expectations of Oriyas; and the advocates of Oriya unity continued to press their claim for the formation of Orissa into a distinct administrative unit. E. S. Montague and Lord Chelmsford saw the reasonableness of this claim and generally favoured the redistribution of Provinces on a linguistic basis for the success of responsible Government. They left it, however, to the Provincial Governments concerned to formulate opinion and make concrete proposals after the advent of the Montford constitution in 1920.

The Bihar and Orissa Legislative Council was opposed to a change in the *status quo* while the debate in Madras Council proved inconclusive. The Madras Government, however, was against the surrender of any of its territory while the Central Provinces Government had an open mind.

The Government of India then appointed what is called the Phillip-Duff Committee to make local inquiries with a view to ascertaining the attitude of the Oriya-speaking people in the north of the Madras Presidency on the question of union with Orissa. Messrs. C. L. Phillip and A. C. Duff reported that there was "a genuine, long-standing and deep-seated desire on the part of the educated Oriya classes of the Oriya-speaking tracts for amalgamation of these tracts with Orissa under one administration."

The next stage came with the appointment of the Simon Commission which recommended the creation of a separate administrative unit for Orissa, agreeing with the Oriyas' contention that under the autonomous conditions proposed by the Commission, the Oriyas would be an ineffective minority in Madras, Bengal, Bihar and Orissa and Central Provinces.

SEPARATE PROVINCE

When the idea of a federation of autonomous units was put forward at the first Round Table Conference, the Oriyas' demand was presented in a well-reasoned statement by the Maharaja (then Raja) of Parlakimedi who asked for a separate Province for Orissa. "We want a separate Province of our own on the basis of language and race," he said. "So that we can be a homogeneous unit with feelings of contentment and peace to realise, and be benefited by the projected reforms and look forward to the day when the United States of India will consist of small federated states based on common language and race."

The Oriyas' demand derived adventitious support from the strength of the Muslim claim for the constitution of Sind as a separate Province. Those who supported the case of Sind at the Round Table Conference could not oppose the Oriyas' claim, which, therefore, came to be recognised as valid.

In Sept., 1931, the Government of India appointed the O'Donnell Committee to examine and report on the financial and other consequences of setting up a separate administration for Orissa and to make recommendations regarding the boundaries in the event of separation. The Committee recommended the creation of a new Province including the Orissa division, Angul, the Khariar Zamindari of the Raipur district and the greater part of the Ganjam district and the Vizagapatnam agency tract. According to the Committee, the new Orissa Province was to have an area of 32,681 sq. miles and a population of about 8,174,000. On the question of financial and other consequences of separation, the Committee made recommendations generally on the lines of the Sind Committee.

In January, 1936, an Order-in-Council was issued by His Majesty's Government constituting Orissa as a separate Province to be brought into line with other Provincial units on the inauguration of provincial autonomy on April 1, 1937.

POPULATION

The area of the Province with the integrated States is 59,800 sq. miles with a total population of 1,37,67,988 according to the latest available reports. The figures of the classification of the population by community are: Hindus (excluding Scheduled Castes) 81,91,423; Scheduled Castes 18,04,624; Muslims 1,65,661; Indian Christians 36,732 and the tribes 3,609,548.

The Province consists of 6 districts—Jhalasore, Cuttack, Ganjam, Koraput, Puri and Sambalpur. In December 1947, 23 states acceded to the Indian Dominion, and in November 1948, Mayurbhanj State also acceded. All the 24 States are now administered by the Government of Orissa. The acceded areas have gone to form 5 independent districts viz.—Mayurbhanj, Keonjhar, Dhenkanal, Bolagiri-Patna and Sundergarh and the remaining States 11 in number have been attached to the neighbouring districts.

CONGRESS GOVERNMENT

Sir John Austen Hubback, K.C.S.I., I.C.S., was appointed the first Governor of the infant province. He held the governorship from April 1, 1936 to March 31, 1941, when Sir William Hawthorne Lewis succeeded him. The third Governor, Sir Chandulal Madhavlal Trivedi, K.C.S.I., I.C.S., held office from April 1, 1946 till Dr. Kailas Nath Katju, M.A., LL.D., was appointed as the Governor on 15th August, 1947 under the new constitution.

The first general elections under the constitution which established Orissa as a separate Province resulted in a clear majority for the Congress Party. Out of 56 elective seats in the Assembly (four are nominated, making a total of 60) the Congress counted 36 as its adherents. The Governor thereupon summoned the leader of the Congress Party to form a ministry but the latter, under directions from party headquarters, declined to do so unless he was given certain assurances by the Governor in regard to the Governor's special powers, etc. After prolonged negotiations this point was amicably settled and the Congress Party leader formed a cabinet and took over the administration.

Late in 1937, the Legislature decided that the capital of the Province should be located at Cuttack-Choudwar.

The working of responsible Government in the infant Province was threatened with interruption twice in 1938—once early in the year and next sometime about the middle. The first of the two crises did not relate directly to Orissa but the second did. Briefly the facts were as follows:

Sir John Hubback the Governor wished to go on leave for reasons of health. Someone had to take his place while he was away and the man chosen to fill the post was the Revenue Commissioner of the same Province. The appointment was, of course, in keeping with tradition as the Chief Commissioner was the senior most official in the Province. But the situation was unusual as there was a responsible ministry in office. Naturally the Prime Minister opposed the appointment on the ground that it was wrong in principle and insulting to his sense of self-respect to ask a Minister to work under a Governor who only the other day took his orders from the self-same minister and would continue to do so on reversion to his former post after the Governor's return. The Premier's complaint was finally taken up by the Congress and Mahatma Gandhi and at one time it looked as though the whole question would assume all-India dimensions. Fortunately however a crisis was averted through the public-spiritedness and sense of self-sacrifice of Sir John Hubback who offered to stay on and postpone his leave.

SECTION 93 RULE

Thus assured of a period of peaceful progress, the Province continued to be administered by the Congress Ministry for some months when in the autumn of 1939 its career was suddenly cut short by the political crisis which overtook all the Congress administered Provinces. The Orissa ministry resigned along with other Congress cabinets and there being no prospect of formation of an alternative Government with any reasonable chance of stability, the Governor, as in other similarly situated Provinces, assumed charge of the entire Province under section 93 of the Government of India Act, 1935. By a resolution in Parliament in April, 1940, this act of emergency was approved and the period of its operation extended by a year. In the absence of a ministry, the Governor administered the province with the aid of an Adviser.

With the object of replacing the Governor's rule by a popular administration for the purpose of organising an all out effort against the Axis-powers the Opposition party led by the Maharaja of Paralakhemundi joined with a number of seceders from the Congress Party and formed a ministry which assumed office on November 24, 1941. The Government at once came up against strong opposition including several motions of non-confidence. The purely political difficulties however disappeared when the majority of the Congress M.L.A.'s were arrested and detained in August, 1942. But the Government encountered trouble of a different nature. There was an India-wide shortage of foodgrains; free trade in grain which was established by the Central Government led to such heavy drain of foodstuffs from surplus Provinces that deaths due to malnutrition and starvation began to occur in large numbers. The privation and distress which followed were just as acute and widespread as in Bengal though they created much less stir in the country.

SECOND CONGRESS GOVERNMENT

In the summer of 1944, the United Nationalist Party's coalition ministry broke up and the Province once again came under section 93 of the Government of India Act, 1935, and was administered by two Advisers, viz., S.L. Marwood, C.I.E., I.C.S., and B. K. Gokhale, C.I.E., I.C.S. The Advisers' rule terminated after 14 years when the second general elections under the new constitution took place after all the Congress M.L.A.'s had been released. As a result of the new elections, the Congress Party captured 40 out of 56 elective seats (including 4 seats for Scheduled Castes), in a House of 80 members.

The most notable occurrence during the present regime is the merger of 25 so-called Orissa States with the Province proper.

It had all along been a dream of the Oriya-speaking people to become united under a single administration with a view to secure cultural and administrative unity. Both the Rulers of the Oriya States and the people realised this as a historical necessity with the result that

for the first time all the Oriya people have been brought together under a single administration and their political unity secured.

EDUCATION

The percentage of literacy in the Province of Orissa as per census figures of 1941 is 9.6.

The Utkal University is an affiliating and examining University. Due to the integration of Orissa States with the Province the number of Colleges rose from 15 to 16 of which 12 are arts Colleges, 2 oriental colleges and 2 professional colleges (medical and education). Of the 12 arts colleges, 9 are first grade colleges including the Womens College at Cuttack and Rajendra College at Bolangir in the acceded areas and 3 second grade Colleges. Seven degree colleges including the Womens College, two professional colleges, one oriental college and a second grade college are maintained by Government and the rest by private agencies. The management of the M. R. College at Paralakhemundi has been temporarily taken over by Government. The Rajendra College provides teaching of Commerce upto Intermediate stage. The total number of scholars in all the colleges on 31st March 1948 was 4,011 (3,809 men and 202 women).

The total number of recognised schools in the Province including the acceded areas on 31st March 1948 was 8,992 which includes 100 special schools. The schools for general education include 122 high schools (115 for boys and 7 for girls), 362 middle schools (334 for boys and 28 for girls) and 8,392 primary schools (8,001 for boys and 241 for girls) as against 89 (83 for boys and 6 for girls), 273 (253 for boys and 20 for girls) and 6,615 (6,409 for boys and 206 for girls) respectively last year.

The number of special schools for boys rose from 147 to 185 and that for girls remained stationary at 4. They consist of one Engineering school, 27 training schools (24 for men and 3 for women) 16 industrial and technical schools (15 for men and one for women), 2 commercial schools, 2 schools for adults, one reformatory school, one school for defectives, 139 other schools (134 toils and 5 madrasas) and one Gymnasium.

Besides there were 913 unrecognised institutions (909 for males and 4 for females which include 18 institutions for males in the acceded areas) as against 826 (822 for males and 4 for females of last year).

The total number of pupils in all the schools for general education on 31st March 1948 was 4,32,954 including 93,388 girls and 4,734 in special schools including 177 girls.

Besides normal growth of education in the Province, provisions have been made for development of education in general at every stage for both sexes under Post-War Development Schemes, special emphasis has been given for education of scheduled caste, backward and hill tribe students by way of granting scholarships and stipends. Basic training schools and junior basic primary schools have been started for implementation of the scheme of Basic Education in the Province. Physical Education has also been encouraged.

PUBLIC HEALTH

The Health organisation under local bodies has been provincialised temporarily and its permanent retention with expansion of staff is under consideration of Government. Since integration of Orissa States having an area of 27,748 square miles with a population of 49,94,570 an Assistant Director of Public Health has been appointed exclusively to be in charge of Public Health administration of states area. Besides this there are two more Assistant Directors of Public Health, one for North and the other for the South Orissa Circles. All Assistant Directors of Public Health are attached to the office of the Director of Health and Inspector General of Prisons, Orissa.

The Provincial malaria unit with its all round expansion is continuing in the Public Health Directorate. Besides two Malaria control units established one for Cuttack District and the other for Koraput Dist., four new Malaria

control units one for each of the Districts of Puri, Balasore, Sambalpur, and Ganjam have been established. Anti-mosquito and anti-larval measures are taken effectively and extensively. Steps are also taken for distribution of Anti-Malaria drugs to the rural people. The towns of Cuttack, Jajpur and Kendrapara were sprayed with D.D.T. and the results were very encouraging.

Schemes for provision of drainage and water supply in Municipal towns are under the consideration of Government. A sum of Rs. 5,00,000 has been sanctioned by Government for improvement of rural water supply.

In order to take timely measures to deal with any epidemic and to reduce the loss of Human life to a reducible minimum Government have established Mobile Field Hygiene Units in each District for operation in rural areas. Additional temporary health staff are also engaged to control the epidemic as and when situation warrants. A Health Inspectors' Training Class and a Refresher course for Health Inspectors are held to train candidates as Health Inspectors and to keep the Health Inspectors abreast of the up to date method of preventive measures respectively. Two qualified Health Inspectors have been appointed to carry out Survey and resurvey work on human Nutrition under the direct supervision of an Assistant Director of Public Health.

Sufficient quantity of milk powder and Multi-Vitamin tablets are distributed among expectant and nursing mothers through the Maternity Centres and among deserving patients through Hospitals and Public Health Staff in the Province.

The leprosy staff of the Provincial Leprosy relief Association has been provincialised from 1st March, 1948 on a permanent basis.

Besides the Orissa Medical College Hospital at Cuttack, there are State hospitals in the District Headquarters and sub-divisional headquarters which have been recently provincialised.

Orissa Medical College.—There was a Medical School at Cuttack started in 1885 which was preparing students for the L.M.P. Diploma. In 1944 the Medical School was converted into a Medical College with a 5 years degree (M.B.B.S.) course. The College is affiliated to the Utkal University. Recently a condensed M.B.B.S. course was introduced in the college for affording facilities to the licentiates to qualify themselves for the M.B.B.S. degree.

A Midwifery Training School at Berhampur has been established. It is now proposed to expand it. The question of establishing a Health School is also under consideration.

The training of technicians and laboratory assistants has also been undertaken in addition to the compoundership and dressership training at the Orissa Medical College. Training of *dais* under the auspices of the Victoria Memorial Scholarship Fund has also been started. A refresher course has also been organised for practising *dais*.

Government have detailed a number of their officers for advance training in various branches of Medicine to foreign countries, and also to various places in India.

Medical Relief Centres.—There are maternity and child-welfare centres at Cuttack, Puri, Balasore, Berhampur, Bargarh and Russelkonda managed by local committees with Government aid. The question of provincialising these centres is under active consideration. The centre at Sambalpur has already been provincialised.

In addition to this it is proposed to open 6 similar centres in each District of the province in the rural areas except in Koraput where only 5 are considered to be enough.

All the District Headquarters Hospitals of the Province have since been taken over by Government. Steps are being taken to provide them with (1) efficient and adequate staff, (2) adequate accommodation, (3) X-ray, ambulance and

laboratory facilities, (4) air-conditioned operation theatre, (5) properly organised out-door department, (6) clinics for (a) tuberculosis, (b) venereal diseases, (c) leprosy, (7) six beds for Tuberculosis patients, (8) incinerators and (9) properly equipped maternity sections.

An infectious diseases Hospital has already been established at Puri.

There is no separate tuberculosis hospital or sanatorium in this Province, the establishment of which is nearing completion. A Supt. for the hospital has been appointed and a spacious building in Dhenkanal made available for the purpose.

Orissa has no separate mental hospital of its own but shares it at Kanke with Bihar and Bengal.

Sufficient amount is being spent for the treatment of venereal diseases cases.

The staff of the Medical Directorate was augmented by the appointment of an Assistant Director of Health and an Assistant Inspector General of Prisons, and one Assistant Director of Public Health for States. Consequently on the integration of 23 Orissa States, 6 Headquarters Hospitals and 117 Hospitals and dispensaries were taken over under Government control, 18 Ayurvedic and 3 Homeopathic Dispensaries were also taken over. The staff of these Institutions have been reorganised on the lines of Orissa proper and funds for providing equipment have been made available.

LOCAL SELF-GOVERNMENT

Local self-government in the Province has not yet a uniform pattern everywhere; three northern coastal districts for instance follow the Bihar and Orissa laws. In south Orissa districts the Madras Laws, and in the western district of Sambalpur, the Sambalpur L.S.G. Act, 1939 and Bihar and Orissa Municipal Act, 1922 are in force. This lack of uniformity has resulted in a great deal of confusion in the sphere of local self-government. Plans are however included in the post-war five-year programme to remodel and improve the general condition of the local bodies and unify the L.S.G. Laws.

The Orissa Gram Panchayat Act has been passed. A unified and consolidated local Government bill for the whole Province has to be introduced in the current session of the Legislative Assembly. A public Health Act, unified Municipal Act, Town improvement Act for Orissa are under consideration. It is also proposed to control the practice of Homeopathic and Ayurvedic system of treatment by legislation.

IRRIGATION AND PUBLIC WORKS

More than half of the Orissa coastal plains is formed by the combined deltas of the rivers Mahanadi, Brahmini and Baitarani, with their numerous branches and this area is partly exposed to damage through floods which are frequent. A flood protection policy has been carefully worked out by Government and is being gradually implemented. Orissa inherited a canal system, constructed in the latter half of the nineteenth century by a private company for combined navigation and irrigation purposes. The demand for water for cultivation is not so great as was anticipated at the time and the canal system has a very slight margin of profit now that the capital debt has been taken over by the Government of India. From the point of national food resources and famine insurance, however, it is most important.

Under the Grow More Food scheme many small irrigation projects have been put through in the Province with partial financial assistance from the Centre.

In the post-war five-year plan an ambitious scheme has been prepared for a multi-purpose reservoir on the Mahanadi river at Hirakud near Sambalpur. This reservoir will control excess flooding in the Mahanadi delta, provide electric power and also be used for the irrigation of a considerable area. Further projects on the

control and utilization of the Mahanadi river on the model of the Tennessee Valley Authority are the two multi-purpose reservoirs further downstream.

Hirakud Dam near Sambalpur is expected to cost about Rs. 47-81 crores; work has been started and will be carried out by C.W.I.N.C. (on behalf of Orissa Government).

The 1937 proposal to establish the new Capital of Orissa in Cuttack was revised in 1946 and it is now decided that the new Capital will be constructed in a new and spacious site, north of Bhubaneswar, the famous Hindu shrine. The site selected is an uninhabited high land with many natural drainages. Dr. O. H. Koenigsberger, a well-known Architect and Town-planner who has been engaged by the Government for the preparation of the master plan for the New Capital, has already prepared it and according to his layout, the actual construction of buildings has been taken up well in hand. The construction of buildings, roads, etc. as contemplated in the project estimate (costing Rs. 5.4 crores) is expected to be completed in about 2½ years' time.

The new capital site will be connected with Orissa and the rest of India by the conversion of the existing old trunk road into a National High-way with bridges over the present unbridged rivers. The construction of the new bridges and the improvement of existing roads up to the new road standard of National High-ways, Provincial High-ways, Major District Roads, etc., has already started under the first of two five-year programmes so that in 10 years time all the important towns and villages in the Province will have all-weather communications.

AGRICULTURE AND INDUSTRY

The Director of Development, who was also Director of Industries, Director of Veterinary Services and Registrar, Co-operative Societies remained in charge of the Department upto the end of March, 1945, when due to increased work in the Agricultural Department brought about by the introduction of a large scale production campaign, a separate post of Director of Agriculture was created for Orissa on April 1st, 1945, and Dr. P. Parjia, O.B.E., D.Sc., M.A. (Cantab.), I.R.S. (Retd.), was appointed to the post. He was succeeded by Sri K. P. Padhi M.A., on 1st October 1948.

The Director of Agriculture is assisted on the Food Production side by three Agricultural Engineers including one Drilling Engineer, one Biochemist, an Assistant Director of Agriculture for multiplication of improved seeds, a Fruit Development Officer, and a Fruit Technologist attached to the Headquarters office and District Food Production Officers in the Districts. These officers attend to the subsidised distribution of seeds and manure, including hiring out of improved agricultural machines and implements to cultivators and sinking of tube-wells and also to general propaganda work. A staff of one Overseer or Sub-overseer and two fieldmen is maintained at every Police Station.

Consequent on the integration of Orissa States to assist the Grow More Food Campaign in the Province six new agricultural districts under six district Food Production Officers have been created. For close supervision and efficient administration of the department the province has been divided into two ranges in charge of two Assistant Directors and many of the routine duties of the Director have been delegated to these range officers. The department has now taken up the reclamation of waste lands on a large scale with the help of tractors and an Assistant Director in charge and an Agricultural Engineer, Land Reclamation have been appointed for the purpose.

Advance of cash loans under the Land Irrigation Loans Act and Agricultural Loans Act, on a subsidised basis for helping the Grow More Food Scheme is done by a Special staff under the District Collectors.

Irrigation projects which are expected to bring in large areas of new lands under cultivation are now being done under a Chief Engineer, Irrigation who is of the Development Department.

Smaller irrigation works of the Food Production Campaign are however in charge of an Engineer who is attached to the office of the Director of Agriculture.

On the research and experimental side, Agriculture Department has a Deputy Director of Agriculture, two Economic Botanists, one Horticulturist, a Mycologist, an Entomologist and an Agricultural Chemist. Rice is by far the staple crop of the Province. A small quantity of jute is produced also. Steps are being taken to increase the jute acreage in consonance with the All-India Policy of growing more jute to make the country self-sufficient in this valuable crop. Cereals and sugarcane are also grown for local consumption. Turmeric is extensively cultivated in the uplands of the district of Ganjam and practically the whole of it is exported. A research station for coconut has been established at Satyabadi in the District of Puri to evolve better types of seeds and propagate larger cultivation.

Establishment of two textile mills one at Chowdwar and the other at Kapilash Road and the establishment of a vegetable ghee plant at Berhampur are nearing completion. Arrangements have also been made for the installation of certain new sugar mills, paper mills, and card board mill, a cement plant, a steel alloy plant and a factory for manufacture of tractors as part of the post-war development programme.

1949-50 BUDGET

With the integration of 23 Orissa States (excluding Mayurbhanj State) with the Province, the revenue and expenditure of the Government of Orissa have increased. Two separate budgets have, however, been prepared. The estimated revenue of the year 1949-50 is Rs. 8.90 lakhs for the Province and Rs. 3.43.13 lakhs for the States. The latter figure includes a grant-in-aid of Rs. 82.68 lakhs from the Provincial revenue to the States area.

The principal sources of revenue are:—

| | Province. | States. |
|---|-------------------------------|---------|
| | (Figures in lakhs of rupees.) | |
| Taxes on Income other than Corporation Tax. | 146.55 | 1.87 |
| Land Revenue | 54.17 | 38.11 |
| Provident Excise | 125.00 | 37.35 |
| Stamp | 38.49 | 5.01 |
| Forest | 23.76 | 47.22 |
| Other Taxes and duties. | 60.49 | 32.53 |
| Miscellaneous Department | | 16.09 |
| Civil Works | 105.48 | 1.48 |
| Subvention from the Centre | 120.00 | |
| Extraordinary receipts | 151.56 | 148.00 |
| The substantial increase under Civil Works in the Provincial area is due to transfer to revenue of the deposits in the Fund for Orissa buildings and to inclusion of Rs. 7½ lakhs representing the balance of the promised grant of Rs. 132 lakhs from the Central Government for expenditure on new Capital at Bhubaneswar. The revenue of the province shown under "Extraordinary Receipts" includes a block grant of Rs. 1.35 lakhs from the Government of India in connection with Post-war Development Schemes and anticipated further grant of Rs. 16½ lakhs for Rural Welfare Schemes. | | |

Receipts other than Revenue receipts for the Province proper are estimated to be Rs. 30.39.74 lakhs including a loan of Rs. 8,61.99 lakhs from the Central Government. This together with the opening balance of Rs. 60.94 lakhs makes up a total of Rs. 39,80.68 lakhs for budget purposes. As to States Area Receipts other than Revenue receipts are estimated to be Rs. 84.01 lakhs, which together with the opening balance of Rs. 32.30 lakhs, make up a total of Rs. 8,95.74 lakhs.

The total expenditure charged to revenue is estimated at Rs. 8,76.09 lakhs for the Province proper and Rs. 3,42.56 lakhs for the States Area. The main items of expenditure are as follows:—

| | Province. | States Area. |
|---|-----------|--------------|
| (Figures in lakhs of rupees.) | | |
| Land Revenue .. | 12.51 | 5.53 |
| Provincial Excise .. | 12.51 | 5.76 |
| Forest .. | 10.19 | 16.94 |
| Appropriation for reduction or avoidance of Debt .. | 16.69 | .. |
| General Administration .. | 71.23 | 41.25 |
| Administration of Justice. | 11.80 | 6.10 |
| Police .. | 77.31 | 50.99 |
| Education .. | 81.39 | 38.91 |
| Medical .. | 27.27 | 17.75 |
| Public Health .. | 29.97 | 8.84 |
| Agriculture .. | 48.35 | 24.74 |
| Veterinary .. | 10.55 | 6.40 |
| Industries .. | 16.36 | 6.26 |
| Miscellaneous Department .. | 23.40 | 28.98 |
| Civil Works .. | 2,43.89 | 36.97 |
| Territorial & Political pensions .. | .. | 19.32 |
| Pension .. | 14.77 | 1.61 |

The total expenditure not charged to revenue is estimated at Rs. 29,07.09 lakhs for the Province and at Rs. 53.18 lakhs for the States Area.

The following amounts have been included in the Budget for financing new Schemes:—

| | Ordinary. | Post-war. | Total. |
|-------------------------------|-----------|-----------|---------|
| (Figures in lakhs of rupees.) | | | |
| Province .. | 1,05.18 | 79.26 | 1,84.44 |
| States .. | 22.40 | 74.68 | 97.08 |

The Budget Estimate for 1949-50 reveals a revenue surplus of Rs. 13.91 lakhs so far as the Province proper is concerned.

A grant-in-aid of Rs. 82.68 lakhs having been proposed from the provincial revenues as already stated the revenue and expenditure of the States Area Budget for the year balance.

ADMINISTRATION

Governor.—His Excellency Asaf Ali, Barrister-at-Law.

Secretary to His Excellency the Governor.—Bhabanrahi Misra.

Aid-de-camp.—Sri N. Mahanti.

Premier, Home, Finance, and Planning and Reconstruction and River Valley Development.—Hon'ble Sri Harekrishna Mahatab.

Minister for Law, Development, Commerce and Labour.—Hon'ble Sri Nityananda Kanungo.

Minister for Education, Health and Local Self Government.—Hon'ble Sri Lingaraj Misra.

Minister for Public Works.—Hon'ble Sri Lall Ranjit Singh Baraha.

Minister for Rural Welfare and Public Relations.—Hon'ble Sri Rajakrishna Bose.

Minister for Revenue, Supply and Transport.—Hon'ble Sri Sadasibha Tripathi.

Adviser for Orissa States.—D. V. Rago, Bar-at-Law, I.C.S.

SECRETARIES.

Chief Secretary (Home, P., R. and Finance).—B. C. Mukharji, I.C.S.

Secretary, Revenue Department.—P. C. Das.
Secretary, Development, Commerce and Labour Department.—V. Ramanathan, I.C.S.

Secretary, Education and Health and L.S.G. Department.—S. C. Palit.

Secretary, Law Department.—C. C. Coari, I.C.S.

Secretary, Supply and Transport Department.—J. N. Misra.

Secretary, Public Works Department.—C. M. Bennett, I.S.E.

Chief Engineer, Public Works Department.—J. Shaw, I.S.E.

Chief Engineer, Electricity.—R. L. Narayanan, B.Sc., B.E.

Secretary, River Valley Development Dept.—Dr. H. B. Mahanti, M.Sc., Ph.D.

Secretary Rural Welfare Dept.—S. V. Sohoni, I.C.S.

Secretary to Hon'ble P.M.—S. N. Misra.

Secretary, Legislative Assembly.—P. C. Patnaik.

It may be noted here that Orissa maintains a joint cadre with Bihar in respect of officers of Indian Civil Service.

ORISSA LEGISLATIVE ASSEMBLY

Speaker.—The Hon'ble Mr. Lalmohan Patnaik, Dy. Speaker.—Mrs. A. Lakshmi Bai.

Secretary.—Pratfullakumar Patnaik, B.A., B.L. Asst. Secretary.—Ghanashyam Swain, B.A.

Gouranga Charan Das (West Cuttack Sadr. General); Bijoyananda Patnaik (Central Cuttack

Sadr. General); Bhairab Chandra Mohanty (North Cuttack Sadr. General); Kishu Charan Das (North Cuttack Sadr. General); Narangadhar Das (East Cuttack Sadr. General); The Hon'ble Sri Nityananda Kanungo (South Cuttack Sadr. General); Dinabandhu Sahu (Central Kendrapara General); Sri Nabakrushna Choudhury (North Kendrapara General); The Hon'ble Sri Rajakrishna Bose (East Kendrapara General); Gadadhar Datta (East Jaipur General); Santanu Kumar Das (East Jaipur General); Dwarikanath Mishra (West Jaipur General); Madan Mohan Patnaik (North Jaipur General); Hrushikesh Tripathy (Angul District General); Jayakrishna Mohanty (East Puri Sadr. General); Lokanath Mishra (South Puri Sadr. General); The Hon'ble Sri Lingaraj Mishra (North Puri Sadr. General); Purnananda Samal (North Puri Sadr. General); Banamali Patnaik (East Khurda General); Satyabadi Nanda (West Khurda General); Surendra Nath Das (Central Balasore Sadr. General); Nilamoni Conray (South Balasore Sadr. General); Karunakar Panigrahi (North Balasore Sadr. General); The Hon'ble Sri Harekrishna Mahatab (East Bhadrak General); Bhagabat Sahu (West Bhadrak General); Brundaban Chandra Das (West Bhadrak General); Sradhakar Supkar (Sambalpur Sadr. General); Mohan Singh (Sambalpur Sadr. General); The Hon'ble Lall Ranjit Singh (West Bargarh General); Lakshminarayan Misra (East Bargarh General); Bisi Bibhar (East Bargarh General); Lall Radramadhab Deo (Khariar General); Dinabandhu Belera (Ghumsur General); Jagannath Mishra (Kudala General); Narayan Panda (Chhatrapur General); Madhu Sudan Mohapatra (Aska Surada General); Iswar Naiko (Aska Sadr. General); Uma Charan Patnaik (Berhampur General); Somanath Panda (Berhampur General); Narayamurty Gade (Berhampur General); Narayan Patra (Baliguda Khondma General); Ananda Tripathy (Parlakimedi General); The Hon'ble Sri Sadasibha Tripathy (Sonerampur General); Radhiamohan Sahu (Jepore Malkangiri General); Sri Radhakrishna Biswasroy (Koraput General); Maulavi Muhammad Yusuf (Cuttack Sadr. Muhammadan); Maulavi Sayed Fazle Haque (North Cuttack-cum-Angul Muhammadan); Maulavi Muhammad Khan (Balasore-cum-Sambalpur Muhammadan); Maulavi Latifur Rahman (South Orissa Muhammadan); Srimati Priyamvada Devi (Cuttack Town Women's); Ghanashyam Das Thirani (Orissa Commerce and Industry); Raja Sailendra Narayan Bhanu Deo (East Orissa Landholders); Rai Bahadur Lokanath Misra (West Orissa Landholders); Baidyanath Rath (Orissa Labour); Lakshminarayan Sahu; Miss Anne Catherine Munro; Antarnajni Mullick; Godavarthi Ramadas.

THE UNITED PROVINCES

THE United Provinces lies in practically the centre of the sub-continent in the north. It is bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by the Central Provinces, and on the west by the Unions of Rajasthan and Madhyachar and the provinces of Delhi and East Punjab. Its total area amounts to 106,247 square miles, to which may be added the area of the three Indian States of Rampur, Tehri-Garhwal and Benares with a total area of 6,276 square miles, making a total of 112,523 square miles. These States lie in the U.P. but they are not merged with it. The total population according to the 1941 census is 56,346,456.

The Province, originally termed the North-Western Provinces and so amalgamated in 1877, was named the United Provinces of Agra and Oudh in 1902 and received its present designation on April 1, 1937. It includes four distinct tracts of country: portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one partly in the submontane belt; the sub-Himalayan tract; the great Gangetic plain; and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought.

The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though more thickly populated. The soil of the Gangetic plain, however, possesses extreme fertility and here the density of population varies from 642 persons per square mile in the west to 555 in the centre and 753 in the east, which gives the Province as a whole a greater population pressure on the soil than any other part of India save Delhi and the Bengal area. In the south there are low rocky hills, broken spurs of the Vindhya mountains, covered with stunted trees and jungle, and in the north the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until it reaches the line of the eternal snows, but the greater part of the province consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganga, Jumna and Gogra.

ADMINISTRATION

The Province was until the close of 1920 administered by a Lieutenant-Governor chosen from the ranks of the Indian Civil Service. Under the Reforms scheme the Province was raised to the status of a Governor's province, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and two Ministers in charge of the Transferred Subjects. With effect from April 1, 1937, provincial autonomy was inaugurated in this Province and a Cabinet of 6 Ministers to assist the Governor was formed, under the G. I. Act of 1935. This Ministry remained in office from July 17, 1937 to November 3, 1939. But after the outbreak of the European War it resigned and the powers of administration were assumed by the Governor under section 93 of the G. I. Act of 1935. He appointed 3 Advisors on November 4, 1939, and a fourth one on September 14, 1943, to assist him in the administration of the Province.

The constitution was restored on April 1, 1946 and a popular Ministry began to function. The Legislature consists of two Chambers, viz., Legislative Assembly which has a Speaker and a Deputy Speaker and the Legislative Council which has a President and a Deputy President.

H.E. Sir H. P. Mody.

The medium for the transaction of public business is the Secretariat, the staff of which consists of Secretaries (including Chief Secretary), Joint Secretaries including a Joint Legal Remembrancer who is ex-Officio Joint Secretary in the Judicial Department and Deputy Secretaries including one Deputy Legal Remembrancer and three Additional Deputy Legal Remembrancers who are ex-Officio Deputy Secretaries in the Judicial Department. There are also Under-Secretaries and one Secretary, Council of Physical Culture who is ex-Officio Under-Secretary in the Education Department and Assistant Secretaries.

The Board of Revenue is the highest court of appeal in revenue and rent cases, being the chief revenue authority in the province. There are 49 Districts in the U.P. and 10 Divisions. Nine of these are under Commissioners. The Kumaon Division is under the Deputy Commissioner of Naini Tal. Here is a list of the Districts and the Divisions into which they are grouped.

MEERUT DIVISION

Dehra Dun; Saharanpur; Muzaffarnagar; Meerut; Bulandshahr.

AGRA DIVISION

Allgarh; Mathura; Agra; Mainpuri; Etah.

ROHILKHAND DIVISION

Bareilly; Bijnor; Budaun; Moradabad; Shahjahanpur; Pilibhit.

ALLAHABAD DIVISION

Farrukhabad; Etawah; Kanpur; Fatehpur; Allahabad.

JHANSI DIVISION

Banda; Hamirpur; Jhansi; Jalaun.

BANARAS DIVISION

Banaras; Mirzapur; Jaunpur; Ghazipur; Ballia.

GORAKHPUR DIVISION

Gorakhpur; Basti; Azamgarh; Deoria.

KUMAON DIVISION

Naini Tal; Almora; Garhwal.

LUCKNOW DIVISION

Lucknow; Unao; Rae Bareilly; Sitapur; Hardoi; Kheri.

FAIZABAD DIVISION

Faizabad; Gonda; Bahraich; Sultanpur; Partabgarh; Bara Banki.

Each district is in charge of a District Officer, termed Magistrate and Collector in Agra, Deputy Commissioner in Oudh and Kumaon and Superintendent in Dehra Dun district.

The average area of each District is 2,213 sq. miles and the average population about a million.

Each Division has an average area of nearly 10,000 square miles and an average population of nearly 5 millions.

The districts are sub-divided into *Tahsils*, with an average area of 518 square miles and an average population of 236,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of some importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *naib tahsildars* and *kanungos*. Ordinarily there are three *kanungos* and one *naib tahsildar* to a *tahsil*. The *kanungos* supervise the work of the *patwaris*, or village accountants, check their papers and make such inquiries as may be entrusted to them by superior Officers.

For judicial purposes (revenue and criminal), the District Officer assigns a sub-division, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted civilians (Joint and Assistant Magistrates and Assistant Collectors) or members of the Provincial Civil Service (Deputy Collectors and Magistrates).

MANUFACTURES

The province is not rich in minerals. Iron and copper ore are found in the Himalayan districts. There were mines of importance, but owing to high cost of production and inaccessibility, most of them have been closed. Coal fields exist in the district of Mirzapur in Tehsil Sanghrauli on the border of the former Rewa State. Gold is found in minute quantities by washing the sands in some of the rivers in the hills. Limestone is found in the Himalayas and in the districts of Etawah and Banda, and stone is largely quarried in the Mirzapur district. Other kinds of stone quarried, though in small quantities, are kankar and slates.

Cottage and artistic industries, however, abound in U.P. Cotton is ginned and spun throughout the Western districts of the province as a home industry; and weaving by means of handlooms is carried on in most districts. Chief handloom weaving centres are Tanda (Faizabad), Benaras, Mau (Azamgarh), Mubarakpur (Azamgarh), Mau Alma (Allahabad), Gorakhpur, Maghar (Basti), Khallabad (Basti), Bara Banki, Sandila (Hardoi), Etawah, Amroha (Moradabad), Meerut, Sikandrabad (Bulandshahr), Deoband (Saharanpur), Sikandrara (Aligarh) and Dhampur (Bijnor). Kanpur is the chief centre for cotton spinning and weaving mills. According to the latest figures available, 3,000 persons are employed in cotton spinning, cleaning and pressing factories and 71,910 in spinning and weaving mills. The number of actual handloom weavers is about 300,000. Natural and artificial silk weaving used to be confined to Banaras (where the famous 'kimkhab' brocade is made), Sandila, Mau (Azamgarh) and Bisalpur (Pilibhit). Embroidery work is done at Lucknow, where the noted 'Chikan' work of cotton on muslins is produced, and in Banaras where gold and silver work is done on silk, velvet, crepe and georgette. Banaras uses local gold thread for embroidery work and 'Kimkhab' weaving. Gorakhpur has lately specialised in the manufacture of crepe and turkish towels.

Glass Industry.—The glass industry is important at Bahjoi, Balawali, Sassi, Hathras, Haran-gau, Shikohabad, Makhampur Naini (Allahabad), Ghaziabad and Banaras State. Firozabad is the chief centre of manufacturing glass bangles in India.

There are in all about forty-one hollow-ware factories, and eighty glass bangle factories in the Province. Out of the forty-one hollow-ware factories nine are large-scale factories and the others are comparatively small. The total value of the goods produced in these hollow-ware factories is estimated at 15,000 tons per year valued at 3-6 crores of Rupees per year. The eighty bangle factories at Firozabad produce about 10,000 tons of bangles per year, valued at at Rs. 6 crores per year.

Besides, cottage small plaid industry exists in the District of Bijpur and Saoni in Aligarh district. There are about 120 cottage workshops having a total production amounting to rupees 45 lacs per year. Recently the glass bead industry has been developed in the Province owing to the efforts of the Glass Technology Section, Department of Industries, U.P., and at present about 50 cottage workshops are engaged in this trade producing goods to the total value of 10 lacs per year. The total labour engaged in the glass industry and cottage industry is estimated between 55,000 to 60,000.

Moradabad is noted for its lacquered brass work, Banaras for brassware engraving and repousse; Farrukhabad, Pilkhawa (in Meerut district) and Muttra for their calico prints and Agra for its durrries and marble and alabaster articles; porcelain wares are now made at Kurja and glazed pottery at Chunar and Meerut; Clay figures of men and fruits at Lucknow; woollen carpets at Mirzapur and Bhadohi (Banaras State) and cotton carpets at Shahjahanpur and leather goods in Kanpur, Agra, Lucknow and Meerut.

The making of brass utensils at Mirzapur, Farrukhabad, Hathras, Moradabad, Shamli (Muzaffarnagar), Banaras, Bahraich and Oel (District Kheri), the carving and inlay work of Nagina and Saharanpur; the art silk industry of Fanda (Fatehabad), the lock and brass fittings industry at Aligarh, Cutlery at Kaimganj and Hathras, the copper utensil industry of Almora, the durrries of Khairabad (Sitapur), Kanpur, Agra and Bareilly, the pottery at Nizamabad (District Azamgarh) and the ivory work of Lucknow and manufacture of scissors at Meerut also deserve mention.

As a result of World War II blanket making has developed on a large scale in the districts of Muzaffarnagar, Meerut, Najibabad (Bijnor), Mirzapur and Bhadohi (Banaras State) and the manufacture of locks, safety and split pins and other miscellaneous iron articles at Aligarh. The weaving of tweeds has developed as a new industry in Almora district.

Trade Centres.—Important trade centres are Kanpur, Allahabad, Mirzapur, Banaras, Lucknow, Meerut, Aligarh, Hathras, Mathura, Agra, Farrukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar, Ghaziabad, Kherja, Gorakhpur, Ghazipur, Pilibhit, Shahjahanpur and Hapur.

Kanpur is the chief industrial centre. It has tanneries, leather goods factories, soap factories, oil mills, cotton, woollen and jute mills, engineering workshops, aluminium utensil factories, hosiery factories, plastic products, starch factories, glue refinery, chemical and pharmaceutical works, ordnance factories and other mills. The Kanpur Woollen Mills is the largest in India. Lucknow possesses an important paper-mill and also a cotton mill. There are cotton spinning and pressing factories at Aligarh, Meerut, and Bareilly and cotton mills at Agra, Hathras, Banaras, Kanpur, Moradabad and Aligarh. There are now 66 Sugar Factories in the province producing sugar by vacuum process. They are situated in Gorakhpur, Rohilkhand, Meerut, Lucknow, Faizabad, Banaras, Agra and Allahabad divisions. A certain amount of sugar is also made by the open pan process and a large quantity of gur is made in the villages. Excellent furniture is made at Bareilly and Saharanpur mostly on cottage lines.

Sodium Silicate is manufactured at Firozabad, Kanpur, Banaras and Allahabad. Electroplating is carried on at Moradabad, Aligarh and Kanpur. Anodisation is done at Banaras. Hydrogen peroxide is manufactured at Kanpur.

Super Phosphate is made at Aligarh, glue at Kanpur and Hapur, and refined glue and gelatine at Kanpur. Casein is made at Aligarh, Dayalbagh and Firozabad. Starch is made at Kanpur, Rampur and Nawabganj. Methylated and rectified and potable spirits are made at Kanpur, Unao, Rosa, Lucknow, Saharanpur, Meerut, Mansurpur, Nawabganj (Gonda), Daurala and Rampur.

There is a paper factory, a strawboard factory and a cigarette factory at Saharanpur. Attars and perfumes are made at Lucknow, Kanauj, Jaunpur and Naini. Dayalbagh (Agra) has a tannery, a leather goods factory, a textile factory, a hosiery factory, a dairy, a chemical and soap factory and a factory for manufacturing doors, bolts, lanterns, electrical goods, fountain-pens, chemical balances, etc. Fountain-pens are made in Kanpur, Lucknow and Agra. Shoe laces and elastic are made in Kanpur. Scientific balances and instruments are made at Banaras and Dayalbagh (Agra).

There is a plywood factory at Sitapur, a strawboard factory at Meerut, a bonemeal at Magarwara (Unao) and at Ilapur (Meerut), a turpentine and rosin factory, a match factory, a catechu factory and a bobbin factory at Chatterbuckganj (Bareilly); brushes are manufactured in Kanpur, Agra, and Meerut; cardboard boxes at Kanpur and Lucknow. Acids are manufactured at Agra, Ghaziabad and Kanpur and power-alcohol at Meerut. There are chemical and pharmaceutical works at Kanpur, Aunasi (Lucknow) and Banaras. Vegetable ghee is manufactured at Kanpur, Begamabad and Ghaziabad (District Meerut).

A sport industry has recently been developed and established at Agra and Meerut by the refugees from Pakistan and Sialkot, and is still in its infancy.

Khadi weaving is done in the eastern districts notably in the Gandhi Ashrams at Azamgarh, Gorakhpur, Sevapuri, Faizabad, and also in the Western Districts of Meerut and Kherja.

Lime burning is carried on largely at Dehra Dun where lime stone is dug or collected locally. Coal is imported from Bengal. Firewood is valued at Rs. 4,40,000. There are 60 kilns of varying capacity in working order.

Silk rearing is done at Doiwala in the Saharanpur district. Carbon is manufactured for refining tur at Etawah.

Oils.—There are four factories manufacturing vegetable ghee with a capacity of about 150 tons per day. The oil crushing industry is well developed in the Province since U. P. produces 2 crore mands of oil-seeds. There are over 146 big oil mills registered under factories Acts and over 250 small oil mills working with power. Refining of oils has been started by four big oil mills. Oil crushing by bullock driven wooden ghans is also well developed in the villages. There are about 25 big soap factories besides a large number of small manufacturers. Paints and varnishes industry is beginning to be developed with the coming into existence of 3 paints and varnishes factories. Boiled oil is already being manufactured by some firms. Allied industries like some textile auxiliaries and toilettes are being manufactured at some places. Tin canisters are made at Agra, Hathras, Etawah, Manipur and Ghaziabad.

AGRICULTURE

The chief industry is agriculture, which is the principal source of livelihood of a little over 70 per cent of the population and a subsidiary source of income to a further 8 per cent. The soils of the province fall into three groups: the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium. The chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being

naturally the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, mustard, cotton, wheat, barley, gram, sugar-cane, pulses and potatoes, rice being grown mostly in low-lying heavy clays, and potatoes on the higher valleys.

The greater part of the Province is highly cultivated. The rainfall varies from 50 to 70 inches in the hills, 40 to 50 inches in the Banaras and Gorakhpur Divisions, while the Agra Division receives only about 25 to 30 inches annually. Drought seriously affected Bundelkhand and the Agra Divisions in the past; better drainage and irrigation facilities have effected considerable improvements. In the latter area, however, shortage of water in the canals and the general lowering of the water level still continue to react against full agricultural returns. Steps are being taken to increase the amount of water passing down the canals.

The price of rice rose more or less steadily till September, 1947, when the maximum price was attained, and declined thereafter till November to rise again in December. The price of wheat rose almost steadily till October when it reached the maximum, then it slightly declined. As regards barley and gram, the prices showed slight variations in the early part of the year, but steadily rose from April and attained their maximum in October. Thereafter the price of barley declined till December, and that of gram fell in November to rise again in December. The price of *arhar dal* rose more or less steadily almost throughout the year and attaining the maximum in December.

There was some decrease in the area under wheat as compared with the corresponding figures for the preceding year, but an increase in the total output. Although there was a slight increase in the area under rice there was some slight decrease in the total output and thus the average output was slightly less. There was some decrease both in the area and total output of cotton but a slight increase in the average output. As regards sugar-cane there was an increase in the area and total output and also an increase in the average output.

Land is held on Zamindari tenure in Agra and Taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in Taluqdari tenure amounts to 54 per cent of the total area in Oudh.

The Provincial Legislative Assembly passed on August 8, 1946 a resolution accepting the principle of abolition of Zamindari system in the Province and requested Government to appoint a Committee. In pursuance of this resolution, Government appointed a Committee in October 1946, to prepare a scheme for the abolition of the zamindari system in the Province. Though the report of the Committee is not published it is gathered that the Committee has arrived at certain tentative conclusions in regard to the amount of compensation to be paid.

THE PEOPLE

The population is mainly Hindu. The 1941 census has disclosed slight variations in the communal percentages. The Hindus were 83.27 per cent as against 84.4% in 1931, the Muslims numbering 15.28% as against 15% at the previous census. The total of all other communities was 1.44% comprising Indian Christians, Anglo-Indians, other Christians, Sikhs, Jains, Parsees, Buddhists, Jews, Tribes other than scheduled castes and of persons who declared themselves as belonging to no caste or religion. Among the Hindus are included scheduled castes, caste Hindus and Arya Samajists.

The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high caste Aryans are frequent in the western districts of the Province. Most of the people, however, show a mixed Aryan-Dravidian origin.

The spoken language of the Province is Hindustani, written in Nagri and Persian characters. There are distinct literatures in Hindi and Urdu languages respectively. But Hindi is the language of the vast majority of the people and Government have made Hindi written in the Devanagari script the State language of the Province.

LOCAL SELF-GOVERNMENT

The main units of local self-government are the district and municipal boards, which have non-official Chairmen. Most of the municipal boards having an annual income of Rs. 50,000 or over have executive officers to whom certain administrative powers are reserved. The administrative functions of the municipal and district boards are performed by the Chairman and Executive Officer or the Secretary, but the boards themselves are directly responsible for most of the administration. The constitution of Municipal and District boards is now being liberalised, with direct election of chairman, widened franchise and joint electorate with reservation of seats for minorities as the main features of the reform.

The district boards obtain 50.68 per cent. of their income from Government grants. The other chief sources of income are the local rate levied from the land owners and the tax on circumstances and property imposed by some of the boards. The United Provinces Motor Vehicles Taxation Act came into force with effect from January 1st, 1936. The tax realised under this Act is also utilised in the payment of grants to local authorities for purposes of expenditure on the construction, maintenance and improvement of roads. The chief source of municipal income is the octroi or terminal tax and toll which is an octroi in modified form. Local opinion is strongly in favour of indirect as opposed to direct taxation for municipal purposes.

JUSTICE

Until the middle of 1948 Justice was administered by the High Court of Judicature at Allahabad in the part of the Province known as Agra and by the Chief Court of Audit sitting at Lucknow in the part known as Audd. Resolutions for the amalgamation of these two courts were passed by the Legislative Assembly and the Legislative Council in February 1948 so that there might be uniformity in the administration of justice in the Province. The Amalgamation Order was promulgated by the Governor-General in July and the amalgamated High Court of Judicature at Allahabad started functioning on July 26, 1948. The present High Court of Judicature at Allahabad exercises jurisdiction over the whole of the province as one single unit. For the convenience of the public of Audd and to avoid sudden dislocation, it has, however, been provided that a Bench of the Allahabad High Court shall be maintained at Lucknow. The Chief Justice has been empowered in the Amalgamation Order to modify the Jurisdiction of the Lucknow Bench and to decide where a particular case or class of cases shall be heard by the High Court. The Chief Justice has recently transferred the jurisdiction over the Faizabad Judgeship from the Lucknow Bench to Allahabad. The amalgamated High Court consists of 15 permanent Judges including Chief Justice and 5 Additional Judges. It has the same extra-ordinary original Jurisdiction as the former Allahabad High Court.

There are 30 posts of District and Sessions Judges of which six posts are held by officers belonging to the Indian Civil Service and the remaining posts by Provincial Service officers. Usually the Judges do the Sessions Work and exercise appellate jurisdictions in Civil and Criminal cases and in certain cases under the U.P. Tenancy Act.

District Officers and their assistants including tahsildars, presiding in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Honorary magistrates who function in almost all the

districts deal with criminal cases. Stipendiary Revenue officers have been appointed temporarily all over the Province to assist in the disposal of rent and revenue case work, and judicial officers have been similarly appointed temporarily to assist in the disposal of criminal cases. Kumaon was brought under the Civil Jurisdiction of the High Court in 1929. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. Government are considering measures to improve the administration of justice in this Division and to bring it in line with the rest of the Province. As a first step Government have approved the scheme of appointment of Judicial Magistrates in Kumaon with powers to deal with civil suits upto a valuation of Rs. 5,000. The Judicial Magistrates do purely Judicial (Criminal and Civil) work and take no part in the executive administration. In the rest of the province there are civil judges. Judges of small cause courts and Munsiffs who dispose of a large number of civil suits. The jurisdiction of a civil judge extends to all original suits without pecuniary limit and a Munsiff can hear cases ordinarily of a value not exceeding Rs. 2,000 and is specially empowered up to Rs. 5,000.

Some civil judges in the Province have been invested with powers of Assistant Sessions Judge to try Sessions cases of lesser importance and some munsiffs have been invested with magisterial powers for trying criminal cases.

Appeals from munsiffs always lie to the district judge while those from the civil judges go to the High Court or the Chief Court, except in cases of a value of Rs. 5,000 or less which are heard by the district judge. Small cause court judges, ordinarily try suits to the value of Rs. 500 but the Senior Judges of Small Cause are empowered to try suits of a civil nature of which the value does not exceed Rs. 1,000. There are also honorary munsiffs whose jurisdiction is limited to Rs. 200, and village munsiffs whose jurisdiction is fixed at Rs. 20.

The Provincial Government by an amendment in the Criminal Procedure Code have provided that appeals against the orders of all magistrates including 2nd and 3rd class magistrates shall in future lie before the court of Sessions.

The total estimated cost of Civil administration for 1948-49 stands at Rs. 1,21,00,000 as against 1,11,82,000 in 1947-48 thus showing an increase of Rs. 12,18,000 of which an amount of Rs. 8,00,000 is due to liberalising of the rates of dearness and cost of living allowances. Certain new items of expenditure involving an additional expenditure of Rs. 2,88,000 have also been included of which the important ones are revision of the rates of diet money of witnesses and complainants of class II and III (1,30,000), restoration of pre-1931 scales of fees of Government Pleaders (95,000), and increase in the cadre of the U.P. Civil (Judicial) Service by 15 posts (50,000). Accrual of annual increments account for another increase of Rs. 2,69,000. An additional sum of Rs. 80,000 has also been provided for staff due to increase in cadre of Munsiffs. Higher provision for allowances and temporary courts is responsible for a further increase of Rs. 68,000.

PUBLIC WORKS DEPARTMENT

The Public Works Department (Buildings, Roads and Irrigation Branches), is under the Hon'ble Minister for Public Works and Irrigation and the post of Secretary to Government is held by a member of the Indian Civil Service.

The Buildings and Roads Branch is administered by three Chief Engineers, two on the Administrative side and one for Post-War Planning. The Province is divided into 7 circles and 27 divisions. Each circle is in the charge of a Superintending Engineer and each division is under an Executive Engineer. This Branch of P.W.D. is entrusted with the maintenance of all Provincial metalled and unmetalled

roads and the construction of all departmental buildings (except those of Irrigation Branch) each costing more than Rs. 7,500.

The Buildings and Roads Branch has increased to more than thrice its size since the outbreak of the war and has now undertaken an extensive programme of Road and Building construction.

COMMUNICATIONS

The road construction scheme is proposed to be spread over 10 years in two phases of 3 and 7 years respectively and would cost nearly 69 crores. Roads have been classified into 4 classes. (1) National Highways—These would traverse several Provinces or States and would be of National importance. (2) Provincial Highways—These would be main roads running along and across the length of the Province. (3) Major District Roads—These would mainly serve the needs of each district and are being taken over from District Boards for reconstruction. (4) Village and other District Roads—These would serve the villages and will put each village within reach of at least 5 to 6 miles of a pucca road. On the completion of first phase of the programme (1946-49) which is estimated to cost 15.5 crores the province will have 9,631 miles of metalled roads, 5,611 miles of unmetalled roads and 608 miles of cement concrete tracks. On completion of the second phase of the programme, the Province will have 15,160 miles of metalled roads, 19,000 miles of unmetalled roads and 3,000 miles of cement concrete tracks.

BUILDINGS

In the Post-War Building Scheme 410 buildings costing about 3 crores were proposed to be constructed throughout the Province during 1946-47. The important buildings to be taken up for construction were mostly of Medical, Animal Husbandry, Agricultural and Educational Departments, i.e. (1) new Medical College at Agra, (2) extension of Medical College at Lucknow, (3) Veterinary College at Fyzabad, (4) Nurses Training Centre at Kanpur, (5) Colonization Scheme, (6) Town and Village Housing Schemes, (7) Residences for councillors at Lucknow, (8) Construction of certain Head of Departments' offices at Lucknow.

The Buildings and Roads Branch has recently started Research and Town Planning sections. Research section deals with Soil Stabilization and researches in Cement concrete and low cost houses. Town planning section deals with the development and expansion of the urban areas in the Province.

IRRIGATION

The Irrigation branch is administered by three Chief Engineers. The province is divided into circles and divisions.

The Irrigation Branch administers the various Irrigation works in the province as well as the Ganges Canal Hydro-Electric Grid, the Tube-well irrigation scheme, and the Fyzabad Electricity and Gogra Pumping Schemes. The Ganges, the Eastern Jumna, and the Agra Canals are administered by the Chief Engineer (West) while the Sarda Canal, and Gogra pumping schemes, the Bundelkhand Canals and the Tube-wells are administered by the Chief Engineer (East). The Project Circle, Irrigation Works, the Sarda Power House Construction Circle, the Hydro-circle, the Ganges Canal Hydro-Electric Grid and the Fyzabad Electricity scheme are under the administration of the Chief Engineer (Development).

The Canals and Tube-wells, administered by the Irrigation Branch in the United Provinces irrigate over 59 lakhs acres annually.

The Sarda Canal, was opened in 1928 for introducing irrigation into Gudd. In November 1941 an extension, which includes 350 miles of new irrigating channels, was formally opened, making the total length of the main canal and branches, including distributaries, drainage cuts and escapes on the system,

7,286 miles. The area irrigated is over 12 lakhs of acres annually including over 2 lakhs acres sugar-cane.

The Ganges Canal—Upper and Lower. The head works of the former are situated at Hardwar in the Saharanpur district and of the latter at Narora in the Bulandshahr district. The Upper Ganges Canal came into operation in the year 1855-56, and its total mileage of channels is 5,958 miles. The area irrigated annually is about 14½ lakhs of acres. The Lower Ganges Canal was opened in 1879-80 and the total mileage of its channels is 5,124 miles. This system irrigates nearly 12 lakhs of acres.

In connection with the Grow More Food Campaign a number of channels have been remodelled and improved, with a view to increasing their water supplies and thereby enabling them to irrigate larger areas. Projects for the construction of about 800 miles of new channels on the Sarda Canal and about 400 miles on the Upper Ganges, Lower Ganges, Eastern Jumna, Betwa, Jhans and Gogra Canals, have been prepared. Of these new channels approximately three-fourths have been completed and opened for irrigation. The additional yield of food grains on this account will be about 75,000 tons per annum.

The Ganges Canal Hydro-Electric Grid supplies power for domestic, industrial and agricultural purposes to 14 districts in the west of the province, and to Shahdara in Delhi province. Seven of the ten available falls have been harnessed for generating electric energy and a stand-by steam power station has been constructed at Chandausi and Hardanganj of 9,000 and 8,000 K.W's. respectively, capacity, making a total of 35,900 K.W's. available on the Grid. Besides supplying energy for lights and fans and minor industries to about 93 towns, the Grid provides power for irrigation pumping from rivers, tube-wells and open wells. Another Hydro-power station at Mohanmadpur designed to generate about 9,000 K.W's. is at present under construction. Additional boilers for Hardanganj steam station have also been obtained which, when installed, will raise the generating capacity of the station to 15,000 K.W's.

A large project for the construction of Hydro-power station at Patthi which would give an additional output of 5,100 K.W's. to the Ganga Grid is under consideration.

A large project for the extension of the transmission system of the Grid, which will enable the power generated at Mohanmadpur power station to be utilised is under consideration. This supply of cheap power from over 2,000 sub-stations in the Grid is already having an important bearing on the economic disposal of crops and the development of industries in the urban and rural areas of the Grid zone.

The steam power station at Sohwal has a capacity of 2,500 Kilowatts. It supplies energy to the towns of Fyzabad and Ajudha and for pumping 380 cuases of water from the Gogra at Katanuli into a canal system 129 miles long, designed to irrigate 43,000 acres. To increase the generating capacity at Sohwal, two 1,000 K.W's. generating sets have been ordered.

The United Provinces Government have various irrigation and power projects under consideration for the post-war period. Brief details of these projects on which investigations have advanced sufficiently are given below:—

Sarda Canal Hydro-Electric Scheme: It is proposed to reconstruct 12½ miles of the Sarda Main Canal to combine the present falls on the existing channels into one drop of 69 ft. for generating 20,000 K.W's. minimum at one power station with an installed capacity of 41,000 K.W's. The station would, in the first instance, be linked with the Ganges Canal Hydro-thermal system in which it will inject 10,000 K.W's. Transmission lines will also be run into Pilibhit, Bareilly, Naini Tal, Shahjahanpur, Kheri, Sitapur,

Lucknow, Barabanki, Unnao and Rai Bareilly Districts where energy will be made available for domestic, agricultural and industrial purposes. Investigations with regard to this scheme have been completed. 40 per cent of the work has been completed with excavation of power channel. It is anticipated that power from this power station will be available for consumption by 1950-51. The total cost of the generation part of the scheme will be Rs. 280.14 lacs and that of transmission system Rs. 2,66.81,000. Hundreds of miles of transmission route have been surveyed.

Nayar Dam Project: It is proposed to impound 1.4 million acre feet gross in the valley of the Nayar, a tributary of the Ganges 50 miles above Hardwar, by building a dam 600 ft. high across the gorge in the river near village Marora in Garhwal district. This Dam will be almost equal in size and height to the Boulder Dam in the U.S.A. so far the highest Dam in the world. Another small Dam 190 ft. high will also be constructed at Byasghat where the Nayar meets the river Ganga. The stored flood waters will irrigate a new area of 238,000 acres and will improve irrigation service to 1,068,000 acres of land, at present irrigated by Upper Ganges Canal system. The gross storage capacity of the lake, which will be formed by this Dam, will be 45,000 million Cubic Feet. It is estimated that approximately 23,200 additional maunds of food grains, 150,000 additional maunds of sugar and 60,000 additional maunds of Cotton will be produced. Hydro-electric plant proposed to be installed on the project will have a capacity of 200,000 K.W's. at Marora Dam and 320,000 K.W's. at Byasghat. The scheme will generate 908,700,000 K.W.H. annually at a cost of less than 2 ples per unit. Extensive exploration of the Dam foundations are now complete and the project is ready. The scheme is estimated to cost Rs. 21.0 crores out of which Rs. 16.70 crores will be debited to power generation and Rs. 7.3 crores to irrigation. The project will take some seven years to complete.

Rihand Dam Project: It is proposed to impound 9 million acre feet gross in the Biland basin in Singrauli Pargana, Mirzapur district by a 280 feet high, 3,000 feet long dam across a gorge near Pipri village. Power will be generated by the artificial head created by the storage dam at the power station situated immediately below it. The power of the installed plant is expected to be 300,000 horse power. The United Provinces Government are carrying on the investigation with regard to this site pending formation of the Some Valley Corporation, the formation of which is under consideration at present. This scheme will also make the river Some navigable at its confluence with the Rihand river and the Rihand river up to the dam site. The dam will control floods in the Rihand and the Some and provide a huge lake for breeding fish for food. The project estimate is ready and work to begin with shortly.

In order to meet the growing demand for irrigation facilities in the Eastern Districts, Government proposed to construct canals from Rapti and Kuana rivers which would serve Domarganj, Basti, Baati, Khalilabad and the tahsils of Basti District and Bangaon Tehsil of Gorakhpur district, and from the Koshi and Danda rivers which will serve the areas bounded by Dauri Nadi in the east, Rohin Nadi in the west, Lakinpur in the south, and Rohin Nadi and Railway line from Nautanwan to Nai Kct respectively. Nine pumps have also been purchased for installation at various places in Azamgarh District and a pump-in scheme is under investigation from Gogra river near Sanawa which will serve Barabanki, Fyzabad, Sultanpur, Partabgarh, Jampur and Benares. The channels on the existing Gogra canal system are also being extended by 50 miles. It is also proposed to construct 100 tube-wells in the Basti and Gorakhpur districts, which would irrigate 24,000 acres of Babl, 12,000 acres of sugar-cane and 6,000 acres of rice giving and additional yield of 210,000 maunds of food grains. The project estimate for Gorakhpur 100 tube-wells and Danda canal have since been sanctioned by Government. The work on the

former is yet to begin in right earnest while the construction of the latter is nearing completion.

The following schemes are under investigation by the Development administration:—

Ranganga Dam Scheme: It is proposed to store 96,000 million cubic feet of the flood waters in the valley of the Ranganga by building an earth and rock fill Dam about 340 feet high above the river bed across a gorge about 2 miles up stream from the Kalagarh Forest Rest House in the Garhwal district. The Dam will be one of the highest earth and rocks dams in the world.

During the dry weather the water stored in the lake formed by the Dam, will be released to flow down the river to Bijoor District 15 miles down stream. Here it will be diverted by a river into 50 miles long feeder across the Doab into the Ganga River near Garmukhshwar. This will supplement the inadequate supplies at present available to Lower Ganges canal. Approximately 800,000 acres of crop will be irrigated.

60,000 K.W's. power will also be available from the scheme during the irrigation period. The scheme is expected to cost Rs. 14.0 Crores. New irrigation canals and extensions of existing channels will cost a further Rs. 8.0 Crores. The project is under detailed investigation.

Kohri Dam Dam: This will impound 7,800 million cubic feet of water and out of this 4,000 million cubic feet will be available for irrigation. It is a dual purpose scheme and will generate 4,000 K.W's. peak power as well. The cost is estimated to be approximately Rs. 3.0 crores. The project is under preparation.

Yamuna Hydro Electric Scheme: This scheme will utilize for the generation of power, the total drop of approximately 750 ft. available in Rivers, Tons and Yamuna, from the site of the proposed Kishan Dam about 14 miles upstream of the confluence of River Tons with Yamuna, to Trout Sahib on the river Yamuna.

The development will be carried out in two stages and will comprise the construction of 7 miles of limits, 14 miles of concrete lined open channel, two weirs across the River Tons, one weir across River Yamuna at Kalsi bridge and four hydro-electric power stations. This scheme will make available 48 million units (K.W.H.). The two stages of the scheme are expected to cost Rs. 6.49 crores and 7.63 crores respectively and the corresponding power plant installations will be 96,000 K.W's. and 60,000 K.W's. respectively.

Pindar Hydro Electric Development: The possibility of developing hydro-electric power from Pindar River, a tributary of the Ganga, which it meets at Karanprayag, District Garhwal, is under investigation. Preliminary reconnaissance indicates that by the construction of two Dams 250 ft. and 500 ft. high, 14 miles and 10½ miles respectively upstream from Karanprayag, 40,000 K.W's. of firm power and 50,000 K.W's. of seasonal power could be generated. If the construction of these two Dams are found feasible on detailed investigation, it will supply cheap power for the development of Upper Garhwal, Almora and Naini Tal Districts. Preliminary investigations are in progress.

Besides the Eastern districts it is proposed to construct two Dams one on Shahzad river near Lalitpur in Jhansi District and the other on Karamassa river near Sihot.

These dams are as below:—

Lalitpur Dam: This will give approximately 3,000 million Cubic feet of water to the Betwa Canal System. It is expected that the Dam will be completed during 1948 Monsoon and will cost Rs. 27,30,000. The work on the Dam has already started. It will irrigate 30,000 additional acres of Babl Crop.

Nagra Dam: Work on this scheme, which will cost Rs. 32½ lakhs is in progress. The Dam will augment water-supplies in the Garal and Ghagar Canal Systems where rice irrigation is to be developed.

The following two projects are also under consideration:—

Sagar Dam: Government have under consideration a project for the construction of an earthen dam on Sagar River with a gross capacity of 2,800 million cubic feet at Mau Ranpur in Jhansi District. The estimated cost is Rs. 41,05,492. The schemes will help in irrigating 24,800 acres which may produce 6,200 tons additional food annually.

Piprai Dam: The project provides for the construction of earthen Dam 100 ft. high on Narayan River in the border of U.P. and C.P. at the Southern tip of Jhansi District. The storage is 11,600 cu. ft. and estimated cost is Rs. 185,92,000. New irrigating channels 460 miles in length will be constructed in Jhansi Hamirpur and Jalaun Districts. Irrigated area is 77,000 acres in Itahi and 39,000 acres in Kharif. The scheme will help to produce 30,000 tons additional food grains annually.

A project for Power Development on the Betwa river has been prepared and is under the consideration of Government. It provides in the first stage for a power house at Dhukwan with an installed capacity of 10,000 K.Ws. It will make electricity available at Orai, Kalpi, Jhansi and a few other towns in Jhansi and Jalaun Districts.

The Ganges Valley State Tube-well Scheme which originally comprised 1,656 tube-wells is now being extended by the construction of 600 more additional tube-wells to help the Grow More Food Campaign. These tube-wells are spread over the districts of Moradabad, Bijnor, Budaun, Muzaffarnagar, Salarnpur, Meerut, Bulandshahr, Aligarh, and parts of Etah and Bareilly introducing irrigation on the volumetric system over approximately an area of 1,980,858 acres, under the ultimate development scheme, hitherto without any source of irrigation.

The Irrigation Branch also maintains a Research Section which deals with problems of flowing water, silting troubles, scouring action below peuca works channel losses, model experiments of existing and proposed Canal works, etc. The Research organisation is being expanded and Government have sanctioned the establishment of a Research Institute at Biorkee under a Director.

POLICE

The Police Force is administered by an Inspector-General, with seven Deputy Inspectors-General, including one Deputy Inspector-General, Headquarters and Railways, and one Deputy Inspector-General, Criminal Investigation Department, one Assistant to I. G. of Police, one Superintendent of Police Headquarters, 76 Superintendents including one S. P., Railways and additional Superintendents of Police, 88 Assistant Superintendents and 204 permanent and (temporary) Deputy Superintendents. There is a Police Training College at Moradabad under two (1 temporary) Superintendents of Police, one as Principal and the other as Vice-Principal. In addition to this there is a Deputy Vice-Principal of the rank of Deputy Superintendent of Police. There is a Criminal Investigation Department forming a separate department with a Deputy Inspector-General in charge and 4 (1 temporary) Superintendents of Police and 21 Deputy Superintendents of Police. There is a Provincial Armed Constabulary which has been reorganised and expanded to constitute 13 battalions. It is under the command of an Assistant Inspector-General, 13 Commandants of the rank of Superintendent of Police, and 26 Assistant Commandants of the rank of Assistant Superintendent of Police, 13 Adjutants of the rank of Deputy Superintendent of Police.

The Anti-Corruption Department which now forms a part of the Criminal Investigation Department is in charge of 2 Superintendents of Police and 6 Deputy Superintendents of Police (all temporary). The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a retired member of the Indian Medical Service.

EDUCATION

Education is maintained in part by the State and partly by means of grants-in-aid. There are five Universities, the four residential Universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 besides eleven affiliated colleges situated outside the United Provinces. Agra University consists of twelve colleges, some of which were formerly associated with the Allahabad University on its external side. These colleges are the Agra and St. John's Colleges at Agra, Christ Church, D.A.V. and Sanatan Dharma College, Cawnpore; the Meerut College, Meerut; the Bareilly College, Bareilly; St. Andrew's College, Gorakhpur; The Balwant Rajput College, and the Agra Medical College, Agra; The Amar Singh K.E.M. Jat College, Lakhote; and the Agricultural College, Cawnpore. There are Intermediate Colleges and Anglo-Hindustani high and middle schools which prepare boys for the High School and Intermediate Examinations conducted by the Board of High School and Intermediate Education, which prescribes courses for high school and intermediate education.

There are 49 Government High Schools for boys and 13 for girls and 8 Government Intermediate Colleges for boys and one for girls; the remainder are under private management and are aided by Government.

The Isabella Thoburn College and the Mahila Vidyalaya College at Lucknow, and the Women's College at Aligarh, impart University education to Indian girls. The Bansat College for women at Benares, the Bakul Hindu Girls' Intermediate College, Moradabad, Balka Vidyalaya Intermediate College, Kanpur, Crosthwaite Girls' Intermediate College, Allahabad, Itagunath Girls' Intermediate College, Meerut, Prem Vidyalaya Girls' Intermediate College, Dayalbagh, Agra, Karamat Hussain Girls' Intermediate College, Lucknow, Mahadevi Kanya Pathshala, Dehra Dun, Kishori Raman Girls' Inter College, Muttra, Tika Ram Girls' Intermediate College, Aligarh, Sekaria Theosophical Girls' College, Sitapur, and Dewaria. Jyoti Girls' Intermediate College, Allahabad, teach upto the Intermediate stage. In addition to these there are High Schools, English Middle and Hindustani Lower Middle Schools and Primary Schools throughout the Province for the education of Indian girls. The St. George Inter College, Mussorie, The St. Joseph's College, Naini Tal, Sherwood Inter College, Naini Tal and La Martiniere College, Lucknow, are well known institutions for European and Anglo-Indian children in the province which teach upto the Intermediate stage. All Saints' Diocesan College, Naini Tal has a Teacher's Training Department for Women Teachers and also a Cambridge Higher Certificate Class. Besides these, there are many excellent educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for Male Teachers in Lucknow, Allahabad and Agra, and a Training Department is attached to the Lucknow Christian College. The Training Department is attached to the Aligarh Muslim University and the Benares Hindu University. Government also maintains a Training College for Women Teachers at Allahabad. The Allahabad University has started a course leading to the M.Ed. degree but this is confined to those who have already obtained the diploma of L.T. or B.T. elsewhere.

Technical Education.—There is a Department of Mining and Metallurgy in the Benares Hindu University where four years' courses of training are provided, leading to degrees in the two subjects. This is the only University in India where training in these two industrial subjects is available. There is a Technical Institute known as the Harcourt Butler Technological Institute and a Central Textile Institute at Kanpur; a school of Arts and Crafts at Lucknow; three Government Technical Institutes at Lucknow, Gorakhpur and Jhansi respectively; one Polytechnic Institute at Brijnagar (Gariwal); five

carpentry schools, one known as Central Wood Working Institute, Bareilly; others are at Allahabad, Fyzabad, Naini Tal and Dehra Dun; six weaving schools, one known as Central Weaving Institute at Benares, others at Mau (Azamgarh), Kairabad (Sitapur), Amroha (Moradabad), Muzaffarnagar, and Bulandshahr and one Metal Working School at Aligarh; two Leather Working Schools at Kanpur and Meerut, one Tanning School at Fatehpur; and one Brassware School at Benares known as Batuk Prasad Khatri Industrial Institute. There is also a Technical College and Leather Working School at Dayalbagh, Agra.

There is a Government Engineering College at Biorkee known as Thomason College and a school of Arts and Crafts in Lucknow. There are two Civil Engineering Schools at Lucknow. At the Benares Hindu University there is a five years' course in Electrical and Mechanical Engineering.

There is an Agricultural College at Kanpur and three Agricultural Schools at Gorakhpur, Bulandshahr and Ghazipur. There is also a Non-government Agricultural Institute at Allahabad and a Non-government Degree College in Agriculture at Agra and Lakhote (District Bulandshahr) and an Intermediate College in Agriculture at Baraut (District Meerut).

Law, Medical.—Education in Law is given at four residential Universities and at the Agra and Meerut Colleges and at the Dayanand Anglo-Vedic and Sanatan Dharma Colleges at Kanpur, and at the Bareilly College. Instruction in Commerce for the B. Com. degree of the Agra University is given in the Sanatan Dharma and the D.A.V. Colleges at Kanpur and in the St. John's College at Agra, Bareilly College, Bareilly, and Balwant Rajput College, Agra. A Commerce Department for the B.Com. degree is also attached to Allahabad, Benares and Lucknow Universities.

The King George's Medical College, Lucknow, which is managed by the Lucknow University prepares candidates for the M.B.B.S. and higher degrees of the Lucknow University. There is also a Government Medical College at Agra which is affiliated to the Agra University. There is also a college of Ayurveda attached to the Benares Hindu University and a college of Unani Tib attached to the Muslim University, Aligarh. The Board of Indian Medicine, U.P. established by Government in 1926, prescribes courses and holds examinations for Ayurvedic and Unani Colleges affiliated to it. The Takmilat-Tib College and the State aided Unani Medical College at Lucknow, the Unani Medical College at Allahabad, the Ishakul Ayurvedic College, Hardwar, the Bundelkhand Ayurvedic College, Jhansi, the Kanya Kanya Ayurvedic College and the Mool Chand Rastogi Trust Ayurvedic College, Lucknow, the Darshanand Ayurvedic College, Benares, and the Lalit Hari Ayurvedic College, Pilibhit, are affiliated to it.

MEDICAL

The Medical Department is in charge of an Inspector-General of Civil Hospitals who is assisted by two Deputy Inspectors-General of Civil Hospitals one of whom is specially in charge of women's hospitals and women doctors' services, and one personal assistant. The Deputy Inspector-General of Civil Hospitals (Women) is also the Secretary of the Provincial Committee of the Countess of Dufferin Fund. A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. In two stations (Ranikhet and Biorkee) Medical Officers in military employ hold collateral civil charge. There are about 100 Provincial Medical Service Officers in charge of important dispensaries and on the reserve list and a large number of Provincial Subordinate Medical Service Officers. Women's hospitals are in charge of P.M.S. (W.) or P.N.M.S. (W.) Officers. Government have also instituted Provincial Nursing Services and a Sisters' and Nurses' Service which are controlled by a Superintendent of Nursing Services who work under the I.G.C.H.

These services have been established with a view to providing trained nurses in the ratio of one nurse to five beds in district headquarters hospitals.

A new 'P.M.S. II', which also has a gazetted status, has been created. This will eventually replace the P.S.M.S. Medical Licentiates with satisfactory war service are being appointed to it at present and in future only medical graduates will be appointed to this service.

The best equipped hospitals for Indian Patients are the Thomason Hospital at Agra, King George's Hospital and the Balmampur Hospital at Lucknow, the newly-constructed Hallett Hospital, Cawnpore, the Prince of Wales Dispensary and the Ursula Horsman Memorial Hospital, Cawnpore, King Edward VII Hospital, Benares, and the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style). The Ramsay Hospital for Europeans at Naini Tal is a first-class institution and there are also the Dufferin and Women's Hospitals at various places for rendering medical aid to women. The King George's Medical College, Lucknow, and the Agra Medical College, Agra, are two of the best equipped colleges in the country, with a staff of highly efficient professors, and the hospitals attached to the colleges are the best equipped hospitals in the Province. The Queen Mary's Hospital for women and children is also attached to the King George's Medical College and provides clinical material for the instruction of students in midwifery and gynaecology. At Agra this is done at the Lady Lyall Hospital. There are sanatoria for British soldiers in the hills. The King Edward VII Sanatorium at Rhowal in the district of Naini Tal is an up-to-date and well-equipped institution for the treatment of European and Indian consumptives. There is also a Government T.B. Clinic at Allahabad. An up-to-date T.B. Clinic is also attached to the King George's Hospital, Lucknow.

Ayurvedic, Unani.—Arrangements have been made for about 232 Ayurvedic and 68 Unani dispensaries to work in villages, under the charge

of qualified Vaidas and Hakims under the Rural Development programme. A compounder has been engaged to assist. Forty-eight fixed and sixteen travelling allopathic dispensaries are also working under the Rural Development programme at suitable places in the countryside. The duty of the medical officer appointed to the Rural Development Dispensaries is not only to provide medical aid in villages but also to inculcate habits of cleanliness and carry on propaganda to ensure personal hygiene and health. Government have also appointed two Unani and four Ayurvedic Inspectors to look to the proper working of the indigenous dispensaries. These Inspectors work under the Chief Inspector of Indigenous Dispensaries, U.P.

The aim which has been kept in view in opening rural indigenous and allopathic dispensaries is to make available medical aid in villages situated in the interior of the districts.

Government also sanction every year grants for the treatment of eye diseases at certain centres in rural areas. A good number of patients suffering from cataract and other diseases have received treatment under the scheme.

There were about eighty subsidized dispensaries and thirty subsidized medical practitioners working at the end of December 1945.

Facilities for the training of Indian girls as nurses and midwives have been provided at almost all important hospitals in the Province.

The Government have established a Hospitals Fund to improve medical facilities. A sum of rupees one crore and sixteen lakhs has so far been allotted to this fund. Applications for grants out of this fund are considered and sanctioned by Government from time to time but it is in the main being conserved for post-war developments, when articles of equipment and building materials will be much cheaper.

A systematic campaign has been undertaken and large funds allotted to bring the hospitals at District Headquarters and the Dufferin Hospitals to a direct level.

Drug Factory.—To tide over the difficulty of getting imported drugs a new pharmacopoeia of indigenous drugs was introduced at hospitals and dispensaries and an Indigenous Drugs Factory was started at Agra. The factory is making good progress. Arrangements have also been made with the Director-General, Indian Medical Service, to obtain supplies of medical stores from the Medical Stores Department. A scheme was sanctioned to train 90 compounders every year for hospitals and dispensaries in the Province and it is in operation now.

A scheme for the provincialisation of district headquarters hospitals (both men's and women's) was started by Government in 1944-45. Almost all hospitals at District Headquarters except Maunpuri, Lucknow and Deoria have now been provincialised. These too will be provincialised soon.

The Board of Indian Medicine, U.P., established by Government in 1926, has been established as a statutory body with the enforcement of the U.P. Indian Medicine Act, 1939 (x—5, 1939), with effect from October 1, 1946 and now functions in accordance with the provisions of that Act. It conducts Ayurvedic and Unani examinations of students studying at its affiliated Ayurvedic and Unani Colleges and awards diplomas to successful candidates and maintains a register of qualified vaidas and hakims. It distributes grants aggregating to Rs. 46,000 to Ayurvedic and Unani dispensaries and practitioners every year. Government give aid to subsidised Ayurvedic and Unani dispensaries and practitioners in rural and urban areas out of an allotment of Rs. 79,000. Government also give grants aggregating to Rs. 1,67,000 every year to Ayurvedic and Unani Colleges. Government's object is to render medical aid through a system in which villagers have confidence.

A Blood Bank scheme has also been started. It is getting quite a good response.

Particular care has been taken in recent years to provide X-rays and cold storage plants at important hospitals at the expense of the Provincial Government.

THE FINANCES OF THE UNITED PROVINCES

Statement of the Revenue and Expenditure of the Government of the United Provinces.

1949-50 BUDGET AT A GLANCE

| | (in lakhs) |
|---------------------------|------------|
| Revised Budget (1948-49)— | |
| Receipts | 4904 |
| Expenditure | 4847 |
| Balance | +57 |
| Budget (1949-50)— | |
| Receipts | 5573 |
| Expenditure | 5558 |
| Surplus | +15 |

Important features of the budget statement made by the Prime Minister are the creation of two funds, namely "The Sugar Research and Labour Housing Fund" and "The Zamindari Abolition Fund," and the formation of an Industrial Credit Corporation for the province with a capital not exceeding Rs. 10 crores. This second measure is designed to counteract inflation and find money for financing various industrial schemes.

Other notable points in the budget are the grant of increased dearness allowance to low-paid employees drawing pay upto Rs. 450 per month, an advance of Rs. 100 lakhs to local bodies for meeting increased expenditure on the pay and allowances of their employees, financial provision for a cement factory and preliminary surveys in connection with the starting of rayon, paper and paints and varnishes factories and prospecting for coal fields on the Nepal border, and extension of prohibition to Fatehpur and Rae Bareilly districts.

Out of the sum of Rupees 100 lakhs to be given as advance to local bodies, a sum of Rs. 50 lakhs was for meeting the cost of revision of pay scales of teachers and other educational personnel. Government would be prepared to increase the total provision to Rs. 125 lakhs if necessary.

A provision of rupees 22.5 lakhs has been made for encouraging the education of scheduled caste and other backward classes and a sum of Rs. 13 lakhs has been allotted for the relief of political sufferers.

ZAMINDARI ABOLITION

The Zamindari Abolition Fund is to receive a credit of Rs. one crore from Government. The bulk of the funds required will be mobilised from the savings of tenants. A tenant who pays ten years' rent will be entitled to a reduction of 50 per cent in his rent and will pay as revenue only half of his present rent. This scheme will at once bring together scattered surplus purchasing power into a pool to be utilised for eliminating middle-men and reviving agricultural prosperity. It will exert a healthy downward pressure on inflation and will not act as a strain on the finances or credit of the Provincial exchequer.

A sum of Rs. 100 lakhs was received as profits on frozen sugar stocks at the time when sugar was decontrolled and another sum of Rs. 50 lakhs was received as profits on molasses from the Sugar Syndicate. While the Fund will be used exclusively for the benefit of this industry, 50 lakhs will be earmarked for building houses for labourers employed in sugar

factories. Another sum of Rs. 73 lakhs will be transferred to the Fund in the budget year, making a total of Rs. 2.23 crores.

About the Industrial Credit Corporation which is to be formed and in the budget for 1949-50 provision for making an advance of Rs. 50 lakhs to this Corporation is made. Government expect that the Co-operative Societies will be able to make adequate contribution and the farmers and wage-earners and others will also join in this venture. The U.P. Government wants to broaden its industry on public support and minimise, if not eliminate, the chance of friction between the different interests connected with the working of such concerns. This scheme will also serve a wholesome purpose inasmuch as it will mop off the surplus money in the hands of petty farmers and other small men.

FINANCE CORPORATION

The Directors of the Corporation are nominated by Government and among them are included representatives of the rural area. The conflict between purchasers of raw materials and the manufacturers is to be resolved and this result will be achieved through the Corporation which will mark a new era in the peaceful development, growth and working of the industries of the province.

Regarding the salaries and allowances of low-paid employees, as the cost of living has greatly increased of late they must have immediate relief. The rates of dearness allowance in force before the new budget and those in force after the budget (from March 1) are given below :—

| PAY | D. A. BEFORE BUDGET | AFTER BUDGET |
|--------------------|---------------------|--------------|
| Up to Rs. 50 | 25 % of pay | Rs. 20 |
| Rs. 51 to Rs. 100 | 20 " " " | Rs. 25 |
| Rs. 101 to Rs. 150 | 20 " " " | Rs. 30 |
| Rs. 151 to Rs. 200 | 10 " " " | Rs. 35 |
| Rs. 201 to Rs. 450 | Nil | Rs. 35 |

The grant of these new allowances will cost the Provincial exchequer a sum of Rs. 200 lakhs.

Regarding Refugees Government are doing all they can for improving their condition and providing them with residences and employment. In the budget year the refugee relief measures will cost the Provincial Government a sum of Rs. 635 lakhs. Details are (a) feeding, clothing, etc. (85 lakhs), (b) construction of shops-cum-residences (Rs. 227 lakhs), (c) loans to urban refugees and students (208 lakhs) and (d) loans to refugee—rural settlers (55 lakhs).

RECONSTRUCTION WORK

Of the estimated expenditure of Rs. 5,558 lakhs in the budget year, the Development Departments will absorb the largest share of Rs. 2,944 lakhs, representing 54 per cent. of the total expenditure. Important development schemes provided for in the budget are :—

(1) The opening of 4,400 new primary schools as part of the scheme for speeding up compulsory primary education all over the province ;

(2) the extension of compulsory military training to three more districts ;

(3) reclamation of 40,000 acres more of new land and further extension of cattle breeding and other schemes in the Agriculture Department ;

(4) the intensification of development activities through Co-operative Societies and the formation of hundreds of seed and implement stores managed by Co-operative Unions ;

(5) further extension of irrigation schemes which have already increased the acreage irrigated by State agency from 52 lakh acres in 1945-46 to 57 lakh acres in the current year ;

(6) increasing the mileage of roads in the Province, both metalled and unmetalled. By the middle of 1948, 1,757 miles of District Board roads had been reconstructed, and 738 miles of new metalled roads, 2,661 miles of new unmetalled roads and 128 miles of cement concrete track had been constructed. By the end of 1948-49 it is expected that 2,092 miles of District Board roads, 903 miles of new metalled roads, 3,398 miles of unmetalled roads and 154 miles of cement concrete track will be completed. The expenditure on roads, buildings, etc., in 1949-50 is estimated at 10.77 crores against 3.69 crores in 1945-46.

(7) further extension of the State-owned road transport scheme (about a thousand vehicles are already operating on different routes in the various regions of the Province and the number in 1949-50 is to be increased to 1,500) and

(8) opening of 50 allopathic dispensaries and 70 indigenous dispensaries in the rural areas.

In regard to the development of civic responsibilities among the people, the Prantiya Rakshak Dal and the inauguration of Panchayat Raj may be mentioned. The volunteers of the Dal have demonstrated at different places and on different occasions their capacity as competent citizens for maintaining peace and helping in melas and in flood relief work. With the powers vested in the Panchayats the people living in the villages will have the necessary equipment and opportunity to deal with their own affairs at the base and as part of a great experiment in decentralisation and real democracy.

As regards police expenditure, there has been in the past a considerable strengthening of the police force and the peak of the police expenditure is anticipated to reach the figure of 7.33 crores in the current year. In the budget year a reduction of rupees 50 lakhs is made. A token provision of Rs. one lakh is made with a view to the implementation of the policy of separation of executive and judicial functions.

The Government want to create a new type of personnel for the services and for this purpose provision is made to start an institution for the training of civil administrative officers. This institution will be located at Allahabad. Under the new scheme the trainees will be required, in addition to receiving training in matters of administration, to spend some time in villages living the life of a villager, and to visit factories and workers' quarters in order to study labour problems at close quarters.

ADMINISTRATION

Governor.—His Excellency Sir H. P. Mody.

STAFF OF HIS EXCELLENCY THE GOVERNOR.

Secretary to the Governor.—Major C. S. Bhatnagar.

(Also Secretary, Provincial Sailors', Soldiers' and Airmen's Board.)

Assistant Secretary, Office Secretary to the Governor.—Prem Ballabh Pande.

Personal Assistant to H.E. the Governor.—K. R. Nazappa, B.A.

Superintendent, Office of Secretary to the Governor.—Govind Ballabh Pant.

COUNCIL OF MINISTERS.

The Hon'ble Pandit Govind Ballabh Pant, B.A., LL.B., Premier and Minister for General Administration, Justice, Finance and Information.

The Hon'ble Hafiz Muhammad Ibrahim, B.A., LL.B., Minister for Communications.

The Hon'ble Shri Sampurnanand, B.Sc., Minister for Education and Labour.

The Hon'ble Shri Hukum Singh, B.A., LL.B., Minister for Revenue and Forests.

The Hon'ble Shri Nisar Ahmad Sherwani, Minister for Agriculture and Animal Husbandry.

The Hon'ble Shri Atma Ram Govind Kher, B.A., LL.B., Minister for Local Self-Government.

The Hon'ble Shri Chandra Bhanu Gupta, Minister for Health and Civil Supplies.

The Hon'ble Shri Lal Bahadur, Minister for Police and Transport.

The Hon'ble Shri Keshava Deva Malaviya, Minister for Development and Industries.

The Hon'ble Shri Girdharilal, M.A., Minister for Excise, Jails, Registration and Stamps.

Shri Pyare Lal Banerji, Advocate-General.

U. P. PUBLIC SERVICE COMMISSION.

Chairman.

Dr. Amarnath Jha, M.A., D. Litt., F.R.S.L.

Members.

Muhammad Ahmad, M.A., LL.B., and Satish Chandra Chatterji, M.A.

Secretary.

G. P. Sinha, B.A.

Superintendents.

Ram Naresn Lal, M.A., LL.B.; Syed Zahurul Hasnain; Shiva Lal.

Scheduled castes.

WEST BENGAL PROVINCE

ACCORDING to the Radcliffe Award the newly constituted Province of West Bengal consists of the whole of the Burdwan Division and part of the Presidency Division of old undivided Bengal, District-wise, the whole of Burdwan, Birbhum, Bankura, Hooghly, Howrah, Midnapore, Calcutta 24 Parganas, Murshidabad, and Darjeeling Districts and parts of Nadia, Malda, Jalpaiguri and Dinajpur Districts are in West Bengal. The 24-Parganas District includes the two P. S. of Jessore, Bongaon and Gaighata, that is 10.94 per cent of the area and 7.28 per cent of the population of Jessore. Of Nadia District 47.75 per cent of the population and 52.34 per cent of the area, of Malda 68.50 per cent of the population and 69.41 per cent of the area, of Jalpaiguri 77.62 per cent of the population and 81.57 per cent of the area, and of Dinajpur 30.28 per cent of the population and 35.14 per cent of the area are in West Bengal.

Besides these there are the two States of Cochin Behar and Tripura.

The total population and the relative figures of Hindus, Muslims and others are given by the following table :

| | Total | Population | | | Percentage | | |
|----------------|------------|------------|-----------|-----------|------------|---------|--------|
| | | Hindus | Muslims | Others | Hindus | Muslims | Others |
| West Bengal .. | 21,106,453 | 14,330,928 | 5,301,006 | 1,563,829 | 67.61 | 25.01 | 7.38 |
| States .. | 1,152,852 | 742,700 | 366,254 | 44,898 | 64.37 | 31.74 | 3.80 |
| Total .. | 22,350,305 | 15,073,628 | 5,667,950 | 1,608,727 | 67.44 | 25.36 | 7.20 |

According to the Census figures of 1931, Bengal is spoken by about 83 per cent of the population of West Bengal and Hindi and Urdu by about 8.3 per cent.

AGRICULTURE

The great majority of the people are engaged in agriculture, pasture and raising dairy produce. The principal crops are rice and jute. During 1941-45 the area under paddy in West Bengal was 9,320,000 acres and the total cropped area nearly 13,245,000 acres, i.e., the area under paddy was approximately 70 per cent. of the total cropped area. In 1947-48 area under paddy was about 9,485,300. The area under jute is given by the following figures :—

| | 1947 | 1948 |
|-------------|---------------|---------------|
| West Bengal | 229,175 acres | 314,920 acres |
| States .. | 48,210 " | 46,985 " |
| Total .. | 277,385 " | 361,905 " |

Other crops include barley, wheat, pulses and oil-seeds. Sugar is produced both from sugar-cane and date palm and tobacco is grown for local consumption in nearly every district. The area under tea in 1944-45 (the latest available figures) was 190,000 acres, the number of tea factories in 1946 was 275 and the average number of workers attending 22,405 whereas the

H. E. Kailashnath Katju

number of gardens in 1946 was 286 and the number of picked workers attending 223,000.

INDUSTRY

Agriculture is the principal industry of West Bengal. In addition to this there are the jute mill industry, the tea industry (confined to the districts of Jalpaiguri including the Dooars and Darjeeling), the coal mining industry and the sugar industry. The jute mills in and around Calcutta and in the riparian tracts of the districts of Howrah and Hooghly constitute the principal manufacturing industry of the Province.

Prior to the outbreak of war raw jute prices showed considerable fluctuation and the demand for jute goods also increased; so the Ordinance restricting working hours was withdrawn only to be replaced soon after by a voluntary restriction agreement among the mills as wartime shipping restrictions made themselves felt and first European, and later Far Eastern, markets were lost. Once again raw jute production started to exceed demand, and only a further agreement between the mills and the undivided Bengal Government whereby the former undertook to purchase a stipulated quantity at minimum rates, and a slight increase in demand for Middle East operations during 1941 helped to stave off another difficult situation.

On the whole 1942 was a more prosperous year despite the difficulties of transport and increasing war demands on the industry, but in 1943 two other problems were added to these—food for labour and shortage of coal, while the increasing value of food crops also lead to short sowing of jute. Large orders from America helped to offset the otherwise poor year which might have been expected, but it was apparent that some form of rationalisation or still more agreements would be necessary to restore the balance. The jute industry played a big role in World War II—all mills working to full capacity. Post-war prospects are good, the first quarter of 1946 brought large orders to Bengal.

The following table gives the value of imports and exports of principal articles in the port of Calcutta during pre-war and post-war periods.

| Value in (000) Rs. L. C. of | | | |
|-----------------------------|----------|-----------|---------|
| Pre-War | Post-War | Variation | |
| 1938-39 | 1946-47† | | |
| Imports .. | 429,534 | 668,149 | 55.55* |
| Exports .. | 708,857 | 1,850,877 | 161.11* |

EDUCATION

Educational institutions in West Bengal are controlled by the Department of Education, the University of Calcutta, district boards, municipalities, district school boards and a number of religious and philanthropic societies. The control of general education as also of engineering education is ultimately vested in the Minister of Education, whereas medical education is controlled by the Department of Local Self-government, and agricultural, technical and industrial education by the Department of Agriculture and Industries.

The Director of Public Instruction is the executive head of the Department, assisted by an Assistant Director, three Special Officers for Primary, Scheduled Caste and Secondary Education and a Reader and Secretary, Text Book Committee. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Manjis.

The University of Calcutta established in 1857 is administered by the Chancellor (the Governor of Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College, Calcutta. Calcutta University is mainly an examining body, but has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated Colleges.

The education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys and a school for girls (both residential) at Kurseong.

JUSTICE

The administration of justice is entrusted to the High Court of Calcutta. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsiffs. Of these officers, the District and Additional Judges and a certain number of Subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only.

Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side, the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. One of the Presidency Magistrates in Calcutta is in charge of the Children's Court and is helped by Hon'y. Women Magistrates. The city has also two Municipal Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

LOCAL SELF-GOVERNMENT

By Bengal Act III of 1884, and its subsequent amendments, which hitherto regulated municipal bodies in the interior, the powers of Commissioners of municipalities were increased and the elective franchise was extended. Bengal Act III of 1884 was repealed by Act XV of 1932 by which material changes have been introduced, e.g., the franchise of the electors has been further widened, women have been enfranchised, the proportion of elected commissioners has been increased and the term of office of the Commissioners has been extended from three to four years. Municipal expenditure now comprises a large number of objects, including water-supply, public works, maintenance of hospitals, dispensaries and educational institutions, veterinary institutions, employment of health officers, vaccinators and sanitary inspectors, the training and employment of female medical practitioners, the provision of model dwelling houses for the working classes, the holding of industrial, sanitary and health exhibitions and the improvement of breed of cattle. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings.

The Municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaces Act III of 1889, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and two Deputy Executive Officers, all elected by the Corporation. The appointments of the Chief Executive Officer and the six other principal officers of the Corporation are subject to the approval of Government. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers.

In the mofussil, district and local boards exercise considerable powers, with regard to public works, education and medical relief.

Bengal Act V of 1919 introduces the new system of self-government by the creation of village authorities vested with the powers and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the union board, which will replace gradually the old chaukidari panchayats and the union committees deals with the village police, village roads, water-supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the union boards, village benches and courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all districts in the Province.

PUBLIC WORKS

The Public Works Department consists of Public Works and Railway Departments and is under the charge of the Secretary to Government in the Department of Communications and Works and Buildings.

The Public Works Department deals with questions regarding the construction and maintenance of public buildings and also regarding roads, bridges, etc.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal technical adviser to Government.

MARINE

The Marine Department deals with questions connected with the administration of the port of Calcutta and inland navigation, including the control and administration of Government launches except the police launches.

IRRIGATION

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

POLICE

The West Bengal Police force comprises the Military Police, the District Police and the Railway Police. The West Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Indian Police Service. Under him are Deputy Inspectors-General for the Presidency range and the Burdwan range and also one Deputy Inspector-General in Charge of the C.I.D. and the Intelligence Branch.

Each district is in charge of a Superintendent, and some of the more important districts have one or more Additional Superintendents. The Railway Police is divided into three distinct charges, each under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. There is also a Village Police, composed of dafadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is about 4 crores.

PUBLIC HEALTH

The head of the Medical Directorate is the Director of Health Services. In the districts the Civil Surgeons are responsible for medical work. According to the latest statistics available there are 105 hospitals and dispensaries in Calcutta, 11 of which are supported by the Government and 26 private hospitals and dispensaries partly supported by the Calcutta Corporation; also there are 6991 beds available of which 500 are at the hospitals and dispensaries mentioned above. The Governments of West Bengal have sanctioned an expenditure of 77,74,000 for Public Health in the 1949-50 Budget.

1949-50 BUDGET

The Budget of the Province of West Bengal for 1949-50 shows a deficit of Rs. 1 crore and 11 lakhs. The revenue receipts are estimated at Rs. 31 crores and 83 lakhs and the revenue expenditure at Rs. 32 crores and 94 lakhs.

2. The following taxation measures have been passed to supplement the revenues and thereby to cover the deficit to the extent of about Rs. 1 crore :—

(a) Agricultural Income-Tax—Reduction of the exemption limit from Rs. 3,500 and 100 standard bighas to Rs. 3,000 and 80 standard bighas.

(b) Sales Tax—Removal of certain items from the exemption list and withdrawal of exemption in favour of the Railway and Water Transport administrations.

(c) Entertainments Tax—Enhancement of the rates of the tax for cinemas.

3. The main features of the Budget are as follows :—

(a) A total provision of Rs. 4 crores and 82 lakhs has been made for expenditure on unproductive development schemes. A contribution of Rs. 2 crores and 40 lakhs will be received from the Government of India towards this expenditure.

A total provision of Rs. 9 crores and 82 lakhs has been made under heads of "Capital Outlay" for development schemes to be financed from loans. The provision includes:

- (i) Rs. 3 crores and 40 lakhs on account of West Bengal's share of the cost of Damodar Valley Project for the year 1949-50.
- (ii) Rs. 75 lakhs for Mor Reservoir Project.
- (iii) Rs. 2½ crores for the development of provincial roads, and
- (iv) Rs. 1 crore and 79 lakhs for housing schemes.

(b) A provision of Rs. 2 crores and 3 lakhs has been made for expenditure on "Grow More Food" schemes. The expenditure will be partly covered by receipts from sale of seeds manures etc. A contribution of Rs. 30 lakhs will be received from the Government of India towards this expenditure.

(c) A provision of Rs. 4 crores and 28 lakhs has been made for expenditure on relief and rehabilitation of refugees. The bulk of the expenditure will be recovered from the Government of India. Besides, a provision of Rs. 6 crores has been made for the purpose of building houses for the refugees and for distribution of loans and advances to them.

4. In point of proportion of the cost of each service to the total revenue expenditure, "General Administration" which occupied the third place in undivided Bengal, has been relegated to the fifth place in 1948-49 and to the sixth place in 1949-50 in West Bengal. "Education" which was fifth in undivided Bengal has been elevated to the third place in 1948-49 and to the fourth place in 1949-50 in West Bengal. "Medical" which was seventh in undivided Bengal has been elevated to the fourth place in 1948-49 and to the third place in 1949-50 in West Bengal.

ADMINISTRATION

The present form of administration in West Bengal dates from 15th August, 1947. In 1912 the Government of the Province underwent an important change, when in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There were normally four members of the Executive Council in charge of the "reserved subjects," and three Ministers, who were in charge of the "transferred subjects."

With the enforcement of the Government of India Act of 1935 on April 1, 1937, complete provincial autonomy came into being. The entire administration vested in the Governor assisted by a Council of Ministers holding office during his pleasure but answerable to a wholly elective legislature comprising two houses. Except in regard to his special responsibilities, the Governor corresponded to a constitutional head. The services no longer found a place in the legislatures and were subordinate to the Ministers. Dynarchy disappeared and there was complete responsible Government.

As from 15th Aug. 1947 two independent Dominions known as India and Pakistan were set up in India under the provisions of the Indian Independence Act, 1947.

The Province of Bengal, as constituted under the Government of India Act, 1935 ceased to exist from that day and in lieu thereof two new Provinces—East Bengal and West Bengal were constituted of which only the latter came under the Dominion of India. Pending the framing of the new constitution of India by its Constituent Assembly, the Legislature of the new Province of West Bengal was made unicameral by an order of the Governor-General issued under the provisions of the Indian Independence Act, 1947. The administration of this Province is at present carried on under the Government of India Act,

1935 as adapted by orders of the Governor-General issued from time to time under the provisions of the said Independence Act. Under the adapted Government of India Act, the special responsibilities of the Governor as well as his discretionary powers have ceased to exist.

The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

PERSONNEL

GOVERNOR.

His Excellency Kailashnath Katju.

MINISTRY.

Prime Minister (incharge of Home, Medical, Public Health and Local Self-government Departments), The Hon'ble Dr. Bidan Chandra Roy.

Finance, Commerce & Industries, The Hon'ble Nalini Ranjan Sarkar.

Civil Supplies, The Hon'ble Prafulla Chandra Sen.

Education Dept., The Hon'ble Rai Harendra Nath Chaudhuri.

Works, Bldgs. & Land and Land Revenue, The Hon'ble Bimal Chandra Sinha.

Judicial & Legislative Depts., The Hon'ble Niharendu Dutt-Majumdar.

Labour, The Hon'ble Kalipada Mookherji.

Forests & Fisheries Dept., The Hon'ble Hem chandra Naskar.

Irrigation & Waterways Dept., The Hon'ble Bhupati Mazumdar.

C.C. & R. Dept., The Hon'ble Nikunja Behary Maity.

Agriculture Dept., The Hon'ble Jadabendra Nath Panja.

NOTE: On March 19, 1949 a new Minister the Hon'ble Syama Prasad Barman was appointed.

H. E. THE GOVERNOR'S PERSONAL STAFF.

Secretary, Sushil Kumar Mukharji.

Assistant Secretary, P. B. Sen Gupta.

Hony. Physician, Dr. Aimal Kumar Roy Choudhuri, M.D.

Hony. Surgeon, L. M. Banerji, M.S. (Cal.), F.R.C.S. (Eng.).

Hony. Dental Surgeon, Dr. Bankim Mukherji, L.D.S., R.C.S. (Eng.).

Hony. Surgeon in Darjeeling, Dr. S. N. Chowdhury, M.B.

Hony. Ophthalmic Surgeon, Dr. K. L. Sen, M.B., F.R.C.S.E., D.O., M.S. (Lond.).

AIDE-DE-CAMP.

Lieut. H. Bhattacharyya, R.I.N.V.R.; Lieut. (1/Capt.) Indar Mohan Lal, 2nd Royal Lancers; Capt. Gyan Nath Katju, G.S.A.

HONY. AIDE-DE-CAMP.

Subedar Major and Hony. Captain Lal Bahadur Sunwar, Sardar Bahadur, O.B.I. (Late of 10th Gurkha Rifles); Subedar Major and Hony. Captain Jakpa Tshering Lama, Sardar Bahadur, O.B.I. (Late of 10th Gurkha Rifles). Commander T. A. Leitch, O.B.E., R.N.R., Resident Naval Officer, Calcutta.

HOME DEPARTMENT.

CHIEF COMMISSIONERS' PROVINCES

[Note.—For Delhi see Index]

AJMER-MERWARA

AJMER-MERWARA in Rajputana lies between North Latitude 25°36' and 26°54' and East Longitude 74° and 75°22'. It is bounded on the north by Jodhpur and Kishengarh, on the east by Kishengarh and Jaipur, on the south by Mewar and on the west by Jodhpur. The area of the Province is 2,400 sq. miles and the population 700,000.

The estimated Expenditure and Receipts for 1949-50 are Rs. 1,16,10,000 and 43,35,000 respectively.

The distinguishing feature of the country is the Aravali range, the barrier which divides the plains of Marwar from the high tableland of Mewar. It is not one range but a series of parallel ranges. About ten miles from Ajmer the hills disappear but in the vicinity of Beawar they form a compact double range which finally meet at Kukra from which village a confused mass of hills and narrow valleys extend to the farthest extremity of the district. Ajmer Tahsil consists mostly of plain country while Beawar Tahsil is more hilly. The district may, generally be divided into seven main tracts separated by hills.

On the whole rainfall is very precarious and very large areas are under dry cultivation which is of the Catch Crop order. The main crops are Maize, Millet, Barley, Cotton, Oilseeds, Wheat, Bajra, Jeeira, Chillies and Onions.

There are four cotton textile Mills and one hosiery factory and many ginning and pressing factories. Mills turn out coarse cloth. There is also some excavation work in mica at some places in the district.

The main transport is by Railway and Road. The Meter Gauge line of B.B. & C.I. Railway passes through the district. Ajmer City forms nucleus of roads which radiate from here in all directions.

Beawar and Kekri Towns are big trading centres. The district is a deficit area in the matter of food grains and therefore there is not much export trade. The chief imports are wheat, rice, pulses, cotton and woollen piece goods, Kerosene oil, salt, utensils, spices, sugar and medicines.

With a view to intensifying the 'Grow More Food' campaign the following schemes were launched during the year 1948-49 to step up the production of food crop in the province. Scheme for the sinking of new wells and deepening the old ones; Control of Phudka grass hopper; Distribution and Multiplication of improved wheat seed; Distribution of oilcakes and chemical fertilisers; Composting town refuse into manure according to the Bangalore process; Protection of seeds and crops from plant diseases; Encouragement of fruit and vegetable cultivation; Poultry Gaushala Development and Fisheries.

MEMBER, CONSTITUENT ASSEMBLY
Mukut Behari Lal Bhargava, Ajmer.

Assistant National Savings Officer, S. Gurbachansingh.

District Magistrate's Nazir, Shiv Shankar Mathur.

ANDAMANS AND NICOBARS

The Andamans are a group of islands of various sizes large and small lying in the Bay of Bengal about 780 and 740 miles from Calcutta and Madras respectively. The main part of the group is composed of five large islands, viz., North Andamans, Middle Andamans, South Andamans, Baratang and Rutland Islands generally known as the Great Andamans. The extreme length of the entire group of the Andaman Islands is 219 miles and the extreme breadth 32 miles, the total land area being approximately 2,508 sq. miles. These islands have several very good harbours—Port Blair, Port Cornwallis, Port Bonington and Elphinstone Harbour. The headquarters are at Port Blair.

The Nicobar Islands, are situated to the south of Andamans 75 miles from Little Andamans. Several parts of the Andamans are uninhabited. The total area is about 635 sq. miles. The islands are usually divided into three groups (Southern, Central and Northern) the chief island in each being Great Nicobar, Camorta with Nancowrie and Car Nicobar. There is a fine land locked harbour at Nancowrie between the islands of Camorta and Katchul.

POPULATION

Some of the islands are not populated at all, some only sparsely while Car Nicobar is densely populated. The total population of the islands of the Andaman Group excluding the aborigines is about 16,000 (11,150 males and 4,550 females).

The most noticeable feature of the population is its cosmopolitan composition. The local inhabitants are descendants of Indians belonging to all castes and creeds and from various Provinces. They have always lived in peace and amity as the citizens of a secular state should. Another question which the people have successfully solved is the one relating to language. Hindustani has taken its place as the 'lingua franca' of the entire Province.

The population of Nicobar group is about 12,000 of which about 10,000 live at Car Nicobar. The origin of the inhabitants is wrapped in some mystery. The most numerous are the Jarawas and the Sentinellae who are of the Negro type. The Jarawas claim to be one of the purest races in the world having had no contacts with the outside world within human memory.

The next in importance are the Onges who are the sole inhabitants of the Little Andamans. Some of them go for fishing expeditions to Rutland Islands and a few find their way to Port Blair. They are a friendly people on the whole. The coastal aborigines commonly known as the Andamanese have dwindled in number and the few that remain (less than 50) are mostly of mixed origin. They are gradually fading away as the birth rate has been extremely low. One can hardly see any children among them.

The climate can be said to be temperate as the heat during the dry months is bearable because of the cool breeze from the sea. The temperature generally varies from 65° to 95°. The average rainfall is about 130 inches, and rain falls from six to eight months in the year. The islands have no such season as winter. The one great disadvantage is the humidity which varies from 79 per cent to 87 per cent and has an enervating effect.

HISTORY

Very little is known about these islands earlier than the year 1789 when the first attempt to colonise these islands was made by Captain Archibald Blair, R. N. and a colony was established at Port Blair. This colony was later moved to what is now known as Port Cornwallis in North Andamans and after a chequered career covering only 7 years the colony was closed in 1796 due mostly to sickness and trouble from the native inhabitants. The present colony was actually opened in the year 1858 for the accommodation of a large number of prisoners following the revolution in India used to be called the "Great Mutiny." The colony expanded considerably and gradually developed into a full-fledged penal settlement.

The islands were occupied by the Japanese in March 1942 and re-occupied by the Government of India in October 1945. With the re-occupation of these islands the penal settlement was abolished.

AGRICULTURE, INDUSTRY

Paddy has been grown with success. But the total yield is not yet sufficient to meet the islands' requirements with the result that besides wheat and other foodstuff certain quantities of rice and paddy have to be imported. The question of bringing larger areas under paddy is now under consideration. One of the ways which is already being tried is by clearing forest, not required by Forest Department, of trees.

Cashewnuts, maize, certain types of pulses and possibly cloves, can be grown here. Coffee, rubber and tea plantations were started in the past. The tea plantations were not a success.

and it is yet to be seen if the coffee and the rubber produced here will be able to compete in the international market with coffee and rubber from elsewhere.

There is plenty of scope for fruit growing. Such fruit as Papaya, Pineapple, Citrus, Bananas, Mangoes, etc., can be easily grown. The question of starting a canning industry has at times been discussed.

Coconuts are next to timber the most important among the produce of the Islands. In the Andamans coconuts are mostly confined to the South Andamans. Exports which go to Calcutta and Madras generally are in the form of nuts and copra.

The seas round the Andamans are said to abound in fish. Conflicting reports are made as to the quantity which is obtainable. A Company which was floated after re-occupation, failed to make any headway and is now likely to be liquidated.

It may be mentioned that the Japanese did intensive fishing in these waters for trocans and other shells before the last war.

The Andaman Islands contain some of the biggest forest estates in the world and therefore the main industry of these Islands is the production of timber. At present the forests which are worked under Government control contain many valuable species whose commercial possibilities have yet to be thoroughly investigated. The better known species are Palauk, Silver grey wood, Gurjan, White Chuglam, Badam, kokko, White Thup, Papia, etc. Exports take the form of logs and planks and sawn-timber, etc., which are produced by the Government saw mill.

The Western India Match Co., established a small factory to convert logs into splinters for their factories in India. Proposals are now under consideration to establish one or two plywood factories and to extract timber on a much larger scale which can be more successfully done by a Government sponsored Corporation than through any other arrangement. In view of the great demand for timber in the post-war period the forest wealth of the Andamans has been attracting more notice than ever before.

A steamer of the Asiatic Navigation Co. Ltd., chartered by the Government of India is the only regular means of communication at present with the Indian mainland. Special ships come at irregular periods to take away timber from these Islands. There is a proposal to have an air service with the mainland and to accelerate the present sea service.

Inter-island communication is by launches and boats maintained by the Forest and the Marine Departments of the Administration. But so far as communication with the more distant islands is concerned one could use the launches only in fair weather.

COLONIZATION

In order to ensure the prosperity of these islands, the question of increasing the population is engaging the attention of Government. Tentative proposals are being considered to settle a lakh or a lakh and a half people on the islands. It is hoped to make available 200 to 300 sq. miles of forest land by clearing them of trees in gradual stages.

The proposal to settle 100 ex-service families by providing facilities to the prospective colonizer has not materialised. Steps have already been taken to rehabilitate refugees from the mainland : 197 families of refugees from East Bengal have already arrived. They have been given allowances, milk and plough animals, land at concession rates, building materials, etc., to help them to start their life afresh in the Islands.

ADMINISTRATION

There is a High School at the Headquarters and several primary classes at outlying villages.

There is a well-equipped hospital at the Headquarters with a separate branch for women

and children. There are smaller hospitals and dispensaries at the outlying places. The incidence of malaria is moderate in areas under control and in other areas the disease is kept in check with regular administration of paludrines. Plague, cholera and small-pox are almost unknown.

The islands form part of the Dominion of India and are administered by a Chief Commissioner. Recently an Advisory Council consisting of five members has been appointed to assist him in certain matters. The Administration maintains several departments such as Forest, Revenue, Police, Marine, Medical, Supply, Agriculture, and Labour. An Assistant Commissioner is stationed at Car Nicobar.

Chief Commissioner, A. K. Ghosh, I.C.S.

BHOPAL

Bhopal (now a Chief Commissioner's Province) has an area of 7,000 sq. miles, a population of 800,000 and an annual revenue of Rs. 1,30,00,000. It was formally proclaimed a Chief Commissioner's Province of the Indian Union on June 1, 1949, when Mr. N. B. Bonerjee, the first Chief Commissioner, announced the taking over on behalf of the Government of India. Simultaneously an announcement was made on behalf of the Nawab of Bhopal, declaring a remission of all loans advanced to lower grade State employees.

Bhopal is in Central India. It is bounded on the north and west by Madhya Bharat; on the south by the Narbada river; and on the east by the Saugor District of the Central Provinces. Most of the Province is situated on the Malwa plateau to the north of the Vindhya. The climate of the region is generally speaking, temperate, and the average rainfall varies between 30 inches and 50 inches.

The Province contains many remains of great archaeological interest, including the famous Sanchi Topes, which date from the second century B.C., and which were later restored under the direction of Sir John Marshall. Adjoining the topes is the Sanchi station on the G.I.P. main line from Bombay to Delhi.

AGRICULTURE AND INDUSTRY

More than two-thirds of the Province is arable and the soil is generally very fertile. The principal agricultural product is wheat; other cereals and the main cash crops are tobacco and sugarcane. The forests are very extensive and valuable. The land system in force is ryotwari by which the cultivator holds the land direct from the Government. There is absolute permanency of tenure so long as the assessment is regularly paid.

With a view to acquainting the people with improved methods of agriculture, the Agricultural Department gives necessary advice and instruction so as to enable the agriculturists to produce good crops in plenty.

Industrially, too, the Province is not badly off. Among the more important manufacturing concerns in the Province are : The Bhopal Textile Mills, the Strawboard Factory, the Schore Sugar Factory, the Nerbudda Refrigerated Products Co., the Central India Chemicals Ltd., the Hamidia Match Factory, a tent factory, an oil mill and several ginning and pressing factories. Bhopal is also rich in deposits such as iron, bauxite, mica and other valuable minerals. In general it is believed that the Province is potentially very rich.

Bhopal is on the G.I.P. Railway main line between Bombay and Delhi. The chief means of communication within the Province itself are the roads, of which a great many are new.

Both in education and public health facilities are provided by the authorities. There are travelling dispensaries in the country-side and a new hospital staffed and equipped on modern lines in Bhopal City.

According to a notification issued by the States Ministry, Government of India, all laws in force in Bhopal before June 1 when the administration of the State was taken over by the Centre, will continue in force until repealed or amended by a competent legislature or authority.

Hitherto only Urdu was the official language in the Province. But now Hindi has been put on an equal footing with Urdu and both are recognised as court languages.

COORG

A Province in South India under the administrative control of a Chief Commissioner and the Government of India with a Legislative Council of its own, and bounded along its entire western frontier by the mountain chain of the Western Ghats which separates it from the Madras Districts of Malabar and South Kanara. The western ghats curve somewhat inland and thus also serve to some extent as the northern and southern boundaries. In the north Coorg is partially separate from the forest highlands of Mysore State by the rivers of Kumardwara and Hemavathi, and on the east the Province merges into the general tableland of Mysore State, the boundaries being marked by the river Cauvery which is known as the Ganges of South India and a famous place of pilgrimage. Coorg is a hilly country with a rainfall of on an average from 80 to 120 inches with evergreen, deciduous and semi-deciduous forests.

The Province forms a single district covering an area of 1,593 square miles and has a population according to the 1941 census of 1,08,725. The population is made up of Coorgs, Gowdals, Brahmans, Muslims, Christians and Harijans.

The budgeted revenue for 1948-49 was Rs. 50,80,000. Budget estimate of revenue for 1949-50 was Rs. 51,63,000, expenditure for 1949-50 Rs. 49,05,000 and the closing balance on March 31, 1949, Rs. 71,80,080.

Paddy, Coffee, Orange, Pepper and Cardamom cultivation are the chief agricultural produce. There is no large scale industry, but a paper mill is being started. Transport consists mainly of buses, lorries and bullock carts. And the chief items of trade are coffee, orange, pepper cardamom and rice.

No schemes under Post-war Reconstruction have yet been started except a college which is due to open shortly.

ADMINISTRATIVE PERSONNEL

Chief Commissioner, C. T. Mudaliar, B.A.

Assistant Commissioner and District Magistrate, K. T. Uthappa, B.A.

District Superintendent of Police, N. C. Subbaya, B.A.

District and Sessions Judge, N. Muddappa, B.A., B.L.

Chief Forest Officer, C. M. Kusalappa.

Civil Surgeon, Dr. T. B. Medappa, M.S., B.S.

Agricultural Officer, B. S. Varadaram, B.A.G.

Registrar of Co-operative Societies, P. M. Chennappa, Dip. Econ. C.I.D. (March), F.R.E.S. (London).

Madania and Health Officer, Major C. B. Cariappa, M.B.B.S.

District Educational Officer, B. S. Kusalappa, B.A., D.E. (Lond.).

Executive Engineer, K. Vndayachalam, B.E.

Treasury Officer, K. P. Kuttappa, B.A.

The Province has a Legislative Council consisting of 20 members with the Chief Commissioner as its President. There are 4 official members, 15 elected members and 1 nominated member in all.

CUTCH

Cutch State was integrated with the Indian Dominion as a Chief Commissioner's Province on 1st June 1948.

The Province has an area of 17,225 sq. miles including the two Ranns (which have an area of about 9,000 sq. miles.) The population is 500,800.

The Province is bounded on the north and the north-west by Sind; on the east by North Gujarat; on the south by Saurashtra; and on the west and south-west by the Indian Ocean.

The capital of the Province is Bhuj, founded in 1549.

There is a fair proportion of good cultivable land in Cutch, the principal crops being wheat, barley and cotton. Irrigation is also well developed with 27 reservoirs. Twelve more reservoirs are under construction.

The Province is rich in gypsum, clays and limestone and has fairly large deposits of iron and lignite.

The main occupation, apart from agriculture and mining are embroidery and silver work, which are well-known for their beauty.

The currency of the Province which in the past was reckoned in Kories was demonetised on 26th April 1949 when Indian currency was introduced.

FAMINE RELIEF

Cutch Province was declared to be a famine area on 1st December 1948. Immediately relief works such as roads, deepening of tanks, etc., were started.

The Government of India have sanctioned a large sum of money to fight the famine and the Province will have 150 miles of new roads and 10 new irrigation reservoirs constructed. A separate famine establishment to work under a Famine Commissioner has also been sanctioned. Large quantities of fodder are being rushed to Cutch from other parts of India.

Efforts are being made for the expansion of education in the province. There are about 630 schools with about 28,000 students on the rolls. Primary and secondary education is free.

Free medical relief is available in the province. There are about 6 Government hospitals and 14 Government dispensaries.

The chief means of communication is by sea. Goods are carried by country crafts, the chief import and export centres being Mandvi and Tuna. The province has a modern port in Kandla with a natural harbour, which the Government of India have decided to develop into a major port.

ADMINISTRATION

The administration is carried on by a Chief Commissioner. Steps are being taken to bring the administration of the province into line with that of other provinces; some departments have already been reorganised.

Chief Commissioner, C. K. Desai, I.C.S.

Judicial Commissioner, R. S. Trivedi, I.C.S.

HIMACHAL PRADESH

The new Province of Himachal Pradesh, administered by the Central Government comprises 21 Punjab Hill States and their 9 tributaries. The 21 States are Baghal, Baghat, Balsan, Bashahr, Bhajji, Bija, Chamba, Dalkoti, Dhani, Jubbah, Keonthal, Kumarsain, Kunihar, Kuthar, Mahlog, Mandi, Mangal, Sangri, Sirmur, Suket and Tharoch.

The 9 tributaries are Delath, Dhadi, Ghundi, Khaneti, Koti, Madhau, Ratash, Rawingarh and Theog.

The Province came into being on April 15, 1948; the consolidation has been achieved with the full agreement and support of the Rulers and the people.

Himachal Pradesh lies between North Latitude 30°30' and 33°10' and East Longitude 75°55' and 79°50'. It is bounded on the north by the Jammu and Kashmir State, on the south by the Tehri-Garhwal State, the Dehra Dun District of the U.P. and the Ambala District of East Punjab; on the west by Ambala, Hoshiarpur and Kangra. On the east the boundaries are undelineated.

The area of the Province is 10,600 miles, the population 950,000 and the land revenue about Rs. 1,32,07,870.

The Province is divided into four administrative districts, Mahasu, Sirmur, Mandi and Chamba.

Mahasu District has a population of 306,783 and is divided into two sub-divisions, Rampur and Jubbah. The Rampur sub-division contains the Tehsils of Rampur, Rohru, Chini, and the Jubbah sub-division contains the Tehsils of Jubbah, Chanpal, Theog, Junga, Arki and Solan and the sub-Tehsils of Kumarsain, Koti and Suni.

Sirmur District has a population of 156,026 and is divided into four sub-divisions, Nahan, Pachhad, Raikwa and Paonta.

Mandi District has a population of 303,685 and contains the Tehsils of Sadar (Sundernagar), Karsog, Sadar (Mandi), Jogindernagar, Sarkaghat, Chachiot and the sub-Tehsil of Dehar.

Chamba District has a population of 168,908 and is divided into the Tehsils of Chamba and Bharmaur, Chura and Pangi and Bhattiyat.

ECONOMY

The main agricultural wealth of the Province consists in potatoes and fruits such as apple, peach, almond, nuts, pomegranate. Salt is another important item; while forests yield timber, fire-wood and charcoal. Handicrafts which include Pashmina shawls, wool of fine quality, resin, herbs, musk and skins are a third source of income.

Himachal Pradesh Forests contain the largest quantities of coniferous timber in Northern India. They are the main source of revenue

in the Province, the estimated annual revenue being 55,00,000. The forests are also useful in ensuring the safety of the catchment areas of the Jannam, Sutlej, Beas, Ravi and Chenab Rivers. On the protection of these catchment areas depends the steady and equable flow of water in these rivers, and the success of irrigation and engineering works in the plains. For purposes of forest utilization the Province has been divided into ten territorial Forest districts, viz., Chamba, Churah, Mandi, Nahan, Suket, Jubbah, Simla, Solan, Nahan and Rajgarh.

Potato is the chief cash crop. The Province has established itself as a vital source of potatoes, especially seed potatoes, for the plains of India. It exports nearly 5½ lakh maunds of potatoes annually out of which over 3½ lakh maunds are directly utilised as seed potatoes.

GOVERNMENT

An Advisory Council of 9 members has been constituted to advise the Chief Commissioner in the discharge of his functions. Of these 9 members, 3 are the representatives of the Rulers of the States which have been integrated in the Himachal Pradesh and 6 are popular representatives.

ADVISORY COUNCIL

H. H. Raja Sir Joginder Sen, K.C.S.I. of Mandi.
Maj. H. H. Lakshman Singh, Raja of Chamba.
Durga Singh, C.I.E., Raja of Baghat.

Shrimati Lila Wati (Mandi).

Dr. Y. S. Parmar (Simla).

Mehta Avtar Chand (Chamba).

Swami Purna Nand (Mandi).

Shri Padam Dev (Bushahr).

L. Shiv Charan Dass.

ADMINISTRATION

Chief Commissioner, N. C. Mehta.

Deputy Chief Commissioner, E. P. Moon.

Judicial Commissioner, Dr. J. N. Bannerji.

Chief Conservator of Forests, N. P. Mohan.

Chief Medical Officer, Col. D. H. Rai.

Chief Educational Officer, Dr. Gokal Chand.

Director of Agriculture, Dr. A. S. Gilani.

Financial Adviser, J. G. Bhandari.

Chief Engineer, Devi Dayal.

Chief Lady Medical Officer, Dr. (Mrs.) A. C. Parmar.

Director of Land Records, Arin Chand.

Secretary (Development), R. G. Abbi.

Director of Civil Supplies, Capt. Inder Sen.

Deputy Commissioner, Mahasu, Mehta Ram Rathan.

Deputy Commissioner, Mandi, L. Wazir Chand.

Deputy Commissioner, Sirmur, Mr. Shiv Paul.

Deputy Commissioner, Chamba, L. Baldev Ram. (Offg.).

LAWS AND ADMINISTRATION OF JUSTICE

THE Indigenous law of India and Pakistan is personal and divisible with reference to the two great classes of the population, Hindu and Muslim. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the British was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Muslim the laws and customs of Islam should be applied. The rules of the *Shastras* and the *Koran* have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843, the Caste Disabilities Removal Act of 1850, the Hindu Widows' Remarriage Act, 1856, and some other Acts and Codes. To quote the *Imperial Gazetteer*, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans. While much of the old Hindu and Muslim law is everywhere personal to their native fellow-subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated.

During recent years, however, there has been a determined demand on the part of social reformers, and various women's organisations in India for an amendment of the Hindu Law so as to bring it into line with progressive social opinion, in consonance with the spirit of the times. The Draft Hindu Code now before the Central Legislature aims at abolishing the archaic principles of the ancient system of law, the removal of sex and caste disabilities, and generally simplifying, secularising, and modernising the law governing all Hindus, including *Langayats*, Buddhists, Jains and Sikhs. In the meanwhile, an opposite tendency has been observable among the Muslims, who by recent legislation have sought to revert to the law of the *Shariat*, discountenancing the application of Hindu Law and custom to the sections of the Muslim community who as converts from Hinduism had retained Hindu Law in matters of inheritance and succession. Apart from this, the entire legal system which has hitherto prevailed in the sub-continent is bound to undergo a profound transformation by reason of the withdrawal of British rule and the partition of India.

CODIFICATION

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially from Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of India and Pakistan is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as

the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the Code."

The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Transfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in India and Pakistan today.

THE FEDERAL COURT

A Federal Court is a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act of 1935 accordingly provided (Sections 200-218) for the Constitution of a Federal Court.

As a result of the Indian Independence Act of 1947 and the orders passed under that Act, India is now split up into two Dominions and provisions are made for the establishment of two separate Federal Courts for the two Dominions.

The Federal Court under The Government of India Act of 1935 continues to be the Federal Court of the Dominion of India. The Federal Court of the Dominion of Pakistan has not yet been established but will no doubt come into being very soon. The provisions for the two Federal Courts are on the same lines, the existing provisions of the Government of India Act of 1935 being adopted for this purpose with suitable modifications.

The Federal Court of India consists of the Chief Justice of India and such number of other Judges as the Governor-General may deem necessary; but the number of puisne judges is not to exceed six unless and until a resolution is passed by the Legislature of the Indian Dominion for an increase. Every judge of the Federal Court is to be appointed by the order of the Governor-General and is to hold office until he attains the age of 65 years. A Judge of the Federal Court is liable to be removed from office by an order of the Governor-General on the ground of misbehaviour or of infirmity of mind or body if the Judicial Committee of the Privy Council on a reference reports that the Judge ought on any such grounds to be removed. The Federal Court is a Court of Record. The Federal Court of India is to sit in Delhi and at such other place or places as the Chief Justice of India with the approval of the Governor-General, may from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Dominion of India, any of the Provinces of India, or any of the Acceding States, if and in so far as the dispute involves any question of law or of fact on which the existence or extent of a legal right depends.

Certain restrictions are placed upon the Court's jurisdiction over disputes to which an Acceding State is a party. In the exercise of its original jurisdiction, the Court can pronounce

only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment, decree or final order of a High Court, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act or any Order-in-Council or Order passed thereunder, or as to the interpretation of the Indian Independence Act of 1947, or of any Order made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave.

APPEALS

The Dominion Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court in civil cases. And a Bill to provide for its enlargement to the fullest extent permissible under Section 206 of the Government of India Act 1935, as now in force and for the abolition *pro tanto* as from February 1, 1948 of all direct appeals in such cases from High Courts to His Majesty in Council either with or without special leave was passed by the Dominion Legislature on December 11, 1947. Although appeals to the Privy Council cannot altogether be excluded by means of this Bill it will have the effect of stopping the further flow of direct appeals to the Privy Council in civil cases and prepare the way for the abolition in due course of all appeals to that body. The Bill however, does not interfere with appeals which are pending before the Privy Council and the records of which have been transmitted to England by the High Court concerned, nor with appeals to the bringing of which special leave may have been granted by the Privy Council before the coming into force of this law.

An appeal also lies to the Federal Court from a High Court in an Acceding State on the ground that a question of law has been wrongly decided concerning the interpretation of the Government of India Act or of an Order-in-Council or Order made thereunder or concerning the interpretation of the Indian Independence Act of 1947 or of an Order made thereunder or concerning the extent of the legislative or executive authority vested in the Dominion by virtue of the Instrument of Accession of that State, or arising under an agreement made under Part VI of the Government of India Act in relation to the administration in that State of a law of the Dominion Legislature.

An appeal may be brought as of right to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Government of India Act or of an Order-in-Council or Order made thereunder or which concerns the interpretation of the Indian Independence Act of 1947 or of an Order made thereunder or which concerns the extent of the legislative or executive authority vested in the Dominion by virtue of the Instrument of Accession of a State or which arises under an agreement made under Part VI of the Government of India Act in relation to the administration in any State of a law of the Dominion Legislature. In other cases, an appeal may be brought to the Privy Council where special leave is granted either by the Federal Court or by the Privy Council. All authorities civil and judicial throughout the Dominion are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court are to be in the English language and judgment must be pronounced in the open Court with the concurrence of the majority of the judges.

The provisions for the constitution of the Federal Court of Pakistan are as already stated, on the same lines. The seat of the Federal Court of Pakistan will be in Karachi.

The Federal Court was first established and commenced to function on 1st October 1937. The Court in the first instance consisted of a

Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000 and each of the puisne judges Rs. 5,600 per month.

Sir Maurice Gwyer, K.C. was appointed to be the first Chief Justice of India, and Sir Shah Mahmood Sulaiman and Mr. M. R. Jayakar to be judges of the Federal Court.

Sir Maurice Gwyer, K.C. retired on 25-4-1943. Sir Srinivasa Vardachariar acted as Chief Justice from 25-4-1943 to 7-6-1943 when Sir Patrick Spens was appointed the Chief Justice. His two colleagues were Sir Mahomed Zafrulla Khan and Sir Harilal Kania.

On the 14th August 1947, Sir Patrick Spens resigned his office of the Chief Justice of India in order to take up the duty of the Chairman of the Arbitral Tribunal set up for the purpose of deciding questions arising out of the partition of India. On his resignation Sir Harilal Kania was appointed the Chief Justice of India. At present the Federal Court consists of five judges, Mr. Justice Mukerjee, Mr. Justice Mehrchand Mahajan, Sir Syed Fazl Ali, Mr. Patanjali Sastri besides the Chief Justice.

Chapter IV Articles 103 *et seq.* of the Draft Constitution of India provide for the establishment of a Supreme Court of India consisting of a Chief Justice of India and such number of other judges, not less than seven, as Parliament may by law prescribe. A person shall not be qualified to be a judge of the Supreme Court unless he is a citizen of India and has been for at least 5 years a judge of a High Court, or has been for at least 10 years an advocate of a High Court. The judge shall hold office until he attains the age of 65, and is not liable to be removed from his office except by an order of the President, passed after an address supported by not less than two-thirds of the members present and voting has been presented to the President by both Houses of Parliament in the same session, for such removal on the ground of proved misbehaviour or incapacity. Under the second Schedule the salary of the Chief Justice of India is fixed at Rs. 5,000 p.m. and that of the other judges of the Supreme Court at Rs. 4,500 p.m. A person who has held office as a judge of the Supreme Court is disqualified from practising in any Court or before any authority in India. The Supreme Court shall be a Court of Record, and shall sit at Delhi or such other place as the C. J. with the approval of the President may appoint. The Supreme Court shall have exclusive original jurisdiction in any dispute between (a) Govt. of India and one or more States, or (b) between Govt. of India and any State or States on one side and one or more other States on the other; or (c) between two or more States, in so far as the dispute involves any question (whether of law or fact) on which the existence or extent of a legal right depends. The Appellate Jurisdiction of the Supreme Court is to embrace appeals from any judgment, decree or final order of a High Court in a State if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Constitution, or by special leave of the Supreme Court. Appeals also lie to the Supreme Court from judgments, decrees, or final orders of a High Court in Civil proceedings in India, if the amount or value of the subject matter of the dispute is not less than Rs. 20,000.

Appeals may also lie to the Supreme Court in certain cases where special leave is granted by the Supreme Court. The law declared by the Supreme Court is to be binding on all courts in the territory of India and its decrees and orders are enforceable throughout India. Provision is made by Article 114 for the enlargement of the jurisdiction of the Supreme Court by Parliament.

On the establishment of the Supreme Court of India, the Federal Court constituted under the Govt. of India Act of 1935 will cease to function.

After the attainment of Independence by India civil appeals to the Judicial Committee of the Privy Council have been abolished since February 1948. Except as regards pending appeals, all civil appeals now lie to the Federal Court instead. The Judicial Committee however still retains the restricted jurisdiction which it has exercised in criminal matters. But with the establishment of the Supreme Court under the new Constitution this jurisdiction also must cease.

HIGH COURTS

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. At present all the Provinces have High Courts except Orissa, Assam and Baluchistan. It now appears as if it was only a question of time before Orissa and Assam too had their own High Courts. The High Courts for Oudh and Sind are called Chief Courts. The principal legal tribunal in the N.-W.F.P. is known as the Court of the Judicial Commissioner.

The Judges are appointed by the Crown; they hold office until they attain the age of 60 years; formerly one third of their number were barristers, one third were recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in the sub-continent or are lawyers qualified in the sub-continent. This fixed proportion of Barrister and Civilian Judges has now been abolished by the Government of India Act, 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to the Federal Court or to His Majesty's Council the latter being heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate Courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal to keep themselves to some extent acquainted with the manner in which the Courts generally are discharging their duties.

LOWER COURTS

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every Province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the Province.

Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian

law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy was exercised by the Governor-General-in-Council and is now exercised by the Governor-General of India or Pakistan and the local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district. As District Judge he presides in its principal civil court of original jurisdiction. His functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India and Pakistan.

There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Small Causes Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the Chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Provincial Insolvency Act of 1920.

Cotoners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

LEGAL PRACTITIONERS

Legal practitioners in India and Pakistan are divided into Barristers-at-Law, Advocates of the Federal and the High Courts; Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtars and revenue agents. Advocates of the Federal Court are divided into two classes, senior Advocates and Advocates. The Federal Court maintains a Roll of senior Advocates and Advocates. All Advocates in the Federal Court must be instructed by Agents on the Rolls of the Federal Court. Agents and no Senior can appear without a Junior. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the Chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Bar Councils Act of 1926 aims at abolishing the various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

The Governments of India and Pakistan have their own law colleague in the Legal Member of the Cabinets of the two Dominions. All Government measures are drafted in this department after their substance is decided upon by the administrative departments concerned. Outside the Cabinet the principal law officer of the Government of India and of Pakistan are the Advocate General of India and Pakistan who are appointed by the Governor-General of India and Pakistan under section 16 of the Government of

India Act, 1935 as applied to the two Dominions. At Bombay and Calcutta the Government of India have their own solicitors. Each of the Provincial Governments has its own Advocate-General appointed under Section 55 of the Government of India Act, 1935.

By Article 63 of the Draft Constitution of India it is provided that the President shall appoint a person qualified to be appointed a Judge of the Supreme Court to be Attorney-General for India. It shall be the duty of the Attorney-General to give advice to the Govt. of India upon such legal matters and to perform such other duties of a legal character as may be referred or assigned to him by the President, and to discharge the functions conferred upon him by the Constitution. In the performance of his duties the Attorney-General shall have right of audience in all Courts in the territory

of India. On the coming into force of the new Constitution the Advocate-General of India will be replaced by the Attorney-General of India.

The Provincial Governments have usually their own Legal Remembrancers and professional lawyers as Government Advocates and Assistant Government Advocates.

Sheriffs are attached to the High Court of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of Court.

LAW REPORTS

The official Provincial Law Reports are now published in eight series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore, Nagpur

and Karachi under the authority of the Provincial Governments concerned. They contain cases determined by the High Court and by the Federal Court and the Judicial Committee on appeal from the High Courts. These appeals raise questions of very great importance and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume and have also compiled a digest of Indian Appeals covering the period 1874-1923. The other provinces and States have series of reports issued under the authority either of the Judiciary or the State.

In addition to these reports a separate series is published under the authority of the Federal Court of India containing reports of the decision of that Court and of the Judicial Committee on appeal from the Federal Court.

LAWS OF 1948

1. Federal Court (Enlargement of Jurisdiction) Act 1948.—This Act has been passed with the object of abolishing all appeals to His Majesty in Council from India, and to constitute the Federal Court of India to be the final and highest court of appeal in all civil and criminal cases in India.

This Act came into force from February 1, 1948.

S. 2 defines "judgment to which this Act applies," as meaning any judgment, decree, or final order of a High Court in a civil case from which a direct appeal could have been brought to His Majesty in Council either with or without special leave if this Act had not been passed.

S. 3 provides that as from Feb. 1 1948 an appeal shall lie to the Federal Court, from any judgment of a High Court without special leave of the High Court if an appeal could have been formerly brought to His Majesty in Council without special leave, and with special leave of the Federal Court in any other case.

S. 3(c) provides that from and after February 1, 1948 no direct appeal shall lie to His Majesty in Council.

S. 4 provides for the continuance of all proceedings taken in a High Court in connection with appeals to His Majesty in Council to the Federal Court except those appeals in which the records have been submitted to His Majesty in Council before February 1, 1948.

S. 5 provides that all applications for special leave to appeal pending before the Privy Council shall be transferred to the Federal Court.

S. 6 makes necessary modification in the existing laws, relating to appeals to His Majesty in Council.

S. 7 saves from the operation of this Act certain appeals pending before His Majesty in Council and ready for hearing.

2. Repealing and Amending Act 1948.—This Act repeals several enactments specified in the Schedule to the Act which are spent or have otherwise become unnecessary or have ceased to be in force.

3. Armed Forces (Special Power) Act 1948.—This Act confers special powers upon officers of His Majesty in Military or Air Forces to fire upon or otherwise use force even to the extent of causing death, against persons acting in contravention of any law, or order for the time being in force in certain disturbed areas in respect of which a proclamation has been issued under S. 15 of the Police Act 1861, prohibiting the assembly of five or more persons or the carrying of weapons. The officers are also empowered to arrest without warrant persons committing a cognizable offence and to enter and search without warrant any premises and make any arrest of persons.

S. 3 provides for the protection of such officers from prosecutions and legal proceedings against them for anything done under the Act.

S. 4 repeals certain Ordinances.

4. Armed Forces (Emergency Duties) Amendment Act 1948.—By this Act a slight amendment is made in S. 2 of the Act of 1947 empowering the central Government to declare any specified service "In a Province or if so requested by the Government of an Adjoining State any specified service in that State," to be a service of vital importance to the community.

5. Indian Tariff (Second Amendment) Act of 1948.—In accordance with the resolution adopted at the first Session of the Preparatory Committee of the United Nations Conference on Trade and Employment established by the Economic and Social Council of the United Nations, the Government of twenty-three States entered into negotiations at Geneva, the negotiations being directed to the substantial reduction of Tariff

and other trade barriers and to the elimination of preferences on a reciprocal and mutually advantageous basis. These negotiations resulted in the framing of a General Agreement on Tariffs and Trade and of a Protocol of Provisional Application. In common with other countries India signed this Agreement and undertook to apply provisionally Parts I and III of the Agreement and Part II to the fullest extent not inconsistent with existing legislation. Accordingly this Act amends the Indian Tariff Act XXXII of 1934.

By S. 3 the items in Schedule A to the Main Act is amended in the manner stated therein for levying standard rate of duty on various articles mentioned therein.

S. 5 provides that no duty shall be levied until March 31st 1951, on tallow, wool, copper lead and zinc, and that duty on aeroplanes, aeroplane-parts, engines, rubber-tyres, and tubes used exclusively for aeroplanes shall not be increased above 3 per cent *ad valorem*.

S. 6 empowers the Central Government by notification to declare this Act in applicable to articles and goods produced or manufactured by countries not parties to the General Agreement.

S. 7 provides that no additional duties of customs mentioned in S. 5 of the Indian Finance Act 1948 shall be levied on goods comprised in Schedules A and C.

6. Code of Civil Procedure (Amendment) Act 1948.—This Act amends S. 80 of the Code of Civil Procedure 1908 by providing that in the case of suits against the Central Government in relation to its railways, the notice shall be given hereafter to the General Manager of that particular railway instead of the notice being given to the Secretary to the Central Government.

7. Cotton Textiles Cess Act, 1948.—The Government of India have recently relaxed their control on prices on Cotton Textiles and have left the fixation of prices to mills who have assured Government that they would fix reasonable prices. Under the circumstances this Act has been passed to impose a Cess on certain Cotton Textiles manufactured in the Indian Provinces. The Act extends to all the Provinces of India, and came into force on 31st December 1947.

S. 3 empowers the Central Government to levy on any cloth or yarn held in stock by a producer or a wholesale dealer a Cess at such rate as it may specify.

S. 4 provides that where a producer or wholesale dealer has made a contract of sale of cloth or yarn on which a Cess is levied such producer or wholesale dealer can lawfully charge the amount of the Cess to the buyer in addition to the contract price.

S. 5 provides that the producer or the wholesale dealer shall be liable to pay the Cess.

S. 6 provides for imposing a penalty for non-payment of the Cess. The penalty is not to exceed the amount of Cess in arrears.

S. 7 provides for recovery of Cess in arrears as arrears of land revenue.

S. 8 empowers the Central Government to authorise persons to take inspection and make a search with a view to securing compliance with this Act.

S. 9 imposes penalty for evasion of Cess and empowers a court trying an offence under the Act to order forfeiture of any cloth or yarn in respect of the offence committed.

8. Pharmacy Act 1948.—This Act has been passed with the object of making better provision for the regulation of the profession and practice of pharmacy and for that purpose to constitute Pharmacy Councils. The Act extends to all the Provinces in India, and

comes into force at once except that Chapters III, IV and V shall take effect in a particular Province from such date as the Provincial Government may fix.

Ty S. 2 "Medical Practitioner" is defined as meaning a person holding a qualification granted by an authority specified in S. 3 the Indian Medical Degrees Act 1916 and specified in the Schedules to the Indian Medical Council Act 1933 or a person registered in a Medical Register of a Province kept for the registration of persons practising allopathic system of medicine.

Chapter III deals with the constitution and composition of Central Council. S. 3 provides that the Central Council shall consist of a large number of members. There shall be six members including at least one teacher of each of the subjects, Pharmaceutical Chemistry, Pharmacy, Pharmacology and Pharmacognosy elected by the Inter-University Board, and six other members of whom at least three possessing a degree or diploma, in and practising pharmacy or pharmaceutical chemistry shall be nominated by the Central Government. One member shall be elected by the Medical Council of India. The Director-General, Health Services or a person authorised by him, the Director of the Central Drugs Laboratory, the Chief Chemist, Central Revenues shall be ex-officio members.

There shall be one member representing each Governor's Province elected by the members of each Provincial Council and one member representing each Provincial Government. The Council so constituted shall be a body corporate with the name of Pharmacy Council of India. The Council shall elect a President and Vice-President who shall hold office for not more than five years.

S. 8 empowers the council to employ a staff including a Secretary and Treasurer. The council shall constitute an Executive Committee from amongst them.

S. 10 provides that the Council may with the approval of the Central Government make Education Regulations prescribing the minimum standard of Education required for qualification of a pharmacist.

S. 12 provides for approved courses of study and examinations to be conducted by an authority in a Province.

S. 14 empowers the Central Council to declare qualifications granted outside the Provinces of India to be sufficient qualification for registration under the Act.

S. 16 provides for the inspection by the Executive Committee of Institutions conducted in Pharmacy.

S. 18 empowers the Central Council to make regulations.

Chapter III commencing with S. 19 and ending with S. 28 deals with Provincial Pharmacy Councils, constituted by the Provincial Government consisting of persons of Pharmaceutical profession including the chief medical officer of the Province and the Government Analyst under the Drugs Act.

S. 20 provides for agreements between two or more Provincial Governments for the constitution of a Joint Provincial Council with provision for its joint expenditure and for providing for joint consultation between the participating Provincial Governments.

S. 21 deals with the composition of Joint Provincial Councils.

S. 22 provides that every Provincial Council shall be a body corporate.

S. 23 provides for the election of President and Vice-President of the Council.

S. 25 deals with the term of office of members of the Provincial Council for a term of five years and provides for filling casual vacancies.

S. 26 empowers the Provincial Councils to appoint a staff and fix their remuneration.

S. 27 empowers the Provincial Council to constitute an Executive Committee from amongst the members of the Council.

Chapter IV deals with the Registration of Pharmacists and maintenance of Registration, and deals with qualifications for entry on the first Register and also for subsequent Registration.

S. 34 provides for Registration fees and Renewal fees.

S. 36 empowers the Executive Committee to remove from the Register, the name of a Registered Pharmacist on certain grounds.

Chapter V provides for penalty for falsely claiming to be registered.

S. 42 provides that no person other than a Registered Pharmacist shall compound, prepare, mix, or dispense any medicine on the prescription of a medical practitioner except under the direct and personal supervision of a Registered Pharmacist provided that this provision shall not apply to the dispensing by a medical practitioner of medicine for his own patients. It further provides that a person contravening this provision shall be punished with imprisonment for a term extending to six months or with fine not exceeding one thousand rupees.

S. 45 empowers the Central Government when it appears to it that the Central Council is not acting in accordance with the provisions of this Act to appoint a Commission of Enquiry consisting of three persons one being a Judge of a High Court one appointed by the Council and one appointed by the Central Government to hold an enquiry.

9. Dock Workers (Regulation of Employment) Act 1948.—This Act is enacted to regulate the employment of dock workers, and it extends to all the Provinces of India.

"Dock Worker" is defined by the Act as meaning a person employed in or in the vicinity of any port or work in connection with the loading, un-loading, movement or storage of cargoes, or work in connection with the preparation of ships or other vessels and for the receipt or discharge of cargoes.

S. 3 provides for the framing of schemes for the registration of dock workers, the conditions of their employment, their training, and regulating their recruitment, and for various other matters including punishment for contravention of the provisions of the scheme and for ensuring greater regularity of employment of dock workers.

S. 4 empowers the Government to make one or more schemes for a port or group of ports and to direct a port authority to prepare in accordance with their instructions one or more draft schemes for the port.

S. 5 empowers the Government to constitute an Advisory Committee consisting of members representing the Government, dock workers and employers to advise upon such matters arising out of the administration of this Act or any scheme made thereunder as the Government may refer to it for advice.

S. 6 empowers the Government to appoint such persons as it thinks fit to be inspectors for the purpose of this Act.

10. Insurance (Amendment) Act 1948.—S. 2 makes a slight amendment in sub-section (1) of S. 4 of the Insurance Act of 1938 by omitting from the sub-section (1) a provident society and a Mutual Insurance Company. The amended sub-section now reads thus: No insurer not being a Co-operative Life Insurance Society to which Part IV of the Insurance Act 1938 applies, shall pay or undertake to pay on any policy of life insurance issued after the commencement of this Act an annuity of Rs. 50 or less or shall give sum of Rs. 500 or less exclusive of any profits or bonus, provided that this shall not prevent an insurer from converting any policy into a paid-up policy.

11. Minimum Wages Act 1948.—This Act provides for fixing minimum of wages in certain employments. It extends to all the Provinces in India.

By S. 2 "wages" is defined as meaning all remuneration capable of being expressed in terms of money payable to a person employed in respect of work done in such employment but not including the value of any house accommodation, supply of light, water, attendance or any other amenity or any contribution paid by the employer to any Pension Fund or Provident Fund or under any scheme of social insurance, or any travelling allowance or any gratuity.

S. 3 provides that the appropriate Government shall fix the minimum rates of wages payable to employees employed in all Scheduled employments, provided however that the appropriate Government shall not fix minimum rates of wages in respect of any Scheduled employment in which less than one thousand employers are engaged. The minimum rates of wages may be fixed by the Government for time work or piece work.

S. 4 provides that the minimum rate of wages fixed by the Government may consist of (1) a basic rate of wages and a special allowance; (2) a basic rate of wages with or without the cost of living allowance; (3) an all inclusive rate.

S. 5 provides for the procedure to be followed by the Government in fixing minimum rate of wages in respect of all Scheduled employments.

S. 6 provides for appointing Advisory Committees and Sub-Committees for the purpose of revising minimum rate of wages.

S. 7 provides for Advisory Board for the purpose of co-ordinating the work of the Committees.

S. 8 provides for a Central Advisory Board for the purpose of advising a Central Provincial Government in the matters of fixation and revision of minimum rates of wages and other matters.

S. 9 provides for the composition and constitution of Committees.

S. 10 provides for revision of minimum rates of wages.

S. 11 says that minimum wages must be paid in cash, except in certain cases.

S. 13 provides for fixing the number of hours of work to constitute a normal working day and provides for a day of rest once a week.

S. 14 provides for extra payment for overtime.

S. 18 provides for maintenance of registers and records by every employer.

S. 19 provides for inspection to inspect the places of employment.

S. 20 provides for the settlement of claims by a commissioner.

S. 22 provides for penalties and procedure.

S. 23 exempts an employer from liability for any offence with which he is charged, if he satisfies the court that he has used due diligence to enforce the execution of this Act and that some other person has committed the offence without his knowledge and consent.

S. 24 declares a court of law from entertaining any suit for the recovery of wages if an application under S. 20 has been made and where wages can be recovered by an application under S. 20.

S. 25 provides that any agreement with any employee for relinquishing or reducing his right to minimum rate of wages or any privilege or concession given to him under the Act shall be null and void.

S. 26 empowers the Government to make exemptions and exceptions in particular cases of employment and further provides that this Act shall not apply to the wages payable by an employer to a member of his family.

S. 27 empowers the Provincial Government to add any class of employment to the Schedule to the Act.

S. 28 gives power to the Central Government to give directions to Provincial Government for carrying into execution the Provisions of the Act.

Ss. 29 and 30 give power to the Central Government and Provincial Governments to make rules for the purposes of this Act.

The Schedule annexed to the Act enumerates twelve kinds of employment in which minimum rate of wages are to be fixed such as rice and flour-mills, tobacco manufactory, employment in plantations and under local authorities, etc.

Part II of the Schedule deals with employment in agriculture, i.e., farming, dairy-production, cultivation, etc.

12. Rehabilitation Finance Administration Act, 1948.—This Act is meant for giving credit facilities for the settlement of refugees in business and industry and for this purpose it establishes a Rehabilitation Finance Administration which will be financed and controlled by the Central Government, but which will work as a Semi autonomous body in close collaboration with the Central and Provincial Governments and banks. Provision has also been made in the Act which will facilitate the granting of financial assistance by normal banking channels.

S. 2 defines a "displaced person" as meaning a person who has been displaced from any area outside India on account of civil disturbances and who has settled or intends to settle and engage in any business or industry in India or a person who has lost his business or industry or property and has come to India.

S. 3 provides that the Central Government shall constitute a corporation called the Rehabilitation Finance Administration for giving financial assistance on reasonable terms to displaced persons to enable them to settle in business and industry. The head office of the Administration is to be at Delhi and branches may be opened at such other places in India as the Central Government may approve.

S. 4 provides for the constitution of the Administration consisting of a chairman appointed by the Central Government who shall be called the Chief Administrator, three officials, appointed by the Central Government, and three officials nominated by the Central Government.

S. 5 provides for the constitution of an Advisory Board consisting of members not exceeding fifteen as may be nominated by the Central Government to advise the Administration on matters of policy.

S. 6 provides for the terms of office of the members of the Administration and the Advisory Board.

S. 7 provides that no member of the Administration shall have any interest direct or indirect in any business, industry or concern to which any financial help is given by the Administration.

S. 8 empowers the Central Government for any reason which may appear to be sufficient to remove any member at any time from the Administration or from the Advisory Board.

S. 9 provides that the Chief Administrator shall be a whole time servant of the Administration and shall receive salary as may be determined by the Central Government.

S. 10 empowers the Administration to engage a staff on such terms as it may determine.

S. 11 provides for the advancement of money by the Central Government to the Administration not exceeding ten crores of rupees, and the Administration shall pay interest thereon at the rate of three per cent per annum.

S. 12 provides for the business to be carried on by the Administration including giving loans to the extent of seven crores of rupees, discounting bills of exchange and promissory notes, etc.

S. 13 gives power to the Central Government to prescribe the limits of loans to be advanced by the Administration, gives power to the Administration to charge interest at six per cent per annum on loans and to give loans for a period not exceeding ten years to "displaced persons." It further provides that all assets created from the loans shall be deemed to be mortgaged to the Administration.

S. 14 empowers the Administration to call for repayment of the loans before the agreed period under certain circumstances.

S. 15 provides for the mode of recovering the loans.

S. 16 provides for auditing the affairs of the Administration.

S. 17 provides for inspection of the borrower's books and accounts.

S. 18 provides for furnishing Returns to the Central Government.

S. 19 empowers the Central Government to give directions to the Administration which should be carried out by the Administration.

S. 20 exempts the Administration from the liability to pay income-tax, super-tax, or any other tax on its income, profits, and gains.

S. 21 provides that the Administration shall not be taken into liquidation except by the order of the Central Government and if it is taken into liquidation its assets shall vest in the Central Government.

13. Railways (Transport of Goods) (Amendment) Act, 1948.—(Owing to the shortage of essential commodities it became necessary that the movement of such commodities by rail should be given preference and for this purpose some form of priority control was essential hence this Act was passed for the rapid conveyance of commodities shown in the Schedule to the Act containing eighteen essential items. This Act extends the life of the Railways (Transport of Goods) Act, 1947 and introduces certain amendments to the effect that the Central Government may direct any Railway Administration to give special facilities or preference for the transport of any of the goods mentioned in the Schedule subject to wagon quotas and also direct the Administration to refuse to carry any of such goods for reasons of urgent public interest.

14. Damodar Valley Corporation Act 1948.—This Act is passed to provide for the establishment and regulation of a Corporation for the development of the Damodar Valley in the Provinces of Bihar and West Bengal. It came into force on 2nd April 1948.

S. 2 of the Act states that the Damodar Valley shall include the basin of the Damodar river and its tributaries.

S. 3 empowers the Central Government to establish a corporation by the name of Damodar Valley Corporation consisting of a chairman and two other members appointed by the Central Government.

S. 4 disqualifies a person from being appointed a member of the Corporation if he is a member of the Central or any Provincial Legislature or if he has directly or indirectly any interest in the work of the Corporation.

S. 6 empowers the Central Government to appoint the Secretary and financial adviser of the Corporation.

S. 10 provides for the appointment of the Advisory Committee to advise the Corporation.

S. 11 defines the limits of Damodar Valley and the area of operation and empowers the Central Government to direct the Corporation to carry out such functions in such areas as may be specified.

S. 12 provides that the Corporation shall see to the promotion and operation of schemes for irrigation, water supply, drainage, generation, transmission, and distribution of Electrical energy and to see to the promotion and control, and navigation in the Damodar river and the promotion, afforestation and control of soil erosion.

S. 13 empowers the Corporation to construct canals and distributaries.

S. 11 empowers the Corporation to fix and levy rates for supply of water for irrigation to the Government.

S. 15 empowers the Corporation to fix and levy rates for supply of water for industrial and domestic purposes.

S. 17 prohibits the construction of any drain or other work or installation by anybody except with the approval of the Corporation.

S. 18 deals with supply and generation of electrical energy in the Damodar Valley.

S. 20 empowers the Corporation to fix the rate of charges for supply of electrical energy.

S. 21 empowers the Corporation to establish and maintain laboratories, experimental and research stations, and farms for conducting experiments for utilizing the water for the development of the Damodar Valley.

S. 22 gives general power to the Corporation to do everything necessary for the purpose for carrying out its functions under the Act.

S. 23 empowers the Corporation to divert or close the public use of any road or open any space.

S. 24 gives power to the Corporation to exercise all the powers of a Provincial Government in the Damodar Valley under the Provision of the Canals Act, Indian Forest Act, Bengal Irrigation Act, and Bengal Embankment Act.

S. 25 directs the Corporation to co-operate with Government, Railway and Local Authorities in the discharge of their duties.

S. 26 enjoins the Corporation to avoid submergence of coal or mineral deposits.

S. 27 deals with the expenditure incurred by the Central Government on behalf of the Corporation.

S. 28 provides for vesting of property in the Corporation.

S. 30 makes the participating Governments to provide capital to the Corporation for the completion of any project undertaken by it.

S. 32 gives power to the Corporation to spend money on objects authorised under the Act.

S. 33 provides for allocation of expenditure chargeable to projects of main objects.

S. 34 provides for capital allocation for irrigation.

S. 37 provides for the disposal of profits and deficits.

S. 38 provides for the payment of interest by the Corporation to the participating Governments.

S. 40 makes provision for maintaining depreciation and reserve and other funds.

S. 42 empowers the Corporation to borrow money.

S. 43 makes the Corporation liable for income-tax in the same way as any other company.

S. 44 provides that the Corporation shall every year prepare a budget for the next financial year showing the estimated receipts and expenditure.

S. 45 directs the Corporation to prepare an annual report giving a true and faithful account of its activities.

S. 46 requires the Corporation to prepare other annual financial statements.

S. 47 deals with accounts and appointment of auditors by the Corporation.

S. 48 empowers the Central Government to give directions to the Corporation on questions of policy.

S. 49 provides that disputes between the Corporation and Governments shall be referred to an arbitrator appointed by the Chief Justice of India.

S. 50 provides for the acquisition of land for the Corporation.

S. 51 gives control to the Central Government over the Corporation.

S. 52 makes the Provisions of the Indian Forest Act applicable to the forests of the Corporation.

S. 53 imposes a penalty for contravening the Provisions of Sections 17 and 18 of the Act.

S. 55 gives power to officers of the Corporation to enter any premises and make a survey or other investigation on behalf of the Corporation.

S. 58 provides that no other enactment shall affect the Provisions of this Act.

S. 59 empowers the Central Government to make rules.

S. 60 empowers the Corporation to make regulations for carrying out its functions under the Act.

15. Industrial Finance Corporation Act, 1948.—This Act has been passed for the purpose of making medium and long-term credits more readily available to industrial concerns in India—particularly in circumstances where normal banking accommodation is inappropriate.

S. 2 defines "industrial concern" as meaning any public limited company, or co-operative society incorporated under an Act and registered in India and engaged in the manufacture or processing of goods or in mining or in the generation or distribution of electricity or any other form of power.

S. 3 provides for the establishment of the Industrial Financial Corporation of India which shall be a body corporate with power to acquire and hold moveable and immovable property.

S. 4 provides that the authorised capital of the corporation shall be ten crores of rupees divided into twenty thousand fully paid-up shares of five thousand rupees each of which ten thousand shares of the value of rupees five crores shall be issued in the first instant. The Central Government and Reserve Bank shall each subscribe for two thousand five hundred shares. The Insurance Companies and other Financial Institutions may subscribe for two thousand five hundred shares in all and Co-operative banks may subscribe for one thousand shares of the Corporation.

S. 5 provides that the Central Government shall guarantee the repayment of shares.

S. 6 says that the management of the Corporation shall be by a Board of Directors which with the assistance of an Executive Committee may exercise all the powers and do all acts on behalf of the Corporation.

S. 7 provides that the Executive Committee shall be competent to deal with any matter within the competence of the Board.

S. 8 provides for the appointment of an Advisory Committee to assist the Corporation in the discharge of its functions.

S. 9 provides for the appointment, qualification and salary of the Managing Director.

S. 10 provides that the Board of Directors shall consist of three directors, nominated by the Central Government, two directors nominated by the Central Board of the Reserve Bank, two directors elected by the Scheduled banks, two directors elected by the other shareholders of the Corporation, two directors elected by the co-operative banks. The managing director shall be appointed by the Central Government.

S. 11 deals with the term of office and retirement of directors.

S. 12 provides for the qualifications and disqualifications of directors.

S. 14 empowers the Corporation to engage officers and employees.

S. 15 provides for the appointment of the chairman of the Board.

S. 16 provides for the constitution of the Executive Committee.

S. 17 provides for the meetings of the Board of directors and the Executive Committee.

S. 18 provides that the Corporation shall establish its head office at Delhi, and branch offices in Bombay, Calcutta, Kanpur, and Madras.

S. 19 provides for opening deposit accounts by the Corporation with the Reserve Bank.

S. 20 provides that the Corporation may invest its funds in the securities of the Central and Provincial Governments.

S. 21 empowers the Corporation to borrow moneys by issuing and selling bonds and debentures by the Central Government.

S. 22 empowers the Corporation to accept deposits from the public not exceeding ten crores of Rupees.

S. 23 empowers the Corporation to transact certain kinds of business such as guaranteeing loans raised by industrial concerns, underwriting the issue of stock, shares, etc., by industrial concerns, granting loans to and subscribing to the debentures of industrial concerns and generally the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under the Act.

S. 24 limits the amount of accommodation to be given to industrial concerns.

S. 25 imposes conditions for accommodation.

S. 26 prohibits the company from subscribing directly to the shares or stock of any company having limited liability.

S. 27 empowers the Corporation to borrow foreign currency through the International Bank for Reconstruction for the purpose of making loans or advances to industrial concerns requiring to be financed in foreign currency.

S. 28 provides that if any industrial concern becomes liable to the Corporation or makes any default in repayment, the Corporation shall have the right to take over the management of the concern or to sell and realise the property mortgaged, pledged or assigned to the Corporation.

S. 29 gives power to the Corporation to call for repayment of any loan from an industrial concern before the agreed period under certain circumstances.

S. 30 makes special provisions for enforcement of claims by the Corporation.

S. 31 says that the Corporation shall be deemed to be a bank for the purposes of the Bankers' Books Evidence Act.

S. 32 provides for the payment of dividends by the Corporation out of its profits.

S. 33 deals with the holding of general meetings of the share-holders of the Corporation.

S. 34 deals with the auditing of the accounts of the Corporation.

S. 35 deals with the Returns to be furnished by the Corporation.

S. 36 gives power to the Central Government to acquire the shares of the Corporation from the other share-holders.

S. 37 provides that the Corporation shall not be taken into liquidation except by the order of the Central Government.

S. 38 provides for indemnifying every director for loss or expense incurred by him in the discharge of his duties except where the loss is caused by his wilful act.

S. 39 requires every director, auditor, officer, or servant of the Corporation to make a declaration of fidelity and secrecy in the prescribed form.

S. 40 relates to the liability of the Corporation for income-tax, and super-tax.

S. 41 provides for the punishment of offences against the Corporation.

S. 42 empowers the Central Government to make rules for giving effect to the provisions of this Act.

S. 43 gives power to the Board of Directors to make regulations for giving effect to the provisions of the Act.

16. Dentists Act, 1948.—This Act has been passed for the first time for the regulation of the profession of dentistry and for that purpose to constitute Dental Councils.

S. 2 defines "dental hygienist" as meaning a person not being a dentist or a medical practitioner or who scales, cleans, or polishes, or gives instruction in dental hygiene, "Dental Mechanic" is defined as a person who makes or repairs dentures and dental appliances, and "dentistry" as including the performance of any operation on teeth and the treatment of any disease deficiency or lesion of human teeth or jaws and the performance of radiographic work in connection with human teeth or jaws or oral cavity, etc.

S. 3 empowers the Central Government to constitute a Dental Council of India, composed of members from dental colleges and dentists and Medical Council in India. The Council so constituted shall be a body corporate by the name of Dental Council of India.

S. 5 deals with the mode of election to the Council and S. 6 deals "the term of office of members and the filling of casual vacancies."

S. 7 deals with the appointment of President and Vice-President of the Council.

S. 8 deals with the appointment of staff and their remuneration.

S. 9 provides that the Council shall constitute from among its members an Executive Committee.

S. 10 provides for the recognition of qualifications included in Part I of the Schedule to the Act for practicing the profession of dentistry. "The qualifications included in Parts II and III of the Schedule shall be recognised as dental qualifications. Only British subjects of Indian domicile are entitled to registration.

S. 11 empowers the appropriate authority in a Province of India to give recognition for dental hygiene qualifications for the purpose of this Act.

S. 12 provides that the Council may prescribe conditions for the training to be undergone by a person before he is entitled to be registered under the Act as a dental mechanic.

S. 13 provides that any recognised dental or dental hygiene qualification shall be a sufficient qualification for enrolment in the register of any Province.

S. 14 requires every authority in a Province of India which grants any recognised dental or dental hygiene qualification to furnish such information as the Dental Council may require as to the courses of study and training and examinations to be undergone in order to obtain such qualification.

S. 15 provides for the appointment of inspectors to attend examinations and to inspect dental training institutions.

S. 16 empowers the Dental Council on a report from the Executive Committee that an authority which holds the examinations for dental qualifications does not act in conformity with the

regulations made under the Act or that a particular institution does not satisfy the requirements of the Council, to withdraw its recognition after consulting the Provincial Government.

S. 18 requires the Dental Council to maintain a register of dentists to be known as the Indian Dentists Register. This Register shall contain entries from all the Provincial Registers of dentists.

S. 19 requires the Council to furnish copies of its minutes and the minutes of the Executive Committee and an annual report of its activities to the Central Government.

S. 20 empowers the Council with the approval of the Central Government to make regulations for the guidance of the Dental Council.

Chapter III consisting of Sections 21 to 30 deals with the constitution, composition and the powers of the Provincial Dental Councils, and the constitution by such Councils of Executive Committees.

Chapter IV consisting of Sections 31 to 46 deals with registration of dentists in a Province on payment of prescribed fee if they reside or carry on the Profession of Dentistry in that Province and if they hold a recognised dental qualification provided that they are of Indian domicile.

S. 41 provides for the removal of the name of a dentist by the Provincial Council if he is convicted of an offence or is guilty of any infamous conduct in professional respect, which in the opinion of the Provincial Council renders him unfit to be kept on the Register.

S. 46 provides that any person who is a registered dentist or registered dental hygienist or registered dental mechanic in a Province may practice as such in any other Province.

Chapter V deals with miscellaneous matters and provides for penalty for false entry in the Register and for misuse of titles.

S. 49 provides that after the expiry of two years from the commencement of this Act, no person other than dentist, registered dental mechanic shall practice dentistry or the art of scaling, cleaning, or polishing teeth or of making and repairing dentures provided that a registered medical practitioner may practice dentistry. Further the provisions of this Act are not made applicable to the performance of dental work or radiographic work in any hospital or dispensary maintained or supported from public or local funds.

S. 51 provides that except as provided in the Act the profession of dentistry shall not be carried on by a company or other corporate body. An exception is made in the case of a company which carries on no business other than the profession of dentistry or some business ancillary to the profession of dentistry and of which the majority of directors and all the operating staff are registered dentist. Similarly the Section does not apply to the carrying on the profession of dentistry by employers for the dental treatment of their employees or by any hospital or dispensary or institution for the training of dentists.

S. 54 authorises the Central Government to appoint a Commission of Enquiry whenever it is found that the Council is not acting in accordance with the provisions of the Act.

The Schedule to the Act contains the names of institutions whose degrees or diplomas in dentistry are recognised as dental qualifications for the practice of dentistry. Some of the names of the institutions are : "The University of Bombay ; The College of Physicians and Surgeons, Bombay ; The Nair Hospital Dental Board, Bombay ; Board of Examiners, Calcutta Dental College and Hospital and Stato Medical Faculty, Bengal."

Part II of the Schedule gives the names of the Punjab University, Punjab State Medical Faculty, Board of Examiners College of Dentistry, Karachi, The Royal College of Surgeons, Edinburgh, The Royal College of Surgeons of Edinburgh, The Royal College of Ireland, The Royal

Faculty of Physicians and Surgeons of Glasgow, then the Universities of London, Durham, Manchester, Birmingham, Liverpool, Leeds, Sheffield, Bristol, St. Andrews, and Belfast. It contains also the various American and Paris institutions of dentistry.

17. Indian Army and the Indian Air Force (Amendment) Act 1948.—This Act makes certain amendments found necessary in the Indian Army Act, 1911 and Indian Air Force Act, 1932.

S. 2 amends S. 114 of the Army Act, 1911 to the effect that the said Section which deals with the disposal of the property of deceased persons and deserters, shall not apply to the Indian Commissioned Officers. Sub-section 2 of the same Section substitutes a new Sub-section (2) to S. 114 of the Army Act of 1911 to the effect that in the case of a deceased person who has left in a bank a deposit not exceeding Rs. 1,000, the commanding Officer may require the bank, society, or other institution where the money is deposited by the said deceased to hand over the same to him or his agent and the bank, society, or institution in question shall be bound to pay the amount to him or his agent and thereafter it shall not be held liable for the same.

Sub-section (4) of S. 114 of the Act of 1911 is also amended by giving power to the Commanding Officer to convert into money cash certificates and saving certificates.

S. 3 substitutes for the old S. 116 of the Indian Army Act, 1911 new Ss. 116 and 116-A to 116-L.

New S. 116 is applicable to persons who are found to be insane or who being on active service are officially reported to be missing.

S. 116-A deals with the disposal of the property of Indian Commissioned Officers who die or desert.

S. 116-B gives power on the death or desertion of an Indian Commissioned Officer to a Committee of Adjustment appointed in that behalf to secure the movable property belonging to the deceased or deserter and to dispose of the same in the manner prescribed.

S. 116-C empowers the Central Government to hand over the estate of a dead Indian Commissioned Officer to Administrator-General.

S. 116-D provides for the disposal of surplus property secured on the death of a person or on his desertion.

S. 116-E provides for the disposal of effects not consisting of money.

S. 116-F gives power to deliver certain property not exceeding Rs. 5,000 to the representatives of the deceased Indian Commissioned Officer without production of probate.

S. 116-G provides that payment of money or delivery of goods or the sale thereof by the Committee or by the prescribed person in pursuance of the foregoing sections shall be a valid discharge to the Committee or the prescribed person or to the crown.

S. 116-H provides that the property in the hands of the Committee or the prescribed person shall not be taken as assets found at the place where the Committee or the prescribed person is stationed.

S. 116-I enacts that the representatives of a deceased person or the Administrator-General may take such action as they may like in respect of property of the deceased officer if it has not been secured or taken charge of by the Committee or by the prescribed person.

S. 116-J provides that the aforesaid Sections shall also apply in the case of an Indian Commissioned Officer who is found to be insane or is officially reported to be missing.

S. 116-K provides that when an Indian Officer dies or deserts while on active service the references to the Committee of Adjustment shall be construed as references to the Standing Committee of Adjustment.

S. 116-L is a definition section defining the word "Representative" as meaning a person who has taken out representation such as probate or letters of administration or succession certificate. The word "representative" shall not include the Administrator-General.

Ss. 4 and 5 introduce similar amendments in Ss. 126 and 128 of the Indian Air Force Act, 1932 as have been done in sections 114 and 116 of the Indian Army Act, 1911.

Under S. 5 instead of the old S. 128 of the Indian Air Force Act, 1932 new Ss. 128 and 128-A to 128-L have been substituted.

S. 6 of the Act makes certain consequential amendments in Ss. 15, 16 and 17 of the Administrator-General Act, 1913.

18. Protective Duties Continuation Act, 1948.—This Act continues for one year more the levy of certain duties characterised as protective duties on the articles mentioned in the first Schedule to the Indian Tariff Act and amends the Sugar Industry (protection) Act, 1932.

S. 2 makes certain alterations in the first Schedule. The old Item No. 63 (30) is replaced by new item No. 63 (30) and contains the following goods:— rods or bars of alloy; tools or special steel of the following category; but excluding precision ground and polished bars: (1) High speed steel, stainless and heat-resisting steel, etc.; if the same is of British manufacture the protective duty is 30 per cent *ad valorem* and if not of British manufacture protective duty is 42 per cent *ad valorem*.

S. 3 extends protection to sugar industry for one year more.

19. The Indian Tea Control (Amendment) Act, 1948.—This Act introduces certain amendments to the existing Act namely the Indian Tea Control Act (VIII of 1938) as have been found necessary as a result of the constitutional changes that have taken place since August 15, 1947 and as a result of the practical experience of its working. The Act is due to the International Tea Agreement among the tea producers of India, Ceylon, and the Netherlands East Indies for regulation of the export of tea and for the control of extension of tea cultivation. The International Tea Committee has recommended to the Governments of the respective countries that the existing agreement may be replaced by an interim agreement for a period of two years or for such time till a regular agreement under the aegis of the proposed International Trade Organisation is concluded. This Act therefore gives effect to the interim agreement for control of the cultivation and for the export of tea.

20. Indian Finance Act 1948.—This Act gives effect to the financial proposals of the Central Government for the year beginning on 1st April 1948. It discontinues the duty on salt manufactured in or imported by sea, or by land into the Provinces of India. It continues the existing rates of inland postage. It alters duties of customs on goods mentioned in items 24, and 75 in the first Schedule to the Indian Tariff Act, 1934. It enhances duty of customs on manufactured tobacco, cigars, cigarettes and motor-cars. It continues the additional duties of customs in the case of goods comprised in Item No. 22. It levies a duty of customs on exports of sugarcane ore, oil-seeds and vegetable-oils. It raises the excise duty on matches in boxes containing fifty matches and it continues the existing rates of income-tax and super-tax.

21. Indian Railways (Amendment) Act, 1948.—The provisions of the Indian Railways Act, 1890 were so far not directly applicable to Indian States. With the setting up of the Dominion of India, the Jurisdiction has been given by the Acceding States to the Dominion in respect of legislation on Railways. The Act therefore extends the provisions of the Indian Railways Act, 1890 throughout the Indian Dominion including the Acceding States.

22. Indian Power Alcohol Act, 1948.—The development of Power Alcohol industry is of national importance both in point of view of using the molasses which would otherwise be wasted and of creating in the country an industry which would be of importance in times of emergency. The utilisation of Power Alcohol would also reduce the price of sugar and reduce our dependence on petrol. This Act therefore aims at giving control over Power Alcohol to the Central Government and adopting measures to utilize the surplus of molasses in certain Provinces and to enforce the admixture of Power Alcohol with petrol.

S. 2 declares that it is expedient in the public interest that the Central Government should take under its control the development of the Power Alcohol industry.

S. 3 defines "molasses" as dark-colour residual syrup drained from sugarcane; "petrol" as dangerous petroleum as defined in S. 2 of the Petroleum Act, 1934 and "Power Alcohol" as meaning ethyl alcohol containing not less than 99.5 per cent by volume ethanol measured at sixty degrees Fahrenheit corresponding to 74.4 over proof strength.

S. 4 says that no person shall manufacture Power Alcohol from any substance other than molasses or such other substance as may be specified by the Central Government.

S. 5 gives power to the Central Government to regulate the production and disposal of Power Alcohol in a distillery.

S. 6 empowers the Central Government to direct that in particular areas no petrol shall be sold except with an admixture of Power Alcohol for motive power in such proportion as the Central Government may fix except that the proportion of Power Alcohol to be mixed with petrol for any motor vehicle shall not be more than 25 per cent or less than 5 per cent by volume.

S. 7 imposes a penalty for contravening the provisions of the Act.

S. 8 empowers the Central Government to delegate its power under the Act to a subordinate officer of the Central Government or to the Provincial Government or to a subordinate officer of the Provincial Government.

S. 10 empowers the Central Government to make rules for the purpose of carrying into effect the provisions of this Act.

23. Taxation on Income (Investigation and Commission) (Amendment) Act, 1948.

S. 2 adds a new sub-section 3 to S. 4 of the Act of 1947 providing that the Investigation Committee shall be appointed to act in the first instance upto 31st March 1950 but the Central Government may extend its term of appointment till 31st March 1951.

By S. 3 a new S. 5 is replaced in the Act of 1947 consisting of four sub-sections. S. 5(1) empowers the Central Government at any time to refer to the Commission for investigation and report any case which the Central Government has *prima facie* reasons for believing that the person has to a substantial extent evaded payment of taxation on income together with such materials as may be available in support of such belief and may at any time apply to the commission for the withdrawal of any case. If the Commission approves of the withdrawal no further proceedings shall be taken thereafter. S. 5(2) empowers the Commission after examining the materials and making an investigation to report to the Central Government, that in its opinion, further investigation is not likely to reveal any substantial evasion of taxation on income and on such report being made the investigation shall be deemed to be closed. S. 5(3) debars a Court from calling into question a reference made by the Central Government. S. 5(4) provides that if in the course of the investigation the Commission has risen to believe that some other person has evaded payment of taxation it may report the fact to the Central Government which may then refer such other person's case to the Commission.

S. 4 substitutes a new S. 6 in place of old S. 6 in the Act of 1947 consisting of ten sub-sections.

The new S. 6 deals with the powers of the Commission. S. 6(1) gives power to the Commission to require any person to furnish written statements of accounts and affairs verified on oath and certified by a qualified auditor. S. 6(2) empowers the Commission to administer oaths and to take evidence and to enforce the attendance of witnesses and to compel production of documents and to issue Commission for examination of witnesses. S. 6(3) empowers the Commission to authorise any income-tax authority to examine the accounts or documents or interrogate persons or obtain statements from them. S. 6(4) gives the same power of investigation to the authorised income-tax officer as the Commission itself has. S. 6(5) provides that if any person refuses or fails to attend and give such information and evidence or to produce such documents as the Commission may require the Commission may close the investigation and direct such person to pay such sum as it may fix by way of penalty and such sum shall be recoverable as if the direction were given under S. 47(1) of the Income-Tax Act. The other sub-sections make only consequential changes.

S. 5 substitutes a new S. 7 for the old S. 7 of the Act of 1947 dealing with the procedure to be followed by the Commission. It empowers the Commission to regulate its own procedure but in making an investigation it has to follow the principles of natural justice and the principles of the Indian Evidence Act as far as practicable and has to give a reasonable opportunity of rebutting any evidence against him. The Commission however has full power to compel production of documents. A person whose case is being investigated is entitled to be represented by a pleader or an accountant or an employee duly authorised before the Commission. It further provides that no person shall be entitled to inspect or take copies of any documents, statements, or materials produced before the Commission, or before any authorised income-tax officer. It also provides by subsection 5 that no prosecution or other legal proceeding shall be instituted against any person for giving evidence before the Commission and no evidence given before the Commission shall be admissible in evidence against such person in any suit or proceeding.

S. 6 substitutes a new S. 8 for the old S. 8 of Act of 1947 which provides for reopening of assessment proceedings. The new S. 8 says that after considering the report of the Commission the Central Government shall direct such proceedings to be taken as it thinks fit under the Indian Income-tax Act, 1922, the Excess Profits Tax Act, 1940 or any other law against the person regarding whom the report has been made in respect of his income after 31st December 1938 and proceedings may be taken and completed in that case under the Income-tax and Excess Profits Tax Acts notwithstanding any lapse of time or any decision given to a different effect by any Income-tax authority. In all assessment or reassessment proceedings taken in pursuance of the report of the Commission, the findings recorded by the Commission shall be final. But such proceedings shall not bar proceedings under S. 34 of the Indian Income-tax Act, 1922. In respect of such proceedings however it is open to the person concerned to require the appropriate Commissioner of Income-tax to refer to the High Court any question of law arising out of such order and the reference is to be heard by not less than three Judges of the High Court.

24. Indian Air-Craft (Amendment) Act 1948.—This Act amends the Indian Air-Craft Act, 1934 by making it applicable to all States which have acceded to the Dominion of India, whereby the item "Civil Aviation" in the federal legislative list is made applicable to all States. Accordingly S. 2 is made applicable to the whole of India and to all Aircrafts which are registered in India.

By S. 3 the word "India" is substituted for the word "British India" in all Sections of the Act of 1934.

25. Provincial Insolvency (Amendment) Act 1948.—This Act introduces new S. 28-A, in the Provincial Insolvency Act, 1920.

S. 28-A makes the point clear that the property of the insolvent includes and was always intended to include his capacity to exercise all powers in or over property which the insolvent might have exercised for his own benefit at the commencement of his insolvency or before his discharge.

26. Junagadh Administration (Property) Act, 1948.—On November 9th 1947 the administration of the Junagadh State was handed over to the Government of India. Shortly before this His Highness the Nawab of Junagadh left the State and took away with him considerable property belonging to the State including securities and shares. These were in the name of His Highness the Nawab, but they are the property of the State. In order to remove all doubts as to the State's title to the securities, shares as well as deposits in banks in Bombay an Ordinance was promulgated vesting the property in the securities, shares, etc., in the Administrator of the State. This Act now replaces the Ordinance.

S. 3 provides that bank deposits, Government Securities and shares of Joint Stock Companies, described in the Schedule to the Act either in the name of His Highness the Nawab, his Dewan or in the name of Pir Mahabat Khan shall vest in the Administrator and he shall have full powers to deal with the same.

S. 4 provides that the Reserve Bank of India shall issue to the Administrator duplicate securities in the Administrator's name in place of the Government Securities mentioned in the Schedule amounting to Rs. 1,29,00,700.

S. 5 provides that every transfer of or dealing with any property of the State as described in the Schedule shall be void against the Administrator from and after the 8th November 1947.

S. 6 bars the jurisdiction of the courts to entertain any proceedings in respect of the said property.

27. Control of Shipping (Amendment) Act, 1948.—The transport situation is not likely to improve adequately at an early date. There is therefore a great need for ensuring priority of movement by sea for essential cargoes like coal, foodstuff, etc. It has therefore become essential to retain the powers which the Control of Shipping Act, 1917 has conferred on the Government. This Act therefore continues the Act of 1947 for one year more. In the light of the experience gained this Act inserts a new S. 3(a) whereby Government is vested with power to control the grant of licences for coasting trade of India in respect of all shipping whether on the Indian Register or not so as to secure uniformity of control over all the tonnage in the coasting trade and to prevent any undesirable incursion of foreign shipping into that trade.

28. Delhi and Ajmer-Merwara Rent Control (Amendment) Act, 1948.—The Delhi and Ajmer-Merwara Rent Control Act, 1947 was not made applicable to any premises the construction of which was not completed and which were not let out to a tenant before the commencement of the Act. Unscrupulous landlords took undue advantage of this exemption and began to charge exorbitant rents and exploit the tenants resulting in great hardship. In the result an Ordinance was passed to remedy this evil which was subsequently replaced by the Delhi-Ajmer-Merwara Rent Control Act, 1947.

Unfortunately the wordings of the new S. 7-A of the amending Act resulted in all new buildings constructed between 24th March, 1947 and 31st December 1947 being left entirely outside the scope of the Rent Control. This

Act therefore has been passed to rectify the anomaly by providing that the Act of 1947 applied to all new buildings and new letting.

29. Atomic Energy Act, 1948.—The newest and one of the most important branches of Science is Atomic Science for alleviating the suffering of humanity. The development and use of atomic energy is therefore a question of national importance. This was recognised by the Government and led to the setting up of a Board of Research on Atomic Energy.

The Act gives Government powers for the control and development of atomic energy for purposes connected therewith particularly control of plants, designed or adopted for the production or the use of atomic energy, the working or export of substances such as Uranium, Thorium, Plutonium, Neptunium, or Beryllium and their compounds.

The Act is drafted on the lines of the Atomic Energy Act of 1946 of the United Kingdom.

The Act extends to all the Provinces of India.

S. 2 empowers the Central Government to take under its control the development of any industry connected with the production or use of Atomic Energy and any mineral which may be used for the production or use of atomic energy or research into matters connected therewith.

S. 3 defines "atomic energy" as meaning the energy released from atomic nuclei, as a result of any process including fission of process but does not include energy released in any process of natural transmutation or radio-active decay which is not accelerated or influenced by external means.

S. 4 gives power to the Central Government to produce, use and dispose of atomic energy and carry out research into any matters connected therewith and to manufacture, buy and transport articles required in connection with the production or use of atomic energy and to do all such things as the Central Government considers necessary for the exercise of the foregoing powers.

S. 5 empowers the Central Government to obtain information from any person of materials, plant, and processes used or designed for the production of atomic energy, and makes it an offence punishable under the Act of any person fails to give the necessary information or makes an untrue statement.

S. 6 gives power to the Central Government to authorise any person to enter any premises used for the production for atomic energy and to obtain such information as may be necessary by making copies or extracts from any drawings or plan or other document without any obstruction from anybody.

S. 7 empowers the Central Government to do over or below the surface of any land such work as it considers necessary for the purpose of discovering minerals and provides for paying compensation to persons affected by the work on their lands.

S. 8 provides for the compulsory acquisition of prescribed substances, stock of minerals and plant by the Central Government.

S. 9 provides for the compulsory acquisition of certain rights to contracts relating to the production or use of atomic energy.

S. 10 provides for the control of production and use of atomic energy by the Central Government by means of issue of licences for working minerals and regulating the export and import of substances required for Atomic Energy.

S. 11 prohibits every person from disclosing information relating to plants used for production of atomic energy.

S. 12 controls the grant of patents by the Controller of Patents and Designs in respect of inventions for the production or use of atomic energy.

S. 15 provides for penalties for offences under the Act.

S. 16 provides for payment of compensation.

30. Indian Lac Cess (Amendment) Act, 1948.—This Act amends S. 3 of the Indian Cess Act, 1930 by doubling the existing rate of seven annas per maund of lac and five annas per maund of refuse lac produced in India and exported from India by fixing the rates at fourteen annas and ten annas respectively.

31. National Cadet Corps Act, 1948.

This Act is designed to overhaul the present University Officers Training Corps at the same time to provide for full development of character and capacity of boys and girls for leadership. For this purpose it was considered that the problem was essentially educational to be solved by the Educational Authorities. To achieve this end the system of cadet training has been found necessary to be introduced in schools and Universities.

The Act provides for the constitution of a National Cadet Corps.

S. 3 provides for the raising and maintaining of a National Cadet Corps.

S. 5 provides for three Divisions of the Corps, the Senior Division consisting of male students of any University and the Junior Division consisting of male students of any school and the Girls Division consisting of female students of any University or school.

S. 6 provides for enrolment of students.

S. 7 empowers the Central Government to raise other units.

S. 8 provides for discharge of every person who ceases to be a student in any University or school.

S. 9 provides for appointment of officers.

S. 10 provides for duties of persons enrolled in the Corps.

S. 11 provides for punishment for contravention of rules.

S. 12 empowers the Central Government to appoint a Central Advisory Committee consisting of the Minister of Defence, Secretary to the Minister of Education, Financial Adviser, the chief of the Army Staff and Commander-in-Chief, the chief of the Air Staff and Air Marshal, the chief of the Naval Staff, and Flag Officer Commanding, five non-official members, and two members of the Central Legislature.

S. 13 provides for making rules for carrying out the objects of the Act.

32. Road Transport Corporation Act, 1948.—This Act is intended for the promotion of a co-ordinated system of road transport in India, in co-ordination with railways by providing for the formation of road Transport Corporations with representatives therein of the Central and Provincial Governments. Under the Government of India Act, 1935 the power to legislate for the incorporation and regulation of trading corporations is given to the Central Legislature. This Act is intended to give the necessary power to such Provincial Governments as may desire to set up the corporations.

S. 3 of the Act provides that notwithstanding anything contained in the Motor Vehicles Act, 1939, the Indian Companies Act, 1913 or any other law, a Provincial Government may appoint a Road Transport Corporation for the whole or any part of the Province. It further provides for the reservation and allotment to the Central Government as represented by its Railways, of certain percentage of the share capital of the Corporation and for adequate representation of the Central Government and of the Provincial Governments concerned on the Corporation.

S. 4 provides that any such Corporation appointed by the Provincial Government shall be a body corporate.

S. 5 deals with the composition of the Corporation empowering the Provincial Government to appoint a certain number of persons on it with certain rights and privileges.

S. 6 provides that the Indian Companies Act shall not apply to the Corporation and the Corporation shall not be wound up except by the order of the Provincial Government after the approval of the Central Government is obtained.

33. Calcutta Port (Pilotage) Act, 1948.

At present the responsibility for administrative control over pilotage on the river Hooghly from the sea to the Calcutta Port limits rests with the Government while the Commissioners for the Port of Calcutta are responsible for the conservation and improvement of the Hooghly river and its approaches. The two functions are inter-dependent hence it is considered that in the interest of better administration the Port Commissioners should be made responsible for Pilotage also. The Act therefore is designed to give the Commissioners the necessary powers for maintaining a Cadre of Pilots.

S. 3 provides that from the date on which this Act comes into force namely, 16-5-1948, it shall be the duty of the Commissioners to maintain pilots for the safe navigation of vessels in the Hooghly area.

S. 4 provides that no person shall be appointed as Pilot who is not authorised by the Central Government under the Indian Ports Act, 1908, to pilot vessels.

S. 5 gives power to the Commissioners to make rules for the behaviour of pilots and for regulating their salaries.

S. 6 gives power to the Commissioners to levy fees for the pilotage of vessels in the Hooghly area at rates fixed under the Indian Ports Act.

S. 7 provides for keeping the pilotage account separate from the general account.

S. 8 provides for the expenditure from the pilotage account.

S. 9 empowers the Commissioners to transfer moneys from the General Account to the Pilotage Account and *vice versa*.

S. 10 provides for the inclusion of certain sections of the Calcutta Port Act, 1830 in the present Act.

S. 11 amends the Calcutta Pilots Act XII of 1859 for the substitution of the Commissioners in place of the Government.

34. Employees State Insurance Act, 1948.—This Act is designed to provide for certain benefits to employees in case of sickness, maternity, and injury during employment.

It extends to all the Provinces of India and is applicable in the first instance to all factories including factories belonging to the Crown but not to seasonal factories. It came into force from 1948.

S. 2 defines "benefit period" as meaning a period of 26 consecutive weeks, or 6 consecutive months corresponding to the contribution as meaning the sum of money payable to the Employees State Insurance Corporation by the Principal Employer in respect of an Employee. It defines "employment injury" as meaning injury to an Employee caused by accident or by occupational disease arising out of and in the course of his employment in a factory to which this Act applies and "factory" as meaning any premises wherein 20 or more persons are working on any day of the preceding twelve months and in any part of which a manufacturing process is being carried on with the aid of power.

S. 3 provides that there shall be established for the administration of the scheme of Employees State Insurance in accordance with the provisions of this Act, a corporation to be known as Employees State Insurance Corporation. The Corporation shall consist of the Ministers for Labour and Health in the Central Government, one person representing each of the Governor's Provinces, five persons nominated by the Central Government, five persons

representing Employees, two persons representing the Medical Profession and two persons elected by the Central Legislature.

S. 8 provides for the constitution of a standing committee of the Corporation.

S. 10 provides that the Central Government shall constitute a Medical Benefit Council.

S. 13 provides that a person shall be disqualified for being chosen as or being a member of the Corporation, the Standing Committee or the Medical Benefit Council, if he is found incompetent or of unsound mind or has an interest in the work of the Corporation.

S. 14 provides for filling in vacancies to the three bodies.

Under S. 15 the members are entitled to receive fees and allowances.

S. 16 empowers the Central Government to appoint Principal Officers of the Corporation such as Director-General of Employees State Insurance and Insurance Commissioner, Medical Commissioner, a Chief Accounts Officer and an Actuary.

S. 17 provides for the employment of a staff for the Corporation.

S. 18 gives power to the Standing Committee to administer the affairs of the Corporation subject to the general superintendence and control of the Corporation.

S. 19 empowers the Corporation in addition to the scheme of benefits specified in this Act, to promote measures for the improvement of the health and welfare of insured persons and for the rehabilitation and re-employment of insured persons who have been disabled or injured and to incur in respect of such measures expenditure from the funds of the Corporation.

S. 20 provides for the holding of meetings of the Corporation, Standing Committee and Medical Benefit Council at such times and places, and subject to such rules or procedure as may be specified.

S. 21 empowers the Central Government to supersede the Corporation and the Standing Committee if the Corporation or the Standing Committee makes default in performing its duties or abuses its power. When the Corporation or the Standing Committee is superseded all the members of the Corporation or of the Standing Committee shall be deemed to have vacated their offices and the Central Government may nominate new members of the Corporation and of the Standing Committee.

S. 22 provides for the duties of the Medical Benefit Council to advise the Corporation, the Standing Committee, and the Medical Commissioner on matters relating to the administration of Medical benefit.

S. 23 enacts that the Principal Officers shall exercise such powers and discharge such duties as may be prescribed.

S. 24 provides that no Act of the Corporation, the Standing Committee, or the Medical Board Council shall be deemed to be invalid by reason of any defect in their constitution.

S. 25 provides for the appointment of Regional Boards, Local Committees and Regional and Medical Board Councils.

S. 26 constitutes the Employees' State Insurance Fund in which all moneys received by the Corporation are to be paid. It empowers the Corporation to accept grants, donations and gifts.

S. 27 provides for making a grant to the Corporation by the Central Government.

S. 28 describes the purposes for which the Fund may be expended.

S. 29 empowers the Corporation to acquire and hold property.

S. 32 requires the Corporation to frame a budget every year showing the probable receipts and the expenditure to be incurred and to submit the same for the approval of the Central Government.

S. 33 provides for maintaining correct accounts.

S. 34 provides for audit.

S. 35 provides for Annual Report.

S. 36 says that the Accounts and Report shall be placed before the Central Legislature.

S. 37 provides for valuation of assets and liabilities every five years.

S. 38 says that all employees in factories to which this Act applies shall be insured.

S. 39 provides for the payment to the Corporation of the contribution payable by the Employer.

S. 40 enacts that the Principal Employer shall be liable to pay contributions in the first instance.

S. 41 allows a principal Employer to recover the amount of contribution paid by him in the first instance from the immediate employer.

S. 42 makes general provisions as regards payments of contribution.

S. 43 provides for the method of payment of contribution.

S. 44 empowers the Corporation to appoint inspectors to see to the payment of contributions.

S. 46 provides for benefits to the insured persons and their dependants.

S. 49 provides for sickness benefits.

S. 50 provides for maternity benefit.

S. 51 provides for disabled benefits where a person sustains temporary or permanent disablement.

S. 52 provides for benefits to the dependants on the death of the insured persons.

S. 54 says that all Medical Examination shall be carried out by duly appointed medical practitioners in the same way as it is provided under the Workmen's Compensation Act.

S. 55 provides for review of any payment of benefit by the Commissioner under the Workmen's Compensation Act.

S. 56 provides for medical attendance, and treatment being given to the members of the family of an insured person.

S. 58 says that the Principal Government shall provide for insured persons and their families reasonable Medical, Surgical and Obstetric treatment.

S. 59 provides for establishment and maintenance of hospitals, etc., by the Corporation.

S. 60 provides that any benefit receivable is not transferable or assignable and not liable to be attached.

S. 66 gives power to the Corporation to recover damages from employer where injury is caused to an employee under certain circumstances.

S. 68 gives right to the Corporation to recover the amount of contributions to be made by the employer.

S. 69 makes the owner or occupier of factories liable for excessive sickness benefit.

S. 72 provides that no employer by reason of his liability for payment of any contribution shall directly or indirectly reduce the wages of an employee.

S. 73 provides that no employer shall dismiss or punish an employee during the period of sickness.

S. 74 gives power to the Provincial Government to constitute an Employers' Insurance Court.

S. 75 provides for the matters to be decided by the court in case of disputes between the Employer and Employee.

Ss. 76 to 83 deal with the powers of the Employers' Insurance Court, the institution of proceedings therein, the appearance of Legal

Practitioners, non-admissibility of claims if not made within ten months and Reference and Appeals to the High Court.

Ss. 84 to 86 provide for penalties for false statements, failure to pay contributions and launching of prosecutions.

S. 87 gives power to the Central Government to exempt a factory or a class of factories and establishments from the operation of this Act.

S. 90 provides for exemption of factories or establishments belonging to Government or Local Authorities.

S. 92 gives power to the Central Government to give directions to a Provincial Government for carrying out the provisions of this Act.

S. 95 gives power to the Central Government to make rules for the purpose of giving effect to the provisions of the Act.

S. 96 gives power to the Provincial Government to make rules.

S. 97 gives power to the Corporation to make regulations for the administration of the affairs of the Corporation and for carrying into effect the provisions of the Act.

Schedule I to the Act gives the table of average daily wages payable to an employee.

Schedule II gives the table of the amount to be paid for sickness, disablement and dependants' benefit.

35. The Gandhi National Memorial Fund Donations (Companies) Act, 1948.

This Act gives power to every Company incorporated under the Indian Companies Act notwithstanding anything contained in that Act or in its Memorandum of Association or Articles of Association to make a donation to the Gandhi National Memorial Fund from the Company's assets.

36. Bombay, Calcutta and Madras Port Trust (Constitution) (Amendment) Act, 1948.

As a result of recent political changes in the country it has become necessary to amend the constitution of the major Port Trust Boards in order to secure an increased representation thereof of Indian Commercial Interest. This Act therefore provides for representation on the Port Trust Boards of Bombay, Calcutta and Madras, of representatives of the Defence Services chosen by the Central Government, representatives of Mercantile Marine Department chosen by the Central Government, the General Manager of the particular railway companies running through the particular Provinces, representatives of Provincial Councils, and representatives of Provincial or Local bodies.

37. The Census Act 1948.—So far there was no Census Act of a permanent nature in force. The former Census Act was confined to the specific Census undertaken in particular years. The present Act is intended to be a permanent measure. It extends to all the Provinces of India, and also to the Acceding States of India, and provides for taking Census.

S. 3 gives power to the Central Government, to declare the taking of Census in the whole or any part of the territories to which this Act extends whenever it considers necessary.

S. 4 gives power to the Central Government to appoint a Census Commissioner to supervise the taking of Census and to appoint superintendents of Census Operations to supervise the taking of the Census. The section also gives power to the Provincial Government to appoint Census officers.

S. 6 provides that every officer in command of any Naval, Military or Air Force, every person in charge of a vessel, every person in charge of a Lunatic Asylum, Hospital, Workhouse, Prison or Charitable, Religious or Educational Institution, every Manager of a hotel or club or a railway or Commercial or Industrial establishment and every occupant of immovable property shall perform Census duties as may be called upon by Government order to do.

S. 7 provides for giving power to the District Magistrate or such authority as the Provincial Government may appoint to call upon certain persons to give assistance in the taking of Census.

S. 8 empowers the Census Officer to ask all such questions to persons as he may think fit and issue orders for the same and persons so ordered shall be bound to answer the questions.

S. 9 requires every occupier of any house or other place to permit access to the Census Officer to allow the affixing of numbers.

S. 10 requires every occupier or manager of a house or Commercial or Industrial Establishment to fill up a Schedule with such particulars as may be required by the Provincial Government.

S. 11 provides for penalties for offences under the Act.

S. 12 requires previous sanction of the Provincial Government to institute Criminal prosecutions.

S. 15 provides that the Records of Census shall not be open to inspection and no entry in such record shall be admissible in evidence in any Civil or Criminal proceedings whatever.

S. 16 provides for the temporary suspension of other laws as to the mode of taking Census in Municipalities.

S. 17 provides for giving of statistical abstracts of Census Information to any Local Authority or person on payment of certain fees.

S. 18 gives power to the Central Government to make rules for carrying out the purposes of the Act.

38. Continuance of Legal Proceedings Act, 1948.

S. 15 (2) of the Indian Independence Act, 1947 provides *inter alia* that any legal proceedings by or against the Secretary of State in respect of any right or liability of the undivided India or any part thereof which were pending in Indian Courts immediately before the 15th August 1947 shall be continued by or against such person as may be designated by order of Governor-General under S. 8 of that Act or otherwise by the law of the Dominion concerned.

Article 12 (3) of the Indian Independence (Rights, Property and Liabilities) Order, 1947 makes the requisite provision for the continuance of such legal proceedings but only in respect of any liabilities of the undivided India, but not in respect of any rights of the undivided India. Thereupon an Ordinance entitled the Continuance of Legal Proceedings Ordinance 1948, was promulgated for this purpose. This Ordinance has been now replaced by this Act.

S. 3 provides that any legal proceedings which immediately before the 15th August 1947 were pending by or against the Secretary of State in any court within the Territories of India and which were in respect of any right of India or of any part of India, shall the right in question was that of the Governor-General-in-Council, be continued by or against the Dominion of India, and if the right in question was that of the former Province of Bengal or the Punjab be continued by or against the Province of West Bengal or East Punjab or as the case may be and if the right in question was that of a Governor's Province other than Bengal, the Punjab, the North-West Frontier Province, or Sind, be continued by or against that Province.

S. 4 provides that in computing the period of limitation prescribed for any appeal or application to a court in respect of any such proceedings, the period from 15th August 1947 to 28th May 1948 shall be excluded.

39. The Indian Registration (Amendment) Act 1948.

—This Act amends the Indian Registration Act, 1908 in order to provide for general exemption of the Administrator-Generals of the Dominion of India from appearing in person or by agents at any Registration Office in connection with the registration of any instrument executed by them in their official capacity.

S. 2 amends S. 17 of Act of 1908 by excluding orders made under the Charitable Endowments Act, 1890 vesting property in a Treasurer of charitable Endowments, or divesting him of any such property from being compulsorily registered.

S. 5 substitutes a new S. 88 for the old S. 88 and provides that notwithstanding anything contained in the Registration Act of 1908, it shall not be necessary for any Officer of Government or any Administrator-General, Official Trustee or Official Assignee, or the Sheriff, Receiver or Registrar of High Court or the holder for the time being of such other public office as may be specified in Government notification to appear in person or by agent at any Registration Office in any proceeding connected with the Registration of any instrument executed by him or in his favour in his official capacity or to sign as provided in S. 58.

Such instruments may be presented for Registration as prescribed by rules made under S. 69.

40. Indian Matrimonial Causes (War Marriages) Act, 1948. Under the existing law no Court in India has jurisdiction to grant a decree of divorce unless the parties are domiciled in India as provided under the Indian Divorce Act or in England or Scotland as provided under the Indian and Colonial Divorce Jurisdiction Act, 1926. In other cases, the woman has no remedy unless she is in a position to institute proceedings in the country of her husband's domicile. During the last war several marriages were contracted by women domiciled in India with foreigners serving temporarily in India on military duty. In such cases the Courts in India had no power to give relief. In England an Act was passed called the Matrimonial Causes (War Marriages) Act, 1944 whereby in the case of such marriages celebrated during the war period the English Courts were given jurisdiction for giving relief to the parties. Following the English Act, this Act has been passed extending the jurisdiction of High Courts in India to give relief even where the husband was at the time of the marriage domiciled outside India if the wife immediately before the marriage was domiciled in India.

S. 2 defines "Marriage" as including a purported marriage which was void *ab initio* and "war period" as meaning the period commencing on 3rd September 1939 and ending on 31st March 1946.

S. 3 says that the marriages to which the Act applies are marriages solemnized during the war period where the husband was at the time of the marriage domiciled outside India and the wife was immediately before the marriage domiciled in India.

It is further provided that this Act shall not apply to any marriage soon after the solemnization thereof of the parties thereto have resided together in the country in which the husband is domiciled. For the purposes of this proviso the whole of the United States of America, the whole of the United Kingdom and the whole of any British possession outside India shall each be treated as one country.

S. 4 gives the High Courts in India jurisdiction to entertain proceedings for divorce or for nullity of marriage in such cases as if both parties were at all material times domiciled in India and the provisions of the Indian Divorce Act are made applicable to such cases, provided that the Petitioner or the Respondent professes the Christian Religion and the proceedings for Divorce or for Nullity of marriage are commenced not later than three years from the commencement of this Act.

S. 6 provides that the validity of any decree or order made in the United Kingdom by virtue of the Matrimonial Causes (War Marriages) Act, 1944 shall by virtue of this Act be recognised in all Courts in the Provinces of India.

41. The Diplomatic and Consular Officers (Oaths and Fees) Act, 1948.—Prior to the passing of the Indian Independence Act, 1947

British diplomatic and consular officers performed notarial duties in respect of Indian Nationals abroad and charged fees therefor and for other consular functions for which fees were leviable. They were also authorised to administer oaths. These functions were performed by virtue of the Consular Salaries and Fees Act, 1891 and the Commissioners for Oaths Act, 1889 passed by the English Parliament. On the passing of the Indian Independence Act, 1947 the British Government ceased to have any responsibility in the matter.

This Act has been passed to provide for the administration of oaths by diplomatic and consular officers and to prescribe the fees leviable in respect of certain of their official duties.

S. 3 provides that every diplomatic and consular officer in any foreign country or place where he is exercising his functions may administer any oath and take any affidavit and also do any notarial act and every oath, affidavit and notarial act sworn, done by or before such person shall be as effectual as if duly administered, sworn or done by or before any lawful authority in any Province of India and any document bearing the impression or seal and signature of such person shall be admitted in evidence without proof of the seal or signature being a seal or signature of that person.

S. 4 provides for punishment for making false affidavits and for forging or fraudulently altering the seal or signature of such authorised person.

S. 6 gives power to the Central Government to prescribe the fees to be levied by a diplomatic or consular officer.

S. 7 provides for the publication of tables of fees to be levied by the diplomatic and consular officers.

S. 8 gives power to the Central Government to make rules for carrying out the purposes of the Act.

42. Indian Merchant Shipping (Amendment) Act 1948.—Under S. 206 (1A) (b) of the Indian Merchant Shipping Act, 1923 no pilgrim shall be received on board the pilgrim ship unless he produces a medical certificate showing that he is vaccinated against Small-pox, within five days before Medical Inspection. The Government of India have since revised the form of certificate against Small-pox so as to bring it into conformity with the *pro forma* laid down in the International Sanitary Conventions, 1944. The new form lays down that the certificates shall not be valid for more than three years from the date of issue. Consequently this Act amends S. 206 by substituting the words "three years" for the words "five years."

43. The Indian Army (Amendment) Act 1948.—Hitherto whenever State Forces personnel served with the Indian Army a notification was issued by the State Concerned to the effect that the State Forces personnel would be subject to the Indian Army Act. Such an arrangement was not satisfactory. Hence it was found necessary to have provision in law by which personnel of Indian State Forces will automatically be governed by the Indian Army Act for all purposes when they are serving with or under the Indian Army in the same manner as regular members of the Indian Army.

S. 2 of the Act substitutes a new S. 6-A for the old S. 6-A of the Indian Army Act of 1911 to the effect that when any of the forces of an Accessing State are acting with or are attached to any of His Majesty's Indian Land Forces within or without India all the provisions of the Indian Army Act, 1911 shall apply to such forces and the members, thereof as if they formed part of that body of His Majesty's Indian Land Forces and for the purpose of command and discipline any officer of such forces shall have all such powers and be treated as if he were an Indian Commissioned Officer, Viceroy's Commissioned Officer, Warrant Officer, or non-Commissioned Officer as the case may be of His Majesty's Indian Land Forces.

This Act further amends S. 7 of the Act of 1911 by providing that King's Commissioned Indian Officers who were governed by the British Army Act, before 15th August 1947 shall thereafter be made subject to the Indian Army Act.

44. Durgah Khawaja Saheb (Amendment) Act 1948.—An Ordinance was promulgated on 11th May 1947 to amend the Durgah Khawaja Saheb Act, 1936 with a view to terminating the membership of the Durgah Committee whom it was considered undesirable to permit to remain on the Committee any longer. This Act replaces the Ordinance. It amends S. 5 of the Act of 1936 and reduces the members of the Committee from 11 to 9 and substitutes a new sub-clause (F) providing that three of the co-opted members of the Committee shall be from among persons residing in any of the Accessing States or in the State of Hyderabad.

45. Indian Telegraph (Amendment) Act 1948. This Act has been passed with the object of extending the application of the Indian Telegraph Act, 1885 to all the Accessing States. By their Instruments of Accession, the States have acceded to the Dominion of India in respect of "Telegraphs." Accordingly the Dominion Legislature is competent to legislate for the Accessing States. Hence this Act amends S. 1 of the Act of 1885 and makes the Act of 1885 to extend to the whole of India.

S. 4 inserts a new S. 35 providing that the reference to the Provincial Government shall be construed as reference to the Government of that Accessing State.

46. Coal-mines Provident Fund and Bonus Schemes Act 1948. This Act is the result of the recommendations made by the Board of Conciliation appointed in 1947 in connection with certain disputes in the Bengal and Bihar Coal-fields for payment of bonus and the establishment of a Provident Fund for the employees in the Coal-mines.

The Act extends to all the Provinces of India and all Accessing States.

S. 3 empowers the Central Government by a notification to form a scheme called the Coal Mines Provident Fund Scheme for the establishment of a provident fund for employees in coal-mines.

S. 5 empowers the Central Government by a notification to frame a scheme called the coal-mines Bonus Scheme for the purpose of giving bonus to employees.

S. 8 provides that the amount of the provident Fund standing to the credit of any member shall not be capable of being assigned or charged and shall not be liable to attachment under any decree or order of any Court. It further provides that on the death of a member the amount standing to its credit and payable to his nominee shall be free from any debt or liability of the member or the nominee incurred before the death of the member.

S. 10 gives power to the Central Government to appoint inspectors to supervise the schemes.

S. 11 gives priority of payment of contributions and bonus over other debts.

The first Schedule to the Act contains the matters to be provided for in the Coal-mines Provident Fund Scheme and the second Schedule contains matters to be provided for in Coal-mines Bonus Scheme.

47. The Displaced Persons (Institution of Suits) Act 1948.—Under the existing law a suit to recover money has to be instituted in the court within whose jurisdiction the defendant resides or the cause of action arises with the result that displaced persons from Pakistan residing in India cannot sue their debtors in Pakistan. This Act therefore enables displaced persons to institute suits in India.

S. 2 says that this Act shall remain in force for three years.

S. 3 defines "displaced person" as meaning a person who on account of the setting up of the dominions of India and Pakistan and on account of civil disturbances in Pakistan have left Pakistan and have come to reside in India after 1st March 1947.

S. 4 provides that notwithstanding anything contained in S. 20 of the Civil Procedure Code a displaced person may institute a suit in a court within whose jurisdiction he or the defendant actually and voluntarily resides or carries on business or personally works for gain, if the defendant who so resides or carries on business or personally works for gain is not a displaced person and the suit is of such a nature that it could have been instituted in a court within the territories of Pakistan before 15th August 1947 and the suit does not relate to immovable property.

S. 1 extends the period of limitation for the filing of such a suit, on the Plaintiff satisfying the court that he was unable to institute the suit within the period of limitation owing to causes connected with his being a displaced person.

48. Income-Tax and Business Profits Tax (Amendment) Act 1948.—This Act carries out the recommendations of the Income-tax Investigation Commission with a view to reopen completed assessments.

S. 2 amends S. 2(6) of the Income-tax Act, 1922 by defining a "company" as meaning a company domiciled in the clause 7 A of the Act, or in Indian or non-Indian Association where incorporated or not which the Central Board of Revenue may declare to be a company for the purposes of the Income tax.

S. 4 amends S. 9 of the Act of 1922 and adds sub-clause 4 to it providing that for the purpose of S. 9.

S. 4 amends S. 9 of the Act of 1922 and adds sub-clause 4 to it providing that for the purpose of S. 9 the holder of an impartible estate shall be deemed as the individual owner of all the properties.

S. 7 inserts a new S. 33-E whereby the Commissioner is given power to call for and examine the record of any proceeding and if he considers that any order passed by the income-tax officer is erroneous and is prejudicial to the interest of revenue he may after giving an opportunity to the assessee to be heard, revise the assessment or cancel it and direct a fresh assessment provided that he shall not revise an Order of assessment made under S. 34 or revise an order after the expiry of two years from the date of the order. The section also provides for an appeal to the Appellate Tribunal.

S. 8 substitutes a new section S. 34 for the old S. 34 providing for assessing income which has escaped assessment. It empowers the income-tax officer that where an assessee has failed to make a return of his income for any year, or to disclose fully and truly all material facts necessary for his assessment whereby his income profits or gains chargeable to Income-tax has escaped assessment or has been under-assessed or the Income-tax officer has reason to believe that the Income-tax of a person has escaped assessment or has been under-assessed, then he may within eight years in the first case and within four years in the second case proceed to assess or reassess his income, profits, or gain, and shall charge the tax at such as it would have been charged.

S. 9 amends S. 46 of the Act of 1922 and adds a new sub-section 5-A to S. 46 providing that the income-tax officer may require any person from whom money is due to the assessee or on account of the assessee to pay to the Income-tax officer so much of the money as is sufficient to pay the amount due from the assessee for arrears of his income-tax and the person making the payment on behalf of the assessee shall be discharged of his liability to the assessee. But if such person after notice from

the Income-tax officer does not make any payment to the Income-tax officer but makes the payment to the assessee he shall be personally liable to the Income-tax officer.

S. 12 amends S. 49-A-A of Act of 1922 to enable the Central Government to enter into an agreement with the United Kingdom for the avoidance of double taxation of income.

S. 13 amends S. 2 of the Act XXI of 1917, viz. Business Profits Tax Act and provides that the directors' remuneration shall include every remuneration payable by a company to him in respect of any services rendered by him in the course of his employment with the company in any capacity whatever.

S. 14 amends S. 9 of the Act of 1947 to provide that where a Hindu undivided family is interested in more than one business, its profits from all businesses may be lumped together as in the case of an individual.

S. 15 amends rule 2 of Schedule 2 of the Act of 1917 so as to ensure that when investment income is includible in the assessable profits of a company the capital as computed for abatement purposes shall include the corresponding investments.

49. Taxation on Income (Investigating Commission) (Second Amendment) Act 1948. This Act amends S. 5 of the Taxation on Income (Investigating Commission) Act XXX of 1917 by extending the date for making references to the Income tax investigation commission for two months i.e., the date is extended from 30th June 1948 to 1st September 1948.

50. The Cantonments (Amendment) Act 1948.—It has been decided to amalgamate the Land Branch of the Cantonments Department with the cadre of the service of Cantonment Executive Officers and to designate the combined service as "Military Lands and Cantonments Service". Consequently S. 2 of the Act amends S. 12 and 50 of the Cantonments Act of 1921 by substituting the words "Military Lands and Cantonments Service" for the words "Service Executive Officers" therein.

51. Imperial Library (Change of Name) Act 1948.—In view of the Constitutional Changes in the country it was thought appropriate to use the word "Imperial" in connection with National Institutions in India. This Act therefore enacts that the "Imperial Library" at Calcutta shall henceforth be known as the National Library.

52. Bombay Public Security Measures (Delhi Amendment) Act 1948.—The Bombay Public Security Measures Act (Delhi Amendment) Ordinance 1948 was promulgated on 14th June 1948 to make express provision in the Bombay Public Security Measures Act, 1947 as extended to the Province of Delhi for tendering of pardon to an accused person. This Ordinance became necessary to enable the Special Judge trying the murder case of Mahatma Gandhi to grant pardon to an approver.

This Act replaces the Ordinance and amends S. 13 of the Bombay Act VI of 1947 as extended to Delhi by adding sub-clause 2-A to S. 13 which provides that a Special Judge trying an Offence under this Act may with a view to obtaining the evidence of any person supposed to have been directly or indirectly concerned in the offence tender a pardon to such person on condition of his making a full and true disclosure of all the circumstances relating to the offence.

53. The Mines and Minerals (Regulating Development) Act 1948.—It has been considered necessary that the development of mines and oilfields and minerals should be a subject of Central regulation and control. This Act therefore seeks to regulate mines and oilfields and mineral development on the lines contemplated in the Industrial Policy Resolution of 6th April 1947 and seeks to give powers to the Central Government to frame rules for the Regulation of the terms and conditions of mining

leases as also for the conservation and development of minerals.

S. 2 declares that the Central Government should take under its control the regulations of mines and oil-fields, and development of minerals.

S. 4 provides that no mining lease shall be granted after the commencement of this Act except in accordance with the rules made under this Act.

S. 5 gives power to the Central Government to make rules for regulating the grant of mining leases and prohibiting the grant of such leases in respect of any mineral or in any area.

S. 6 gives power to the Central Government to make rules for the conservation and development of minerals.

S. 7 gives power to the Central Government for the purpose of modifying or altering the terms and conditions of any mining lease granted prior to the commencement of this Act.

S. 8 authorizes the Central Government to delegate its power under this Act to be exercised by such officers or authority as may be specified.

S. 9 provides imposing punishment for contravention of the rules made under this Act.

S. 10 provides that all the rules made shall be laid before the Central Legislature.

S. 11 empowers the Central Government to depute any officer to inspect any mine, examine any person, and to take inspection of documents relating to mines.

S. 13 provides that the provisions of this Act shall be binding on the Crown.

54. Electricity (Supply) Act 1948.—This Act has been passed to provide for the rationalisation of the production of supply of Electricity, for taking measures conducive to the Electricity development of the Provinces of India and for matters incidental thereto. This Act extends to all the Provinces of India, and Ss. 3, 4, 57, 58, and 77 and the 6th and 7th Schedules come into force at once. The remaining provisions of the Act are to come into force on such date as the Provincial Government may by notification appoint.

S. 3 gives power to the Central Government to constitute the Central Electricity Authority to exercise such functions and perform such duties under the Act as the Central Government may prescribe.

S. 4 provides that every Provincial Electricity Board, Provincial Government Electricity Department or other licensee or persons supplying Electricity for public or private purposes, shall furnish to the Central Electricity Authority, accounts, statistics and returns relating to the generation supply and the use of Electricity.

S. 5 deals with the constitution and composition of Provincial Electricity Boards.

S. 6 provides for Inter-Provincial agreements to extend the Board's jurisdiction to another Province.

S. 9 provides that a member of a Board shall not hold any interest in any firm or company carrying on the business of supplying Electricity or fuel for generating Electricity or manufacturing, selling or hiring machinery, plant, or equipment for the generation, transmission and use of Electricity or any interest in the managing agency or shares of such companies.

S. 10 provides for the removal or suspension of members if found unfit.

S. 14 deals with the holding of the ordinary meetings of the Board and the transaction of business therein.

S. 16 empowers the Provincial Government to constitute a Provincial Electricity Council which shall consist of the members of the Board and such other persons as the Provincial Government may appoint to represent interests of industry, commerce, transport, agriculture and labour.

S. 17 empowers the Provincial Government to constitute Local Advisory Committees for such areas in the Province as they may determine.

S. 18 deals with the general duties of the Board which includes the duty to see that Electricity is supplied to licensees.

S. 19 deals with the powers of the Board for the supply of Electricity to licensees.

S. 20 gives power to the Board to engage in certain undertakings in connection with the manufacture and the use of Electricity. The Board may maintain shops, and show-rooms, for the display, sale or hire of fittings, wires, apparatus, etc. and may hold exhibitions and demonstrations to promote and encourage the use of Electricity.

S. 21 empowers the Board to take measures for the development of water power in the Province.

S. 22 empowers the Board to conduct investigations, experiments, and trials for improving the methods of transmission, distribution and supply of Electricity and use of water power and may for that purpose maintain laboratories.

S. 23 empowers the Board to grant loans to licensees for the purpose of Electrical undertakings.

S. 24 gives power to the Board to give subscriptions to any associations for the promotion of the common interests of persons engaged in the generation, distribution or supply of Electricity.

S. 25 empowers the Board to engage consulting engineer.

S. 27 provides that the Board shall have the same powers and obligations as a licensee has under the Indian Electricity Act, 1910.

S. 28 empowers the Board to prepare schemes for rationalisation for the transmission and supply of Electricity and to establish, own, operating stations and to provide for construction and maintenance of transmission lines.

S. 29 requires the Board to publish a scheme before sanctioning it and after considering the representations made to it and after inquiries it may sanction the scheme. Such sanctioning of the scheme is subject to the approval of the Central Electricity Authority.

S. 37 gives power to the Board to purchase generating stations or undertakings or main transmission lines.

S. 38 empowers the Board to establish a new generating station.

S. 39 empowers the Board to operate a generating station.

S. 41 empowers the Board to use transmission lines.

S. 42 gives power to the Board to place wires, poles, and other appliances for transmission and distribution of Electricity and also for the transmission of Telegraphic or Telephonic communications.

S. 43 gives power to the Board to enter into arrangements for the purchase or sale of Electricity.

S. 44 provides that the previous consent in writing of the Board must be obtained by a licensee for establishing new generating stations or for making major additions to or replacement of plants in generating stations.

S. 45 empowers the Board to enter upon and shut down generating stations in certain circumstances.

S. 46 requires the Board to fix a tariff called the "Grid Tariff" in respect of each area for which a scheme is under force. The Grid Tariff shall apply to sales of Electricity by the Board to the licensees.

S. 49 deals with the sale and supply of Electricity by the Board to persons other than licensees.

S. 57 provides that the licensees shall charge consumers for the supply of Electricity in accordance with the provisions of the 6th Schedule and the Table appended to the 7th Schedule.

S. 58 empowers the Board or where no Board is constituted, the Provincial Government to direct the amortisation and tariffs policies of licensees being local authorities with respect to licensed undertaking in such manner as the Board or the Provincial Government may consider expedient for the purposes of the Act.

S. 59 requires the Board not to carry on its operations under this Act at a loss.

S. 60 requires the Board to assume obligations of the Provincial Government in respect of all the matters to which this Act applies.

S. 61 requires the Board in February of each year to submit to the Provincial Government the estimated capital and revenue receipts and expenditure for the ensuing year.

S. 62 provides that only in the case of extreme urgency, the Board shall have the right to incur unbudgeted expenditure of a sum not exceeding Rs. 25,000 on account of recurring expenditure or a sum not exceeding one lakh of Rupees on account of non-recurring expenditure.

S. 63 provides for making subventions to the Board by the Provincial Government with the approval of the Provincial Legislature.

S. 64 provides for giving loans to the Board by the Provincial Government.

S. 65 gives power to the Board to borrow moneys required for the purpose of the Act.

S. 67 provides for discharging the liabilities of the Board in a defined priority order.

S. 68 provides for the creation by the Board of a Depreciation Reserve Fund.

S. 69 provides for accounts and audit.

S. 70 provides that the provisions of this Act shall prevail over the provisions of the Indian Electricity Act.

S. 71 enacts that where under the provisions of the Indian Electricity Act any right or option to purchase the undertaking of a licensee exists in the Provincial Government or a local authority such right or option shall vest in the Board.

S. 72 provides that water-power concessions shall be granted by the Provincial Government only to the Board.

S. 73 provides for co-ordination between the Board's schemes and multi purpose schemes for the development of any river.

S. 74 empowers an officer or the servant of the Board to enter upon any land or premises for the purpose of lawfully using any transmission lines or of making any investigations incidental to the exercise of powers or the performance of duties by the Board.

S. 75 provides for annual reports, statistics and returns to be made by the Board.

S. 76 provides for referring to arbitration all questions and disputes arising between the Provincial Government or the Board and a licensee.

S. 77 provides for penalties for infringement of the directions of the Board given to the Licensees and for contravention of the Provisions of the Act.

S. 78 gives power to the Provincial Government to make rules to give effect to the Provisions of this Act.

S. 79 gives power to the Board to make regulations for carrying into effect the Provisions of this Act.

S. 80 provides that the Board shall be deemed to be a company and liable to Income-tax and Super-tax, on its income—profits and gains.

S. 81 provides that the officers and servants of the Board shall be deemed to be public servants.

S. 82 provides that no suit or prosecution shall lie against any person for anything done in good faith under the Act.

The first Schedule deals with arrangements in respect of controlled stations. Part I deals with assumption of control by the Board over stations works by licensees. Part II deals with the price to be paid for Electricity supplied under Part I. Part III deals with permanent closing down of a controlled station. Part IV deals with purchase by the Board of controlled station not to be closed down.

The second Schedule deals with the supply of Electricity by the Board to licensees owning stations other than controlled stations.

The third Schedule deals with the closing down of generating stations other than controlled stations.

The fourth Schedule deals with the price for undertakings generating stations and main transmission lines purchased by the Board.

The fifth Schedule deals with charges for use by Board for transmission lines and main transmission lines.

The sixth Schedule deals with financial principles and their applications.

The seventh Schedule deals with depreciation of assets and contains a Table describing the assets and the period of time.

The eighth Schedule deals with the manner of determination of cost of production of electricity at a generating station.

The ninth Schedule deals with the allocation of costs of production at generating stations.

55. Indian Income-Tax (Amendment) Act 1948. S. 2 of the Act corrects an inadvertent error in the printing of the newly inserted S. 15-B of the Income-tax Act by inserting after the words "in respect of any sums paid by him" "on or after" the 1st day of April 1948.

S. 3 amends S. 51 of the Income-tax Act, 1922 by the insertion of new sub-clauses (n) and o. Sub-clause (n) provides for the disclosure of information to the Reserve Bank of India to enable it to compile certain statistics of investments required to be furnished to the International Monetary Fund.

Sub-section (o) provides for giving information as may be required by the Central Government or Provincial Government for the purpose of investigation into the conduct and affairs of any public servants.

56. Territorial Army Act 1948. This Act seeks to provide a legal basis for raising the Territorial Army. The proposals regarding which were announced in Parliament on 8th April 1948. Owing to the Constitutional changes the old Territorial Force Act, 1920 is no longer suitable. The present Act lays down the broad principles on which the Territorial Army is to be raised leaving the administrative details to be provided for in rules and regulations.

S. 3 provides for raising and maintaining an Army to be called the Territorial Army and the Central Government is empowered to constitute such number of units of the Territorial Army as it may think fit and it may disband or re-constitute any unit so constituted.

S. 4 provides for the personnel of the Territorial Army consisting of officers and enrolled persons.

S. 5 provides that the officers in the Territorial Army shall consist of two classes one holding commission granted by the Government with designation of ranks corresponding to those of Indian Commissioned Officers and other being called the Junior Commissioned Officers holding commission in the Territorial Army granted by the Government General with the designation of ranks corresponding to those of Viceroy's Commissioned Officers.

S. 6 provides that any person domiciled in India, may be enrolled in the Territorial Army.

S. 7 provides that any officer or enrolled person shall be required to perform Military Service outside India but otherwise every officer or enrolled person shall be bound to serve in any unit of the Territorial Army for any work which may be prescribed in support of civil power or regular forces.

S. 8 provides for discharge of every enrolled person from the Territorial Force on the expiration of the enrolment period.

S. 9 provides that every officer and enrolled person, when called out or attached to any regular forces shall be subject to the provisions of the Indian Army Act 1911.

S. 10 prescribes for the trial and punishment of enrolled persons for offences under the Act.

S. 13 provides that persons subject to this Act shall be deemed to be a part of the regular forces for certain purposes.

S. 14 empowers the Central Government to make rules prescribing the manner and conditions of enrolment of Service and Military Training and to make such other rules for the purpose of carrying out the provisions of the Act.

57. Indian Navy (Discipline) (Amendment) Act, 1948. S. 48 (7) of the Naval Discipline Act as set forth in the first Schedule of the Indian Navy (Discipline) Act, 1934 provides that the President of a court martial for the trial of a person below the rank of a Captain must be a Captain or a person of a higher rank. On the passing of the Indian Independence Act, 1947 it was found that owing to the constitutional changes and the departure of a number of British Officers from the Indian Navy, there were no Indian Officers of the rank of Captain the highest rank being Lieutenant-Commander. It therefore became necessary to amend S. 48 (7) in order to provide that the President of a Tribunal need not be a Captain but he may be a substantive or acting commander. This Act therefore by S. 2 amends S. 48 (7) and substitutes the words "the President is a substantive or acting commander" instead of the words "the President is a Captain."

58. Exchange of Prisoners Act 1948.—This Act has been passed in pursuance of an agreement with Pakistan for the exchange of prisoners between the two countries.

S. 2 defines a "prisoner" as meaning any person committed to custody on or before the 1st August 1948 under the writ, warrant or order of any court or court-martial and "transferable prisoner" as meaning in the Province of East Punjab any prisoner who being a Muslim is willing to be transferred to Pakistan and in any other part of India a prisoner of such category as the Central Government may specify, who being a Muslim is willing to be transferred to Pakistan.

S. 3 provides for the issue of a warrant by the Provincial Government for release and transfer of prisoners.

S. 4 provides for the handing over of the prisoners to authorised officer of Pakistan.

S. 5 provides that upon the delivery of custody of a prisoner to an officer of Pakistan, all courts and authorities in India shall cease to have or exercise in relation to such prisoner any jurisdiction in respect of the offence for which he was confined or detained in jail.

S. 6 provides that it shall be lawful for an officer of Pakistan after receiving the custody of a prisoner to convey him out of India.

S. 7 provides for the records of prisoners so transferred to be sent to the Government of Pakistan.

S. 8 prohibits any person transferred to Pakistan from returning to India except with the permission of the Central Government and the contravention of this provision is made punishable.

S. 9 provides that the Central Government shall specify the place or places at which and the officers to whom the custody of prisoners

confined in Pakistan is to be delivered by the Government of Pakistan.

S. 10 repeals the Exchange of Prisoners Ordinance 1948.

59. The Indian Cotton Cess (Amendment) Act, 1948.—The main object with which this Act has been passed is to double the rate of the Cess leviable on cotton produced in India and either exported from any customs port to any port outside India or consumed in any mill in India under the Indian Cotton Cess Act, 1923. Accordingly S. 3 of the Act, 1923 is amended and the Cess of two annas therein has been raised to four annas and the Cess of six pies has been raised to one anna.

S. 3 amends S. 4 of the Act of 1923 regarding the representation of the Cotton Growing Industry upon the Central Cotton Committee. For this purpose a new item (VIII) is substituted for the old item (VII) providing that nine persons shall be nominated by the Central Government to represent the Cotton Growing Industry of whom two shall be from Madras, two from Bombay, two from United Provinces, two from Central Provinces and Berar, and one from East Punjab.

A new item IX is substituted for the old item IX providing that seven persons shall be nominated by the Governments of the following Accession States namely Mysore, the United States of Gwalior, Indore, and Malwa (Madhya-Bharat), the United States of Rajasthan, the United State of Vindhya Pradesh, the Patiala and East Punjab States Union, the United State of Kathiawar (Saurashtra) and Jaodala.

S. 4 amends S. 12 of the Act of 1923 by providing that the Committee shall have the power to apply the proceeds of the Cess on Cotton and any other moneys received by it for the improvement and development of the methods of growing, manufacturing and marketing of Indian Cotton.

60. The Resettlement of Displaced Persons (Land Acquisition) Act, 1948.—In consequence of a large influx of persons displaced from Pakistan it has become urgently necessary to obtain powers for Government to procure lands at fair price for the rehabilitation of refugees.

This Act therefore has been passed to attain that object.

S. 3 provides that whenever it appears necessary to the Provincial Government to acquire specially any land for resettlement of displaced persons, a notification shall be published stating the area and boundaries of the land proposed to be acquired, and the date on which such acquisition will be made.

S. 4 provides for giving notice to the owner or occupier of land affected by the notice of acquisition.

S. 5 provides that when a notice of acquisition is served or published, the land shall vest absolutely in the Provincial Government free from all encumbrances, and the collector or such other person appointed by the Provincial Government may proceed to take possession thereof.

S. 6 provides for objections being made to the collector by owners regarding acquisition of particular lands.

S. 7 provides for the method of determining compensation to be paid for the land acquired and appointment of arbitrator to settle the amount of compensation which should be paid for the land.

S. 9 provides for securing information for the purpose of determining compensation payable under the Act.

S. 10 empowers the Government to make use of the land acquired under the Act in such a manner as it thinks proper for the purpose of resettling displaced persons.

S. 11 provides for penalties for obstructing possession of land by Government or failure to furnish information required by the Government.

S. 12 exempts any agreement or award for compensation from being chargeable with stamp duty.

S. 11 gives power to the Provincial Government to make rules.

61. The Central Silk Board Act 1948.—The Report of the Silk Panel appointed by the Government is commended:—

(a) Improvement of mulberry cultivation, adequate supplies of disease-free seed, and improvement of rearing and reeling of silk-worm cocoons;

(b) expansion of the industry from the present capacity of about two million pounds a year, to four million pounds a year;

(c) to implement these recommendations, it has been decided to set up a Central Silk Board, to advise Government on matters relating to Silk.

This Act therefore gives effect to these recommendations.

S. 2 declares that it is expedient in the public interest to take under the control of the Central Government the development of the raw silk industry in the country.

S. 4 gives power to the Central Government to constitute the Central Silk Board consisting of the Minister in charge of Industry and Supply in the Central Government, three persons nominated by the Central Government, three persons nominated by the Mysore Government, two persons nominated by the Madras Government, two persons nominated by the West Bengal Government, one person nominated by the Kashmir Government, one person nominated by each of the Governments of Assam, Central Province and Berar, the United Provinces, Bombay and Bihar and five persons nominated by the Central Government representing the Silk Industry.

S. 8 deals with the functions of the Board such as undertaking, assisting and encouraging scientific, technological and economic research and devising means for improved methods of mulberry cultivation, rearing silk-worm-seeds, reeling of silk worm cocoons and improving the quality and production of raw silk, etc.

S. 9 provides that the Central Government shall in the first instance make an outright grant to the Board of such sum of money as the Central Government may think fit. The funds of the Board shall be kept in such bank or invested in such manner as may be prescribed and shall be spent only for the purpose authorised by the Act.

S. 10 provides for levying and collecting a Cess by the Central Government on raw silk produced in India.

This duty shall be payable by reellers of raw silk within one month from the receipt of a notice of demand from the Board.

S. 11 provides that the Acts of the Board shall be subject to the control of the Central Government.

S. 12 provides for keeping the amounts by the Board of all moneys received and spent by it and requires the Board to have the accounts audited annually.

S. 13 gives power to the Central Government, to make rules to carry out the purposes of this Act.

S. 14 provides for penalties for offences committed under the Act.

S. 15 provides that no prosecution shall be instituted except with the consent of the Central Government.

S. 17 gives temporary power to the Central Government until the Board is constituted to exercise the powers conferred by this Act upon the Board.

62. The Reserve Bank (Transfer to Public Ownership) Act 1948.—The Reserve Bank of India as at present constituted is a privately owned institution incorporated by a Special Act. With a view to implement the Government policy that the Bank should function as the State Owned Institution and to meet the general desire that the control of Government over the Bank's activities should be extended to insure greater co-ordination of the monetary, economic and financial policies, this Act has been passed.

S. 3 provides that on the appointed day fixed by the Central Government the shares of the Reserve Bank shall by virtue of this Act be deemed to be transferred free from all trusts, liabilities and encumbrances, to the Central Government and from that day the registered holders of the bank shall be paid compensation at the rate of Rs. 118-10-0 per share in promissory notes of the Central Government bearing interest at the rate of three per cent per annum repayable at par on the due date with dividends due on the shares in respect of the year ending on 30th June 1948 with further interest calculated at four per cent per annum per share for the period from 1st July 1948 to the appointed day.

S. 4 provides that on the appointed day any person who was holding office as a director of the Central Board otherwise than as Governor or Deputy-Governor or as a member of a Local Board of the Bank shall vacate his office and thereafter the Central Board and the Local Boards shall be reconstituted as prescribed in Sections 8 and 9 of the Reserve Bank of India Act, 1934.

S. 5 provides for the exercise of all powers by the Governor or the Deputy-Governor of the Bank, pending the reconstitution of the Central Board.

S. 6 gives power to the Central Government to make rules for giving effect to the objects of the Act and in particular to provide for the manner in which compensation shall be paid and the persons to whom it shall be paid.

S. 7 provides for the amendment of the Reserve Bank of India Act 1934 as from the appointed day in the manner as provided in the Schedule to this Act.

The Schedule amends S. 4 of the Act of 1934 by stating that the capital of the newly constituted Bank shall be Rupees five crores.

S. 7 of the main Act of 1934 regarding the management is also amended and provides that the Central Board shall consist of the following directors:

- (a) A Governor and two Deputy-Governors.
- (b) Four directors nominated by the Central Government from each of the four Local Boards.
- (c) Six directors nominated by the Central Government.
- (d) One Government Official nominated by the Central Government.

The Schedule also provides for the reconstitution of the Local Boards and their functions by suitable amendment of S. 9 of the main Act of 1934.

S. 47 of the main Act is also amended for providing that the surplus profits of the Bank after providing for expenses and contingencies shall be paid over to the Central Government.

S. 50 of the main Act is also amended whereby power is given to the Central Government to appoint two auditors, and to fix their remuneration.

The four Local Boards are to be constituted from four areas named the Western area, the Eastern area, the Northern area, and the Southern area.

63. The Factories Act, 1948. This Act consolidates and amends the law for regulating labour in factory and repeals the Factories Act of 1934 and the amendments thereto upto 1947. It extends to all the Provinces of India and also to the Acceding States of India.

S. 2 defines "adult" as meaning a person who has completed 18 years of age; "adolescent" as meaning a person who has completed 15 years of age and "child" as meaning a person who has not completed 15 years of age.

It defines "prime mover" as meaning any engine, motor or other appliance which generates power; "transmission machinery" as meaning shaft, wheel, drum, pulley or other appliance by which motion of a "prime mover" is transmitted to any machinery; "factory" as meaning premises wherein ten or more workers are working and in which manufacturing process is being carried on with the aid of power or where twenty or more workers are working in which a manufacturing process is carried on without the aid of power.

S. 4 gives power to the Provincial Government to direct that different Departments or Branches of a factory shall be treated as separate factories.

S. 5 gives power to the Provincial Governments to exempt a factory from the provisions of this Act during an emergency.

S. 6 provides for obtaining the permission in writing of the said Government or the Chief Inspector for construction of a factory and for the registration and licensing of factory.

S. 7 provides that every occupier of premises used as a factory shall give notice to the Chief Inspector, 15 days before the premises are used as a factory and to give particulars thereof.

S. 8 gives power to the Provincial Government to appoint inspectors for the purpose of the Act.

S. 9 describes the powers of the inspectors to inspect factories.

S. 10 gives power to the Provincial Government to appoint qualified medical practitioners as certifying surgeons and prescribes their duties.

S. 11 deals with keeping every factory clean and free from effluvia.

S. 12 directs that proper arrangements should be made for disposal of wastes and effluents.

S. 13 provides for securing and maintaining proper ventilation and temperature in factories.

S. 16 deals with prevention of overcrowding.

S. 17 deals with proper lighting.

S. 18 deals with making proper arrangements for water supply.

S. 19 requires maintenance of sufficient latrines and urinals.

Chapter IV consisting of sections 21 to 41 deals with keeping safety devices such as fencing of machinery, and taking precautions when working near the machinery, not employing young persons on dangerous machinery, casing of new machinery, prohibiting employment of women and children near cotton-openers, properly maintaining hoists and lifts, cranes and other machinery; taking precautions against dangerous fumes and explosives and taking precautions in case of fire.

Chapter V deals with provisions for welfare of workers such as washing, and sitting facilities, First-Aid appliances, Canteens, Rest-rooms, Lunch-rooms, Crèches for women, and appointing welfare officers.

Chapter VI provides that any adult worker shall not be required to work in a factory for more than 48 hours in a week, that he shall have a certain number of holidays in a week, that he shall have intervals for rest, that he shall not work on a night shift beyond midnight, that he shall not be made to work in two shifts at a time, that he shall be given extra wages for over time, that he shall not be taken on double employment, that notice of periods of work for adults shall be displaced and that a register of adult workers shall be maintained.

S. 64 provides for restrictions on employment of women.

Chapter VII deals with employment of young persons and it prohibits the employment of children who have not completed the age of 14 years and requires certificate of fitness, etc., in the case of employment of children over 14 years of age. It also provides that no child shall be employed in any factory for more than 48 hours in a day and not between 7 p.m. and 6 a.m. It also requires the maintenance of register of child workers and provides for their medical examination.

Chapter VIII deals with leave with wages to be granted to workers in a factory every year.

Chapter IX empowers the Provincial Government to exempt the application of this Act to Public Institutions, to make rules for safety of workers in the case of dangerous operations and for giving notices of accidents and diseases.

It also empowers the Provincial Government to direct inquiry into cases of accident or disease.

S. 91 of the same chapter gives power to an inspector to enter a factory and take sample of any substances used or intended to be used in a factory in contravention of the Act or which is likely to cause bodily injury to the workers in the factory.

Chapter X deals with penalties for offences committed under the Act and the procedure to be followed for imposing penalty. It also imposes liability on owners of premises under certain circumstances.

Chapter XI deals with appeals and other supplemental matters such as obligations to workers in connection with handling machinery and publications of rules and prohibiting inspectors from disclosing information relating to any manufacturing or commercial process which he may have received in the course of his official duties.

64. Essential Supplies (Temporary Powers) (Amendment) Act 1948.—This Act has been passed to tighten up the machinery for the enforcement of the control on cotton textiles.

Accordingly S. 2 amends S. 7 of Act, XXIV of 1946 and substitutes a new proviso to subsection (1) of S. 7 providing that where the contravention is of an Order relating to cotton textiles, the court shall sentence any person convicted of such contravention to imprisonment for a term which may extend to 2 years and may in addition impose a sentence of fine and direct that any property in respect of which the Order has been contravened, shall be forfeited to the Government.

It further provides that where the contravention is of an Order relating to food-stuffs the court shall direct that any property in respect of which the Order has been contravened shall be forfeited to Government unless the Court thinks otherwise.

65. The Indian Railways (Second Amendment) Act 1948.—This Act amends the Indian Railways Act, 1890 with the object of constituting a Railway Rates Tribunal.

The Act therefore by S. 3 inserts new Sections 34 to 46 (c) in the Act of 1890.

S. 34 provides that there shall be constituted the Railway Rates Tribunal consisting of a President and two other members appointed by the Central Government for the purpose of discharging the functions specified in the new Section.

S. 35 empowers the Central Government to constitute two panels of assessors namely (a) the trade, industry, and agriculture panel and (b) the railway panel.

S. 36 gives power to the Tribunal to appoint a staff.

S. 37 provides for the fixing of the Headquarters of the Tribunal by the Central Government.

S. 40 says that the Tribunal shall have the power of a Civil Court under the Code of Civil Procedure.

S. 41 gives power to the Tribunal to hear complaints against the Railway Administration regarding rates of charges in respect of commodities carried by the Railway Administration.

S. 42 gives power to the Tribunal to alter rates of charges in respect of commodities but only with the sanction of the Central Government.

S. 43 provides that all matters and disputes coming before the Tribunal shall be decided with the aid of the assessors.

S. 44 gives power to the Tribunal to make rules regarding its practices and procedure to be followed for effectively discharging its function with the approval of the Central Government. This Section also provides that the Central Government shall give to the Tribunal such assistance as the Tribunal may require and enjoin the Tribunal to make annually a report to the Government of its proceedings.

S. 45 says that the Tribunal shall not have any jurisdiction in respect of rates of charges levied by the Railway Administration for the carriage of passengers and their luggage, parcels, Military traffic and traffic in Railway materials and stores and demurrage charges except on a reference being made to the Tribunal by the Central Government.

S. 46 provides that the Railway Administration may alter, cancel or quote a new station to station rate.

S. 46(A) provides that the decision of the Tribunal shall be given by majority of the members and shall be final.

S. 46(B) provides that the Tribunal may enforce its Orders by sending them for execution to Civil Courts.

S. 46(C) is a definition section and defines "class rate" as meaning a rate fixed according to the class, species, quantity and seasonality, and including livestock and station to station rate. It also defines a special reduced rate applicable to a specific commodity loaded between two specified stations.

66. Delhi and Ajmer-Merwara Land Development Act 1948. This Act has been passed to provide for the preparation and execution of land development schemes, the reclamation of waste-land and the control of private forests and grass-land, in the Provinces of Delhi and Ajmer-Merwara.

S. 3 provides that soon after the commencement of this Act, the Chief Commissioner shall appoint an officer called the Land Development Commissioner and constitute for the Province a Land Development Board consisting of the Land Development Commissioner, two official persons with agricultural or engineering experience and two non-official persons.

S. 4 provides that the Board shall prepare a Land Development Scheme for the Province for the purpose of preservation and improvement of soil, prevention of soil erosion, improvement of water-supply by constructing tubewells, dams, improvement in methods of cultivation, introducing dry-farming methods, development of horticulture, and planting of fruit-trees; reclamation of waste-lands, etc.

S. 5 provides for inquiring into the schemes prepared by the Board, and giving sanction to the same by the Chief Commissioner.

S. 6 provides for publication of schemes.

S. 7 gives power to the Board to make regulations for the purpose of carrying out the objects of the scheme.

S. 8 empowers the Land Development Commissioner with the approval of the Board to grant loans for carrying out the work under any scheme.

S. 9 provides for punishing act contravening the provisions of the scheme.

S. 10 provides for the carrying out of any scheme by Government on any land at the expense of the owner thereof.

S. 11 provides for taking contribution from owners and adjoining lands benefited by the works.

S. 13 gives power to the Board to carry out works on lands and to recover expenses from owners thereof.

S. 16 provides that where any land in which a tenant has a right of occupancy has benefited by work carried out under the scheme, the tenant has to pay enhanced rent.

S. 17 gives a right of entry to any officer of the Board to any lands for the purposes of the Act.

S. 18 provides for appeal by an aggrieved person to a prescribed authority whose decision shall be final.

S. 19 gives power to the Central Government to control the acts of the Board.

Chapter III consisting of Ss. 20 to 29 deals with reclamation of waste-land by empowering the Board to take possession of such land and to improve the same.

Chapter IV consisting of Ss. 30 to 31 amends S. 35 of the Indian Forest Act, 1927 in its application to the Province of Delhi and provides for giving control to the Board over forest, waste-land and grass-land for the purpose of cutting of trees and timber, cutting and storage of grass and doing such other acts as may be conducive to public welfare.

S. 32 gives power to the Central Government to make rules for carrying out the purpose of this Act.

67. The Indian Tariff (Amendment) Act 1948.—The object of this Act is to give protection to the following industries:—(1) steel-baling hoops, (2) starch, (3) glucose, (4) potassium permanganate, (5) Plywood, (6) Electric Motors, (7) Cotton and hair belting, (8) dye lattices, (9) ferro-silicon, (10) stearic and oleic acids, (11) non-ferrous metals, (12) steel belting and lathings.

The protective duties levied on the same are between 15 per cent to 40 per cent *ad valorem* and for this purpose the first Schedule to the Indian Tariff Act, 1934 has been amended accordingly. The Act also continues to give protection to the preserved fruit industry for a further period of three months from 1st January 1949.

THE FIGHTING FORCES

THE present army of India originated in the small establishments of guards, known as *sepoys*, enlisted for the protection of the factories of the East India Company; but *sepoys* were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon near Masulipatam. Madras was acquired in 1610, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1665 the number was only 285 of whom 93 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable *sepooy* forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organization and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 30th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1750 raised to the position of the leading power in India the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Maharratta Princes and others by Muslim adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the Indian armies, which had been organised on the French system, were reorganised. The European troops were 13,000 strong and the Indians numbered some 57,000, the infantry being generally formed into 7-regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis of Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Maharratta States, in which Sindia had established power over the Mughal Emperor at Delhi by means of a large regular army offered by Europeans under the French

adventurer Perron. In campaigns against Sindia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The British Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806, when Indian troops suddenly rebelled and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

OVERSEAS EXPEDITIONS

Several important overseas expeditions were undertaken in the early part of this nineteenth century. Bourbon was taken from the French; Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops, which had volunteered this service.

In 1814, the Nepal War took place in which Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunza. The Gurkhas were overcome in this war after stout resistance.

In 1817, hostilities again broke out with the Maharrattas, who rose against the British during the progress of operation against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The Maharratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten, respectively at Burkee, Sitabadi, and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north, never to return. In the Punjab, to which the frontier now extended, the army came into touch with the great military community of the Sikhs.

In 1824, the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of Indian infantry, 8 regiments of regular and 5 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

Afghan and Sikh Wars.—In 1829, a British Army advanced into Afghanistan and occupied Kabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measure retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former awe. Hostilities broke out in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Muddki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Alwal and Sohraon. Two years later an outbreak at Multan caused the Second Sikh War, when, after an indecisive action at Chillian-

wala, the Sikhs were finally overcome at Gujrat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended over the frontier to the country inhabited by turbulent tribes. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

1857 UPHEAVAL

On the eve of the upheaval in 1857 there were in the Bengal Army 21,000 British and 137,000 Indian troops; in the Madras Army 8,000 British and 49,000 Indian troops; and in Bombay 9,000 British and 45,000 Indian troops.

Disaffection culminated in mutiny at Barrackpore and in an outbreak at Barrackpore where Sepoy Mangal Pandey attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the populace, burned the houses of the Europeans and murdered many. The troops then went off to Delhi.

Delhi is the historic capital of India. On its time-worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. At the time Delhi was held only by a few Indian battalions, who joined the rebels. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who rebelled in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa.

But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reorganisation after 1857.—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organised into three armies, viz., Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organisations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1865 another large reorganisation took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, viz., Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organisation the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western, corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant-Generals of Commands led to delay in the dispatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops, but was given no administrative responsibilities.

Early in the First Great War both Army Commanders took the field and were not replaced until 1916 and 1917, when both had practically the same functions as their predecessors. It was then realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands, and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy, and new principles of war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief. One of these, namely Western Command, was abolished on the 1st November, 1938, and replaced by an Independent District.

The Chatfield Committee.—In September, 1938, an announcement was made on behalf of the British Government, that the outcome of the discussions regarding the role of land and air forces in India in relation to the defence problems of India, and the Empire which had been authorised in March of that year, had been considered by the British Government.

The need for early action to place the defence organisation of India on a more satisfactory basis was accepted, and, at the suggestion of the Government of India, an expert body of inquiry known as the Chatfield Committee was appointed by the British Government to visit India.

In the meantime and in the light of the progress made during the discussions that were held in the summer of 1938, the British Government in September, 1938, made certain offers of assistance, subject to approval of Parliament. These were an increase of £500,000 to the annual grant of £1,500,000 which had been paid to the Government of India, since 1933, in aid of India's defence expenditure, a capital grant up to £5,000,000 for the re-equipment of certain British and Indian units in India, and the provision of aircraft for the re-equipment of certain squadrons of the Royal Air Force. It was further agreed that four British battalions should be transferred from the Indian to the Imperial establishment.

The following is the substance of the main recommendations of the Chatfield Committee Report:

Modernised Re-equipment.—The Committee reported that in the interests of Indian defence the whole of the army forces in India should be modernised with only such minor variations as would not affect the general level of efficiency.

The types of modernised units were to be as follows:—

British and Indian Cavalry light tank regiments equipped with light tanks and armoured carriers for reconnaissance;

Indian cavalry armoured regiments equipped with light tanks and armoured cars;

Indian cavalry motor regiments—provided with motor transport for conveyance of the personnel who would be normally on foot;

British and Indian field artillery regiments—all regiments were to be mechanised and in due course equipped with 25 pounder guns;

Sappers and Miners units—with mechanised first line transport and mechanical power tools;

British and Indian infantry battalions—armed with rifles, Brens and 2 in. mortars and fully mechanised first line transport;

Units on the North-Western Frontier would retain a certain proportion of pack mules.

It therefore recommended a thorough-going scheme for re-equipment of all branches of the service. One of the most important features of the modernisation proposals was the mechanisation of the bulk of the cavalry and of the first line transport of a large portion of the infantry with the object of greatly increasing the mobility of the units.

With this end in view the Chatfield Committee recommended that the basis of distribution of the Army in India should be (A) Frontier Defence, (B) Internal Security, (C) Coast Defence, (D) External Defence Troops.

The total reduction of British troops as measured with the establishment on July 1, 1938, was approximately 25 per cent. A reduction in the number of units was also involved.

Supply of Munitions.—The principle that India should as far as possible be made in all major respects self sufficient in munitions in time of war was accepted, and a scheme for re-organising, and, where necessary, expanding the Ordnance Factories in India was recommended.

Defence Gift To India.—The British Government took full account of the heavy capital cost involved which was estimated at some £34,330,000, or Rs. 45 crores. Accepting that this capital expenditure could not be found out of the resources available in India, the British Government offered to provide it from the British Exchequer. The sole condition attached was that India should bring her defence forces up to the standard of equipment necessitated by modern warfare and adjust her strategical plans to the conditions now obtaining in the world.

It was estimated that a period of five years would be required for the completion of the modernisation plan and the provision of the total capital sum would accordingly be spread over this period. Of the total amount three-quarters would be provided as a free gift while one-quarter would be advanced by way of a loan. The interest on this portion, however, would be entirely remitted for the first five years; thereafter interest would become payable together with instalments of capital.

India's Defence Liabilities.—In estimating India's defence requirements, the Committee had to consider how far the prevailing conceptions as regards India's liability for defence could be held valid in the light of modern conditions. Till then the principle had been accepted that India should be responsible for the "minor danger" of the maintenance of internal security and for the defence of her land frontiers, while Great Britain should be responsible for the "major danger" of an attack by a great Power upon India, or upon the Empire through India.

Modern developments have, however, clearly shown how vulnerable India is to attack in other forms than those that were envisaged when the principle was first laid down. Such attacks, if they should ever mature, would so vitally affect India's own well-being that they would demand her immediate co-operation in effective measures for her defence. In such cases India's defence would clearly be most effectively and economically assured by co-operation in the defence of points outside India strategically essential to her security.

Thus the Committee recommended as a general principle that the forces maintained by India should be adequate not merely for the narrower purposes of purely local defence, but also to assist in maintaining what they described as "India's external security" and further that India should acknowledge that her responsibility could not in her own interests be safely limited to the local defence of her land frontiers and coasts.

It was fully appreciated that the forces maintained by India could only bear a small share in those wider responsibilities, and that she could not necessarily bear in full the cost of such forces as were maintained in India. The committee recommended therefore that the contribution hitherto paid by the British Government should be continued at the higher level of £2,000,000 a year to which it had been provisionally raised by Government.

On this basis it was estimated that it should be possible for India, without enlarging the annual provisions for defence expenditure, to meet the whole maintenance costs of the forces organised and equipped on the scale proposed. From this main principle the conclusion was drawn that if forces held in India for the purposes covered by the joint responsibility were used outside India in an emergency affecting India's external security, their ordinary maintenance charges to be borne by India.

The margin for external defence suggested is one-tenth of the forces maintained in India in the case of the Army.

THE PARTITION

The year 1947 is a landmark in the history of the Armed Forces of India. Consequent on the division of the country into the two Dominions of India and Pakistan, it was decided that each Dominion should establish its own Armed Forces. The Royal Indian Navy, the Indian Army and the Royal Indian Air Force were accordingly divided between the two Dominions on communal-optational basis which worked out to the approximate proportion of one-third to Pakistan and two-thirds to the Union of India. A scheme was then evolved by which those units which were predominantly Hindu or Muslim should belong to India and Pakistan respectively; individuals of the other community serving in such units were given the choice as to which Dominion they wished to serve.

Thus each Dominion was allotted its own Sea, Land and Air Forces. India retained the title of Royal Indian Navy, Indian Army and the Royal Indian Air Force for these particular arms; while the titles of the Pakistan Forces became Royal Pakistan Navy, Pakistan Army and the Royal Pakistan Air Force.

Such a division and re-organisation of the Armed Forces needed a co-ordinating authority which was provided by the Supreme Commander's Headquarters. Field Marshal Sir Claude Auchinleck, former Commander-in-Chief, was appointed as Supreme Commander with the specific purpose of reconstituting the Armed Forces for the two Dominions under the directional control of the Joint Defence Council, which consisted of representatives from both Dominions, the Governor-General of India Viscount Mountbatten being the independent Chairman.

Since the bulk of the work of reconstitution was completed sooner than it was anticipated, the Supreme Commander's Headquarters closed at the end of November, 1947, and the Joint Defence Council on April 1, 1948. A communiqué explained that as nearly all the functions for which the Joint Defence Council was set up had been completed there was no need for such a body. The Executive Committee of the Joint Defence Council, however, which will be renamed the Inter-Dominion Defence Secretaries' Committee will continue in existence in order to carry out the remaining functions of the Joint Defence Council of which the chief is the movement of stores from India to Pakistan and vice versa.

As for the Ordnance factories, no physical division has taken place. India has assumed full liability for their book value, and has agreed to make available to Pakistan a sum of rupees six crores to be drawn as and when required by way of assistance towards the setting up of Ordnance factories and other institutions.

As regards the ten regiments of Gurkhas recruited from Nepal (an independent country), six were retained by the Indian Union and four were transferred to the British Government to form a part of the British Army by mutual agreement between the Governments of Nepal, India and the United Kingdom.

WITHDRAWAL OF BRITISH FORCES

An agreement was reached between the Government of India and His Majesty's Government that all British Forces in India would be withdrawn soon after the transfer of power. Accordingly the first detachment of the British Troops—Army and Royal Air Force—approximately 1,500 strong left India on August 17, 1947 and the withdrawal was completed on February 28, 1948, when the last British Unit—First Battalion, the Somerset Light Infantry, sailed from India.

ARMED FORCES PERSONNEL

ROYAL INDIAN NAVY

Chief of Naval Staff & Commander-in-Chief, Royal Indian Navy, Vice-Admiral W. E. Parry, C. B., R.N.
Special Duty, Rear-Admiral J. T. S. Hall, R.I.N.
Chief of Staff, Naval H.Q.S., Commander H. Drew, C.B.E., D.S.C., R.N.
Captain H.M.J.S. DELHI, Commodore H. N. S. Browne, R.N.
Chief of Administration, Naval H.Q.S., Captain B. S. Soman, R.I.N.
Chief of Personnel, Naval H.Q.S., Captain R. D. Kuriar, R.I.N.
Chief of Naval Aviation, Naval H.Q.S., Captain H. C. Randall, O.B.E., R.N.
Commanding Officer, Bombay, Commodore H. R. Inigo-Jones, R.I.N.
Commanding Officer, Cochin, Commodore G. H. Ellison, R.N.
Naval Officer-in-Charge, Vizagapatnam, Captain G. Goodland, R.N.
Captain H.M.J.S. SHIVAJI, Captain D. N. Mukerjee, R.I.N.
Chief Engineer, H.M.J.S. DELHI, Captain Daya Shankar, R.I.N.

ROYAL INDIAN AIR FORCE

Chief of the Air Staff and Commander-in-Chief, R.I.A.F., Air Marshal Sir Thomas W. Elmthirst, K.B.E., C.B., A.F.C.
Deputy Chief of Air Staff, Air Vice-Marshal S. Mukerjee, C.B.E.
Air Officer Commanding No. 1 (Operational) Group, Air Commodore A. M. Engineer, D.F.C.
Air Officer Technical and Equipment Services, Air Commodore Narendra.
Air Officer-in-Charge, Personnel and Organisation, Air Commodore D. A. R. Nanda.
Air Officer Commanding No. 2 (Training Group), Air Commodore R. H. D. Singh.

INDIAN ARMY

Chief of Army Staff and Commander-in-Chief, Indian Army, General K. M. Cariappa, O.B.E.
Chief of the General Staff, Indian Army, Maj-General Kalwant Singh.
Adjutant-General, Indian Army, Maj-General H. Lal Atal.
Quartermaster-General, Indian Army, Maj-General B. S. Chibbi.
Engineer-in-Chief, Indian Army, Maj-General H. Williams, C.B.E.
General Officer, Commanding-in-Chief, Western Command, Lt-General S. M. Shrivastha.
General Officer, Commanding-in-Chief, Southern Command, Lt-General Rajindrasinhji, D.S.O.
General Officer, Commanding-in-Chief, Eastern Command, Lt-General Th. Nathu Singh.
Master-General of Ordnance, Indian Army, Maj-Gen. H. B. Stabile.

The Armed Forces of India used to contain a very large British element but the Government of the new India decided to completely nationalise her Armed Forces at the earliest date possible. Since the decision was made the nationalisation of the Indian Army has proceeded rapidly. The Committee appointed to study the nationalisation problem under the chairmanship of Shri Gopalaswamy Ayyangar completed its report by the end of 1947. Actually even before the completion of the report, about the time when it became clear that the country would have to be divided after August 15, 1947, nationalisation had started and it was just a question of speeding up the process. The number of British Officers in the new Indian Army has varied from time to time, the highest figure for any time between April and December 1948 being 257. The last British Commander-in-Chief, General Sir Roy Bueker vacated office on January 15, 1949 when General K. M. Cariappa succeeded him as the first Indian Commander-in-Chief. The number of British Officers after March 31, 1949 will be approximately 190, the majority of the officers being specialists belonging to Technical Branches.

In the Air Force there was really no problem of nationalisation as such as the Indian Air Force had no British Officers. However, it has been necessary to obtain on loan about a dozen British Officers. In addition, a few civilian British Technicians are also employed on contract in various Air Force Installations.

In the Navy, the full achievement of nationalisation must necessarily be delayed since there does not in fact exist an adequate number of Indian Officers with the requisite experience. The policy, however, remains the same as in the other two Services, only such British Officers being retained, or accepted on loan from the Royal Navy as are absolutely essential, that is to say, those whose place cannot be filled by Indian nationals.

Demobilisation.—From V-J Day to the end of August 1947, the net reduction in the strength of the Indian and Pakistan Armies amounted to 1,648,772 men and women. Of these 32,677 were British and Indian/Pakistan officers, 12,177 were officers and auxiliaries of the W.A.C.F., 49,024 were British, other ranks serving with Indian and Pakistan Armies and, 1,533,570 were Indian and Pakistan ranks including 64,321 civilians attached to Indian/Pakistan armies.

DEFENCE ORGANIZATION

The Defence organisation of India consists of the Ministry of Defence and the Armed Forces Headquarters with their subordinate formations.

There have been very significant changes in the organisation and functions of the Ministry of Defence since 15th August 1947. In fact, the changes commenced somewhat earlier. Before September 1946, when the Interim Government first assumed power, the Commander-in-Chief was not merely the Supreme Commander, the Head of all the three Services, but was also the Defence Minister, and occupied a specially privileged position, second only to that of the Governor-General. With the appointment of a popular representative as the Defence Minister, the Commander-in-Chief stepped down but he still continued to be the Head of the three Services. Although, therefore, it was the Defence Minister who attended Cabinet meetings and obtained Government orders or passed orders himself on behalf of Government on important matters of policy, it was the Commander-in-Chief who, by virtue of his position as the Head of the three Services, continued to be the principal co-ordinator and played a decisive role in determining and shaping the policy of the Ministry. After 15th of August 1947, there was a further fundamental change. From that date onwards, each Service was placed under its own Commander-in-Chief, their new designations being: Chief of Army Staff and Commander-in-Chief, Indian Army; Chief of

Naval Staff and Commander-in-Chief, Royal Indian Navy; and Chief of Air Staff and Commander-in-Chief, Royal Indian Air Force. Broadly speaking, it is in their capacity as Chiefs of Staff, that the three Commanders-in-Chief meet the Defence Minister and the Defence Secretary.

A revolutionary change in the role of the Defence Ministry was thus effected. For the first time, the Defence Ministry assumed its proper position, which had tended to become obscured when the posts of the Defence Minister and of the Commander-in-Chief of the Armed Forces were combined in one person. The Ministry of Defence is responsible for obtaining policy decisions of Government, for transmitting those decisions to and seeing to their implementation by the three Service Headquarters. Also, it is still more directly responsible for ensuring the implementation of Government decisions relating to certain other matters which fall broadly into two categories: firstly those which affect all the three Services, such as, the Ordnance Factories, the organisation of the Armed Forces Medical Services, the organisation of the Scientific Adviser, the Historical Section, the publication of Military Regulations and Forms, the Pensions organisation, etc.; and secondly, those which are more closely and directly connected with civil authorities and with the public, such as, the Military Lands and Cantonments organisation, acquisition and custody of land vested in Government for purposes of Defence, and the relinquishment of such lands when they are no longer necessary for these purposes, Marine Surveys and dangers to navigation, Soldiers', Sailors' and Airmen's Boards and Benevolent and Welfare funds. In addition there are a few other items which do not clearly fall under one or the other head, but which may be regarded broadly as falling in the second category, namely, the National Cadet Corps, the National Inter-Services Academy, and the organisation of the Armed Forces Information Officer.

DEFENCE MINISTRY COMMITTEES

With a view to ensuring expeditious and efficient handling of work of such complexity and extending over so many subjects, a network of committees has been established at different levels. There is at the top the Defence Ministry Committee which deals with the more important of the Inter-Services problems; it is composed of the Defence Minister, the three Service Chiefs, the Financial Adviser and the Defence Secretary. The decisions of this Committee are final and binding on all concerned. Where important policy issues are involved, the Committee does not take a final decision but makes recommendations to the Defence Committee of the Cabinet. This is composed of the Prime Minister (Chairman), the Deputy Prime Minister, the Minister for Finance, the Minister for Defence and the Minister for Transport; and in attendance the three service chiefs, the Secretary, Ministry of Defence and the Financial Adviser, Defence. For all practical purposes the Defence Committee of the Cabinet confides Government in so far as the Defence Ministry is concerned. As a Committee of the Cabinet, however, it again refers matters of certain kind to the Cabinet for confirmation. Under the Defence Minister's Committee are organised a number of subsidiary committees which are competent to take final decisions, but which submit all policy issues and matters of importance to the Defence Minister's Committee. The more important of these Committees are the Chiefs of STAFF, the Scientific Advisory and the Medical Committees. The Chiefs of Staff Committee, composed of the Heads of the three Services, is responsible for advising the Defence Committee of the Cabinet, usually through the Defence Minister's Committee, on all military matters which require Ministerial consideration.

No organisation under the Indian Armed Forces exists to undertake a systematic study of the extensive and highly developed defence science. Experience of World War II has shown the value of scientific research for the

defence services and it is universally agreed that adequate scientific research organisation is essential for the defence organisation of the country. India made a start by appointing, in 1918, S. Koduri as scientific adviser to the Ministry of Defence in July 1918. He guided the Defence Science Policy Board which included as its members three distinguished Indian scientists. It is proposed to come within the Ministry of Defence and at least another to senior scientists and four junior scientists. A plan of development is already being worked out. When the defence service organisation is properly established its main function would be to advise the Ministry of matters of scientific interest to the Services including the imparting of scientific education to the members of the Armed Forces and on questions of scientific strategy for the defence of India. It will also advise and conduct service scientific establishments on scientific development and research, provision of laboratory facilities and so on.

ARMY HEADQUARTERS

The Army Headquarters functions directly under the Chief of the Army Staff and the Commander in Chief, Indian Army. It is divided into the following main branches which are again further subdivided into directorates:

General Staff Branch

Adjutant-General's Branch

Quartermaster-General's Branch

Master-General of Ordnance Branch

Engineers and Staff Branch

Military Secretary's Branch

Under the Army Headquarters, the Army is organised into commands, each commanded by a General Officer Commanding-in-Chief of the rank of Lieutenant-General. The commands are divided into areas, each under the command of a General of the rank of Major-General and the areas in their turn are subdivided into sub-areas under the command of a Brigadier. These are the formations.

India is now covered by three commands, the Eastern Command, the Southern Command and the Western Command. The old Northern Command, having gone to Pakistan. For strategic, administrative and financial defence of the northern frontier of India a purely operational command was established to start with. This was known as the Eastern and Last Punjab Command. One of the first tasks it had to carry out was the establishment of law and order in the disturbed province of the Last Punjab and the evacuation of millions of Indian nationals from across the border. Later this Command had to assume operational responsibility in Jammu and Kashmir. It necessitated the command to remain strong as it became clear that it could not function purely as an operational command and that it was essential for it to take over administrative responsibilities over defined areas. Therefore, on March 1, 1948, it was broken up to the shape and size of a traditional state command like the Southern and Eastern Commands and was redesignated as the Western Command. Its control area extends from Mhow in the South to Central India, from the southern boundaries of Kashmir to the north, the whole of Rajasthan, Delhi and East Punjab provinces.

THE INDIAN ARMY

The Indian Army is divided into numerous Arms of the Service, in just the same way as the British Army.

The Indian Armoured Corps. The Corps was formed from the 1st Cavalry, the Indian Cavalry, an armoured division of the first regiment was mechanised in January 1940 and by the beginning of 1941, the last horse unit appeared from the Corps. The Indian Armoured Corps is now composed of two types of Regiments. The Armoured Regiment equipped with Medium Tanks and the Light Armoured Regiment

equipped with Light Tanks and Armoured Cars. Each Regiment has a proportion of lorries and trucks, which are used for administrative purposes. The men are drawn from every community and are posted to the various regiments according to their class composition. The Corps has also, for the first time in its history, a Regiment of all classes, Madras which brings recruiting onlookers a new lease of life.

Royal Indian Artillery. Consists of Field, Medium, Mountain, Anti-tank, Heavy and Light Anti-Aircraft Survey Regiments and Coast Batteries, the most famous of these is the Mountain Artillery. In addition, it has its own Air Observation Post Light, to help observe and engage ground targets from the air. During the Second World War the Royal Indian Artillery increased to nearly 80,000 all ranks serving, among other units, in 12 Mountain, 11 Field, 7 Anti-tank, 2 Medium and 29 Anti-Aircraft Regiments.

The Corps of Royal Indian Engineers. The Engineers are composed of the two main elements of:

(a) The Corps of Royal Indian Engineers, and (b) The Military Engineer Services.

The Corps of Royal Indian Engineers is composed of the three main Groups:

(a) Queen Victoria's Own Madras Engineer Group.

(b) King George and Queen Victoria's Own Bengal Engineer Group.

(c) Royal Bombay Engineer Group.

With in addition the Survey Group for which personnel are found from the three main Groups.

The three main Groups are practically similar in composition and provide all the Engineer Units. These include the Army, Royal Armoured Engineer, Light, Infantry and Airborne Engineer Units, Field Units, Electrical and Mechanical Companies, Construction Companies, Workshops and Park Companies, Well-boring, Pipeline etc., with in addition Transportation Railway Units and Transportation Dock, and Indian Water Transport Unit. Movement Control personnel are also found from the three main Engineer Groups.

The Survey Group provides all the Survey Units required by the Indian Army.

The Military Engineer Services carry out Engineer construction works and maintenance in India on behalf of all the three Services of Navy, Army and Air Force.

Corps of Indian Electrical and Mechanical Engineers. The Corps is equivalent to the Royal Electrical and Mechanical Engineers of the British Army. It is responsible for the repair of all Arms, Armament, Vehicles, and mechanical and electrical equipment used by the Army.

The Corps is organised broadly into two categories. The first category consists of training establishments such as the School of Signals at Mhow, Signals Training Centre at Jabalpur and the Army Signal School in Poona, and the other category consists of a variety of signal units which serve the various formations both static and field. The head of the Corps has a dual designation as the Signal Officer-in-Chief and the Director of Signals. As Director he is under the Chief of the General Staff, and is responsible for advice on all signal matters affecting the Army as a whole. As Signal Officer-in-Chief he is responsible for the provision of static and communications for the Army and the overall efficiency and well-being of the Corps of Indian Signals. A Chief Signal Officer with similar functions is appointed at the Headquarters of each Army Command.

The Indian Infantry. During 1945 several changes took place in the designation and titles of Indian regiments, the most important being the change in title of the 4th Bombay Grenadiers which became the Indian Grenadiers and the 19th Hyderabad Regiment which was renamed the Kunwar Regiment. All other Indian regiments with the exception of the Punjab Regiments dropped their numerical designations.

The number of Battalions in each Regiment varies. Parachute Battalions were raised in the early part of 1942 and are organised on similar lines to the Indian Infantry.

Royal Indian Army Service Corps.—The Royal Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Royal Indian Army Service Corps which is under the control of the Quartermaster-General, is constituted in three main branches, namely: (a) Supply, (b) Animal Transport, and (c) Mechanical Transport.

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals, animal transport ambulance sections and field medical units and vehicles for other miscellaneous purposes.

The mechanical transport was taken over by the Royal Indian Army Service Corps in 1927. The Officers for the service were mainly drawn from the Royal Army Service Corps, and by transfers from both British and Indian units.

The war years witnessed considerable expansion in R.I.A.S.C. transport services. From 36 A. T. Coys. and 29 M. T. Units of various types, they were increased to 80 A. T. Coys. and 394 M. T. Units.

The elephant was for the first time taken in the service and was found to be very useful in Burma.

Our additions to the service were Tank Transporters, Amphibious and Water Tpt. Coys. There has also been a very great expansion in air supplies which at one time was the main source of supply in Burma.

Indian Army Ordnance Corps.—This Corps is the equivalent of the Royal Army Ordnance Corps of the British Army. It deals with the procurement, storage and issue of all stores and equipment used by the Army except food and certain Medical and Bridle Stores.

INDIAN ARMY CORPS OF CLERKS

For the efficient administration of the Indian Army, much depends on the Indian Army Corps of Clerks, who form in the main the clerical staffs of Army Commands, Districts and various military establishments in India.

With the outbreak of World War II a vast expansion took place, when the post-war strength of 500 all rank, equally divided into two wings, British and Indian, was increased.

Wherever the Indian Army fought, men of this Corps were with them.

Remount Veterinary and Farms Corps, India. The R.V.F. Corps is responsible for the following functions during Peace and War:

- Breeding, procurement and training of transport animals of the Indian Army.
- Veterinary care and shoeing of Army animals including those of the Military Farms.
- Inspection of meat issued to troops.
- Issue of dairy produce to the Army and provision of fodder for the Army animals.

The Corps consists of a Staffed Veterinary Officers, Remount and Farm Officers and Veterinary Assistant Surgeons.

Indian Army Educational Corps.—The education of the Army is carried out by officers, JCOs and NCOs of the Indian Army Educational Corps, which was formed in June, 1947. They work under the direction of the Chief of the General Staff through the Director of Military Training. Personnel of the Educational Corps are posted to all formations and units. The Army School of Education, PAMHARLI, is responsible for training the personnel of the Corps and regimental educational instructors, and for carrying out experiments in educational methods.

Armed Forces Medical Services.—The Government of India accepted the recommendations of the Special Committee, set up in 1946, under the Chairmanship of Dr. B. C. Roy (now Premier of West Bengal) to examine the question of integrating the medical services of the Armed Forces and sanctioned the integration of this service. A Director General of the Armed Forces Medical Services, Lt.-Gen. K. S. Master, was appointed in Sept. 1948, and a start was made with the preparation of detailed plans for integration. The Indian Medical Service, as a separate service, ceased to exist on Aug. 15, 1947 and its place was taken by the Indian Army Medical Corps.

The Medical services of the Armed Forces of India are composed of the following categories of personnel and subordinate organisations:—

- Officers and other ranks of the I.A.M.C. which came into existence on April 3, 1943 and organised on the lines of the R.A.M.C. It embodies the late I.M.S. (Military Wing), the I.M.D. and the I.H.C.
- Officers and other ranks of the Indian Army Dental Corps which came into existence on April 3, 1943 and is organised on the lines of the Royal Army Dental Corps.
- The Indian Military Nursing Service.
- The Auxiliary Nursing Service.

The Royal Army Medical Corps, the Royal Army Dental Corps, Queen Alexandra's Imperial Military Nursing Service in India, which were primarily responsible for the medical care of the British troops have ceased to function in India after August 15, 1947.

AIR FORCE IN INDIA

From August 15, 1947, the RIAF became an independent Service under the Defence Ministry and Minister, and is no longer, as heretofore, under the Commander-in-Chief in India, who was always an Army Officer. The RIAF is now commanded by Chief of the Air Staff and C-in-C, RIAF.

Before the partition, the Indian Air Force consisted of a certain number of aircraft, pilots and ground personnel who were a small section of the larger RAF then located in India. Major questions of policy for this combined air force was settled by the Air Ministry in London, and most of the personnel for the overhaul and repair of aircraft and for the training of personnel and of the staff at Air Headquarters in Delhi were British.

After the partition a new Headquarters staff had to be built up in Delhi, more or less, equivalent to an Air Ministry, with the object of designing and constructing an air force and directing all its activities. The Air Headquarters (India) has since been built up and now consists of three main branches, the "Air Staff", the "Personnel and Organisation Staff" and the "Technical and Equipment Staff," each section is under the charge of a Provincial Staff Officer of an Air Commodore or Air Vice-Marshal's rank.

The RIAF units outside Delhi are in the main, organised into two groups; the Operational Group which has under its command all the frontline squadrons; No. 2 Training Group which is responsible for the training of recruits entering the Air Force in all the varied trades that are necessary to ensure the proper functioning of aircraft and the ground stations at which aircraft are based. Training schools for future RIAF pilots are based at the initial training wing, Coimbatore, Elementary Flying—Training School, Jodhpur and advanced Flying School, Ambala. The staff of the Schools is wholly Indian.

A special class for Air Force Officers at the present Military Staff College in the Nilgiris has also been instituted.

Training facilities in general have expanded throughout the length and breadth of the sub-continent covering all phases of instruction

for flying and ground personnel. The expansion during the last few years has been phenomenal. Training is of the same high standard as in the R.A.F. Provided with some of the latest equipment and under the able guidance of highly skilled instructors, technical schools are turning out first-class technicians.

During the training, candidates not only receive instruction on ground subjects such as theory of flight, aircraft recognition, aero engines, etc., but also experience of at least three hours flying, approaching more closely to service conditions.

The Royal Indian Air Force had its origin in the recommendations of the Skeene Committee in 1926. Six years later the Indian Air Force Act was passed by the Indian Legislature and the first flight was formed in April, 1933. From that first flight, with its three aeroplanes and six pilots trained at the R.A.F. College, Cranwell, has grown a Service which, by 1946 had eight Fighter and two Transport squadrons and anti-aircraft co-operation unit, a force equivalent in aircraft strength to thirteen squadrons.

Trained originally for Army Co-operation work, Indian pilots had their first operational experience over the difficult flying country of the North-West Frontier. They shared with the R.A.F. the duty of policing tribal territory until the summer of 1941 when they took over the work completely.

On the outbreak of war in 1939 the Indian Air Force Volunteer Reserve, together with a number of R.A.F.V.R. officers resident in India, was formed for the purpose of guarding India's coasts and keeping the shipping lanes open. It did this with conspicuous success until the end of 1942 when it was embodied in the R.I.A.F.

During the Burma campaign in 1942 the R.I.A.F. had its first experience of operations against a major power, No. 1 Squadron earning a special message of congratulation from the Commander-in-Chief, Field-Marshal Lord Wavell. Its commanding officer won the D.F.C. Nos. 3 & 6 Coast Defence Flights also operated with success in Burma.

RIA.F. Squadrons.—From November 1942 upto the end of the Burma campaign full use was made, for the first time of R.I.A.F. squadrons in offensive operations. The main weight of the battle effort was felt by the Japanese on the Arakan front. The R.I.A.F. also distinguished itself during the Imperial siege and supported the eventual victorious advance into Burma.

Equipped with Spitfires and Hurricanes, squadrons of the R.I.A.F. were operating continuously on the Burma front. Their particular duties included the attack on enemy troops and supply dumps and lines of communication, tactical and photographic reconnaissance, close support to the army, and fighter and escort work with supply-dropping aircraft.

Besides operating as complete squadrons and units with Eastern Air Command in Burma thousands of ground crews, technicians and airmen of all trades worked with R.A.F. units all over India.

On March 12, 1945 His Majesty the King approved the designation of "Royal" as a prefix to the Indian Air Force in recognition of the work done during the short history of India's own Air Force.

The RIAF played an invaluable part in the Kashmir operations. Without this powerful wing of the country's armed forces, it would not have been possible for India to rush to the help of the State at a moment of great crisis. In the Punch sector alone, cut off from the rest of the country, where refugees had gathered in thousands, the RIAF dropped tons of supplies and evacuated nearly 30,000 refugees. The flights to Leh over an altitude of 24,000 feet without proper flying facilities and to Gilgit in unfavourable weather conditions, present examples of great heroism.

Consequent on the division of the sub-continent the Dominion of India received one Transport and seven Fighter Squadrons as its share of allotment. This is also its present strength. Plans, however, are under consideration for the expansion and modernisation of the RIAF.

Women's Auxiliary Corps (India).—The Women's Auxiliary Corps (India) was formed in April 1942 with the object of releasing men for work in forward areas. British, Indian and Anglo-Indian women undertook a variety of work ranging from staff and administrative appointments to technical work with all three fighting Services. In February 1944, a Naval Wing was formed for personnel serving with the R.I.N. Training of recruits was carried out in three large training centres and officers received their instruction at O.C.T.C., Officers' School and Staff College. Service was entirely voluntary and for the duration of the war or for as long as service was required. The Corps was disbanded on 1st April 1947.

WAR PRODUCTION

The development of equipment position was phenomenal, and the war production capacity was so far developed that it was able to supply the sub-continent's armies with a large part of their weapons and equipment, as well as contingents overseas. Up to V-J day, approximately 2,48,000 chassis of nearly 30 different types were assembled in 75 plants in the sub-continent. About 2,02,000 bodies of 50 different types were built, mainly with Indian or Pakistani material and Indian or Pakistani labour. Over 7,000 armoured bodies were produced in various railway workshops. Progress was made in the manufacture of armoured plate and armoured fighting vehicles were satisfactorily produced. Various new types of small arms ammunition and artillery ammunition came from the ordnance factories and about 620 million rounds of small arms ammunition were repacked for U.S. Army Forces during the 5th and 6th years of war.

Probably the greatest advances were made in the supply of clothing and equipment. In the first four years of the war, the output of tailored items rose to a peak of over 12 million items. Nearly 49 million boots, chappals and canvas rubber shoes were produced up to the end of 1945. A considerable quantity of these were sent overseas both to the Middle East and other theatres of war. Over 124 million blankets, 48 million pairs of woollen socks, 254 million cotton shirts, 124 million pairs of drill trousers were produced. The production of rifles during the war was nearly 574,000. Over 80 items of ammunitions including light machine-guns, bayonets, guns and cartridges were produced in Indian and Pakistani factories. Among other important items of armament stores which were produced in quantity was Bren gun tripods, anti-aircraft, gun sights, binoculars, stereoscopes, clinometers and telescopes. Mention must also be made of the production of trawlers and assault crafts which played a great part during the Burma campaign.

INDIAN OFFICERS' PAY

The Post-war Pay Committee constituted by the Government of India to formulate the new Pay Code of officers and men of the Indian Armed Forces completed its task early in June 1947. The rates of pay which apply to officers and men in the three Services from July 1, 1947, are designed to provide a level of remuneration comparable with those granted to the Civil Services of the Government of India. The new rates of pay represent a very substantial simplification of the old pay structure. Officers receive the same dearness allowance as civilian officers, but other ranks, who are housed, fed and clothed at the public expense will get half the civil rates. The numerous allowances for special duties which was the feature of the old Pay Code have been abolished, as the new pay covers the full range of duties of officers and other ranks. The general effect of the new Pay Code is to improve the remuneration of other ranks and to reduce that of senior officers.

TERRITORIAL ARMY

The Territorial Force as it was called when it was started was one of the several aspects of the Indianisation of the military services. The force was intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service was not hitherto been a hereditary profession. It was intended, at the same time, to be a second line and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carried with it a liability for something more than purely local service or home defence. It involved in certain circumstances, service overseas. The force was the direct successor of the Indian section of the Indian Defence Force created during the Great War of 1914-18. It was modelled on the old militia in England. The essence of its scheme of organisation consisted in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units were given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

At the conclusion of the last war and after the attainment of independence it was decided to have a Territorial Army. The Territorial Army Act 1919 which repeals the Indian Territorial Force Act 1920 was passed by the Indian Parliament in September 1919. The main difference between the old Indian Territorial Force and that of the new Territorial Army is that, while under the old act its composition was limited to a few Provincial Infantry Battalions, a small number of medical officers, belonging to the medical branch and the University Officers Training Corps the new Territorial Army would consist of artillery units including Anti-Aircraft and Coast Defence, Infantry, Armoured Corps, Engineers, including Railway and Port units, Signals, Ordnance, Medical, Supply and Transport and Postal units. The units raised would be of two types, i.e., Provincial units recruited from rural areas and undergoing training at a stretch of one annual camp of two to three months duration, and Urban units recruited from large towns and training on the 'weekly drills' system with a small annual camp.

For purposes of recruitment it will be open to all persons domiciled in India. India has been divided into 8 zones, the recruitment to units being on a zonal basis.

The primary role of the Territorial Army will be to form a second line to the regular Army in the event of a national emergency and therefore capable of reinforcing the regular army by units or formations of all types. The Territorial Army Officers and men will also form the nucleus for the expansion of the Army in an emergency.

Matters of detail are still under consideration and recruitment to various units started in the middle of 1949.

THE STATES FORCES

The States Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. During the years 1947 and 1948 very considerable numbers of the States Forces were employed, for service with the Indian Army.

The war year witnessed an enormous expansion in the State Forces. In August 1945, there were 130,000 officers and men serving in the States Forces, of whom 44,000 were serving outside the States in theatres of war and (what was then) British India.

The changes brought about as a result of the integration of the States have had their inevitable repercussions on the position of the State Forces. The Forces of the States which have merged into Provinces or which have been integrated into Chief Commissioners' Provinces are being taken over by the Indian Army. The Forces of the States which have integrated to form Unions now come under the exclusive control of the Rajpramukhs of these Unions.

The Government of India appointed in November 1947 a Military Adviser-in-Chief, Indian States Forces, to co-ordinate the training organization and administration of these forces.

OFFICERS

Before the war there were three main categories of officers in the Indian Army: those holding the King's Commission, those holding Indian Commissions and those holding the Viceroy's Commission now called J.C.O.s. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder.

King's Commissioned Officers were obtained either from the Military Colleges or the Universities in England. Up till 1932 these commissions were open to either Englishmen or Indians.

In 1932 the Indian Military Academy at Dehra Dun was opened to undertake the training of Indian Officers. They were granted Indian Commissions and have identical powers to those of King's Commissioned Officers within the Indian Army.

During the late war, no regular commissions were granted except to those cadets who were already under training when the war began. Instead, Emergency Commissions were given to British candidates and Indian Emergency Commissions to Indians. The Commissions had the same status as Regular Commissions but were limited to the duration of the war and a period thereafter. Grants of Emergency Commission ceased in July 1946.

Now that the war has ended, Regular Commissions have been re-started. The sources of supply are the Indian Military Academy and selected officers from among those holding Emergency Commissions. It is also expected that the Universities will provide some candidates for Regular Commissions. Only subjects of Indian nationality are eligible for these commissions.

Plans are under way for the establishment of a National War Academy at Poona, at which all future officers of the three services will be trained.

As an interim measure a limited number of Short Term Commissions are being given to suitable candidates most of whom will be Indian Emergency Commissions Officers. These Commissions are granted for a limited period and are designed to fill the gap between demobilisation of the war commissioned officers and the re-establishment of a full intake of Regular officers from the Military Academy.

Opportunities for promotion to officer status from the ranks continue to be available.

In conformity with the policy of nationalising the service, which assumed prominence in 1946 no more commissions were granted to British officers and those holding regular commissions, with less than 20 years' service on 1st January 1947, were given the chance of transferring to British service.

The King's Indian Orderly Officers.—Since the earliest times Indian officers have been a link between Indian ranks and British officers. These Indian officers hold Viceroy's Commissions, as distinct from the King's Commissions held by British officers and Dehra Dun graduates. They are for the greater part promoted from the ranks. The highest rank is subedar-major in the Infantry and artillery regiments, risalhar-major in the cavalry.

The first Indian officers associated with the Sovereign were in command of detachments sent to London for Queen Victoria's Jubilees in 1887 and 1897. It was then realised that some personal link should be maintained between the King-Emperor and the Indian Army.

On January 1st, 1903, the Viceroy issued a General Order announcing certain favours and concessions to the Army in India in connection with Edward VII's Coronation, among them the annual appointment of Indian Orderly Officers.

Six Indian Orderly Officers were appointed in 1903, a number reduced to four in 1904. These four were appointed each year for the London season, from April to August. They attended the King at Courts and Levees, standing near the throne, at all reviews and at such ceremonies as Trooping the Colour. Upon these occasions they appeared in full dress. For garden parties and similar engagements they were dressed in grey coats of knee length.

For their services in London, the Orderly Officers receive the Royal Victorian Medal, a souvenir of their supreme honour.

Reserve of Officers.—Previous to the War of 1914-18 there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The First World War proved that for many reasons this reserve did not fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the AIRO published in 1939 are in force. During and after World War II no AIRO Commissions were granted, and the future policy about AAIROS will be reviewed. European Wing of AIRO was disbanded in August, 1947.

Military Attaches and Advisers Abroad.—Military Attaches (Naval, Army and Air Force) to Indian Ambassadors and High Commissioners have been appointed in the United States, United Kingdom, China, Afghanistan, Iran, Nepal and Pakistan. These appointments at present are confined to countries in which their presence is considered to be most useful to Indian Armed Forces.

NATIONAL CADET CORPS

The formation of a 200,000-strong National Cadet Corps and a Territorial Force were announced by India's Defence Minister, Sardar Baldev Singh, in the Central Legislature on March 13, 1948. He said that one of the steps by which Government propose to impart military training to Indian youth was to implement immediately the report of the National Cadet Corps Committee.

This committee had been appointed by the Government of India in July, 1946, under the chairmanship of Pandit Hriday Nath Kunzru, the veteran Liberal leader.

Simultaneously with the Defence Minister's announcement the 44-page report of the Kunzru Committee was released to the press.

National Cadet Corps scheme is being implemented in all Provinces and in the majority of States. A total of 101 units Senior Division and 220 Troops Junior Division were raised during 1948. The present strength of the National Cadet Corps is 14,585 cadets in the Senior Division and 19,660 cadets in the Junior Division. During 1949, 78 additional units Senior Division and 277 Troops Junior Division and 4 units Girls Division were expected to be raised. This would bring the total strengths by Divisions to 24,000 Senior Division and 45,000 Junior Division and 360 Girls Division by the end of 1949. National Cadet Corps units are being officered by Professors and school teachers who have been granted National Cadet Corps Commissions after they have successfully completing military training with Army units. A total of 302 Professors and 417 school teachers have completed their training so far. A further batch of 325 Professors and 962 School Teachers were expected to commence training during

the 1949 summer vacation. There has been a great response from the student community; all Colleges and Schools have long waiting lists.

The enrolment in the National Cadet Corps is entirely voluntary, and without any liability for service in the armed forces. "Government being confident that the enthusiasm of youth in general for serving the country is sufficient guarantee that the response in colleges and schools will be satisfactory."

INDIA IN THE TWO WARS

In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war were reviewed. The following figures show the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,696 deaths from all causes. The number of animals sent overseas was 175,000.

The sub-continent's magnificent contribution in the late war was both substantial and valuable. Units of the R.I.A.S.C. went to France in 1923 and gained particular praise for their courage and bravery in adversity. Indian formations were in action in Syria, Iraq, Iran, British and Italian Somaliland, the Sudan, Eritrea, Hong Kong, Borneo, Malaya and Burma and Italy. The total of her fighting forces reached the peak strength of 2.25 million. The Indian Army won more than 7,000 awards including 31 Victoria Crosses—an Empire record surpassed only by the United Kingdom.

Africa.—Here in 1910, assembled an Allied army of which the Fourth and Fifth Indian Divisions were destined to play a leading role.

Against Marshal Graziani's Libyan army of more than 300,000 men, this Allied force under the command of Field-Marshal Wavell marched into the Western Desert. In the great clash at Nibeiwa they captured the Italian camp, thousands of prisoners and vast quantities of stores. Then came the Italian disaster at Sidi Barrani where, in December, 1940, 20,000 Italians capitulated and Wavell's men swept on to Sollum, Bardia, Tobruk, Derna and Benghazi.

In the meanwhile the Fifth Indian Division was busy with the Italians in East Africa. Early in 1941 this division drove the enemy from Gallabat, Gedaref and Butana Bridge and then, with the Fourth, continued the pursuit deep into Eritrea.

Victories at Barentu and Ad Teclusan paved the way for the triumph at Karen where, after two weeks of bitter fighting, the Italians hoisted the white flag. The Fifth went on to Asmara, Massawa fell and in May, 1941, the Viceroy of Abyssinia surrendered at Amba Alagi.

Back again to the Western Desert went the Fourth and Fifth in June to meet a new menace—Rommel's panzers. Under the command of Field-Marshal Sir Claude Auchinleck Indian forces fought hard but were slowly pushed back to Mersa Matruh. Benghazi was cut off and Tobruk fell.

Many weary months of disappointment followed but at El Alamein in June, 1942, came the turn of the tide. In this, the Fifth's last action before leaving for Iran *en route* to India, the division, on the Ruweisat Ridge, captured about 2,000 prisoners. In October the Allies passed to the offensive at El Alamein. The avalanche had started to come to a halt only on the other side of Africa.

The Germans were rolled back from Egypt, then across Cyrenaica and towards Tripolitania. The new year came and still the retreat continued at the Mareth Line, the enemy's defences crumbled and he retreated still further west. There followed the Fourth's brilliant action in the Wadi Akarit area and the pursuit went on.

Sfax was by-passed, Sousse was occupied in the middle of April, 1943, and at Garet the Germans turned once more to fight—and lost. Soon the Eighth Army linked up with the British First Army and together they burst open the gates of Tunis in May. The Fourth Indian Division played a prominent part in this final action and—a fitting climax to the whole campaign—Gen. Von Arnim, who had taken over from Rommel as commander of Axis forces in Africa, was compelled to surrender to the famous Indian formation.

ITALIAN CAMPAIGN

In the liberation of Europe, Indian troops played a worthy part. By their exploits in Italy they proved to the world that the valour of India's arms was second to none. Three famous Indian divisions were concerned in the hard-fought campaign that ended in the capitulation of the Germans.

The Eighth Indian Division came into the line in October, 1943. Before the end of that year it had crossed three rivers, the Lirno, Trigno and Sangro—in the face of severe opposition and after breaking the German winter line, got past the Mago river. The Fourth Indian Division entered the arena in December, 1943, and after a short spell on the Orsogna and Maiella sectors arrived on the Cassino front in February, 1944. Spearheading the American Fifth Army's offensives against Cassino the division fought one of the fiercest battles of the war. In April, 1944, the third of the trio, the Tenth Indian Division took up positions on the Adriatic sector.

When the great offensive against Cassino started in May, 1944, the Eighth was assigned the most vital role—that of crossing the Rapido river, south of the town. After a tremendous effort our forces outflanked Cassino and the enemy stronghold fell. After the capture of Rome the Tenth moved to the Perugia-Tiber area, the Eighth took over the Certaldo-Pegione sector and the Fourth, after clearing Pescara and Chieti, began a drive along the Upper Tiber and Arno valleys in conjunction with the 10th.

The Eighth crossed the Arno river, entered Florence and fought its way to the Sieve valley, the Tenth pushed along the upper reaches of the Tiber and the Fourth moved across to the Adriatic to spearhead the Eighth Army's all-out attack on the Gothic Line, striking the first blow at these redoubtable positions on the Foglia river, capturing Monte Calvo and fighting north, forced a bridgehead through the Marano to enter the citadel of San Marino.

UNCONDITIONAL SURRENDER

In the breaking of the Gothic Line the remaining two Indian divisions also played a decisive part. In the 5th Army sector the Eighth Division went through Mount Giovi, crossed the Sieve, captured Mount Verucca and occupied the fortress feature of Femma Morta. While in the mountains overlooking Bologna the Eighth was called upon to help repel the German offensive in the Serchio valley and earned the praise of the Commanding General for their stout-hearted defence.

Meanwhile the Tenth kept moving against stubborn resistance and, going past Pietrolunga and Alpe di Catania, captured M. Filiceto. Prior to taking part in the final phases of the campaign the division also captured Farneto.

Early in April, 1945, the Eighth Army crossed the Santeramo. By the middle of the month they had smashed through the Argenta gap. Bologna was liberated on April 21 and major elements struck north after crossing the Po. By the end of April the Eighth Army was consolidating on the Po. Twenty-five German divisions had been smashed and prisoners totalled 120,000.

On the afternoon of April 29, the enemy estimated at nearly one million under the command of Gen. Vietinghoff surrendered unconditionally. The Italian campaign was over.

Victory in Burma.—The virtual end of the Burma campaign was heralded by the capture of Rangoon in May, 1945.

The road to victory was no easy one. In the spring of 1942 the Indian troops faced annihilation when the Jap hordes swarmed into Burma and forced them, fighting every foot of the way, into Assam itself where they turned at bay and let the enemy's effort spend itself.

There followed weary months of relentless patrolling during which our little army used every dodge to keep the enemy guessing until we had built up sufficient strength to strike back. Early in 1943 came our counter blow when the first Wingate expedition penetrated into Burma as far as the Irrawaddy.

In the meantime great preparations were afoot in India for the coming offensive. In March, 1943, the blow fell and Wingate's men struck once again this time by air—in the heart of enemy occupied territory. Simultaneously the Japs launched what proved to be their last serious attempts to invade the sub-continent when they attacked the Seventh Indian Division in the Arakan.

At the Neakyedank Pass the Seventh held the Japs and then, with the aid of the Fifth Indian Division, who came to their help, systematically isolated and cut up the enemy. Toiled in the south the Japs turned north and struck at the Dimpapur road but the gallant defence of Kohima proved to be the turning point of the campaign and the enemy began a retreat which ended in his final defeat.

The year 1944 was one of further victories—Myittha, Mogoke, Tamu, Sittang, Tiddim, Loi White, Kalembo.

By the end of 1944 a desperate situation faced the Japs. The 14th Army had crossed the Chindwin and was advancing into Central Burma towards Mandalay.

It was in this phase that Gen. Sir William J. Slim, then commanding 14th Army, sent an entire corps secretly on a 320 miles march down the Gangaw valley to approach Mandalay from the rear. Meiktila was captured, and, unable to cope with this double threat, the enemy were forced to surrender Mandalay to the 19th Indian Division on March 20. The pursuit continued on to Yenangyaung, Pongou, Prome and Pegu.

AMPHIBIOUS ASSAULTS

Meanwhile, seven major amphibious assaults, Myebon, Akyab, Ponnagayon, Ramree Island, Lepan, Taungup and Ra-Uwa, had carried Fifteenth Indian Corps far down the Arakan coast.

Finally an amphibious assault was mounted against Rangoon in conjunction with 14th Army's rapid approach from the North. The 26th Indian Division had left Ramree Island and sailed to the Gulf of Martaban. The advance on Rangoon developed into a race between this force and their comrades in arms pushing South on the capital from Pegu. The latter lost by a narrow margin for, with the dropping of paratroops South of Rangoon, assault craft brought 26th Indian Division up the Rangoon river to the greatest prize of the war.

Rangoon was occupied on May 3rd and the link-up between our two forces took place a fortnight later.

Thousands of Japs, stranded by our rapid push towards the capital, made desperate attempts to cross the Sittang and outwit our encircling forces. A few did escape, but without supplies, ill-armed and in unfriendly country they perished in the fever-laden swamps and jungles in which they sought refuge. More than 10,000 of the enemy were killed in this phase, the last of the war.

The debacle of the Japanese was complete. Indian Army troops fanned out over South-East Asia, occupying territory that had awaited liberation for more than three years.

The end of the long road came at Singapore on September 12, 1945, when the entire Japanese Expeditionary Forces, Southern Regions, were formally surrendered to Admiral Lord Louis Mountbatten, Supreme Allied Commander, South-East Asia, by Field-Marshal Count Terauchi.

WAR SUPPLIES

The sub-continent's contribution in the economic sphere has been no less important. The utmost use was made of the sub-continent's agricultural, industrial and mineral resources. The value of war orders handled by the Supply Department alone came to over Rs. 841 crores from 1939 to end of 1945.

Bodies for armoured fighting vehicles, mine-sweeping trawlers, new types of weapons and ammunition and various items of personal and other equipment were produced. It was during this war that the sub-continent began to make a number of special steels. Machine tools were also made and supplied in large quantities. Her ancient silk industry was revived to meet the demands for parachutes. Rubber production was increased and went hand in hand with developments in the use of substitutes and planting of new and novel rubber yielding plants. During the war, the sub-continent made notable gains in munition production. In 1943-44, gun and mortar ammunition increased to 35 times the pre-war output, guns and carriages and bayonets 20 times the pre-war quantity and small arms ammunition more than 4 times their pre-war output. Grenades, mines, bombs and pyrotechnic stores, most of which were not made in the sub-continent before the war were now manufactured, and in the last year of war the output steadily increased. A feature of special significance during the war was the manufacture of radar development equipment.

For the 22 years of the North African war, the sub-continent was responsible for supplying the bulk of stores for the theatre of operations. Allied troops in the Mid East wore clothes made in India, to a considerable extent, and walked in boots supplied by Indian or Pakistani factories. Nearly 90 per cent of the tents which protected the troops from the torrid heat, the canvas ground sheets which kept away the sands of the deserts from tanks, planes, motors and vehicles and nearly all the timber came from the sub-continent. India and Pakistan sent over 1,500,000 tons of stores in a steady stream. Other vital supplies to the Mid-East included assault craft, camouflage paints, nets and hemp, medical stores and equipment for the comfort of troops. Important supplies were also sent to Russia.

GALLANTRY AWARDS

The following awards for gallantry were won by the three fighting Services from 3rd Sept. 1939 to 1st April 1947:—

| Gallantry Awards | R.I.N. | Indian Army. | R.I.A.F. |
|------------------|--------|--------------|----------|
| V.C. | .. | 31 | .. |
| G.C. | .. | 9 | .. |
| D.S.O. | .. | 275 | 1 |
| I.O.M. | .. | 365 | .. |
| D.S.C. | .. | 15 | .. |

INDIAN GALLANTRY AWARDS

For acts of bravery or distinguished service performed on or after Aug. 15, 1947 the following Indian Gallantry Awards have been instituted:

1. PARAM VIR CHAKRA, Highest Order of Gallantry.
2. MAHA VIR CHAKRA, Second Degree Gallantry Award.
3. VIR CHAKRA, Third Degree Gallantry Award.
4. MENTION IN DESPATCHES.

The decorations will be in the form of a medal (except for Mention in Despatches) and personnel of all ranks and categories (both men and women) of the Navy, Army and the Air Force will be eligible for these awards.

JCO's and other ranks of the Army and equivalent ranks in the Navy and Air Force who are awarded the decorations will be entitled to monetary allowance from the date of the act by which the decorations have been gained at a monthly rate of Rs. 50 for PARAM VIR CHAKRA, Rs. 30 for MAHA VIR CHAKRA and Rs. 20 for VIR CHAKRA. In the event of the death of the recipient, his widow will be eligible for the monetary allowance.

PARAM VIR CHAKRA, which will rank next and immediately after the Victoria Cross, will only be awarded for the most conspicuous bravery or some during or pre-eminent act of valour or self-sacrifice or extreme devotion to duty in the presence of the enemy whether on land, at sea or in the air.

MAHA VIR CHAKRA and VIR CHAKRA will be awarded for gallant or distinguished service in the presence of the enemy or under conditions equivalent to service in actual combat with the enemy whether on land, at sea or in the air.

MAHA VIR CHAKRA will rank next to and immediately after the D.S.O. (Distinguished Service Order) in the case of officers and immediately before the Indian Order of Merit in the case of JCO's and other ranks of the Army and equivalent ranks in the Naval and Air Force Services.

VIR CHAKRA will rank next to and immediately after the M.C. in the case of officers and JCO's or equivalent ranks, but before the Indian Distinguished Service Medal in the case of other ranks of the Army and equivalent ranks in the Naval and Air Force Services.

MENTION IN DESPATCHES will be awarded for acts of gallantry or distinguished service in operations against the enemy or under conditions equivalent to service against the enemy whether on land, at sea, or in the air, which are not of such a high order as to merit the award of the Vir Chakra but still deserving recognition.

C-in-C's COMMENDATION CARD will be awarded to all ranks of the Army. The Commendation Cards are personally signed by the C-in-C, for acts of gallantry or distinguished service, or for exceptional devotion to duty performed either in operational theatres or in non-operational areas, which are not of such a high order as to qualify for a higher gallantry or distinguished service award or for which the higher award is inappropriate. Awards will normally be made for specific acts of bravery or for distinguished or special service. The card will not be awarded posthumously.

ARMY'S AID TO REFUGEES

Unprecedented disturbances broke out in the Punjab in the weeks following the partition of the country, resulting in large scale movement of population. The Army, whose aid was sought for tackling the problem set up in September, 1947, a Military Evacuation Organisation on which fell the responsibility for rescue and movement of hundreds of thousands of refugees between the two new Dominions, Muslims in East Punjab and non-Muslims in West Punjab were rescued to refugee camps and later escorted to Pakistan and Indian territories respectively, by road, rail and air. Within six weeks the Organisation had moved 15 lakhs of non-Muslims from Pakistan to India. Foot convoys, which were the means of movement for the largest number of refugees were provided with military escort all along the route. The refugee trains were also escorted by the Military.

Unprecedented floods in East Punjab in October rendered the refugee routes unserviceable and Army Engineers worked hard and got them going within a week.

Speaking of the effort on the Indian side accommodation to refugees was provided in 36 camps. The Army placed 40,000 tents at the disposal of the provinces. The largest of the camps is the one at Kurukshetra which was organised by the Army. The camp accommodated at one time nearly 300,000 refugees and can normally house 250,000 in separate towns of 50,000 each. At its peak 20 major Indian Army units were employed. The camp has a hospital of its own with up-to-date arrangements for vaccination and inoculation. Accommodation stores such as camp kettles for use in the camp were also made available by the Army.

Field Ambulance, surgical units and almost all other medical services of the Army were provided for the use of refugees. Mass inoculations and vaccinations were carried out and ambulance cars accompanied foot convoys. The Army made available 1,300 beds for refugees in the Combined Military Hospitals in Jullundur, Ambala and Delhi. Medical officers were detailed for work in East Punjab. Medical stores and equipment amounting to about 250 tons were supplied to the refugees.

The Army placed at the disposal of the Military Evacuation Organisation six Transport Companies and supervisory staff for five civilian transport companies. The M.E.O. used in one month alone over 1,000,000 gallons of petrol in the East Punjab area. At the peak period about 600,000 gallons of aviation spirit a month were used.

KASHMIR CAMPAIGN

Hardly had the communal disturbances in the Punjab died down after partition in 1947, when the Indian Army was called upon to fight a prolonged campaign in Jammu and Kashmir to throw out large bands of raiders who had poured into the State at several points across the Pakistan border.

The main column of raiders drove down the Domiculmulla road, heading towards Srinagar. By capturing the Mahura power-house, 50 miles north-west of Srinagar they cut off supply of electricity to the whole of the Kashmir Valley. Srinagar itself was in peril.

The Maharaja of Jammu and Kashmir and the National Conference leader, Sheikh Mohammed Abdullah, made a distress call to the Government of India on October 26 seeking military aid. The next day, the Maharaja signed the Instrument of Accession and the India Government took the decision to dispatch troops to Srinagar. The first batch of Indian troops was flown there on October 27, more than 100 civilian aircraft being pressed into service for this operation.

On the afternoon of November 8 Baramulla was cleared of raiders and the security of Srinagar ensured. By November 14, the invaders had been chased beyond Uri, 65 miles west of Srinagar.

In the meantime, the raiders had seized considerable territory in the Jammu province adjacent to the Pakistan border. The State forces which had already taken up positions near the Jammu-Pakistan frontier had been surrounded in Mirpur, Kotli, Punch, Jhangar, Naushera, Bhimber, Rajouri and Beri-Pattan. Rushing into Jammu, Indian troops first set about relieving the garrisons in these key towns and saved the lives of thousands of refugees who had taken shelter with them. They first linked up with Beri-Pattan and then took Naushera and Jhangar. A scratch column marched towards Kotli and brought out 15,000 refugees without loss of a single life. The garrison at Mirpur could not be relieved but it fought its way out with the refugees. Simultaneously, another column had set out from Uri towards Punch and reinforced the garrison there.

Meanwhile, in the far north in Gilgit, the insurgents had effected a *coup d'etat* imprisoning the Governor and establish in their own regime. Steadily, they built up Gilgit as their forward military base for operations in the north-eastern province of Baltistan. Non-Muslim elements in the State Forces stationed in Gilgit fell back on Rondu and later moved to Skardu.

As winter gradually froze the fronts in Kashmir battlefield flared up in the Jammu province. A force of 6,000 raiders mounted a concentrated three-pronged offensive against Naushera on the night of February 6-7. Indian troops repulsed the attacks, inflicting heavy casualties, with 1,900 killed and many more wounded.

During the winter of 1947-48, the Jammu-Pakistan border was the scene of several raids in which marauder bands adopted 'loot and flee' tactics, burning houses, looting property and abducting women. They made several attempts to disrupt Indian supply line along the Pathankot-Jammu road, but owing to energetic action by Indian troops the raids were stopped. Mobile and static patrols were stationed along the entire route to keep the raiders off.

Jhangar, situated at the road-fork to Kotli and Mirpur, was recaptured on March 18, which constituted a strategic gain for the Indian Army. The Indian garrison in Punch, though isolated and besieged, fought on bravely and repeated attacks and constant shelling by the raiders failed to reduce the town. The RIAF broke up a threatened raider assault and, flying constant sorties, evacuated nearly 25,000 refugees.

In the summer of 1948, the tempo of fighting on the Uri front increased. An Indian column, setting out from Handwara, north-east of Uri captured Tithwal, 18 miles from the border town of Muzaffarabad. At this stage Pakistan, began sending regular battalions to stem the tide of the westward Indian drive. Indian troops, however, halted Pakistan's counter-thrusts, and set up a firm base at Uri.

ADVANCE IN JAMMU

On the Jammu front Indian troops advanced from Naushera to Chingaz and then on to Rajouri, which fell to them on April 12, after fierce resistance by the invaders. Two Indian columns, one driving from its base in Rajouri and another from Punch, met at Potna on June 16, a village on the Rajouri-Thanamandi-Punch track. After

the link-up, a small force penetrating into the enemy-held Mendhar valley, rescued several hundred refugees and brought them to safety. In the Naushera sector, Indian troops captured Sadabad and Samani early in June 1948, two important features commanding Indian positions around Naushera. Jhangar, the Indians' forward-most position on the Jammu front, was subjected to determined attacks, which were all repulsed.

Failing to penetrate the Indian Army's steel ring around Kashmir and Jammu, the raiders began sending out columns from Gilgit into the barren regions of Baltistan with the intention of opening yet another front north-east of the Kashmir Valley. A force, mainly composed of Gilgit Scouts, Chitralis, Frontier Constabulary and tribesmen and led by Pakistan Army regulars, spread over the whole of Baltistan.

A raider column made its way through the Skardu region and reached the Sind River Valley. The Indians immediately turned towards the east and chased the raiders out beyond the strategic Zoji Pass. Another invading column had moved into the Guraiz valley with the object of getting into the Kashmir Valley via Bandipura in the north. Indian troops drove this column beyond Guraiz and sealed off that passage to the Kashmir Valley.

After overwhelming a small State garrison on August 14, the raiders advanced towards Leh in the Ladakh valley. To meet this new threat, the Indians decided to reinforce the small State garrison in Leh, an almost inaccessible town situated at an altitude of 11,500 feet. The first contingent of Indian troops had trekked their way to Leh in the freezing cold of February. Early in June, flying over 23,000 feet high Himalayan ranges, the R.I.A.F. landed further reinforcements in Leh. This force in Leh, assisted by the hastily organised national militia of Ladakhi Muslims and Buddhists, routed the raiders, pushing them back to the fringe of the Ladakh valley.

Early in July, the U.N. Commission for India and Pakistan arrived and at first commiserated at their labours almost the first thing they did was to appeal to both the Dominions to refrain from doing anything that might aggravate the situation. Therefore offensive activity on all sides temporarily ceased.

ZOJI LA CROSSING

A record in the history of armoured warfare was the capture of Dras and Kargil when on November 1 light tanks of the 7th Light Cavalry drove through snow-capped and boggy tracks and over rock-like glaciers, crossed Zoji La at an altitude of 12,000 feet. Lying sixty-four miles north-east of Srinagar, Zoji La forms a bottleneck joining the valleys of Kashmir and Ladakh. The pass itself is dominated by heights on both sides and is about two miles long.

It was on November 20 that Indian troops in two columns, forking out from their base in the Jammu province, effected a link-up with the Punch garrison after a siege lasting twelve months. Indian troops had to fight their way for forty-five miles through some of the most difficult terrain, encountering fanatical opposition all the way from the raiders strongly entrenched on commanding heights to join in the defence of Punch, a defence which will go down in history as one of the most outstanding achievements of the Army and Air Force.

The fighting in Jammu and Kashmir came to an end on January 1, 1949, when the C-in-C's of India and Pakistan, with the approval of their respective Governments, ordered a 'Cease Fire'.

HYDERABAD POLICE ACTION

Owing to deterioration in the internal situation of Hyderabad State, consequent on the atrocities committed by the militant organisation of Razakars under a man called Kasim Razvi the Indian Union was forced to resort to "police" action in the State.

Indian troops entered Hyderabad territory on the morning of September 13, 1948, and marched along the main Sholapur-Secunderabad road to re-garrison Secunderabad and restore confidence among the panic-stricken people. Another column marched simultaneously from Vijayawada to Hyderabad. On the first day of the action, the Razakars offered serious opposition only at Nalhrug. Indian forces from the two other directions however continued their advance. Whatever resistance Indian forces met with was from fanatical Razakars; the State forces simply fell back and back on Hyderabad.

On September 17 at 1-30 P.M. the G.O.C.-in-C., Southern Command, Lt.-Gen. Maharaj Shri Rajendrasinhji sent an ultimatum to the Commander-in-Chief of the Hyderabad Army, Maj.-Gen. El-Edroos and the Nizam capitulated unconditionally. Indian troops thus re-entered Secunderabad at 4-30 p.m. on September 18 after a lapse of 17 months. Maj.-Gen. J. N. Choudhury, Commander of the Indian troops, was met by Maj.-Gen. El-Edroos, Commander of Hyderabad forces, who formally surrendered State forces on behalf of the Nizam. The following day, Maj.-Gen. Choudhury was appointed Military Governor of Hyderabad.

NEPAL GOVERNMENT'S ASSISTANCE

A note on the assistance given by the Nepal Government would be in order here. In response to a request made by the Government of India for help to maintain law and order within the Country, the Government of Nepal readily agreed to loan India a contingent of Nepalese troops consisting of ten battalions who arrived in India in August 1948. This timely help made it possible for regular Indian troops to be relieved of internal security duties and were employed elsewhere in India. The contingent returned to Nepal in January 1949 when the internal security position improved.

It may be recalled that during World War II Nepalese troops fought in Burma and operated, under their own commanding officers, with the troops of the famous 14th Army.

INDIAN SAILORS', SOLDIERS' AND AIRMEN'S BOARD

These Boards are probably the most important and valuable non-official institutions connected with the Armed Forces. They were constituted in 1919, in place of the Central Recruiting Board, the purpose of which was fulfilled with the end of the First World War. The object was at the outset to deal with a number of post-war problems—the finding of employment for soldiers released from the colours, the relief of the dependents of those who had lost their lives in the war and of those who were incapacitated for further service, the education of soldiers' children and the safeguarding of the general interests of soldiers and their dependents. As years passed, the Board had gradually to adjust itself to normal peace conditions and it was decided to maintain it permanently for a series of duties which have from time to time expanded and developed.

The Board on 31 December 1922 had the residue of the war fund, known as the Imperial Indian War Relief Fund, handed over to it. This formed the nucleus of its finances. The latter have since been husbanded with great care. The face value of the securities constituting the fund amounted on 31 March 1941 to Rs. 17,11,200, bearing an annual interest of Rs. 69,892.

The Board has its seat at New Delhi and co-ordinates the activities of Provincial Boards which exist in each province. Under the control of these Provincial Boards there exists throughout the country a network of District Boards reinforced in some cases by Tehsil or Taluka Committees and other kindred bodies.

Meetings of Indian S.S. and A. Board are normally held twice a year. The composition of the Board is as follows:

President: The Hon'ble the Minister for Defence.

Members: the Hon'ble the Ministers for Finance, Education and Labour, the Secretary, Ministry of Defence, the Secretary, Ministry for States, the Director-General of Health Services, the Adjutant-General, Army Headquarters, India, the Chief of the Naval Staff and C-in-C. R.I.N., the Financial Adviser, Ministry of Finance (Defence), Mrs. Hannah Sen (unofficial) and the Chief of the Air Staff and C-in-C. R.I.A.F. A whole-time officer of the Defence Ministry is the Secretary of the Board.

The Provincial Board is at the head of the provincial organisation and is normally located at the capital of the province. The Patron of the Board is H.E. the Governor and the President is the Premier (or a Minister nominated by the Patron). The Secretary is a civilian officer in the Provincial Secretariat.

The working unit is the District S. O. S. and a Board, normally located adjacent to the Deputy Commissioner's or the Collector's office. These Boards are established in all districts from which recruits have been obtained in sufficient numbers. The President of the Board is the Collector or the Deputy Commissioner. Each Board has a paid Secretary, usually an ex-V.C.O.

In the more heavily-recruited districts, Tehsil or Zail Sub-committees are formed with the Tehsildar, Zaildar or Mamlatdar as President and an honorary Secretary, where necessary. These sub-committees are represented on the District S.O. and A.

In the Indian States also, there are Boards corresponding to the provincial and district S.S. and A. Boards.

In May 1940, Army Headquarters appointed regimental officers as whole-time Military Vice-Presidents with the express object of frequently touring areas covered by a fixed number of District Soldiers' Boards.

From 70 District Soldiers' Boards in British India when war broke out, the number has risen to 138, besides 37 State Soldiers' Boards.

OBJECTS

The following are the objects and duties of the District Soldiers' Boards:—

- (a) Constantly to endeavour to promote and maintain a feeling of good-will between the civilian and military classes;
- (b) To give all possible assistance to the President of the Board in his capacity as head of the district in all administrative matters connected with the ex-soldier or his family;
- (c) To demonstrate the benefit of and so promote the desire for mutual co-operation between ex-soldiers and civilian officials;
- (d) To represent and explain to the civil authorities all matters of particular moment to ex-soldiers that require the attention of the local administration;
- (e) Generally to watch over the welfare of the ex-soldier and his family, and the interests of serving soldiers absent with their units.

As regards item (e), quoted above, the function of the Board and corresponding organisations cover a wide range. Their main tasks are enumerated below:—

- (a) To ascertain and intimate the whereabouts of an absent soldier to his dependents and to communicate to him news of all important matters affecting his family's welfare.
- (b) To procure legal advice in the case of a law-suit against an absent soldier where there is no male member of his family capable of protecting his interests;
- (c) To assist an absent soldier's family in the event of disease or famine;

(d) To assist ex-soldiers and their dependents in securing medals, pensions, arrears of pay, etc.;

(e) To investigate cases of ex-soldiers invalided out of the Indian Army for chronic diseases such as tuberculosis, leprosy, diabetes, etc., and to report them to the Provincial Branch of the Indian Red Cross Society for medical assistance;

(f) To investigate applications for relief from the various military charitable funds.

Boards, which have become the recognised centre to which the man comes when in trouble, have also attached to them information bureaux which are linked to the regional exchange organisation set up by the Labour Deptt. to find employment for ex-Servicemen.

The Board at present controls the following funds:—

- (i) The Indian Sailors', Soldiers' and Airmen's Board Fund.
- (ii) The King Emperor's Patriotic Fund.

The former was formed on December 31, 1922. Out of Rs. 10 lakhs received from the Imperial Indian Relief Fund for the purpose, primarily of meeting expenditure in connection with the scheme work through Provincial and District Sailors', Soldiers' and Airmen's Board for safeguarding the general interests of the Indian ex-soldiers, and secondly expenditure which might be considered desirable to incur on objects of cognate nature. Till Jan. 1, 1913 grants were made from this fund to meet the expenditure on the maintenance of District Boards. It is now used primarily for payment of special pensions to blinded ex-servicemen, and to meet the expenditure on miscellaneous items such as bank charges, audit fees, etc., in connection with the administration of the fund.

The latter fund was started in July 1918, out of the gifts from the Ruling Princes to Their Majesties King George V and Queen Mary on the occasion of their Silver Wedding. The purpose of the fund is to afford educational facilities to the children of Indian soldiers. The bulk of the fund has been used up in building and equipping the King George's Royal Indian Military Schools at Jhelum, Jullundur and Ajmer, for the education of the children of Indian officers and other ranks of the Indian Army. The purpose of the fund has now been extended to permit the interest derived from the securities being used for financing the annual Sports meeting of the King George's Royal Indian Military Schools, for the benefit of servicemen and ex-servicemen and their dependents.

OTHER FUNDS

The following Central funds which are not under the control of the Indian Sailors', Soldiers' and Airmen's Board deserve mention:—

1. **Armed Forces Benevolent Fund.**—This fund exists primarily for the alleviation of distress among past and present members of the Indian Armed Forces and their dependents. The inter-services fund provides for relief grants to the disabled ex-servicemen and dependents of those who lost their lives on active service and also for educational scholarships to children of ex-servicemen killed in action.

The Defence Minister is the chairman of the General Committee of this fund, and the Defence Secretary is the Vice-President. The three Service Chiefs, the Adjutant General and the Financial Adviser are members of the board and the Secretary of the Indian Sailors', Soldiers' and Airmen's Board acts as its secretary.

2. **Flag Day Fund.**—The object of the Flag Day Fund is to provide benefit for ex-servicemen and amenities to serving personnel. The first Flag Day was organised on October 1, 1948 and contributions were collected from all parts of the country. The composition of the Managing Working Committee of this fund is the same as for that of the Armed Forces Benevolent Fund. Last year a sum of Rs. 11,11,616-8-0 was collected.

3. **Armed Forces Reconstruction Fund.**—The fund known as the Military Reconstruction Fund was initiated in 1942. The Government of India decided to contribute monthly to this fund at the rate of Rs. 2 for each combatant and Re. 1 for each non-combatant. Contribution to this fund ceased on March 31, 1946. It was decided that 80 per cent of the fund should be distributed to Provinces and States to be administered by Provincial and State Committees and the remaining 20 per cent administered by a Central Committee. This Central portion of the fund is known as "The Armed Forces Reconstruction Fund." This Fund was finally deemed to have been duly constituted on July 20, 1946.

The purposes of this fund are as follows:—

(a) Primarily as measures of a permanent nature to benefit those now serving and those who will in future serve in the ranks or as non-combatants enrolled in the Indian Armed Forces and their families. The fund will not normally be used to make individual grants.

(b) Education, Family welfare in the Lines, Servicemen's and Servicewomen's welfare in the Lines, Collective care of the disabled, Grants to Sailors', Soldiers' and Airmen's Boards.

4. **The Army Central Welfare Fund.**—The object of this fund is to relieve distress among Indian Army Servicemen, ex-servicemen and their dependents and to look after the welfare of the men and their families in the lines.

5. **The Royal Indian Naval Benevolent (Association) Fund.**—This fund exists to relieve hardship or distress among certain categories of naval officers, ratings and their dependents.

6. **The Royal Indian Navy Amenities Fund.**—This is a non-public fund maintained at Naval Headquarters and administered by:—

- (i) The Commander-in-Chief, Royal Indian Navy.
- (ii) The Chief of Staff, Royal Indian Navy.
- (iii) The Chief of Administration, Royal Indian Navy.
- (iv) The Judge Advocate of the Fleet.
- (v) The Chief of Personnel, Naval Headquarters.

Its income from investments and any grants made specially for expenditure during the year are utilised to make grants to Ships or Establishments for any welfare project or amenities (whether for officers or ratings) which commend themselves to the Administrators. The Sports Funds of Ships or Establishments are required to make quarterly contributions to the Royal Indian Navy Amenities Fund and such contributions are treated as "Capital" and invested as and when occasion arises.

7. **The Indian Air Force Benevolent (Association) Fund.** This fund exists to relieve hardship or distress among all ranks, past and present, of the Royal Indian Air Force, and their dependents, especially those disabled by flying.

8. **Royal Indian Air Force Central Welfare Fund.**—This fund exists:—

- (a) To assist Messes, Institutions and clubs both existing and to be formed, by grants and loans.
- (b) To provide amenities such as indoor and outdoor games, radios, musical instruments, stage material, library books, etc. for Indian airmen.
- (c) To make grants on behalf of the Royal Indian Air Force charitable and philanthropic organisations which provide assistance to past and present members of the Royal Indian Air Force and their dependents.
- (d) To provide measures of a permanent nature for

- (i) Servicemen's Education,
- (ii) Family Welfare in Lines,
- (iii) Collective care of disabled airmen, and
- (iv) Grants to Soldiers', Sailors' and Airmen's Boards.

- (e) To provide Maternity and Child Welfare facilities and Women's Institutes for families of Royal Indian Air Force Airmen.
- (f) To provide assistance in the education of Airmen's children.
- (g) To assist in construction of sports grounds at units, when such grounds are not provided at Government cost.
- (h) To provide anything considered essential for the welfare and well-being of Royal Indian Air Force personnel which are not provided at Government cost and are considered to be beyond the means of the personnel themselves.

ST. DUNSTAN'S COMMITTEE

The Indian St. Dunstan's Committee for the War-Blinded, of which the Defence Minister is the Chairman, was constituted in November, 1939, to afford relief to the Indian war-blinded.

Established in July 1943 from funds raised from public donations the St. Dunstan's School, Dehra Dun, has turned out, so far, nearly 200 men who have benefited from the training received in the School. Among the incidental evils of blindness the most harmful is the idleness it brings and the deadly monotony of unending days with nothing to do. The object of the training given in the School is, therefore, to enable the war-blinded to gain confidence, personal happiness and learn a trade of their choice.

Knitting, spinning, rope and net-making, blanket and cloth weaving, mat, basket and newar making are some of the principal trades taught in the School. After the training the men receive free of charge the tools of the trade to continue their work and make their living. Disabled Indian war-blinded are housed in a separate hostel which has been fitted with special bedrooms, bathrooms and lavatories where suitable gadgets are provided to help the men to get about without assistance.

After August 15, 1947, negotiations were started to set up St. Dunstan's, India, as an independent body, free of all control from the St. Dunstan's Council, London. It has been agreed to appoint as trustees the Hon'ble Sardar Baldev Singh, Sir Mirza Ismail and Brigadier Thakur Mahadeo Singh, D.S.O., and to transfer the ownership and control of the funds in India to the new trustees. Legal formalities to effect the transfer are under way.

DISABILITY PENSIONS

Formed on April 1, 1945, the Pensions Branch of the Ministry of Defence has been dealing with all disability and family pension claims arising out of World War II. More than one lakh pension claims have been dealt with so far and only about one thousand claims, the majority of which are of recent origin, remain to be dealt with. During the year 1948-49 about 10,000 original claims were finally disposed of.

ROYAL INDIAN NAVY

The Royal Indian Navy traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or the Portuguese and from the pirates who infested the Indian coasts. The first two ships, the Dragon and Rosencroft, were despatched from England in 1612 under Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows :—

| | |
|-------------------------|--------------|
| Hon. E. I. Co.'s Marine | .. 1612-1686 |
| Bombay | .. 1686-1830 |
| Indian Navy | .. 1830-1863 |
| Bombay Marine | .. 1863-1877 |
| H.M. Indian Marine | .. 1877-1892 |
| Royal Indian Marine | .. 1892-1934 |
| Royal Indian Navy | .. 1934 |

India's Naval Force has always been closely connected with Bombay, and in 1688 when the E. India Company took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877, the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay continued to be the principal centre of Indian Naval Training and to a large extent of administration. In the winter of 1940-41, the Naval Headquarters moved to New Delhi.

During the war 1914-1918, Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships served as Auxiliary Cruisers. Officers also served in the Royal Navy.

RE-ORGANISATION SCHEMES

After the war the Fisher Committee, who came to India to report on the Indian Armed Forces, strongly recommended that the R.I.M. should be re-organised as a combatant service.

But the times were hard; money was scarce. The report of the Inchcape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R.I.M. Ships on their various stations, on light-house duties, transport work, carrying of officials, etc.

Happily for the Service, however, the Government of India in 1925 appointed a Departmental Committee under the Chairmanship of General Lord Rawlinson. This Committee recommended that the R.I.M. should be re-organised as a purely combatant Naval Service with the title of Royal Indian Navy, in the first instance to be commanded by a Rear Admiral on the active list in the Royal Navy. The scheme was accepted by the H.M.G. and the Government of India.

Accordingly on 2nd October 1934, the Royal Indian Navy was inaugurated, the historic ceremony taking place in Bombay.

The Chatfield Committee's Report, presented in 1939, made far-reaching recommendations in regard to the Royal Indian Navy.

EXPANSION DURING THE WAR

Shortly before the War, permission was given for the establishment of the Royal Indian Naval Reserve and the Royal Indian Naval Volunteer Reserve and during the war the increase in the number of ships, training establishments and personnel was most rapid. At the end of the hostilities the Royal Indian Navy Fleet comprised 6 modern sloops, 3 old sloops, 4 corvettes, 16 minesweepers (Bangors/Bathurst class), 16 trawlers, 4 gunboats, 6 motor minesweepers, one coastal force depot ship, one landing ship, infantry, one salvage vessel, 22 auxiliary M/S and patrol vessels, 27 fairmile M.L's, 23 harbour defence M.L's and 21 flotillas of minor landing craft and L.C.T's.

Four frigates namely "SHAMSHER", "DHANUSH", "TR" and "KUKRI" were acquired from the Royal Navy after the hostilities. During the war the personnel in the Service increased to 3,031 officers and 27,651 ratings. Normally the ratings in the Service are recruited as boys and they sign an engagement for 12 years. During the War as a result of expansion, a large number of ratings were recruited for active service for 5 years. These ratings were trained in newly set up establishments near Bombay. Officers of the R.I.N. are generally trained in U.K. but during the hostilities, officers of the Naval and Volunteer Reserve were trained in a Shore Establishment called H.M.I.S. FERROZEE. Officers in the Executive Branch were given short but intensive courses in seamanship, gunnery, signals and other subjects. About 160 of these Reserve Officers have now been granted regular and short service commissions.

ACTIVITIES DURING WAR

Throughout the war R.I.N. ships were engaged in operations and in November 1942 one of the H.M. Indian ships, "Bengal", won world-wide renown by engaging in the Indian Ocean two Japanese raiders which were far more heavily armed and were ten times her size. One of the raiders was sunk, the other made off, and H.M.I.S. BENGALE reached port safely. In the early months of 1943 vessels of the R.I.N.'s Coastal Force did good work in support of our troops on the Arakan Coast. Our vessels intercepted Japanese coastal craft conveying troops and supplies and took part in the raid on Myebon.

In 1944, ships of the Royal Indian Navy again co-operated with the land forces engaging the enemy on the Arakan Front. Support was afforded by bombarding enemy shore positions and by harassing the enemy's water-borne supplies. In four months these ships steamed more than 30,000 operational miles on 43 separate missions in enemy waters.

The Royal Indian Navy was well represented in the eight amphibious operations by which the 15th Indian Corps advanced down the Arakan Coast from the Indian frontier to Rangoon in the spring of 1945.

In Burma.—Men of the R.I.N. Landing Craft Wing, who had been trained secretly for more than two years, established their reputation on the beaches of Akyab, Myebon, Kyaikpyu, Kanung, Ju-Yaw and Letpan. They formed the spearhead of each of these six assaults, carrying troops to the beaches and keeping them supplied during critical phases of the ensuing battles.

The Indian sloops NARBADA, JUMNA, KISTNA and CAUTERY fired tens of thousands of shells in support of the Army's coastal advance in Arakan, penetrating up inland waters as far as thirty miles from the open sea to increase the effective range of their bombardments.

A flotilla of nine fleet mine-sweepers of the Royal Indian Navy cleared the approaches to the Rangoon River estuary before the arrival of the invasion convoy, whose escort included two Indian sloops—SUTLEJ and CAUTERY.

The period, July to December 1945, brought to the R.I.N. the opportunity of operating in waters from Rangoon to Hongkong. R.I.N. fleet mine-sweepers played a prominent part in the operations around Malaya and two sloops were serving with the British Pacific Fleet.

Throughout July 1945, H.M.I. Ships NARBADA, GODAVARI and KISTNA maintained patrols in the Mergai Archipelago, the Forrest Straits, and off the Tavoy and Tennasserim coasts. Many of the islands in the Archipelago were visited and landing parties went ashore to interrogate the inhabitants.

Malay Pacific.—In July H.M.I.S. PUNJAB and H.M.I.S. DECCAN took part as dandylays to the 7th (R.N.) mine-sweeping flotilla in the mine-sweeping operations off Phuket Island, at the northern end of the Malacca Straits. The two ships assisted in fighting the fire in H.M.S. VESPA after a suicide bomber had crashed on her deck and H.M.I.S. PUNJAB later rescued the survivors. Both the ships were complimented by the Captain, East Indies Escort Forces, for their work in this operation.

H.M.I. Sloops NARBADA, GODAVARI and KISTNA, the fleet mine-sweepers of the 37th Mine-sweeping flotilla, H.M.I.S. HARRACUDA and the 50th M.L. flotilla took part in the general move eastwards to Malaya and the Netherlands East Indies. H.M.I.S. KISTNA arrived at Penang on 1st September 1945 in company with the 3rd Battle Squadron, and remained there giving assistance to the occupation forces till the middle of the month.

The 37th mine-sweeping flotilla played a prominent part in company with the 6th and 7th mine-sweeping flotillas in operations to clear British and Japanese mine-fields in the Singapore Roads and the Malacca Straits, and visited most of the ports in southern Malaya.

H.M.I.S. BENGAL arrived in Singapore on 3rd September in company with the cruiser H.M.S. CLEOPATRA (wearing the flag of the Commander-in-Chief, East Indies Station) and the 6th mine-sweeping flotilla, these being the first British warships to return to Singapore.

On 26th September 1945 H.M.I.S. NARBADA arrived at Port Blair with the Naval Force Commander for the re-occupation of the Andamans and Nicobar Islands. The official surrender of the Japanese Forces in these islands was made to this Force.

H.M.I. Ships GODAVARI, CAUVERY and SUTLEJ operated till recently with the British Pacific Fleet since the recapture of Singapore and steamed many miles in Far Eastern Waters on the various duties required of occupation forces.

MUTINY

On 18th Feb. 1946 mutiny broke out in H.M. I.S. TALWAR spreading to other ships and Naval establishments in Bombay. After a day or two, ships in other ports also joined. There was an exchange of fire between the mutineers in Castle Barracks, Bombay, and the Military guards. In Karachi H.M.I.S. HINDUSTAN also exchanged fire with the Military. The mutineers however surrendered on 23rd February. The Government of India appointed a Committee to inquire into the causes and origin of the mutiny.

The Committee's report revealed the existence of certain grievances. And the Government in their conclusion said that the lessons of the mutiny were two: officers must consider the welfare of the men before their own comfort or safety and, two too rapid an expansion without proper provision for the training of officers was unwise and the aim of the service in peace must be to prepare for service in war.

Among the other points which the committee made were the following: 1. Casualties 9 officers and 1 rating killed; 41 ratings including 2 B. I.O.s and one officer wounded. 2. Politics and political influence had great effect in unsettling the men's minds. 3. Extremely rosy picture was held out by recruiting authorities. 4. There was lack of contact between officers and men and a feeling of discrimination. 5. There was lack of patient and sympathetic attitude to genuine grievances. 6. Ratings were denied certain concessions and privileges enjoyed by ratings of the Royal Navy. 7. Indian officers were regarded as inferiors.

PARTITION OF R.I.N.

On 14th August, 1947 before the partition, the R.I.N. had six modern sloops, four frigates, 16 fleet mine-sweepers and other mine craft beside 297 Officers and 10,064 ratings. As a result of partition the sloops NARBADA, GODAVARI, the frigates SHAMSHER and DHANUSH, four mine-sweepers and some minor craft were allocated to Pakistan. In addition to this the R.I.N. lost three of its shore establishments to Pakistan. H.M.I.S. DILAWAT, BAHADUR and HIMALAYA. The first two are boys' training establishments and the last one a gunnery and radar school. The following has been allocated to India:

SLOOP'S:—SUTLEJ, JAMNA, KISTNA, CAUVERY.

FRIGATES:—TIL, KUKRI.

MINE-SWEEPERS:—ORISSA, DECCAN, BHAR, KUMAON, KHYBER, ROHIL-KHAND, CAINATIG, RAJPUTANA, KONKAN, BOMBAY, BENGAL, MADRAS.

CORVETTES:—ASSAM.

SURVEY VESSEL:—INVESTIGATOR.

TRAWLERS:—NASIK, CALCUTTA, COCHIN, AMRITSAR.

MOTOR MINE-SWEEPERS:—FOUR IN NUMBER.

HARBOUR DEFENCE MOTOR LAUNCHES:—FOUR IN NUMBER.

All existing landing Craft.

The Boys' Training Establishment is now located at Vizagapatnam and Cochin and has been converted into the largest training centre in India under a Commodore specially brought from the U.K. The schools in Cochin cover communications, Torpedoe and anti-submarine, seamanship, Supply and secretariat, cookery, physical training, etc. Only the electrical school is still located at Jamnagar.

On September 15, 1948, H.M.I.S. 'Delhi' the 7,000 ton cruiser of the Leander class acquired by India from the U.K. arrived at Bombay. And the following month on October 21, she left on a coastal cruise of nearly seven weeks round India, visiting the Andamans also; the object was mainly to provide working experience to the crew. While at Trincomalee she had sea air exercises with H.M.S. 'Norfolk' and other units of the R.N. stationed there. Again in March 1949 she had a second spell of similar exercises at the same place.

In the spring of 1949 India obtained three Destroyers from the R.N. which she named H.M.I.S. 'Rajput', H.M.I.S. 'Ranjit' and H.M.I.S. 'Rang'. They had exercises with units of the R.N. Mediterranean fleet during the middle of the year and arrived in India sometime in the autumn.

Naval expansion in India is planned on a ten year basis and so as to produce a balanced defence force for the country consisting of all the three arms of the Service. At present cadets for the R.I.N. Officer cadre are receiving, during the first two years, their general education along with officer cadets of the Army and the Air Force at the Armed Forces Academy, Dehra Dun but for higher naval training they are going to the U.K. In the near future, however, while general education will be provided at the National Academy at Khadakavasi, regular Naval training will be given at R.I.N. College which is proposed to be established, probably, at Vizagapatnam.

Another development of importance is that of naval aviation in regard to which the preliminary steps have already been taken. The Chief of Naval Aviation at the N.H.Q. is working out the plans and programme. And ten selected R.I.N. officers are in the U.K. undergoing training as naval pilots. It is intended to acquire two light aircraft carriers in the near future and eventually to form a Carrier Air Group. The problem of training in sufficient numbers, the necessary flying and maintenance personnel is also engaging attention.

NATIONAL ACADEMY

To provide basic training for all future officers of the Royal Indian Navy, the Indian Army and the Royal Indian Air Force, the Government of India have had under consideration since 1945, a project for the setting up of a Military Academy on the lines of the United States Military Academy at West Point. It was originally intended that this institution should be named as the National War Memorial Academy, to perpetuate the memory of the part played by Indian soldiers in World War II.

Various Committees composed of leading educationists, service chiefs and others were set up to examine the different aspects of the project and to submit detailed recommendations as to the estimates of cost. A small sub-committee also visited the services training institutions in the U.K., Canada and the U.S.A. before formulating its final recommendations. It has now been finally decided to set up a National Academy at Khadakavasi near Poona for the combined training of the potential officers of the three defence services. The combined course at the Academy will be for a period of three years followed by a further specialised service training. All the land required for the National Academy at Khadakavasi has been offered free of cost by the Government of Bombay and a special construction division has been set up for the project.

As the construction of building, etc. at Khadakavasi for the establishment of National Academy will take some time, the National Academy scheme has been implemented by the addition of an Inter-service Wing to the Indian Military Academy at Dehra Dun which commenced training officers for the three Services on January 4, 1949. This new institution has been re-named as Armed Forces Academy. When the National Academy starts functioning, the Armed Forces Academy will close down and will be incorporated in the National Academy.

The cadets will receive two years' basic training at the Inter-service Wing of the Academy. The Naval and Air Force cadets will later proceed to their Advance Service Training Schools while the Army cadets will join the Military Wing of the Academy for a further two years' training.

EDUCATIONAL INSTITUTIONS

(a) **Lawrence Schools.**—From funds raised from the public three schools were established one at Sanawar, in the Simla Hills, the other at Lovedale in the Nigiri Hills and the third at Mount Abu for the benefit of the children of the British soldiers serving in India. After the partition, these schools could no longer function for the limited purpose of imparting education to the children of British troops, and as a result of the committee set up to examine and make recommendations as to their continuance and future development, it has been decided to re-organise the schools at Sanawar and Lovedale as public schools to be run by the Ministry of Education. Sufficient facilities did not exist at Mount Abu for running a public school and the possibility of converting it into a girls' school is under consideration.

The Government have accepted the liability of continuing the education of the entitled children so long as there exist any, on the terms and conditions applicable to them. In addition 40 per cent of the vacancies are to be reserved for the children of the Armed Forces personnel. It is proposed further to provide a number of scholarships to deserving students and students with parents of limited means.

(b) **King George's Royal Indian Military College.**—There are 4 institutions of this kind at Jullundur, Ajmer, Belgaum and Bangalore. These institutions were established for the purpose of providing education for the sons of Indian soldiers which would fit them for an Army career. Admission to these colleges is open to sons of Junior Commissioned Officers and other ranks, who have served or are serving in the regular Indian Army, Warrant Officers and Ratings of the Royal Indian Navy and Warrant Officers and other ranks of the Royal Indian Air Force. It has been decided to review the working of these colleges, and for that purpose a Committee has been set up with wide terms of reference.

(c) **School of Foreign Languages.**—A school of foreign languages was established on February 1, 1949, at New Delhi to impart instruction in certain foreign languages to officers of the Armed Forces who are required to know certain foreign languages. As facilities for the teaching of foreign languages do not exist in this country to the necessary extent, it was decided to start a school of foreign languages. 200 students have already joined and are receiving instruction in French, Chinese, Arabic, Russian and German.

(d) **School of Military Engineering.**—The school was started during the war in 1943, at Roorkee. It gives newly Commissioned Officers technical, tactical and administrative training in Military Engineering. After the partition this school was transferred to Kirkee near Poona. A permanent building for the school is now under construction.

(e) **Armed Forces Medical College.**—It has been decided to re-organise the Army Medical Training Centre, Poona, which was established as a war-time institution in 1943.

It will be known as Armed Forces Medical College, Poona. The College will run two courses, a Junior Course for the officers on joining the Medical Services of the Armed Forces, and a Senior Course which will be a refresher clinical course for officers who have been in service for some time. In addition, specialised training in Physiology and biochemistry, etc. will also be provided. The College will have its own Research Department and will train specialists in all subjects and is designed to meet the needs of the Medical Service of the Navy, the Army, and the Air Force.

(f) **Staff College.**—A new staff college has been established after the partition at Wellington in the Nilgiri Hills, but the permanent location of this institution has not yet been decided. The new staff college is intended to meet the requirements of the three Services and when the college materialises an important step will have been taken towards the close integration of staff training of the three Services.

(g) **The Air Technical College.**—It is essential for the Air Force to have a sufficient number of people adequately trained in all the technical aspects of aircraft maintenance in perfect air-worthy condition. For this purpose, it has been decided to establish an Air Technical Training College. The planning and

arrangements for its establishment have now been completed and it was expected that the College would start functioning in July 1949. In the first instance the College would be staffed by European instructors but it is expected that Indians will be able to take over in 5 years.

(h) **Naval Schools.**—The Navy lost practically all its important Training Schools almost all of which were located in Karachi. These have now been re-created at Cochin. They are all housed in temporary structures, which it is hoped will be replaced by permanent ones over a period of years.

There are a number of other Training Institutions which have had to be established or re-organised to meet the needs of one or the other of the Services. In spite of the existence of these establishments, it is still necessary to send officers and men for training abroad. That necessity will continue for some years to come. It is with some difficulty, however, that the requisite number of vacancies at the Training Institutions abroad are secured.

EX-I.N.A. PERSONNEL

The section can be wound up with a note on the I.N.A. Following a statement made by the Prime Minister in the Indian Parliament on

March 20, 1948, the disabilities attached to the members of the Indian National Army was removed. Orders were issued to the effect that the previous orders of dismissal of such of the ex-Indian Army personnel as joined the Indian National Army should be deemed to be orders of discharge from the Army, or, in the case of officers, retirement from the Army. Fresh discharge certificates showing the character as "good" have been issued and ex-Indian National Army personnel are now free to join the Army, if otherwise qualified. Provincial Governments and States which have acceded to the Indian Union have also been requested to render all assistance possible, to such personnel in regard to their re-employment and other rehabilitation matters.

A sum of Rs. 30 lakhs has been set aside by the Government for affording financial relief to these men and their dependents. Lump sum grants have been or are being made from this sum to those men who were disabled and the dependents of those who were killed while serving in the Indian National Army. The concessions apply only to those Indian Army personnel who joined the Indian National Army and are now the nationals of India or of any State which has acceded to the Indian Dominion and have not migrated to Pakistan.

THE CO-OPERATIVE MOVEMENT

THE outstanding feature of the rural economy of India and Pakistan is the appalling poverty of the rural population. The various estimates, official and non-official, that have been made of the income per head of population at various times leaves the matter absolutely in no doubt. The Central Banking Enquiry Committee estimates that the average income of an agriculturist does not work out at a higher figure than Rs. 42 a year. The extent of an average holding, which is about 6 acres, for an agricultural family of 5 persons is too inadequate to maintain it in ordinary comfort even with the low standard of living which is so characteristic of the rural population. Moreover, cultivation is in a large measure exposed to the vicaries of the monsoon. In every 5 years there is but one good year, one bad year and three indifferent years. These unfavourable conditions might be mitigated to some extent by a well conceived policy of irrigation by the States; but so far, of the total cultivated area in the countries, about 16 per cent. only has irrigation facilities from rivers, tanks or wells while the remaining 84 per cent. depends wholly on rainfall. Thus the frequency of failure of crops, owing to drought and floods, frost and pests, coupled with the low vitality and high mortality of the live-stock, render the economic position of the cultivator worse still. The inadequacy of the subsidiary occupation to supplement the slender income from agriculture contributes further to his extreme economic weakness. He has sufficient spare time on his hands to devote himself to subsidiary occupations but he has been exposed to the full blast of the competition of forces from the rest of the world and many of the industries on which he relied in the past have suffered largely from, or been wiped out by the competition of machine-made articles. He is now being drawn steadily into the sphere of influence of markets both national and international and he has neither the organisation nor the credit facilities to help him as in countries like the United States of America or Canada or some of the European countries. Though the recent rise in the prices of agricultural products has benefited him, his position remains essentially weak. In addition to these numerous difficulties, the agriculturist has another serious handicap in that he is largely illiterate. The percentage of literacy in India and Pakistan is still very low being only 13 per cent., and any progress in agriculture is well-nigh impossible without the background of general education. All these factors lead to what is the most outstanding feature of the rural economy of India and Pakistan—the chronic and almost hopeless indebtedness of the cultivator.

RURAL INDEBTEDNESS

The Central Banking Enquiry Committee has estimated that the total rural indebtedness of India and Pakistan is about Rs. 900 crores. Though indebtedness of the agricultural population has continued from old times, it is acknowledged that it has risen considerably during the last century and more especially during the last 50 years. This colossal burden of debt is the root problem which has got to be faced in any attempt towards the economic regeneration of the masses. A peculiar feature of this indebtedness is that the debt which remains unpaid during the lifetime of the cultivator who contracts it passes on as a burden to his heirs, so that many agriculturists start their career with a heavy burden of ancestral debt, which they in their turn pass on with some further increase to their successors. Ignorance and improvidence, extravagance and conservatism have further been held as the reasons for the continued growth of this heavy load. A marriage festival in the family tempts the cultivator to launch out into extravagance while funeral ceremonies prove no less costly. All these factors—the uneconomic nature of the agricultural industry, the chronic and heavy indebtedness and illiteracy all form a

thoroughly depressing background for the rural economy of India and Pakistan.

GENESIS OF THE MOVEMENT

It is no wonder that under the circumstances detailed above the agriculturist has constant recourse to borrowing and that too not only for any permanent improvement that he may contemplate but for his current agricultural needs as also for periodical unproductive purposes such as weddings and funeral ceremonies. The absence of any banking organisation in the country-side has driven him into the arms of the *sawcar* or the *mahajan* who, while proving a very accommodating person, has acquired a grip on him from which the cultivator has found it impossible to extricate himself. The exorbitant rates of interest charged, coupled with various devices which increase still further the actual rate of interest, and the numerous services which the *sawcar* performs as a retail tradesman and the buyer of the cultivator's produce, make the *sawcar* the dominant force in the village, reducing the agriculturist to a position of absolute serfdom.

In 1883 the Land Improvements Loans Act was passed and this was followed in the next year by the Agriculturists' Loan Act enabling Government to advance loans repayable by easy instalments and at low rates of interest for improvements and also for current agricultural needs. In 1892 Sir Frederick Nicholson submitted a report to the Madras Government on the possibility of introducing land and agricultural banks and the discussion thus initiated by him was continued by Mr. Dupernex of the U.P. in his "Peoples Banks for Northern India". The caste system of the Hindus and the ideas of common brotherhood among the Muslims were evidences of the peoples' natural aptitude for co-operation and the *midras* of Southern India furnished a practical proof of this aptitude. In 1901 the Government of the day appointed a committee to consider the question of the establishment of agricultural banks and the report of this committee resulted in the passing of the Co-operative Credit Societies' Act of 1904. The co-operative movement was thus launched in the country on the 25th March, 1904. The Act aimed at encouraging thrift, self-help and co-operation amongst agriculturists, artisans and persons of limited means and the societies that were to be started were intended to be small simple credit societies for small and simple folks with simple needs and requiring small sums only. Knowledge of and confidence in their fellow members which are the keynote of success were ensured by providing that a society should consist of persons residing in the same town or village or group of villages and should be members of the same tribe, class or caste. In order to provide facilities in urban areas for the small man, urban societies were also permitted. The Act introduced the principle of unlimited liability for rural societies. The local Governments were empowered to appoint special officers called Registrars of Co-operative Societies, whose duty it would be to register societies formed under the Act, to get the accounts of such societies audited by a member of their staff and in general to see that the societies worked well. The seed thus sown has grown in the course of 40 years into a fine tree with twigs and branches, spread out in many directions. In spite of several weaknesses in the Co-operative movement in the two countries, it is beyond dispute that the movement has been a powerful instrument towards the awakening of the country-side and has led to a steady improvement in various directions of the life of the cultivator. Moreover, the use of the vote, the elective system, the ideals of self-help, self-reliance, compromise, give and take, the habit of working on an organised plan, the rounding of angularities are all great items in the training of a citizen and the co-operative societies have been great schools for political and civic education. Since the launching of the movement

in 1904, there have been amendments of the co-operative law and committees and commissions of enquiry to remedy defects and to suggest further lines of action.

PAKISTAN

Since August 15, 1947, India has been partitioned into the two Dominions of India and Pakistan. Co-operation has always been a Provincial subject and there has thus been no directive from the Centre. The Provincial Governments have therefore continued to function in the Co-operative Departments as before, whether they are included in one Dominion or the other. The Reserve Bank which is now entrusted with the issue of co-operative statistics has been able to bring out the statistical statements only up to 30th June 1946, and gives the figures for the old divisions into British Indian Provinces and Indian States. It is difficult under these circumstances to get a correct idea of developments in Pakistan. Sind and the N. W. F. Provinces remain as before; but difficulty arises in regard to the Punjab and Bengal, both of which have been split up into Western and Eastern regions. The Punjab was a very important Province so far as the Co-operative Movement was concerned, but in the absence of reports from the Co-operative Registrars, it is not possible to get a clear idea of the progress and development in the Pakistan Provinces of West Punjab and East Bengal and in the Indian Provinces of East Punjab and West Bengal.

According to a special report of the Registrar in Sind, one of the main difficulties in the development of co-operation in that Province is the lack of trained personnel. A Co-operative Training Scheme is therefore under consideration. Establishment of industries for increasing the national wealth and amelioration of the condition of the masses are engaging the attention of the Department particularly the question of the housing and settlement of the refugees. The Sind Provincial Co-operative Bank is the financial arm of the Co-operative Movement, while the Board of Supervision is responsible for supervision. The Provincial Co-operative Institute concerns itself with propaganda and education, while the Department arranges for Audit and Inspection.

West Punjab is the most important of the Pakistan Provinces in Co-operative as in other matters. Separate statistics are not yet available but the general picture of the Punjab may well be taken to hold good for West Punjab rather than for East Punjab. A succession of able Registrars and fuller backing by the Provincial Government had given the lead to the Punjab, which was one of the best co-operatively developed province in India. Non-credit Agricultural societies for a number of purposes were popularised, the most notable contributions being the Consolidation of Holdings, Better Living, Arbitration and Rural Reconstruction societies. It may be presumed that West Punjab carries on its past traditions and goes ahead in its co-operative programmes and policies. East Bengal shares the general deterioration that marked co-operative endeavour in Bengal when it was first started and it is too early to expect it to march on vigorously on the forward path till rehabilitation and rectification of the existing societies have been carried out.

The problems of Co-operation in the two Dominions are yet much the same nature and inter-Dominion talks and conferences should serve a very fruitful purpose indeed.

In the following pages, therefore the progress of co-operation has been reviewed for the two Dominions—India and Pakistan, jointly as in the past.

GROWTH OF CO-OPERATION

In the first few years of the movement the number of societies grew very slowly but the growth was considerably accelerated from 1910 and the average number of societies from 1910 to 1915 was about 12,000. The pace of growth still further quickened after 1915 and now there are 1,46,958 agricultural societies and 23,838 non-agricultural ones. Table 1 shows the distribution of these societies by Provinces in India and Pakistan. It will appear from the table that progress in different parts has not been uniform. The Bengalis, the Punjabs, the United Provinces, and Madras have the largest number of societies while other major provinces like Bombay, Bihar, the Central Provinces and Assam show smaller figures. The two Punjabs with 26,993 societies come first in the number of societies (90.3 per one lakh inhabitants, while the Bengalis have a larger number of societies than the Punjabs come second in that respect with 69.5. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 169.0 and 136.7 respectively. It is satisfactory to note that the co-operative movement has spread not only in the Provinces but also in the States; and compared with the total population, Kashmir, Gwalior and Indore lead in this matter though the premier States of Mysore, Baroda, Hyderabad and Travancore have also made considerable progress. Even more instructive are the figures in Table 2. The total number of members of primary societies stands on the 30th of June 1916 at 92 lakhs. Taking the normal family at a little under 5, it is clear, that about 41 crores of people in India and Pakistan are being served by this movement. There is no single movement rural or urban fraught with such tremendous possibilities for the uplift of the masses as the co-operative movement and there is no other movement which affects such a large percentage of the population. Bombay leads in the number of members of societies, 49.1 per one thousand inhabitants, the Punjabs come next with 37.8, Madras, the Bengalis and Sind rank thereafter. This shows that the size of societies varies in different Provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other Provinces of India and Pakistan. Of the smaller areas, Coorg takes a leading place with 178.8 members per one thousand inhabitants, while Travancore has an average of 30.7. Membership is a much better test in many respects of progress than the number of societies and from this point of view, the progress in the two Punjabs, Bombay, Coorg, Travancore and Ajmer-Merwara must be regarded as quite satisfactory. There is also a third aspect of the growth of the movement. The number of societies, or the membership in the societies alone is not an index of the work that is being done and of the benefits which are being conferred by the movement. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their working capital than from the number of members. In this direction the marvellous progress so far achieved by the movement should also be noted. From about Rs. 68 lakhs, which was the average up to 1910, the working capital has advanced very rapidly and stands in 1946 at more than Rs. 1,64 crores. It is gratifying to note from Table 3 that this large sum has been derived mostly from non-Government sources. The share capital, reserve fund and deposits from members together constitute about Rs. 67 crores and this is really owned capital, that is to say members' own money. The provincial or central banks and other societies contribute a little less—25 crores while the non-members or the outside public contribute about 49 crores. This latter item shows to a remarkable extent the growth of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the

country. The distribution of the working capital by Provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India and Pakistan. Bombay and Sind lead in this respect with 259 and 150 annas per head of population respectively. The two Punjabs and Madras come next with 129 and 118 while the Bengalis fall behind with 59. Among the smaller areas, Coorg comes out first with 257 annas per head of population while Ajmer-Merwara comes second with 163. Of the States, Baroda takes the first place with 95, while Indore, Mysore and Cochin follow with 79, 75, and 61 respectively. Bombay is easily first in the matter of deposits from members which amount to about 7 crores out of a total working capital of 35 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. Bombay, the Punjabs and Madras lead in many respects, U.P. showing a spurt in recent years. The smaller areas and the States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the Provinces and States while non-agricultural, that is, urban societies show a much slower development. But before we proceed, we must explain the chief component parts of the structure as it has now been built up.

FINANCIAL STRUCTURE OF THE MOVEMENT

Apart from the comparatively few co-operative societies at present working for non-credit purposes, whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. Of these credit institutions, by far the greater proportion is rural. The rural credit society has, for its main purpose, the financing of the agriculturist and as such it needs funds. The original idea of co-operative credit lies in making available to the needy the surplus of the well-to-do brethren through the medium of the society but in the villages, the well-to-do and the needy rather form distinct groups, the former playing or trying to play the *saver*. This instead of comprising more or less all sections of the population of the village, a society is very largely made up of the needy section. Even if it was not the slender savings of the well-to-do would not be enough to meet the wants of the needy and a village society cannot, therefore, be self-sufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy load of unproductive debt of the average farmer, his habit of investing his savings, if any, in lands and ornaments, his illiteracy and consequent lack of the banking habit, soon made it apparent that rural credit societies could not be expected to raise the required funds in deposits either from members or locally. The question of funds for the working of a rural co-operative society thus becomes a vital question indeed. Central banks have therefore been brought into existence at the district headquarters in order to raise money from towns and make them available to the primary rural societies. Following up the idea further, it has been found necessary to have a provincial bank at the provincial headquarters to serve as a balancing centre for the central banks and to make available larger funds for the primary societies through the central banking institutions. The financial structure of the co-operative movement is thus largely composed of three parts—(i) the Agricultural Credit Society, (ii) the Central Financing Agencies, and (iii) the Provincial Banks. Obviously one more part in the structure seems possible and desirable, namely, an Apex All-India or All-Pakistan Co-operative Bank. So far, however, such a bank has not been started though the provincial banks of India have an

Indian Provincial Co-operative Banks Association.

AGRICULTURAL CREDIT SOCIETIES

The success of these societies is closely related to their very peculiar constitution. In an ordinary joint-stock company, a member is liable only to the extent of the value of his share holding and his liability is therefore limited; but in the case of agricultural credit societies, the liability is unlimited, that is to say, members are jointly and severally liable to the creditors of the society for the full amount of the debts incurred by it. Such a liability would never be acceptable to any person, unless he was imbued with the broader vision of brotherhood between members and unless he himself had an active voice in the management of the society and had a more or less full knowledge of the character and antecedents of his fellow members. Co-operative credit is the capitalisation of character and unlimited liability is the great instrument to secure the admission into a society as members of those persons only, who by their character and antecedents deserve to be taken into that brotherhood which imposes such an obligation as unlimited liability on all, so that they either swim or sink together. To secure success, therefore, the proper selection of members is of the utmost importance; and it is unfortunate that this has not in practice been as well kept in view as it should be, in the eager desire to promote the formation of more and yet more societies.

Credit is a blessing only if turned to productive account; if used up for unproductive purposes, it is a curse. It would enrich the producer but it would only impoverish the consumer. The agriculturist needs money for productive purposes such as his current agricultural needs, land improvement, purchase of stock and implements, manures and seeds, as also for unproductive purposes, such as repayment of old debts, weddings and funerals. He thus requires credit not only as a producer but also as a consumer—a producer who hardly makes profits from his industry and a consumer who has no past savings to enable him to tide over a bad period, but who is a perpetual borrower ready to live for today and let tomorrow take care of itself. He is besides ignorant and illiterate, and though sufficiently conversant with the routine of his industry hardly awake to the need or scope for improvements in his methods. In such circumstances, it is imperative for the management of a rural co-operative society very carefully to scrutinise the loan applications and examine the purpose for which loans have been asked and to see that the loan when sanctioned is used for the specific purpose. And yet it is in this very respect that co-operative societies have fallen short in their duty.

THEIR RESOURCES

The funds of an agricultural credit society are raised from entrance fees, share capital, deposits or loans from non-members, loans from the central or provincial banks, loans from Government and the reserve fund. The income from entrance fees and share capital is small compared with the financial requirements of the members. A large source from which funds are derived is deposits and loans. The volume of deposits which a society is able to secure on terms offered by it is an index of the measure of the public confidence it has inspired and the soundness and the stability of its financial position. The ideal placed before these societies is the development of members' deposits to the extent of making the society financially self-sufficient. These deposits by members further serve the purpose of stimulating thrift and saving habit among them, and are, therefore, eminently desirable. Attempts are everywhere made to encourage deposits, but the response has been small, except in the province of Bombay, where they form one-fifth of the total working capital. Loans from central banks therefore furnish the bulk of the working capital of these agricultural credit societies at present.

Low dividends and voluntary services resulting in low cost of management have made it possible to divert a substantial proportion of the profits of these societies to reserve funds, and thereby provide against unforeseen losses, bad debts and losses on the realisation of certain assets such as by investment depreciation. The general practice in regard to the use of the reserve fund in the business of the societies is that it is used as ordinary working capital.

The funds collected by the agricultural societies in India and Pakistan are at present by no means negligible. They aggregate to about 33 crores of rupees. Their financial position as on the 30th of June 1946 stood thus:—

| | In thousands of rupees |
|----------------------------|------------------------|
| Share capital | 5,88.50 |
| Reserve and other Funds .. | 10,57.11 |
| Deposits | 2,81.29 |
| Loans | 13,71.39 |
| Total Working Capital .. | 33,01.29 |

The figures show that these tiny agricultural societies work with about Rs. 19 crores of their own capital (including members' deposits in this head) as against their outside borrowed capital of about Rs. 14 crores. The owned capital was thus about 58 per cent. of their total working capital, and this proportion is rising steadily as years pass.

CENTRAL FINANCING AGENCIES

The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912, and the Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies.

Thereafter the number of central financing agencies grew rapidly specially in the Punjab, the Bengalis and the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available to other societies suffering from a deficiency of funds and to provide proper guidance to and inspection over them. On 30th June 1946 the number of central banks was 601.

There are four main sources from which a central bank derives its working capital which stood in 1941-45 at 39.8 crores: (a) Share capital, (b) Reserve, (c) Deposits, (d) Loans.

The paid-up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources is 1 to 8. Deposits from members and non-members constitute the bulk of the borrowed capital of central banks. The total amount of deposits held by central banks in the year 1945-46 from individuals and other sources amounted to Rs. 24 crores and from primary societies to Rs. 8.8 crores. Deposits in central banks are mainly of two kinds, viz., savings and fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available, and where loans for long periods are advanced the periods of deposits are also comparatively long. In addition to funds obtained by deposits, central

banks raise loans from outside banks, from other central banks, from the local provincial bank and from Government. The total amount of loans held by the central banks in 1945-46 from outside banks, from other co-operative banks and from the provincial banks was Rs. 3.4 crores and from Government Rs. 58 lakhs. Central banks ordinarily do not directly borrow loans from Government, but, in recent years undivided Bengal and Orissa have held Rs. 4 and Rs. 4 lakhs respectively. This practice is more common in the States, where Gwalior, Hyderabad, Bharatpur, Patiala, Indore and Bhopal hold from their Governments Rs. 29, 5, 8, 4, 2 and 2 lakhs respectively. Borrowings from outside banks are generally confined to accommodation obtained from the Reserve Bank against Government Securities or Promissory Notes executed by societies in favour of the central bank and endorsed by the latter in favour of the Reserve Bank. This accommodation is, however, limited and advances from other joint-stock banks are also now rare. The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central banks are generally prohibited from having any direct dealings with either the Reserve Bank or any other joint-stock bank or with one another. This rule is, however, not rigidly observed in the Punjab and Madras. Several central banks, because of their long standing, possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which created advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1945-46 was Rs. 3 crores chiefly in Bombay, C.P. and the Punjab. Advances are made to individuals on the pledge of agricultural produce, thus combining trading with banking which is against sound banking principles. Besides, such advances encroach upon the domain of marketing finance and hamper the growth of co-operative marketing. The total advances made by central banks to societies at the end of the year 1945-46 amounted to over Rs. 37.6 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 601 central banks of the country during the year 1945-46 amounted to Rs. 54 lakhs on the total working capital of Rs. 45 crores; the rate of dividend paid varied from 3 to 6 per cent. in different parts of the country but the most usual rate paid was 5 per cent. per annum.

PROVINCIAL CO-OPERATIVE BANKS

At present, all the major Provinces except Orissa have apex banks functioning in them. There are apex institutions in two of the States, Mysore and Hyderabad, though in the others also there are institutions corresponding to the apex bank or functioning as such. There are 13 such institutions in all out of which 11 are in India and Pakistan and two in the States. The constitutions of these institutions vary considerably; but the functions of all these institutions are more or less the same, namely, the co-ordination of the work of the central banks and provincialisation of finance in them. It is found that in a large majority of the apex banks the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in the Dominions, and in the States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public. It is, therefore, thought necessary to insist upon the maintenance of fluid resources on a

certain scale and in some Provinces the Government of the Province has prescribed definite rules with regard to the maintenance of fluid resources. The period for which deposits are accepted determines the maximum period for which they can lend out these borrowed funds to their clients, and in every Province the apex bank has fixed for itself a maximum term, beyond which no loans are, in general, sanctioned. The following figures will clearly show the position of the apex banks in 1945-46.

| Provincial Banks, 1945-46 | |
|---|------------------------|
| | In thousands of rupees |
| Working Capital— | |
| Share Capital | 1,00.94 |
| Reserve and other funds .. | 2,01.74 |
| Deposits and loans— | |
| from individuals | 10,60.75 |
| from Provincial and Central banks | 6,99.70 |
| from societies | 4,02.34 |
| from Government | 24.50 |
| Total | 24,89.97 |
| Loans made during the year to— | |
| Individuals | 8,13.60 |
| Banks and societies | 8,14.32 |
| Total | 16,87.92 |
| Loans due by— | |
| Individuals | 2,00.88 |
| Banks and societies | 4,53.46 |
| Total | 6,54.34 |

While accepting deposits from co-operative banks and the general public, most of the apex banks have also dealings in current account with the latter. The undivided Punjab apex bank does not encourage such accounts with individual non-members, as it does not wish to enter into competition with central banks. Apex banks also generally carry on ordinary banking business, such as collecting *hundi*s and dividends from companies and collecting pay and pensions. The provincial banks of Bombay, Madras and the undivided Punjab have floated long-term debentures. The Bombay bank has so far issued debentures of the value of Rs. 9.8 lakhs and these debentures are recognised as a trustee security. The bank at Madras has issued debentures of the value of 2.13 lakhs on the security of a floating charge of the general assets of the bank, while the Punjab bank has issued debentures of the value of 5 lakhs. As in every banking institution, these banks are also frequently troubled with surpluses and deficits, though at different times in different institutions. There is therefore interlending of surplus funds between these apex banks, and during the period of shortage of funds, deposits are accepted from surplus banks, and some of them call for special season deposits allowing favourable rates of interest to tide over the period of shortage. The Indian Provincial Co-operative Banks' Association enables the member banks to ascertain which of them are surplus in the period and by correspondence to arrange for inter-provincial borrowings.

OVERDUES

Among the most important tests of the success or otherwise of a co-operative credit society is undoubtedly the promptness in repayment of loans by members, and it is in this respect that one has to recognise that the societies have not attained any very great measure of success. On 30th June 1946, the overdue loans in agricultural societies amounted to Rs. 6,22,68,085 as compared with Rs. 6,79,08,564 the year before; the working capital of the agricultural societies was Rs. 33,01,30,665; the loans due by

individuals were Rs. 18,92,12,220. The overdue loans were therefore 19 per cent. of the working capital and 33 per cent. of the total loans due by individuals. The position is, however, rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the

date of repayment and in some cases, by the farmers' borrowing from the *sonecar* to pay the society's dues and that the percentages represent merely an average for the two Dominions. The following table shows the position in different provinces on 30th June 1946.

Overdue Loans in Agricultural Societies, 1945-46

(In lakhs of rupees.)

| Province | Working capital | Loans due by individuals | Overdue loans by individuals | Percentage of overdue loans to | |
|-------------------------------------|-----------------|--------------------------|------------------------------|--------------------------------|--------------|
| | | | | Working capital | Loans due |
| Madras | 6.33 | 4.12 | 85 | 13 | 21 |
| Bombay | 4.39 | 2.38 | 77 | 18 | 32 |
| Sind | 93 | 54 | 21 | 26 | 41 |
| Bengal (E. and W.) .. | 5.76 | 2.75 | 2,24 | 39 | 81 |
| Bihar | 62 | 27 | 11 | 18 | 41 |
| Orissa | 50 | 34 | 19 | 38 | 56 |
| United Provinces .. | 1.86 | 1.27 | 18 | 10 | 14 |
| Punjab (E. and W.) .. | 5.82 | 2.95 | 66 | 11 | 22 |
| Central Provinces and Berar | 85 | 63 | 10 | 12 | 16 |
| Assam | 14 | 5 | 5 | 36 | 100 |
| Mysore | 55 | 30 | 11 | 20 | 37 |
| Baroda | 62 | 29 | 5 | 8 | 17 |
| Hyderabad (Dn.) .. | 115 | 63 | 7 | 6 | 11 |
| Gwalior | 33 | 46 | 19 | 58 | 41 |
| Indore | 26 | 26 | .. | .. | .. |
| Kashmir | 44 | 25 | 11 | 25 | 44 |
| Travancore | 43 | 16 | 10 | 23 | 63 |
| Total .. | 33.61 | 18.92 | 6.23 | (average) 19 | (average) 33 |

The position after June 1933 grew more serious, since the fall of prices of agricultural produce and the world crisis and trade depression reduced the repaying capacity of the agricultural borrower considerably and increased the terrible load of overdue loans in rural credit societies. This continued growth of overdue loans is an ominous portent and reflects very badly on the soundness of the Co-operative structure. The loans having been based on the assets of members, the ultimate solvency of the societies is beyond dispute; but severe pressure on members and the consequent wholesale liquidation of societies would have very serious political and economic reactions. The causes that have led to this phenomenon, which menaces the entire existence of the co-operative movement, are chiefly to be found in not basing the loans sanctioned on the repaying capacity of the borrowing member, in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts, and generally in the uneconomic nature of the agricultural industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case where almost every member is a borrower or a surety to other borrowers and where the societies are composed almost wholly of the needy section of the village, the remissness in exerting

pressure and in taking action against the defaulter, even when he is wilfully defaulting, add considerably to the growth of the menace of excessive overdues. The central financing agencies are more concerned with the assets that in the last resort are the security for their lendings and, with more funds than they could use, are more eager than even the Registrar himself for organising new credit societies.

The position has been eased considerably by the recent rise in the prices of agricultural produce under war conditions; but temporary relief is no solution and care will have to be taken so that the earning capacity of the agriculturist is increased by linking up credit with co-operative marketing and by the development of subsidiary industries or secondary occupations for him in his leisure.

LAND MORTGAGE BANKS

The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multiplication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing

the earnings of agriculturists which alone would prevent any further increase in their debts and pave the way for the paying off of the old ones. It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the *sonecar*, upon so fully financing the agriculturists that they could be prevented from resorting to the *sonecar* any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts. The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has clung more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate margin of saving which could be employed to redeem past follies or misfortune. The *sonecar*, it is often forgotten, is the village retailer as also the purchaser of the villagers' produce and what he cannot recover from the borrower by way of interest or the part payment of the principal of the loans, he can more than make good on the threshing floor or in his shop. The co-operative movement by concentration on the credit side has attacked him on one front only, so that the risks of non-payment are saddled on the society while the profits of the merchant and the retail shopkeeper are still enjoyed by the *sonecar*; the attack ought to have been on all fronts. However, under the circumstances, the clarification of the situation of indebtedness is most desirable as a preliminary towards tackling the important questions of the redemption of old debts. The Indian Central Banking Enquiry Committee has wisely emphasised the need for a vigorous policy of debt conciliation on a voluntary basis and for exploring the possibility of undertaking legislation to secure, if need be, the settlement of debts on a compulsory basis. A simple Rural Insolvency Act as recommended by the Royal Commission on Agriculture and endorsed by the Central Banking Committee would also be an important step towards liberating those who have already given up all their assets, from the incubus of ancestral and old debts, so that at least they and their heirs could start with a clean slate. In any case, the need for long term loans to the agriculturists for land improvement and for the redemption of old debts seems obvious, and it has now been recognised that the time has come for the provision of this facility by the starting of land mortgage banks.

There are three main types of such banks. The strictly co-operative type is an association of borrowers who raise credit by the issue of mortgage bonds bearing interest and made payable to bearer. The commercial type works for profit and declares dividends. The third type—the quasi co-operative—has a mixed membership of borrowers and non-borrowers, operating over fairly large areas and formed with share capital and on a limited liability basis. The banks organised so far in the sub-continent are of the co-operative type, though strictly speaking they belong to the quasi co-operative variety, admitting as they do to the membership a few non-borrowing individuals for attracting initial capital as well as business talent, organising capacity and efficient management.

At present there are 9 co-operative land mortgage banks in the Punjab. Two of these operate over whole districts, the rest confine their operations to a single tehsil. Bombay has 16 land mortgage societies and a Provincial

Land Mortgage Bank, which have been successfully carrying on their business. The Bengalis have 9, Assam 4, C.P. and Berar 21 while Madras has 119 primary land mortgage banks and a central land mortgage bank. It is too early to pronounce on the success or otherwise of these few banks. Among the objects for which these banks advance loans are the redemption of old debts, improvement of land and method of cultivation and the purchase of land in special cases. The Central Banking Committee think, however, that for a long time to come the resources of these institutions will be mainly required for enabling the cultivator to redeem his land and his house from mortgage and to pay off his old debts. One feels, however, extremely doubtful whether the emphasis should not be laid on the intensive and extensive development of agriculture, since as pointed out above, unless agriculture becomes a paying industry, the redemption is impracticable and illusory. The bulk of the funds of these banks will have to be raised by debentures and for these purposes there will have to be in the Provinces central land mortgage banks as in Madras and in Bombay. Government will have also to render assistance to these institutions for the success of the debenture issue, and its guaranteeing the interest as in the Punjab ought to meet all reasonable needs, though in special cases there would not be much harm in the Government's purchasing debentures of a certain value. While mutual knowledge of and control over one another among members is the insistent feature in the case of the unlimited liability credit society, the insistence in the case of a land mortgage bank with limited liability is on the capacity and business habits of the directorate. In order to ensure sound valuation of security, careful investigation of titles, correct assessment of borrower's credit and repaying capacity and on the efficient management of affairs. The recent rise in the value of agricultural lands has tempted the agriculturist to sell one or more of the plots he holds and pay off a large part of his debts to the *sawcar* and to the Land Mortgage Bank from the price realised, so that the business of the land mortgage banks has been decreasing considerably. This factor with the low yield on investments has been causing some anxiety.

The operations of the Land Mortgage Banks and Societies in India and Pakistan during 1944-45 were as under :—

| | |
|------------------------------------|-------------|
| Number of banks or societies | 289 |
| Number of members | 1,11,909 |
| Share Capital Rs. | 54,01,004 |
| Debentures from the public | 3,98,15,013 |
| Debentures from Government | 6,97,000 |
| Deposits | 25,18,570 |
| Reserve and other funds | 33,22,197 |
| Loans | 3,19,45,555 |
| Working Capital | 8,37,32,369 |
| Loans made to individuals | 60,72,658 |
| “ “ “ Banks and Societies, | 58,37,908 |
| Profit | 4,90,815 |

PROPAGANDA, EDUCATION, TRAINING

In the initial stages of the movement, it fell on the Registrar to carry on propaganda and organise co-operative societies. For this purpose

the assistance of non-official honorary workers was imperative and in the various Provinces a band of such workers was brought into existence, who as honorary organisers of the district or talukas actively co-operated with the officials in carrying on propaganda, organising new societies as a result thereof and looking after the societies so started in some measure. With the rapid growth of co-operative societies, however, it was felt that for the further propagation of the movement it was desirable to carry on work by co-operators themselves in a more organised manner and for that purpose co-operative institutions were started in the various Provinces. In some Provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some Provinces, like Bihar and Orissa, they became federations of co-operative societies, in others, like the Bengals and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all Provinces, that is, propaganda and the focussing of co-operative opinion on the various problems that confronted the movement from time to time. These institutions have come to be regarded in an ever increasing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the financial side and as such concerned more with the financing of the movement, and the institutes, unions, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing co-operators' views to the authorities. In 1939, the All-India Co-operative Institutes' Association was established to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important co-operative problems from time to time and to encourage the growth of co-operative literature.

It was soon perceived that one of the serious handicaps to the successful working of co-operative societies was the ignorance of the members and the absence of trained men as office-bearers of societies. Illiteracy of the rural population, however, has been found too big a problem for these institutes and they have, therefore, attempted only to spread knowledge of co-operation and co-operative principles to the members of societies and to train the office-bearers in various ways. Education has thus developed into an important function of these institutes. In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. It has started this year a Co-operative Training College at Poona for the benefit of employees of the Co-operative Department as also of the Co-operative Banks and other Societies. In the Punjab, however co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Unions render active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute had been established at Sabour in the Bhagalpur Division which was controlled by a governing body which includes the Registrar, and a few representatives of the Co-operative Federation. The Training Institute has now been transferred to Pusa. Madras has organised 6 training institutes and has recently started a College as in Bombay. In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises the training classes.

The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of Provincial Co-operative Colleges and a Co-operative College for the whole country for the higher training of the more important officials of the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever that any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the office-bearers of societies or the managers and inspectors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The undivided Central Government placed in the last few years at the disposal of each of the Provincial Governments about one lakh of rupees which were devoted to a better organisation of co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some Provinces like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies, but this is a statutory obligation of the Registrar and is generally done by him. The departmental audit or inspection by the central banks cannot dispense with the need for careful supervision, which to be effective must be from within, and the provincial federation or union is obviously the best agency for this friendly and efficient supervision. In recent years, however, the need for tightening official control on the co-operative societies has been felt and supervision, audit and training have been taken up by the Provincial Co-operative Departments more and more, and the Provincial Co-operative Institutes and Unions have not been functioning as actively or profitably as the well ordered development of such a popular movement as the co-operative movement would require. The Seventh All-India Co-operative Conference held at Lucknow in May, 1947 stressed the need for strengthening these institutes and of progressive officialisation of the co-operative movement.

NON-CREDIT AGRICULTURAL

CO-OPERATION

For some years past increasing attention has been directed to other forms of co-operation for the benefit of the rural population. Credit is but one of the needs of the cultivator; its organisation through co-operation touches but the fringe of the problem; and different provinces have been experimenting upon the application of co-operative organisation to meet his various non-credit needs. The problems of irrigation, consolidation of holdings, improved sanitation, fencing, cattle insurance, dairying and supply of agricultural requisites, and above all the marketing of agricultural produce have been therefore engaging the attention of co-operators, and societies for these purposes have been established here and there and have been working with varying success. In a land of ignorant and illiterate agriculturists, it would appear wiser to adopt the rule of one village, one society; but the complexities of the non-credit forms of co-operation have induced the authorities to avoid the multi-purpose or general society and to favour the single purpose society, and we have the curious spectacle of an agriculturist being viewed as a person with a bundle of several needs, each one of which it is proposed to meet separately. A single society trying to meet all the needs of the agriculturist would attack the *sawcar* on all fronts and would become a live force in the village and tend to promote the ideal embodied in the famous phrase: Better living, better farming and better business. However, co-operative opinion

is fast coming to accept the wisdom of this and discard the theory of almost water-tight compartments. The agricultural

non-credit societies in India and Pakistan on the 30th June 1946 were 22,788 distributed as under:—

Non-Credit Agricultural Societies, 1945-46

| Province | Purchase and sale | Production | Production and sale | Other forms of co-operation | Total |
|-----------------------------|-------------------|------------|---------------------|-----------------------------|--------|
| Madras | 245 | ... | 276 | 529 | 1,050 |
| Bombay | 109 | 19 | 188 | 247 | 563 |
| Sind | 1 | ... | 5 | 1 | 7 |
| Bengal (E. and W.) .. | 283 | 1,028 | 897 | 1,583 | 3,791 |
| Bihar | 58 | ... | 3,108 | ... | 3,226 |
| Orissa | 22 | ... | 33 | 1 | 56 |
| United Provinces .. | 13 | 474 | 1,884 | 5,917 | 8,288 |
| Punjab (E. and W.) .. | 21 | 866 | 3,114 | 370 | 4,571 |
| Central Provinces and Berar | 87 | 18 | 3 | ... | 108 |
| Mysore | 75 | ... | 36 | 28 | 129 |
| Baroda | 91 | 20 | 65 | 34 | 210 |
| Hyderabad | ... | ... | ... | 5 | 5 |
| Total .. | 1,188 | 2,462 | 9,931 | 9,204 | 22,788 |

Of these the most important are the marketing societies particularly for the sale of cotton in Bombay, and the consolidation of holdings and better living societies in the two Punjabs.

MARKETING SOCIETIES

Marketing of Agricultural produce is the real crux of the whole question of rural prosperity and betterment, and as group marketing is always more effective than individual marketing especially in India and Pakistan where the individual producer is illiterate and constitute a small unit, co-operative marketing has been accepted now as one of the most desirable ideas to work for. It is only the complexity of the working of co-operative sale societies, the difficulty of providing marketing finance, the lack of expert knowledge on the part of co-operative officials, and the lack of godown and storage facilities that have prevented the rapid multiplication of sale societies and their efficient working. It is really in the development of this form of co-operative effort that ultimate success must be sought for credit alone could never bring comfort. Where it has been tried with success, the results have been extremely satisfactory. The tremendous headway made in European countries like Denmark and in the United States of America in co-operative marketing organisation and the successful examples of the cotton sale societies in Bombay should arrest attention and invite concentration on the co-operative organisation of agricultural marketing. The jute and paddy sale societies of the two Bengals have not met with success, but the cotton grower in Gujarat and the Bombay Karnataka has reaped considerable benefit from the cotton sale societies. Absence of fraud in weighing, adequate and high prices, insurance of the produce against risks of fire, prompt payment of sale proceeds, financial accommodation till the produce is sold, information of daily price fluctuations in the Bombay market, supply of genuine and genuine and certified seed, bonus and dividends are no small gains to the agriculturist, who was otherwise at the mercy of the *adattay* or worse still of his village *sowcar*. The cotton sale societies of Surat have recently combined in a federation which has taken over the co-operative ginning factory already started by the members. A few societies for the sale of other articles have also been organised in Bombay, such as for the sale of jaggery, tobacco, chillies, paddy, onions and arecanut. The Bengals have several jute sale societies with a Jute Wholesale at Calcutta and paddy sale societies with a sale depot in Calcutta. The Punjabs have several commission shops to provide storage facilities so that the grower could wait for better prices, but which sell to local merchants yet, rather than to the merchants at the port. Madras has a number of sale societies, but their transaction are small and they have not yet made much progress. The United Provinces have organised the sale of sugar-cane very effectively through Sugar-cane

Societies and the Marketing Union. Recently provincial co-operative marketing societies have been started with Government encouragement and assistance in Madras and Bombay the results of the working of which will be watched with great interest by co-operators all over the country. Both these Societies have been rendering useful service to the country by undertaking on behalf of Government work in connection with the distribution of manures, and other agricultural requisites, and rationing. It is indeed high time that Government gave to marketing societies consistent patronage in a fuller measure and linked up Co-operative Credit effectively with marketing. Separate statistics are not available for marketing societies and it is to be hoped that the Reserve Bank will publish them in its statements.

It may however be of interest to note that in the last few years great developments have taken place. Bombay had 137 marketing societies in 1915-46, while Madras had 189. In Bombay most of the societies deal only in one commodity, but in Madras they deal in several, though specialising in leading local products like paddy, groundnut or tobacco. In the United Provinces remarkable progress has been achieved in the development of marketing mainly of cereals and oilseeds, ghee and sugar-cane. The cereals and oilseeds unions numbered 153 and handled produce of the value of Rs. 52 lakhs. The ghee societies numbered 870 and the cane societies 681. There is also a Provincial Development and Marketing Federation there.

Bihar has 3,808 cane growers societies modelled on the U.P. societies. West Bengal has a Provincial Marketing Society. In the C.P. & Berar there are 87 marketing societies. Coorg, Travancore, Mysore and Hyderabad have also organised central marketing societies.

During 1945-46, the sale of goods to members amounted to Rs. 174 crores and the purchase of members' products amounted to Rs. 112 crores.

Non-credit activities of Agricultural societies, 1945-46.

(In lakhs of rupees.)

| Province. | Supply of goods to members. | Sale of members' products. |
|---------------------------|-----------------------------|----------------------------|
| Bombay | 6.70 | 4.51 |
| Madras | 1.52 | 94 |
| Bengal (East and West) .. | 2.05 | 53 |
| Travancore | 1.53 | 4 |
| Punjab (East and West) .. | 1.25 | 1.25 |
| C.P. & Berar | 1.36 | 43 |
| Total .. | 17.48 | 11.32 |

Even agricultural credit societies and their central banks are doing non-credit work and are competing with marketing societies in a rather unfair way. This tendency is most marked in Bombay, where credit societies supplied goods worth Rs. 24 crores and sold goods worth Rs. 12 crores to members.

CONSOLIDATION OF HOLDINGS

The law of primogeniture, by which the eldest son alone succeeds to the property of his ancestor and which is in force in some European countries does not obtain in India or Pakistan. Each heir is given a proportionate share of each item of the inherited property and not a share of the whole, equivalent to his portion. The result is that successive generations descending from a common ancestor inherit not only smaller and smaller shares of his land but inherit that land broken up into smaller and smaller plots.

The disadvantages of fragmentation are obvious. A part of land is wasted owing to fragmentation being so excessive as to prevent any agricultural operations, and another part is lost in boundaries. The economic loss due to this system can be easily imagined, and the only solution is consolidation of holdings. This most difficult, important and interesting experiment originated in the United Punjab in 1920. The procedure adopted in establishing a Co-operative Consolidation of Holdings Society is to call together all persons directly interested in land in a given village, persuade them to accept the bye-laws whereby a majority in a general meeting might approve a method of repartition, and then carry out actual adjustment of fields and holdings in such a manner that no single individual might have any grievance. As a result of patient work, some very striking results have been achieved and the movement for consolidation in the Punjab has assumed the dimensions of an important agricultural reform. It is steadily gaining in popularity, and, as more staff is trained and the people become better educated to the advantages of the system, the figures for the area consolidated would mount up year by year. This work began in 1920-21 and on 31st July 1946 there were 2,003 societies, the area consolidated being 154 lakh acres.

In the Central Provinces some success in consolidation has been achieved in the Chattisgarh Division where scattered holdings are particularly common and it is not rare to see 10 acres broken into 40 plots. The Local Government found it desirable to resort to legislation and passed the Central Provinces Consolidation of Holdings Act in 1928. Any two or more permanent holders in a village holding together not less than a certain minimum prescribed area of land, may apply for the consolidation of their holdings, but the outstanding feature of the Act is that it gives power to a proportion, not less than one-half of the permanent right-holders, holding not less than two-thirds of the occupied area in a village, to agree to the preparation of a scheme of consolidation, which scheme, when confirmed, becomes binding on all the permanent right-holders in the village and their successors in interest. The area consolidated so far is 114 lakh acres.

In Bombay a Bill was introduced in the Legislative Council in 1928 to deal with certain features of the problem. When this Bill was introduced, it encountered a good deal of opposition, and so the Bill had to be ultimately dropped. Very recently, however, the Bombay Legislature has passed a Bill for the prevention of further fragmentation of holdings and for consolidation.

There are 11 societies for the consolidation of holdings in the United Provinces, and 11 in the Baroda State based on the Punjab model.

RURAL RECONSTRUCTION

One of the main reasons why the achievements of the co-operative movement fall so short of the expectations of the promoters and workers is the extreme backwardness of the rural population, and so the ultimate success or otherwise of the co-operative movement is bound up with

general rural development and progress. The co-operative movement itself is a great experiment in rural reconstruction aiming to protect the agriculturist from exploitation by the usurer, the middleman—*dada* and the merchant. Rural reconstruction has, however, of late years claimed an increasing amount of attention; but so far attempts on a mass scale have not been made; what has been done has been individual effort. The best known of such centres is at Gurgaon in East Punjab. The work done there covers education, sanitation, medical relief, improvement of agriculture, female education and maternity welfare.

In the Central Provinces and Berar the local Government started similar work in November 1929. The latter part of 1932 saw a considerable impetus imparted to the cause of rural reconstruction. His Excellency Sir Frederick Sykes, the then Governor of Bombay, concentrated on village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work can be carried on by District Committees under the guidance of District Collectors. The work being co-ordinated by Divisional Officers. The old Punjab appointed Frayne of Gurgaon fame as Commissioner, Rural Reconstruction and old Bengal made a similar appointment. It appears that all Provincial Governments are devoting considerable thought to this very important work. Since the accession to power of the National Governments in Delhi, Karachi and the Provinces, earnest efforts are being made for village betterment through Provincial and District Rural Development Committees and long-range plans are being formed to that end.

The old Punjab was responsible for introducing this very desirable type of co-operative society to promote better living among the members. There are now more than 300 such societies. The societies do not collect any levy from their members, except a small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws. Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters. Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitted, some have discouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of conditions in the life of the village.

URBAN CREDIT SOCIETIES

While the chief objective of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1904 permitted two classes of societies—rural and urban, recognising thus the suitability of the co-operative method for solving the problems of urban population also. At present there are in all 23,838 non-agricultural societies with a membership of 31,35,452. Of these, 7,551 are credit societies, the rest being societies for other purposes.

An important class of the urban population is that of the merchants and traders, and though the joint-stock banking system that has so far developed is quite well suited in many respects for them, from the point of view of the small trader, it is co-operative banking that is obviously wanted. The importance of People's Co-operative Banks promoted for the benefit of urban people without any distinction of caste or creed is, therefore, very great, for the financing of small merchants, artisans and craftsmen, and for the stimulation of trade and industries

in and around district and taluka towns. The principal business of these banks is short-term credit and in this respect they resemble the ordinary commercial banks. In the absence of any industrial co-operative bank, it is also for the peoples' bank to finance small industrialists and help the development of cottage industries which still play a very considerable part in industrial economy. Another very important function which falls to peoples' banks is the financing of the marketing of the produce of the land from the field to the port or to the principal market centres, and thus assist in the development of the internal trade of the country. It is only, however, in Bombay and East and West Bengal that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,185 non-agricultural credit societies but most of these are not real peoples' banks. The two Punjabs have 9,96 unlimited liability societies and 235 with limited liability. Even here we hardly find any development of real peoples' banks. In East and West Bengal the limited liability societies number 590 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong Division have several big concerns, however, working on sound lines. The question of starting peoples' banks in Bihar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs. 20,000 and more are classed as urban banks. Since 1922 co-operators in this Presidency have been very keen on having a full fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banking, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies. Peoples' banks are a repository of peoples' savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance, and it is quite necessary therefore that their share capital must be pretty large.

SAVINGS

In the Bombay Province on the 30th June 1940 there were 181 urban banks most of which are fairly successful. The total membership was 210,460, the working capital was Rs. 5,07,51,125 and the reserve fund amounted to Rs. 59,25,040. It can be said without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement, and other Provinces might well follow Bombay's example in this direction. Urban banking has now been found so successful that decentralisation and relaxation of departmental control will probably

first be introduced with regard to them, supervision and guidance being made available from their own federations.

An important variant of the urban co-operative society is the Thrift Society. The system adopted is to collect regular savings every month for a continuous period of two to four years, invest the collected amount to the best advantage and pay back to the subscriber his amount at the end of the term with interest. In many societies, loans are advanced also but not exceeding a certain fixed proportion, usually $\frac{2}{3}$ of the deposits. In W. Punjab have more than 1,000 societies and the bulk of the members are school masters. There are over 125 thrift societies for women only having a membership of more than 2,000. Madras has also more than 100 thrift societies and Bombay has a few also. Recently however Life Insurance Societies have been started in Bombay, Bengal and Madras. The Bombay society was started in May 1930 largely through the efforts of Dewan Bahadur H. L. Kaji, has no share capital and works on a mutual basis. It has by now written a business of over five crores. The Bengal Society has had to seek amalgamation with a joint-stock insurance company, while the Madras Society—the South India Co-operative Insurance Society—started vigorously as a full fledged life insurance society with share capital and comparatively low rates of premium, and has already written a large business of over Rs. 8½ crores.

Madras has a Co-operative Fire and General Society and a Co-operative Motor Vehicles Insurance Society. Recently the All India Co-operative Fire and General Insurance Society has been registered in Bombay under the guidance of Dewan Bahadur H. L. Kaji.

Housing societies have assumed great importance due to the acute house shortage in big cities. Madras favours the individual house-ownership type, while Bombay favours the co-partnership type. There are 126 such societies in Bombay and 113 in Madras.

Industrial societies have been developing rapidly in recent years and during 1945-46, the sale of goods amounted to Rs. 54½ crores and the purchase of goods to Rs. 42½ crores. Madras predominating with Rs. 30 and 22 crores respectively, Bombay coming next with 7½ and 7½ crores respectively.

The Consumer's Co-operative Movement has not achieved any striking success except in isolated cases like the Triplicane Urban Co-operative Society in Madras. The World War II changed conditions radically and led to the vigorous promotion of consumers' co-operative societies in India and Pakistan. The following table shows how Madras maintains the lead, with Bombay and Assam following:—

Consumers' Co-operative Societies, 1945-46.

(In lakhs of rupees.)

| Province or State. | No. of societies. | Membership. | Share capital. | Working capital. | Sales. |
|---------------------------|-------------------|-------------|----------------|------------------|--------|
| Madras | 1,346 | 4,47,000 | 67 | 157 | 13.58 |
| Bombay | 465 | 1,22,500 | 29 | 55 | 5.42 |
| Assam | 1,229 | 1,35,380 | 27 | 103 | 1.30 |
| Bengal (East and West) .. | 372 | 74,120 | 8 | 13 | 75 |
| Orissa | 122 | 15,360 | 2 | 4 | 42 |
| U.P. | 163 | 19,000 | 3 | 5 | 24 |
| Berar | 277 | 26,369 | 3 | 5 | 42 |
| Mysore | 151 | 32,942 | 9 | 26 | 1,05 |
| Travancore | 19 | 2,450 | 0.4 | 1 | 7 |

Two features of the development of consumers co-operation in Madras deserves special mention. The first is the penetration of stores societies in rural areas, 892 of the 1346 societies being rural with a membership of over 14 lakhs, a working capital of Rs. 57½ lakhs and sales over Rs. 390 lakhs. The other feature is the organisation of wholesale or central stores. These

last are 21 in number with sales amounting to Rs. 1,267 lakhs. South India generally and Madras in particular have been very suitable areas for the consumers' Movement. Whether the success achieved there is due to its being a land of cheapness and efficiency or to other causes, it is hard to discover.

It is too early to pass any judgment on these societies. With the end of the system of rationing and economic controls, there will come a crisis and unless the stores societies strengthen themselves by amalgamation, larger capital and better efficiency in management, the danger may be both great and real.

REVIEW

The Co-operative Societies Act of 1904 had limitations which were soon recognised and at a conference of the Registrars, a Bill was drawn up which became the Co-operative Societies Act of 1912. This Act remedied the defects of its predecessor, authorized the registration of societies for purposes other than credit, substituted a scientific classification based on the nature of the liability for the arbitrary one into rural and urban and legalised the registration of Unions and Central Banks.

In 1914 the then Government of India reviewed the situation in a comprehensive resolution and recommended a change in the policy regarding the grant of loans to members, so that they might lend money for domestic purposes as well as for agricultural ones in order that the members might confine their dealings with the Co-operative Societies and be weaned from the *sowcars*. In 1914, the Maclean Committee on co-operation was appointed and its report in 1915 led to the reorganisation and overhauling of the whole administration of co-operation. Punctual repayment of loans was insisted upon, and all those societies that failed to live up to the ideal of co-operation were sought to be eliminated. From this time onwards the share of co-operators in the movement assumed increasing importance and it came to be realized that for the success of the movement, deofficialising was necessary. The Government of India Act of 1919 made co-operation provincial transferred subject and the local Governments were left free to adapt the 1912 Act to their own requirements.

The steady growth of the Central Financing Agencies relieved the Registrars partly of the need for attending to this very important matter in the development of co-operation; but propaganda still remained the function of the Registrar and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands. Accordingly Co-operative Institutes were started in various Provinces, in some cases as unitary societies reaching down to the village through their branches in the divisions and the district, in other cases as a federation or union more or less complete of the primary societies. The part these non-official bodies began to play henceforth became increasingly important, some adding to the primary function of propaganda, others such as co-operative education, supervision over societies and even audit.

ENQUIRY COMMITTEES

The steady progress of the movement—sometimes even too rapid—for nearly 20 years, however, was found hardly to lessen the colossal burden of indebtedness of the ryot, for co-operative credit necessarily confined itself to short-term loans. It was in the undivided Punjab that the first Co-operative Land Mortgage Bank was started at Jhang in 1920. Soon after other provinces followed suit.

While the movement was developing at a rapid pace it was found that financially the situation was worsening. Defaults in repayment were becoming increasingly common and Co-operative Committees of Enquiry were instituted in various Provinces. The Central Provinces thought it necessary to have such a committee in 1922, while Bihar and Orissa followed with a similar committee in 1923. A few years after, the Oudh Committee made similar inquiries for the U.P., the Townsend Committee for Madras and the Calvert Committee for Burma. These Committees have carefully analysed the position in their respective provinces and have made recommendations for the consolidation

and rectification of the co-operative credit organisation and the extension of the non-credit side of agricultural co-operation. The powers conferred upon the Local Government by the Act of 1919 to modify the Act of 1912 have been exercised by almost all Provinces, except the Punjab and the U.P. Bombay passed the Co-operative Societies Act of 1925 making the object of the movement still wider than that of its predecessor and its preamble refers to "better living, better business and better methods of production" as the aim of the movement. The chief features of the Bombay Act of 1925 are the adoption of a scientific system of classification of societies, the improvement of the procedure for liquidation of cancelled societies, the extension of summary powers of recovery to the awards of arbitrators and the provision of penalties against specified offences. The Madras Act came into force in July 1932. East and West Bengal, Bihar and Orissa have also similar Co-operative Acts of their own. The progress of the movement in forms other than credit has not been very remarkable and credit societies still predominate, especially the Agricultural Credit Societies.

There are a number of housing societies especially in Bombay, Madras and Mysore, and artisans' societies and unskilled labour societies in Madras. It may be noted that on the agricultural side co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress. It is true that the extraordinary circumstances created by the Second World War have led to the problem of food distribution and systems of rationing and to the consequent formation of a large number of consumers' store societies. But it is very doubtful how far these Societies will continue their work when normal times return, unless they amalgamate into larger units and function more as general stores than as food and groceries stores.

In 1926, the Royal Commission on Agriculture was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Since then, in consequence of the appointment of the provincial committees under the Indian Central Banking Enquiry Committee the co-operative movement in the different provinces has been further surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking facilities have been examined.

A few years back, the Government of Bombay appointed a small committee to inquire into the co-operative movement and to suggest how effective action could be taken to improve, extend and strengthen the movement. The report has been submitted and one welcome feature of the suggestions is the adoption of the multi-purpose society as the primary unit in villages advocated strongly by the Agricultural Credit Department of the Reserve Bank.

The growing difficulties of the co-operative movement in times of unprecedented depression led the undivided Government of India to hold a Co-operative Conference at New Delhi on the 29th January 1934. In December 1935 and 1939, other Conferences of Registrars met at Delhi and discussed the situation further.

As a result, consolidation, rectification and rehabilitation of the credit societies were accepted as the policy, whereas expansion and diversification were severely restrained. Official control was strengthened and the movement which was being passed on to the co-operators themselves in the twenties became more officialised than ever before.

It may also be mentioned that the States were not slow in introducing the co-operative movement within their limits, and the movement in some of the more important of the States, such as Hyderabad (Deccan), Mysore,

Baroda, Gwalior, Indore, Kashmir, and Travancore has made considerable progress, more or less on the same lines as those followed in the neighbouring Provinces. Statistics are now available for some of the smaller States like Bharatpur, Simur, Kotah, Patiala, Kolahpur and Bahawalpur which show how rulers of the States have accepted Co-operation as their best lever for rural betterment.

LANDMARKS

The landmarks in the history of the co-operative movement are: the Co-operative Credit Societies Act of 1904; the Co-operative Societies Act of 1912; the Maclean Committee Report, 1915; the provincialisation of co-operation, 1919; the establishment of institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation; the Report of the Royal Commission on Agriculture, 1926; Reports of the Indian Central and Provincial Banking Enquiry Committees, 1931; greater official control; marketing surveys, debt conciliation schemes, land mortgage banking and organisation of provincial marketing societies; growth of Consumers' Movement; Report of the Co-operative Planning Committee.

The movement has thus developed rapidly and the stages of its evolution may be briefly summarised as—agricultural credit; urban credit; central credit organisations; apex co-operative banks; propaganda by co-operators themselves; beginnings of non-credit agricultural co-operation; urban co-operative banking; land mortgage banks; co-operative education; rectification and consolidation of the credit movement; organisation of supervision over primary societies and rural reconstruction; multi-purpose societies, co-operative marketing, industrial co-operatives and consumers' co-operation.

In recent years, Provincial Governments have been seriously undertaking programmes in the interests of the agriculturists. Money-lenders' bills have been passed to restrict the evils of usury and debt legislation has been or is being passed in Madras, Central Provinces, Bombay and a few other provinces so as to reduce agricultural debt and to bring it within the repaying capacity of the debtor. The strengthening and reorientation of the co-operative movement has also been taken earnestly in hand, which would by the conversion of the credit primaries into multi-purpose societies, by organising co-operative sale of agricultural produce and by promoting secondary occupations for the agriculturists on a co-operative basis, change the whole emphasis of the movement from one of merely supplying credit to supplying the entire needs of the rural population. Active mass-scale efforts at rural reconstruction and at increasing the earnings of agriculturists represent the keynote of the present-day trend of the co-operative movement.

An important landmark in the history of the Co-operative Movement is the report of the Co-operative Planning Committee issued towards the end of 1946. The Report which is very comprehensive lays down the lines and principles of co-operative development for the next few decades. But the Report gives no indication as to the relative importance of different types of co-operative effort. So it is up to the Provincial Governments now to lay down the priorities and start working quickly towards the goal. Already there is great expansion in the Co-operative Credit structure and experiments are being undertaken in co-operative farming. Cottage industries are being developed through co-operative industrial associations. The future of co-operation lies however in development and expansion of co-operative marketing and the organisation of subsidiary occupations for agriculturists and the vigorous growth of consumers' co-operation in urban areas with strong Co-operative wholesales at the chief ports like Bombay, Madras, Calcutta and Karachi.

TABLE No. 1.

Number of Societies by Provinces and States for 1945-46 only.

| Province | Estimated Population (Millions) | Central | Supervising and Guarant- eeing Unions | Agricultural | Non-Agri- cultural | Total Number of Societies | Number of Societies per 1,00,000 inhabitants |
|--|---------------------------------------|---------|---|--------------|-----------------------|---------------------------------|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| Madras | 51.8 | 31 | 263 | 12,047 | 3,571 | 15,912 | 30.7 |
| Bombay | 21.9 | 14 | 118 | 5,376 | 1,747 | 7,255 | 33.1 |
| Sind | 5.0 | 1 | 1 | 739 | 205 | 946 | 18.9 |
| Bengal (East and West) | 62.3 | 120 | | 39,893 | 3,307 | 43,320 | 69.5 |
| Bihar | 38.3 | 43 | 1 | 9,017 | 202 | 9,263 | 24.2 |
| Orissa | 9.2 | 15 | | 2,737 | 428 | 3,180 | 34.6 |

LABOUR

INDIA has always been a predominantly agricultural area. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work. But, the migration is generally of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken.

LABOUR LEGISLATION

The Central co-ordinating authority in India for questions connected with labour legislation is the Ministry of Labour of the Government of India with the Labour Minister in charge. The administration of matters connected with the English and Indian Merchant Shipping Acts, the Mercantile Marine Department and Indian Seamen is with the Ministry of Commerce. In respect of all the Railways, the Labour Minister is responsible for the administration of the Payment of Wages Act, 1936, Trade Disputes, Hours of Work for employees not covered by the Factories Act and regulation of employment of children. He is also responsible for Regulation of Labour and Safety in respect of mines and oilfields; trade disputes in industries, businesses or undertakings carried on by the Central Government; and Inter-Provincial Migration.

In the field of Concurrent Legislation, the Labour Minister is responsible for (1) factories, (2) Welfare, conditions of labour, provident funds and workmen's compensation, health insurance including invalidity pensions and old age pensions; (3) unemployment insurance; (4) trade unions and industrial and labour dispute; (5) electricity; and (6) boilers.

CENTRAL OR PROVINCIAL

Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were Central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fell within the scope of the provincial legislatures. Although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, pledging of child labour, etc., falls on the Provincial Governments who have to bear the entire cost of administration as it is not permissible under the constitution for the Central Government to incur any expenditure from Central revenues on the administration of provincial subjects.

The Central Government in the Ministry of Labour, however, maintains control in connection with the Indian Mines Act and the Mines Maternity Benefit Act.

The Royal Commission on Labour in India recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that, if federal legislation were not practicable, efforts should be directed to securing that as early as possible, the whole of India should participate in making progress in labour matters.

The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

(1) Factories; regulation of the working of mines, but not including mineral development; (2) Welfare of labour; Provident funds; employers' liability and workmen's compensation; (3) Trade Unions; industrial and labour disputes.

Since the institution of the Annual Conference of Labour Ministers, the First Session of which was held at New Delhi in January, 1940, the

trend has been towards Central rather than Provincial Labour Legislation with this difference, that, whereas all the Central Acts passed prior to 1941 automatically applied to the whole of India, some of the recent labour legislation has been perni-ive, that is to say, it is open to any particular Province to extend such legislation to its territory or not as it pleases.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in the sub-continent. Hours of labour were inordinately long, rates of wages unduly low and other conditions of work not too satisfactory. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safeguard factory workers from injury through accident.

FIRST FACTORY ACT

1881 Factory Act.—With the growth of factory organisation and the rapid development of her industries, the minds of certain men, notably Sorabjee Shapurjee Benali, however, began to be awakened to the existence of evils which for the standards of today would be considered intolerable and increasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time, from all employers, in the passing of the first Indian Factories Act of 1881. Owing to an almost complete lack of adequate inspection however the 1881 Act remained a dead letter in most provinces.

A Factories' Commission was appointed in 1899 and on the basis of its recommendations, a new Factories' Act was passed in 1901. The main features of this Act were: (1) a compulsory rest interval of half an hour; (2) a weekly holiday; (3) non-employment of a child under nine and a 7 hour day for children between nine and fourteen; (4) a 11 hour day for women with a 12-hour interval if they were required to work for the permissible maximum hours; and (5) restriction in the employment of women during 8 p.m. and 5 a.m.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined for the time being at any rate, to worsen conditions in the various factories. The first was the introduction of electricity for purposes of factory lighting and the second was plague. The immediate effect of these two was a considerable increase in working hours.

Reduction in Hours.—Conditions of work in factories in the sub-continent during the period which was appointed in 1906 and by the Factory Labour Commission, a body appointed by the British Government in 1907. The Commission were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. A new Factories' Bill was introduced in the Governor-General's Legislative Council and passed into law in 1911.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. The 1911 Act was brought into force with effect from the 1st of July 1912.

The Act of 1922.—In March 1920, the Mill-owners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a 10-hour day broke the back of all opposition to reduced hours of work in the factories and an easy passage for the necessary legislation was assured.

The law relating to factories was amended and consolidated by the Act of 1922. The main provisions of factory legislation as it now stood were as follows: (1) the qualification for registration was the employment of 20 persons—factories employing not less than ten workers could be notified; (2) non-employment of a child under 12, a 6-hour day for children between twelve and fifteen, a half-hour rest interval after four hours work and prohibition of the employment of a child in two factories on the same day; (3) restriction in the hours of work of adults to eleven per day and sixty per week; (4) prohibition of the employment of women between 7 p.m. and 5-30 a.m. except in the fish curing and canning industry; (5) compulsory rest intervals and a weekly holiday; and (6) measures for controlling excessive artificial humidification and for the health and safety of operatives.

Exemptions on well defined principles were to be permitted. The Amending Acts of 1923, 1926 and 1931 effected minor improvements but the general principles remained unaltered.

Factory law in India was completely overhauled in 1934 as the result of the acceptance by Government of most of the recommendations made for its improvement by the Royal Commission on Labour in India. A new consolidating and amending Act was passed by the Central Legislature in 1934 and 'The Factories Act, 1934' was brought into operation with effect from 1st January 1935. This Act has been amended in 1936, 1940, 1941, 1944, 1945, 1946 and 1947. The amendment Act of 1946 reduced the daily hours of work from 9 to 8 and the weekly hours from 51 to 48 in the case of perennial factories and from 10 to 9 and from 60 to 54 in the case of seasonal factories.

FACTORIES ACT, 1948

With a view to consolidating and amending the law regulating labour in factories the Factories Act, 1948, was passed and its provisions came into operation with effect from 1st April 1949. The 1948 Act was very general in character and left too much to the rule-making powers of the Provincial Governments. This has been remedied by laying down in the law itself the minimum requirements regarding health, safety and general welfare of workers.

The following are the main provisions of the Act.
Scope. The Act covers all industrial establishments employing 10 or more workers and using power and establishments employing 20 or more workers and not using power. The Provincial Governments have been empowered to apply the provisions of the Act to any premises, irrespective of the number of persons employed, where a manufacturing process is carried on with or without the aid of power, except where the work is done by the worker solely with the aid of his family. The distinction between seasonal and perennial factories no longer exists.

Licensing and Registration. The Provincial Governments may make rules requiring the registration and licensing of factories. The Act lays down that the occupier of a factory shall, at least 15 days before he begins to occupy or use any premises as a factory, send to the Chief Inspector of Factories a written notice containing details regarding the factory such as the name of the factory, name and address of occupier, nature of work, details of power used, etc.

Health. The Act prescribes that every factory should be kept clean and free from effluvia arising from drains, privies, etc., and lays down stipulations regarding sweeping, cleaning and disinfecting, white washing, etc. Effective

and suitable provision shall be made in every factory for securing and maintaining in every workroom adequate ventilation and such temperature as will secure to the workers therein reasonable conditions of comfort. No room in any factory shall be overcrowded to an extent injurious to the health of the workers and in existing factories 350 cubic feet of space should be provided for every workman. In new factories to be built the space for each workman shall be 500 cubic feet. Provisions relating to lighting, drinking water, latrines and urinals, etc., have also been laid down.

Safety. Elaborate provision regarding safety such as fencing of machinery, casing of new machinery and regulations regarding hoists and lifts, cranes, pressure plant, etc., have been laid down. Women and children are prohibited from employment on certain types of machinery. Precautionary measures against fire, dangerous fumes, explosive or inflammable dust, gas, etc., have been stipulated.

Welfare. Washing facilities for the workers, appliances for first-aid, rest shelters, canteens, etc., are prescribed under the Act. In every factory where 500 or more workers are employed the occupier shall employ Welfare Officers. The Provincial Governments may make rules requiring the maintenance of canteens in factories where more than 250 workers are ordinarily employed.

Hours of Work. Weekly hours of work have been fixed at 48 and daily hours at 9. The maximum spreadover allowed is 10½ hours. No worker shall work for more than 5 hours before he has had an interval for rest of at least half an hour. Payment for overtime has been prescribed at double ordinary rate of wages. No woman shall be employed in any factory except between the hours of 6 a.m. and 7 p.m. In special cases, however, the Provincial Governments may vary these limits. A weekly day of rest has also been prescribed.

Employment of young persons. No child who has not completed his fourteenth year shall be required or allowed to work in any factory. A child who has completed his fourteenth year or an adolescent (a person who has not completed his eighteenth year) shall not be allowed to work in a factory unless a certificate of fitness by a certifying surgeon is in the custody of the manager of the factory and he carries while at work a token giving reference to such certificate. No child shall be employed or permitted to work in any factory for more than 4½ hours in a day or between the hours of 7 p.m. and 6 a.m.

Leave. Every adult worker who has completed a period of 12 months' continuous service in a factory shall be allowed during the subsequent period of 12 months leave with wages including dearness allowance for a period calculated at the rate of one day for every 20 days of work performed by him during the previous 12 months, subject to a minimum of 10 days. In the case of children the leave should be at the rate of one day for every 15 days of work subject to a minimum of 14 days.

Notifiable Diseases. Where any worker in a factory contracts any disease specified in the schedule appended to the Act, the manager of the factory shall send notice thereof to such authorities, and in such form and within such time, as may be prescribed. Further, if any medical practitioner attends on a person who is, or has been employed in a factory and who is, or is believed to be, suffering from any disease specified in the schedule the medical practitioner shall send a report in writing to the Chief Inspector.

Administration of the Act. The administration of the Act is left to the Provincial Governments. Steps have been taken by most of the Provincial Governments to strengthen the Factory Inspectors. The Central Government have set up an advisory organisation, namely the Office of the Chief Adviser Factories.

C. P. Act.—The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act was intended to regulate the labour of women and children and to make provision for the welfare of labour in

factories to which the Factories Act, 1934, does not apply. "Unregulated Factory" has been defined as "any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on:— (i) bidi making, (ii) shellac manufacture, and (iii) leather tanning." A "child" has been defined as a person who has not completed his fourteenth year.

The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions in the Factories Act. Children's hours of work are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

The Madras Act.—The Madras Non-Power Factories Act was passed in 1947. Like the C.P. Act it is meant to regulate the conditions of labour in factories to which the provisions of the Factories Act, 1934 did not apply. The Act applies to certain specified industries and handicrafts wherein 10 or more workers are employed. Government having the power to vary the schedule of employment and to apply any of all the provisions of the Act to places or premises wherein less than 10 workers are employed, under the Act the occupier of every non-power factory covered by the Act should take a licence for carrying on work. The minimum age for employment has been fixed at 14 and persons between the ages of 14 and 17 can be employed only if they are certified by a certifying surgeon as fit for employment. Hours of work have been fixed at 9 per day and 48 per week. The spreadover is limited to 10 hours a day. Provision is made for annual leave, sick leave and casual leave of 12 days each with wages. Provisions similar to those in the Factories Act, 1934, have been made in regard to Health and Safety.

FACTORY STATISTICS

Upto and including the Report for the year 1939, statistics regarding the numbers of factories and of factory workers used to be given in the annual reports on the administration of the Factories Act published by all the Provincial Governments. The Government of India published a Summary of the Provincial Reports every year. These summaries contained statistics in eight different statements in regard to the following matters: (1) totals of the number of working factories, classified by Province according to types of factories; (2) average daily numbers of workers employed classified in the same way and by age and sex groups; (3) intervals, holidays and hours of work separately for perennial and seasonal factories; (4) accidents; and (5) convictions in respect of offences under the Act. A table containing the figures for numbers of working factories and the average daily number of workers employed therein classified by age and sex groups, between the years 1894 and 1939 was published at page 479 of the 1942-43 edition of this publication.

Owing to the shortage of paper, both the Provincial Governments and the Government of India discontinued the publication of the Annual Reports on the administration of the Factories Act and the Annual "Statistics of Factories" with effect from the publication of the Reports for the year 1940. In view, however, of the fact that information relating particularly to employment figures would be widely used, the figures for the years 1938 to 1942 were published in the August, 1943 and in the January, 1944 issues of the *Indian Labour Gazette*.

No corresponding information was given in the published tables for numbers of factories but from figures recently published by the Government of India it would appear that the total number of factories registered in India under the Factories Act, 1934 was 14,023 in the year 1947 as against 13,377 in the year 1946.

The following table sets out the statistics of the average daily numbers of persons employed in all factories in India for the years 1941 to 1947 classified according to main industry groups and according to their employment in perennial and seasonal factories.

| Classes of Factories | Average Daily Number of Persons employed in the year | | | | | | |
|--------------------------------------|--|------------------|------------------|------------------|------------------|------------------|------------------|
| | 1941 | 1942 | 1943 | 1944 | 1945 | 1946* | 1947† |
| Government and Local Fund | | | | | | | |
| Perennial Factories .. | 219,233 | 209,273 | 355,858 | 420,435 | 456,000 | 278,326 | 56,592 |
| Seasonal Factories .. | 853 | 620 | 507 | 484 | 700 | 840 | 596 |
| Total .. | 220,086 | 209,893 | 356,365 | 420,919 | 456,700 | 279,166 | 257,188 |
| All Other Perennial Factories | | | | | | | |
| Textiles .. | 953,320 | 965,459 | 1,001,893 | 993,269 | 1,014,309 | 971,665 | 995,411 |
| Engineering .. | 204,056 | 223,820 | 253,947 | 265,392 | 314,688 | 206,188 | 207,016 |

| All Other Seasonal Factories | 305,443 | 300,698 | 297,883 | 294,996 | 276,000 | 213,873 | 223,058 |
| Grand Total: All Factories .. | 2,156,377 | 2,282,237 | 2,436,819 | 2,520,251 | 3,050,676 | 2,213,555 | 2,235,184 |

* Figures for N.W.F.P. and the Punjab (East and West) are not available.

† Figures for Indian Dominion except East Punjab.

A table published at page 519 of the February 1947 issue of the *Indian Labour Gazette* gives the composition of the average daily number of workers employed in registered factories in the different provinces by age and sex groups for the year 1947 but not by industries. The figures for the year 1947 show that of the total number of workers in all factories 1,937,722 were men, 257,993 were women, 27,816 were children and 11,577 were adolescents.

During the year 1947, factories in Pakistan employed an average daily number of 203,736 workers.

THE INDIAN MINES ACT, 1923

The conditions of employment of labour in Indian Mines are governed by the Indian Mines Act, 1923, as amended by the Amending Acts of 1928 and 1935. The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901.

The Amending Act of 1928 made some minor changes concerning daily limits of the hours of work and regulation of shifts. As a result of the recommendations of the Royal Commission on Labour and the adoption of the Draft International Labour Convention on Hours of Work in Coal Mines the Act was further amended in 1935. Further minor changes were made by the Amending Acts of 1936, 1937 and 1946 and in Ordinance of 1945.

The 1923 Act for the first time prescribed maximum limits of 54 hours per week for underground and 60 hours per week for above-ground workers. No limits were prescribed for daily hours. A daily limit of 12 hours was imposed for the first time by the Amending Act of 1928 which was brought into effect from 1st April 1930. As a result of the recommendations made in the matter by the Royal Commission on Labour in India and the adoption of the Draft Convention on Hours of Work in Coal Mines by the Fifteenth Session of the International Labour Conference in 1931, the Government of India passed the Indian Mines (Amendment) Act, 1935, which was brought into effect from 1st October 1935.

The main provisions of the law regarding hours and conditions of work in Indian Mines as it now stands, are as follows:

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed above-ground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than twelve hours.

(c) The periods of work of a person employed below-ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below-ground except during his periods of work and where work below-ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and the periods of work of any such person are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited and those below the age of 17 are not permitted to work in mines unless certified medically fit.

(e) The Amending Act of 1946 makes it compulsory for the mines to maintain closed shower baths, separately for men and women, at or near the pithead. The Mines (Amendment) Ordinance, 1945, provided for the maintenance of creches in mines. The Ordinance was repealed in 1947 but the provisions of the Ordinance were incorporated in the Act.

(f) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

The Government of India promulgated regulations under Section 29(3) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1929 and in all other mines with effect from the 1st July 1929. In order to prevent undue hardship a principle of gradualness in the number of women to be reduced every year was laid down. Women are not prohibited from accepting employment in open workings and on the surface of mines.

In view, however, of an acute shortage of labour in coal mining areas this policy was temporarily reversed. By two notifications dated the 24th November and the 4th December, 1943 respectively, the Government of India exempted, until further orders, all coal mines in the Provinces of Bengal, Bihar, Central Provinces and Berar and Orissa from the provisions of clause (3) of Section 29 of the Indian Mines Act, 1923 to the extent to which regulations made thereunder prohibit the entry of women into underground working, for the purpose of employment subject to the following two conditions: (1) no woman was to be employed underground in galleries which were less than six feet in height; and (2) every woman employed underground was to be paid wages at the same rate as a man employed underground on similar work. Milk was to be supplied to women working underground. There was considerable agitation both in India and abroad against the lifting of the ban on the employment of women underground. So the Government of India re-imposed the ban with effect from 1st February 1946, and there is now no employment of women underground in coal mines.

At the first meeting of the Industrial Committee for coal mines the representatives of labour raised the issue of large scale retrenchment of labour by employers. The employers contended that this was inevitable as the number of workers were far in excess of their requirements and they could not be expected to provide housing and foodstuffs at concession rates to a labour force surplus to their requirements. In pursuance of a decision reached at the meeting of the Industrial Committee a Committee was appointed by Government to go into the whole question of surplus labour in coal mines.

MINING STATISTICS

The collection of full statistics with regard to the numbers of mines and of the persons employed therein dates from 1921. These statistics used to be published in the Annual Reports of the Chief Inspector of Mines in India. Commencing from the year 1940, the Government of India have been publishing abridged reports which contain no figures for numbers employed. Statistics for the 16 years from 1923 to 1939 were given in a table at page 480 of the 1942-43 edition of this publication. The Government of India have, however, published figures showing the average daily number of persons employed in all mines in the various Provinces in India in the issues of the *Indian Labour Gazette*. We set out the available figures in the following table:

EMPLOYMENT IN MINES CLASSIFIED BY PROVINCES

(Figures for the Indian Dominion)

| Province | 1939 | 1945 | 1946 | 1947 |
|----------------------|---------|---------|---------|---------|
| Bihar | 170,284 | 245,020 | 259,186 | 254,774 |
| West Bengal | 60,965 | 75,543 | 80,573 | 80,682 |
| C.P. & Berar | 41,666 | 32,329 | 36,191 | 39,811 |
| Madras | 14,549 | 11,754 | 13,103 | 12,504 |
| Others | 11,086 | 8,612 | 11,223 | 10,492 |
| Total | 298,550 | 373,298 | 400,376 | 407,263 |

With a view to consolidating and amending the law regulating mines, the draft of a Bill was prepared by the Government for discussion at the first meeting of the Industrial Committee for coal mines. It is understood that a Bill on the subject will be introduced by Government shortly.

The table below gives the average daily number of workers employed in mines in Pakistan during 1948:

| | |
|------------------------|-------|
| 1. West Punjab | 3,537 |
| 2. Sind | 707 |
| 3. Baluchistan | 3,281 |
| Total | 7,525 |

THE PAYMENT OF WAGES ACT

The Payment of Wages Act was passed by the Central Legislature early in 1936 and has since been twice amended. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 Edition of this publication. The more important provisions of this Act which were brought into operation with effect from the 28th March 1937 are as follows:

(a) *Scope of Application.*—The Act in the first instance applies to factories and railways but Provincial Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steam vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sales. It applies only to wages and salaries which average below Rs. 200 per month.

(b) *Wages.*—'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include 'travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Many industrial establishments in India especially cotton textile mills grant good attendance and efficiency bonuses in addition to wages. These bonuses operate as fines in cases where the standards for earning them are not attained. The Government of India, while framing the Act, included such bonuses within the ambit of 'wages' but the definition of this term as far as bonuses are concerned had been widely interpreted.

The Government of Bombay held that existing good attendance and efficiency bonuses wherever they obtained must be paid without conditions and notified all factories accordingly. As a test

case, the Arvind Mills in Ahmedabad were prosecuted in the City Magistrate's Court for non-payment of these bonuses in cases where the conditions for earning them were not fulfilled. The Magistrate held that bonuses were wages and directed that the deductions made should be refunded to the workers. The matter was taken in appeal in the Court of the Assistant Judge, Ahmedabad, where the decision of the Magistrate was upheld. The Mills thereupon filed a further appeal in the High Court, Bombay, which reversed the Ahmedabad judgments and held that all bonuses must be earned.

(c) *Wage Periods.*—No wage period is to exceed one month and all wages are to be paid in coin and, or currency notes.

(d) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions.* Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and, on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a Provincial Government may, by general or special order, authorise. The Central Government promulgated a Payment of Wages Amendment Ordinance in 1940 amending the Act to enable deductions being made from wages with written authorisation of the employed person for investment in any War Savings Scheme approved by a Provincial Government. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

(f) *Fines.*—No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines can be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the Provincial Government or of an authority which a Provincial Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period is not to exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Provincial Governments have been empowered to make rules in connection with most of these matters.

(g) *Deductions for Absence from Duty.*—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the Provincial Government if ten or

more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or implicitly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By the amending Act of 1937 an explanation was added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(h) *Deductions for Recovery of Advances.*—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses; and recovery of advances of wages not already earned are to be subject to rules to be made by Provincial Governments.

(i) *Contracting-Out.*—No contracting-out is permitted.

(j) *Procedure.*—Provincial Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the Courts ignore the fact that even in such cases delay in making payments had occurred.

(k) *Administration.*—Inspectors of factories are made responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to Provincial Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

The present position is that in the case of persons employed on Railways the responsibility of administering the Act rests upon the Chief Labour Commissioner (Central).

By an amendment in the Payment of Wages (Federal Railways) Rules the application of the Act has been extended to cover workers employed by railway contractors employing on an average 20 or more persons.

It is now proposed to amend the Act in the light of experience gained and in conformity with the new policy of Government to give a fair deal to labour. The principal proposed amendments are (a) to extend the scope of the Act to those drawing up to Rs. 400 per month and (b) to empower Government to extend the provisions of the Act to workers in industrial establishments under their control including contract labour. The amendment also seeks to provide for the supply of pay dockets to the workers containing a full account of their wages.

By a Notification in the Gazette of India the provisions of the Act (except sub-section 4 of section 8) have been made applicable to the Payment of Wages to all classes of persons employed in coal mines. In Madras, Coorg, Bihar, Orissa and West Bengal the provisions of the Act have been made operative in certain other industries such as plantations, omnibus services, etc.

MINIMUM WAGES ACT

The Minimum Wages Act, 1948 received the assent of the Governor-General on 15th March 1948. The Act was designed to provide for the fixation of minimum wages in certain employments wherein sweating labour is prevalent or where there is a chance of exploitation of labour. The Act covers the following industries for types of establishments: Woollen carpet making or shawl weaving; rice, flour or dal mills; tobacco manufactories (including bidi making); plantations; oil mills; employment under any local authority; road construction or building operations; stone breaking or stone crushing; lac manufactories; mica works; public motor transport; tanneries and leather manufactories; and agriculture. The appropriate Governments can extend the application of the Act to any industry wherein, in their opinion, minimum wages should statutorily be fixed.

The Act requires the Central or Provincial Governments, as the case may be, to fix within two years from the passing of the Act minimum rates of wages payable to persons employed in the industries mentioned above. In the case of agriculture, however, minimum wages need be fixed only within three years. Minimum wages need not, however, be fixed in respect of employments in which there are in the whole Province less than 1000 employees.

The Act provides for the fixation of minimum time rates, minimum piece rates, guaranteed time rates and overtime rates appropriate to different occupations, or localities or for adults, adolescents, children and apprentices. The minimum rate may consist of a basic rate and a cost of living allowance and or cash value of concessions or it may be an all-inclusive rate.

The Act authorises the appropriate Governments to appoint Committees and Sub-Committees to hold inquiries and advise them to fix minimum rates of wages in respect of any scheduled employment or for the revision of these rates. They may also appoint an Advisory Board for co-ordinating the work of various Committees and also to advise Government generally in the matter of fixing or revising minimum rates of wages. The Central Government is to set up a Central Advisory Board for advising the Central and Provincial Governments and for co-ordinating the work of Provincial Advisory Boards. The Committees and Sub-Committees as well as the Central and Provincial Advisory Boards are to consist of equal number of representatives of employers and employees, and of independent persons not exceeding a third of the total number of members.

The Central or the Provincial Governments, as the case may be, can fix the number of hours of work per day, provide for a weekly holiday, etc., in regard to any employment in which minimum wages have been fixed under the Act.

Bills on this subject have also been introduced in the legislatures of Cochin, Mysore and Travancore.

The Central Government has now framed model rules under the Act for the guidance of Provincial Governments.

WORKMEN'S COMPENSATION ACT

In its main principles, the Indian Act which was brought into operation with effect from 1st July 1924, follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of all interests to the original measure. The limitations of scope were to a large extent removed by amending Acts passed in 1928, 1929, 1931 and 1935.

Under the Act payment of compensation has been made obligatory on all employers whose employees come within its scope, and injured workmen or the dependents of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where, except in the case of injury resulting in death, the accident is not directly attributable to the workman having been at the time of the accident under the influence of drink or drugs or to wilful disobedience of rules or orders or willful disregard of safety devices.

Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident, provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925.

This list was further expanded in 1933 and again in 1934 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning; (2) chrome ulceration or its sequelae; (3) compressed air illness (Caisson Disease) or its sequelae; (4) arsenical poisoning or its sequelae; (5) pathological manifestations due to (a) radium and other radio-active substances, and (b) X Rays; and (6) Primary epitheliomatous cancer of the skin.

Main Provisions.—The main provisions of the Workmen's Compensation Act as it stands today are as follows:

Classes of Workmen Covered by the Act.—These have been specified in the definition of the term "workman" contained in section 2(1) (a) and in Schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 (except Railway Servants) are excluded. According to the Amended Act passed in 1946, the upper income limit has been raised to Rs. 400 per month.

Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height or of dams and embankments of roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canals, pipe lines or sewers; the fire brigade; railway mail service; persons employed in outdoor work in the postal and telegraphic services; operations for winning natural petroleum or natural gas; blasting operations and excavations; ferry boat services; cinema, coffee, rubber or tea plantations; electricity or gas generating stations; light-houses; cinematograph picture producing and exhibiting; divers; elephant and wild animal trainers and keepers and salaried motor drivers and cleaners. Recently persons employed in warehouses in markets employing ten or more persons have also been brought within the scope of the Act. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered.

The Government of Madras have recently brought persons employed in plucking coconuts within the scope of the Act. The Madras and U.P. Governments have also extended the scope of the Act to cover persons employed for the purpose of loading or unloading any mechanically propelled vehicle or in the handling or transport of goods which have been loaded into such vehicles.

As far as seamen are concerned, those employed on ships registered in India are covered. But if accidents take place within the three mile limit of the territorial waters the Act applies even to those employed on ships not

registered in India. But with a view to facilitating the settlement of claims in respect of seamen on ships not registered in India and to avoid litigation, provision has been made in the Lascar's Agreement for the settlement of claims for compensation on the lines of the Indian Act and in default of agreement the Commissioner of the Port where the agreements are signed has been accepted as the final authority to whom these matters should be referred for decision.

Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered.

The Provincial Governments are empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature. In pursuance of that power the Government of Bombay have extended the scope of the Act to persons employed on motors or other mechanically propelled vehicles engaged in loading, unloading, handling or transport of goods and to all employees of Municipalities and District Local Boards engaged in occupations ordinarily requiring outdoor work.

Any person who is covered by the Employees' State Insurance Act, 1948, and who is entitled to receive disablement or dependant's benefit from the Employees' State Insurance Corporation is not entitled to claim any compensation from the employer under this Act.

Amount of Compensation.—The amount of compensation payable depends, in the case of death, on the average monthly wages of the deceased workman and in the case of an injured workman both on the average monthly wages and the extent of disablement. The term "wages" includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes.

The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 300 per month are Rs. 4,500, Rs. 6,300 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement.

No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused; but many large firms such as General Motors (India), Ltd., Messrs. Lever Brothers (India), Ltd., and others pay compensation in lieu of wages with effect from the date of injury.

(NOTE: Permanent total disablement means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Dependents.—These are defined in two categories: firstly, those who are in practically all cases actually dependents; and secondly, those who may or may not be in that position.

The first includes a widow, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a widower, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

The interests of dependents in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability, the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependent advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependent is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners appointed by Provincial Governments. The Provinces of West Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead: (1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation.

The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in India while generally agreeing as to the inequity of the doctrines were such as to leave it open to employers in most Provinces to have recourse to them. The Government of India passed the Employers' Liability Act, 1938, through the Central Legislature declaring that these defences shall not be raised in suits for damages in India in respect of injuries sustained by workmen.

Amendments.—During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression "monthly wages" which has now been defined to mean the amount of wages deemed to be payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves a doubt

as to whether a workman employed on wages payable otherwise than by the month or on a monthly basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions 2 and 3 Geo. 6, C. 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act.

The second amendment referred to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could be made under the said Act and that the Provincial Government certifies that the application was rejected.

The Government of India in the Ministry of Commerce, formulated a Lascars War Risk Compensation Scheme in August 1940 in respect of death or disablement directly attributable to war injuries sustained by lascars employed on ships registered in the United Kingdom. The scheme provides for widow's pensions, children's allowances and generous disablement allowances.

It often happens, in cases before Commissioners for Workmen's Compensation, that there is a dispute between the parties on medical questions. In such cases the usual practice is to call in private medical practitioners to give verbal evidence on the points in dispute. This not only increases the cost of the proceedings but tends to delay settlements. With a view to preventing this unsatisfactory, dilatory and expensive procedure, the government of old undivided Bengal passed the Workmen's Compensation (Bengal Amendment) Act, 1942 for the appointment of medical referees whose report would be binding on both the parties. This Act also provides for the creation of a permanent panel of qualified medical practitioners who may be appointed as medical referees.

STATISTICS

All Provincial Governments in India used to publish Annual Administration Reports on the working of the Workmen's Compensation Act. The Government of India summarised these Reports and published an annual survey under the title "Statistics of Workmen's Compensation". The Government of India have stopped the publication of these summaries since 1939, but an annual note on the working of the Act is being published regularly in the Indian Labour Gazette which is being issued by the Labour Bureau of the Government of India.

At page 585 of the 1941-42 edition of this publication we gave a table showing the figures of fatal and non-fatal cases in respect of which compensation was paid from the year 1924 when the Act was first brought into effect up to the end of the year 1938 together with the figures for the total amount of compensation paid. The latest available statistics on the subject will be found in the following table :—

| Year | Total number of cases | Total compensation paid |
|------------|-----------------------|-------------------------|
| | | Rs. |
| 1925 | 11,371 | 6,44,120 |
| 1935 | 22,999 | 11,61,465 |
| 1938 | 35,065* | 14,32,723* |
| 1939 | 38,681 | 15,09,327 |

* Excludes figures for Sind (not available).

| Year | Total number of cases | Total compensation paid |
|--------------|-----------------------|-------------------------|
| | | Rs. |
| 1940 | 41,015 | 19,38,476 |
| 1941 | 39,045 | 15,84,293 |
| 1942 | 44,443 | 18,69,359 |

Accident Insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureau in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in the sub-continent deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies are now concerned with half the number of cases that came up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry.

The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

MATERNITY BENEFIT

A Bill introduced by Mr. N. M. Joshi in the Central Legislative Assembly in 1924 to provide for the payment of maternity benefits to women employed in certain industries was not passed. The Government of Bombay, however, took up the question a few years later and the Bombay Maternity Benefit Act was passed in 1929. This was substantially amended by an Amending Act passed in 1935. A similar Act was passed in the Central Provinces in 1931. These were the first Acts of their kind in India. Since then, Maternity Benefit Acts have also been passed in the Provinces of Madras, old undivided Bengal, Sind, Assam, old undivided Punjab, Bihar and the United Provinces. The Bombay Act was, with certain modifications extended to Ajmer-Merwara and Delhi. In the year 1948 the West Bengal Legislature passed a separate Act for women employed in tea plantations under the title of the Bengal Maternity Benefit (Tea Estates) Act, 1948. Except for the Assam Maternity Benefit Act, which covers women employed in both factories and on plantations and the last Act, all the other Maternity Benefit Acts are applicable to women employed in factories only.

The subject of extending the benefits of such legislation to women employed in Mines was discussed at the Second Conference of Labour Ministers held in January 1941 and as the result

of these discussions the Central Legislature passed the Mines Maternity Benefit Act, 1941, in the same year. This Act was amended in 1943 in such a way as to prevent a woman from being debarred from drawing benefit for a day on which the mine is closed and a further amendment of the Act was made in 1945 making special provisions for women employed underground. Consequent on the reimposition in 1946 of the ban on the employment of women underground the Amendment Act of 1945 was repealed in 1948.

The main principles in all Maternity Benefit Legislation are the same: provision for the payment of a cash benefit to women for specified periods before and after childbirth, a compulsory period of rest after delivery and also before delivery if notice is given; but, in the latter case, the period for which an employer has to pay cash benefit is strictly limited. All Acts specify a qualifying period for the earning of the benefit: this varies from six months to a year. Women are prohibited, under penalty, from accepting employment under another employer during periods for which they are in receipt of cash benefit from the employer with whom this liability rests.

In the Central Act for women employed in Mines and in the U.P. Act additional bonuses of Rs. 3 and Rs. 5 respectively are provided for if the services of a qualified midwife are availed of; but, if such assistance is provided for by or in an institution of an employer, this bonus is not to be paid.

In U.P. and Bihar the Acts lay down that factories employing certain numbers of women should maintain creches and appoint health visitors for looking after the welfare of the women workers.

Assam Act.—The Assam Act has certain provisions which are not met with in the other Provincial Acts and the Central Governments Mines Maternity Benefit Act. One such provision is that no employer shall knowingly employ a woman in any job during the four weeks immediately preceding the day of her delivery save upon such suitable light work as may be recommended by a medical practitioner. The other Acts prohibit only the employment of women during the four weeks immediately following childbirth.

By another provision an employer is required either himself to provide upon the premises to which the Act applies free medical treatment and attendance for every woman entitled to maternity benefit, or to make such arrangements with a medical practitioner to provide such treatment and attendance during pregnancy, and at, and after confinement. If a woman declines to accept this free medical attendance and treatment provided by the employer or leaves the service of the employer, she forfeits the maternity benefit which is admissible to her under the Act. No qualifying period is required in the case of an immigrant woman who was pregnant when she first arrived in Assam.

The Act provides for the payment of maternity benefit at weekly rates unlike the daily rates found in the other Act. It provides for payment—(a) on plantations at the rate of Re. 1 per week during the period preceding the day of delivery and Rs. 1-4-0 per week during the period following the day of delivery, provided that the total cash payment which the employer shall be required to make on this account shall be Rs. 14; and (ii) in employments other than plantations Rs. 2 per week or the average weekly wage or salary subject to a minimum of Rs. 2 per week. The Assam Government propose to amend the Act so as to raise the rate of benefit to 12 annas per day.

The qualifying period in the Central and in the U.P. Acts is six months and in the Ajmer-Merwara Act twelve months. In all the remaining Acts it is nine months. The maximum period for which maternity benefits can be paid is six weeks under the Ajmer-Merwara Act, seven weeks under the Madras Act, sixty

days under the Punjab Act and eight weeks under all the other Acts. The rate of benefit used to be eight annas per day or the average daily wage whichever was less in most Acts but many Acts are now adopting a uniform eight annas a day. The Punjab Act gives average daily earnings of twelve annas per day whichever is greater.

THE TRADE UNIONS ACT, 1926

The origin of the passing of a Trade Unions Act in India was the historic Buckingham Mill Case of 1920 in which the Madras High Court granted an interim injunction against the Strike Committee of the Madras Labour Union forbidding them to induce certain workers to break their contract of employment by refusing to return to work. Trade Union leaders found that they were liable to prosecution and imprisonment for *bona fide* union activities and it was felt that some legislation for the protection of trade union was necessary.

In March, 1921, Mr. N. M. Joshi, successfully moved a resolution in the Central Legislative Assembly recommending that government should introduce legislation for the registration and protection of trade unions. Opposition from employers to the adoption of such a measure was, however, so great that it was not until 1926 that the Indian Trade Unions Act was passed. This Act was brought into operation with effect from 1st June 1927 and was slightly amended in 1928 to facilitate the procedure of appeal against the decision of the Registrar refusing or cancelling the certificate of registration of trade unions by employers.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. "Trade Union" has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers. Persons under the age of 15 are debarred from membership of any registered union.

Registration.—The administration of the Indian Trade Unions Act is entirely on a provincial basis and each Provincial Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province. Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The Government of Sind enacted legislation in the year 1944 to amend the Indian Trade Unions Act in such a way as to require that two-thirds of the members of the executive of a Union must be workers and also to prevent one individual person from being an Officer of more than one Union.

The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may

prefer an appeal to a judge appointed by the Provincial Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations, Rights.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, or amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence.

Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union. The Govt. of Madras have recently tightened up their regulations in connection with the maintenance, by registered unions of their registers. Among other things, all unions will now be required to maintain files of Vouchers and machine-numbered subscription receipt books.

The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases.

Registered unions are empowered under the Indian Trade Unions Act to carry on any form of insurance activity without being under any obligation to secure professional advice as to the actuarial soundness of such business. By virtue of Section 118 of The Insurance Act, 1938, insurance business carried on by a trade union is not subject to the provisions of that Act.

One of the most vexed questions in connexion with trade unions in India is that of their recognition by the employers. We are dealing with this question more fully under the heading Trade Unionism in India. Many Bills aimed at compelling employers to recognise unions of their workers have been introduced by private members in Provincial Legislatures but these failed to carry the support of the Governments concerned. The subject was discussed at the Second Session of the Labour Ministers Conference and, as a result of the decisions then reached, the Government of India drafted a Bill intended to add a New Chapter dealing with the Recognition of Trade Unions and Rights and Liabilities of Recognised Trade Unions to the Indian Trade Unions Act. This was circulated to all Provincial Governments for opinion after consultation with the interests concerned. In the light of the criticisms received, the Government of India drafted a new Bill on the subject and this was introduced in the Central Legislative Assembly by the Hon'ble the Labour Member on the 13th November 1943, and became law in November 1947.

Besides providing for compulsory recognition of representative trade unions by the employers the Act specifies certain acts as unfair practices

on the part of employers and recognised trade unions and provides for punishment of a fine in the case of employers and withdrawal of recognition in the case of trade unions.

Statistics.—As far as statistics of registrations are concerned, tables showing the numbers of registered unions on all the provincial registers in India and Pakistan at the end of each financial year together with the membership and income of those which furnished returns, have been incorporated in this section in some previous issues of this publication. A table giving this information for the years 1927-28 up to 1939-40 was published at page 487 of the Edition for 1942-43. As we have pointed out in the opening paragraphs of this Chapter, the Government of India and the Provincial Governments have temporarily stopped the publication of annual reports on the administration of Labour Laws.

The Government of India have, however, commenced publishing short and abridged reports containing the more important statistics in the *Indian Labour Gazette*. The latest year for which information of an All-India character is available is for the year ending 31st March 1947. The statistics relating to registered trade unions for that year are reproduced below:

| Province* | Number of Registered Trade Unions | Number of Unions making returns of Membership | Membership of Unions making returns |
|----------------|-----------------------------------|---|-------------------------------------|
| Ajmer-Merwara | 36 | 8 | 5,184 |
| Assam | 36 | 25 | 13,518 |
| Bengal (West) | 601 | 250 | 488,697 |
| Bihar | 111 | 47 | 35,585 |
| Bombay | 168 | 126 | 267,009 |
| C.P. & Berar | 96 | 48 | 20,149 |
| Delhi | 52 | 32 | 43,204 |
| Madras | 368 | 273 | 182,189 |
| Orissa | 42 | 31 | 8,766 |
| U.P. | 199 | 113 | 90,919 |
| Central Unions | 41 | 36 | 176,742 |
| Total | 1,725 | 998 | 1,331,962 |

* Information for East Punjab is not available.

INDUSTRIAL DISPUTES ACT

Recent years have witnessed a great deal of activity both on the part of the Central Government and of the Provincial Governments and the States in considering and enacting measures for the prevention and settlement of industrial disputes. Till the year 1929 the only law relating to the settlement of trade disputes was the Employers and Workmen (Disputes) Act of 1890. The Royal Commission on Labour in India referred to the necessity of establishing a permanent statutory machinery to deal with labour disputes. The Government of India in a Bill which they introduced in 1934 to make the 1929 Act permanent included in it some of the suggestions made by the Commission. This Bill was passed in April 1934. In 1936 an amending Bill was introduced which was passed into law in 1938. This new legislation provided for the appointment of Conciliation Officers, extended the scope of the Act to cover certain other trade disputes and some other public utility services.

The war showed certain inherent defects in this legislation and made it necessary for Government to supplement the Law by enforcement of Rule 81 (A) of the Defence of India Rules. According to this Rule, the Government could refer any dispute for arbitration and enforce the award. The enforcement of this Rule in the large number of cases proved of great benefit both for labour, industry and the community as it considerably assisted in diminishing industrial strife. The enforcement of this rule was, however, a

temporary measure and it was decided therefore, in 1946 to introduce the Industrial Disputes Bill in the Legislative Assembly which was passed into an Act in March 1947.

The Act provides for setting up of two types of organisations, namely, (1) Works Committees and (2) Industrial Tribunals for the prevention and settlement of disputes. It makes conciliation compulsory in all disputes in public utility services and optional in other cases.

Section 22 of the Act declares any strike or lock-out in a public utility service to be illegal if it is commenced or declared (i) without giving to the employer or employees, as the case may be, a notice of strike or lock-out in a prescribed manner, within six weeks before striking or declaring a lock-out, or (ii) within 14 days of giving such notice, or (iii) before the expiry of the date of strike specified in any such notice; or (iv) during the pendency of any conciliation proceedings before a conciliation officer and 7 days after the conclusion of such proceedings, etc. The Act also prohibits certain other strikes and lock-outs and declares them illegal if commenced or declared during the pendency of (i) conciliation proceedings before a Board and 7 days after the conclusion of such proceedings; (ii) proceedings before a Tribunal and 2 months after the conclusion of such proceedings; or (iii) during any period in which a settlement or award is in operation, in respect of any of the matters covered by the settlement or award.

Provinces and States.—Following upon the publication of Bombay Departmental Enquiry Committee's Report in 1934, the Bombay Government enacted the Trade Disputes Conciliation Act in 1934. This was a simple measure which provided for the appointment of Labour Officer and for instituting conciliation machinery. When the Congress came into power, this measure was replaced by a more radical one, known as the Bombay Trade Disputes Act of 1938.

During the War, most of the Provinces made a liberal use of Rule 81 (A) under the Defence of India Rules. With the cessation of hostilities, however, many Provinces introduced Bills to enact legislation for prevention and settlement of industrial disputes. In 1946, Bills were introduced in the Provincial Legislatures by the Governments of C.P. and Berar, Sind and Bombay. The C.P. and Berar Industrial Disputes Settlement Act was passed in May 1947 and the Sind Industrial Relations Act in June 1947. The Bombay Industrial Relations Act received the assent of the Governor-General in April 1947. The Act was amended in 1948 to make provision for certain matters such as the setting up of Wage Boards, the compulsory formation of Joint Committees, etc.

The United Provinces Industrial Disputes Act was passed in December 1947.

The new Bombay Act is an advanced piece of legislation and covers a number of matters apart from those relating to the Prevention and Settlement of Disputes. For the first time, it provides for the establishment of Labour Codes and increases the powers of Government to make arbitration compulsory. It also provides for setting up of Joint Committees and for maintenance of records of labour conditions in each undertaking.

Indore, Cochin, Travancore and Baroda are some of the States which have passed legislation for the prevention and settlement of industrial disputes more or less on the model of the Indian Trade Disputes Act of 1929. There are, however, slight variations from the Indian Act and these relate to certain categories like public utility workers, appointment of conciliation officers, etc. The Baroda Act provides for a permanent Board of Conciliation consisting of a chairman and two persons appointed by the Government. It also requires one month's notice for strikes and lock-outs in public utility services as against 14 days' notice in the Indian Act. Under the Indore Act, picketing of any

kind in furtherance of any illegal strike or lock-out, or any meeting convened with a view to calling into question the Government orders on the report of the officer or the Board is also illegal and liable to punishment.

Statistics

Statistics of industrial disputes in the sub-continent have been collected only since 1921. The following table sets out the number of disputes in some of the years since 1921, the number of persons affected by these disputes and the total time lost in man-days:

| Year. | Number of disputes. | Number of workpeople involved. | Number of working days lost. |
|------------|---------------------|--------------------------------|------------------------------|
| 1921 .. | 396 | 600,351 | 6,984,426 |
| 1926 .. | 128 | 186,811 | 1,097,478 |
| 1931 .. | 166 | 203,008 | 2,408,123 |
| 1936 .. | 157 | 169,029 | 2,358,062 |
| 1939 .. | 406 | 409,189 | 4,992,795 |
| 1940 .. | 322 | 452,539 | 7,577,281 |
| 1941 .. | 359 | 291,054 | 3,330,503 |
| 1942 .. | 691 | 772,653 | 5,779,965 |
| 1943 .. | 716 | 525,088 | 2,312,287 |
| 1944* .. | 658* | 550,015 | 3,147,306 |
| 1945 .. | 829** | 747,520 | 4,051,499 |
| 1946 .. | 1,629 | 1,951,948 | 12,747,762 |
| 1947 .. | 1,811 | 1,810,784 | 16,562,666 |
| 1948 .. | | | |
| Jan. .. | 210 | 215,613 | 1,358,856 |
| Feb. .. | 148 | 128,049 | 1,102,598 |
| March .. | 176 | 148,839 | 1,366,801 |
| April .. | 163 | 81,081 | 686,060 |
| May .. | 147 | 91,530 | 491,336 |

* Results not known in 5 cases and demand not known in 1 case. ** Result not known in 1 case and demand not known in 6 cases. † Revised, yet provisional. ‡ Provisional.

Thirteen stoppages known to have taken place in December, 1948 could not be included for want of full details. Returns have not been received from the East Punjab and Orissa. Returns for C.P. and Berar are incomplete and complete information is not available from Delhi.

In Pakistan from the date of partition upto 31st December 1948, there were 87 industrial disputes involving 58,391 workers resulting in a loss of 209,221 man-days.

Employment of Children.—The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their fifteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable.

By an Amending Act passed in 1939 the employment of any child who has not completed his twelfth year is prohibited in any workshop connected with *hidi* making; carpet weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fireworks; mica-cutting and spitting; shellac manufacture; tanning and wool cleaning.

The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or recognition from a Provincial Government.

Provincial Governments are empowered by the Amending Act to add any description of process to the industries already scheduled in which the

employment of children under twelve years of age should be prohibited.

In keeping with the provisions of the Factories Act 1948, which raises the age limit of children for employment in a factory from 12 to 14 years, the Act has been amended to prohibit the employment of children under 14 in all manufacturing processes enumerated in the schedule to the Act.

TEA DISTRICTS EMIGRANT LABOUR ACT

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. The Act was amended in 1908 and 1915. These Acts aimed, among other things, at the abolition of the indentured labour system. The abolition of the system, however, did not become effective till the repeal of the workmen's Breach of Contract Act, in 1926. The whole question was subjected to a thorough examination by the Government of India and the Provincial Governments in 1926-28 and by the Royal Commission on Indian Labour in 1929-30.

The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the Provincial Government; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; (c) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other Provinces; (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (f) that in the event of the recurrence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters.

The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act, 1932, which was brought into effect from the 1st October 1933.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Provincial Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV).

The forwarding of recruits to Assam must be made through the prescribed routes where arrangements for feeding, rest and medical

treatment have been made and by authorised forwarding agents. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband.

Repatriation.—Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15).

Section 3 of the Act makes provision for the appointment of a Controller of Emigrant Labour with some staff and a possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Central Government may determine for each year of levy.

The cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of cess was reduced by the Government of India from Rs. 5 to Rs. 3 from 1st October 1938. It was subsequently raised to Rs. 4 for the year commencing 1st October 1939. In 1945, the cess was levied at the rate of Rs. 3 per assisted emigrant but was again reduced to Rs. 2 in 1946.

The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

The following details taken from the latest available Administration Report of the Controller of Emigrant Labour would be of interest :—

During the year 1946-47, the number of assisted emigrants was 40,049. There were also 9,322 non-assisted emigrants. The *per capita* cost of recruitment was Rs. 95-0-2 and showed an increase of Rs. 4-11-8 over the previous year.

The number of adults and children living on tea estates in Assam was 5,84,222 and 5,60,217 respectively making the total 11,44,439.

The Indian Tea Association have set up a Labour Department to look after the welfare of labour.

SHOPS LEGISLATION

The first Province in India to enact legislation for the regulation of hours of work and conditions of employment in shops and commercial establishments was Bombay where the Legislative Assembly passed the Bombay Shops and Establishments Act on the 30th October 1939. Three other Provinces in India—Bengal, the Punjab and Sind—enacted similar laws during the year 1940. The Punjab Act was extensively amended by virtue of the Punjab Trade Employees (Amendment) Act, 1943. The Sind Act was amended in 1944. The Bombay Act

was brought into effect from 15th November 1940. The Punjab Trade Employees' Act came into force with effect from 1st March 1941, the Bengal Shops and Establishments Act from 1st April 1941 and the Sind Act from 20th November 1941. The Punjab Act was extended to Delhi Province in 1942. In 1947 the C.P. and Berar, U.P. and Madras enacted legislation on the subject. Assam passed a Shops and Establishments Act in June 1948.

The question of framing Central legislation for the grant of a weekly holiday to shop workers in those Provinces which have no legislation on this subject was discussed at the Second Session of the Labour Ministers' Conference and the Conference decided that such legislation was necessary. The Government of India drew up a Bill on the subject and this was passed by the Central Legislature with the title of the Weekly Holidays Act, 1942, early in that year. The option for the application of this Act in any Province which has no Shops' Legislation rests with the Government of that Province.

We shall first proceed to describe the Bombay Shops and Establishments Act in some detail and we shall then give a brief outline of the manner in which the other Acts differ from the Bombay Act.

The Bombay Act deals with three main types of establishments: shops; commercial establishments; and restaurants, eating houses, theatres and other places of amusement or entertainment.

Application.—This Act covers commercial establishments, shops, theatres or any other places of public amusement or entertainment, restaurants or eating houses, government Offices and offices of Local Authorities; clubs and residential hotels; bazars or fairs for the sale of work for charitable or other purposes from which no profit is derived; hospitals, nursing homes and dispensaries; stalls and refreshment rooms at wharves and docks; chemists' and druggists' shops as are approved by the Provincial Government by a general or special order; and persons exclusively employed in the collection, delivery or conveyance of goods are excluded from the operation of the Act.

The Act does not apply to persons occupying positions of management or employed in a confidential capacity; persons whose work is inherently intermittent such as that of travellers, carvers, watchmen and caretakers; and persons exclusively engaged in preparatory or complementary work, such as clearing or forwarding clerks or messengers.

Shops.—Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five continuous hours unless he has had an interval of rest for at least half an hour. The Act makes it compulsory that every shop shall be closed not later than 9 p.m. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists' and druggists' shops, etc.

In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on the sale of any goods after 9 p.m. in or adjacent to a street or public place. This does not, however, apply to the sale of newspapers.

The maximum spreadover has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning

and late at night provision has been made for the extension of the spreadover to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

Commercial Establishments.—In the case of these establishments the Act provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops, but in commercial establishments overtime to the extent of 120 hours per year is permitted.

The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are so arranged that they shall not together be spread over more than 12 hours in a day. The Provincial Government is, however, empowered to grant exemptions from this requirement for not more than six days in every calendar year for each person who may be required to work on account of stock-taking, making of accounts, settlements or on other prescribed occasions.

Restaurants and Places of Amusement.—For these establishments, a ten-hour day has been prescribed with a spreadover of 14 hours. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

Miscellaneous Provisions.—No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But, no child who has not completed his twelfth year is allowed to work at all in the establishments covered by the Act.

The hours of work in the case of young persons between the ages of thirteen and seventeen years are restricted to 42 per week and to 8 per day and no young person is permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning.

All overtime work is to be paid for at the rate of a time and a quarter.

Enforcement of the Act is in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act are liable, on conviction, to a fine which may extend to Rs. 25 for the first offence and upto Rs. 250 for every subsequent offence.

The Act in the first instance was made applicable to the City of Bombay, the Ahmedabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment, and the Sholapur and Hubli Municipal Boroughs. The Act was extended to Barsi in 1943.

Other Acts.—The Sind Act is applicable to almost the same classes of establishments as are covered by the Bombay Act. The Bengal Act grants exemption from the provisions of the Act relating to restrictions in hours of sale, viz., those for the closing of shops for one and a half days in the week and after 8 o'clock each night to shops dealing in perishable commodities like meat, vegetable, flowers, etc.; shops dealing in articles required for obsequial ceremonies; and to shops dealing in tobacco, *pan*, newspapers, etc. and such seasonal commercial establishments and the clerical establishments of such seasonal factories as may be exempted by Government.

The Punjab Act has a somewhat wider application than any of the other Acts; shops dealing in perishables, medicines and newspapers; all places of public entertainment; clubs and residential hotels; barbers and hair-dressers; stalls at railway stations; and caretakers, porters, travellers, canvassers, domestic servants, etc., are exempted only from the operation of the sections dealing with opening and closing hours and the 'close day'. By virtue of the amending Act of 1943, all Government and Railway Offices, essential services, refreshment rooms and stalls at railway stations and dining cars, offices of lawyers, auditors or registered accountants, hospitals and dispensaries and factories are exempted from the operation of any of the provisions of the Punjab Act.

Whereas the Bombay Act prescribes 9 p.m. as the closing hour for shops, the Bengal Act prescribes 8 p.m., while in the Punjab this varies with the seasons of the year—not later than 10 p.m. in the summer, and 9-30 p.m. in the winter. In Sind, the 1944 Amending Act altered the closing hour of shops from 9 p.m. to 10 p.m. In actual practice, however, this is made effective only during the summer months, viz., from March to October. During the winter months of November to February the closing hour is altered to 9 p.m. by Government notification. The Assam Act has fixed 7 P.M. as the closing hour for shops.

The Punjab, the U.P., and the C.P. and Berar Acts lay down both the opening and the closing hours. The Madras Act empowers Government to fix opening and closing hours.

As far as hours of work are concerned the Bombay Act places a daily limit in respect of shops and places of amusement, and a monthly limit in respect of commercial establishments. In contradistinction to this, the Sind Act prescribes a maximum of 54 hours per week for persons employed in commercial establishments, the Bengal Act 56 hours a week for shops and the Punjab Act 54 hours a week for shops and commercial establishments.

The Bengal and Assam Acts do not place any limitations on hours of work—daily, weekly or monthly—in commercial establishments but place a maximum limit of ten hours per day for work in places of amusement. For shop employees a 9-hour day and a 50-hour week have been prescribed in the Assam Act and a 10-hour day and a 56-hour week by the Bengal Act. The C.P. Act has fixed a working day of 9 hours for shop employees and 10 hours for commercial employees. The Punjab Act prescribes a uniform 10-hour day as the maximum that may be worked in any establishment covered by it. The Madras and U.P. Acts prescribe a uniform daily limit of 8 hours' work.

The Punjab Act endeavours to restrict dual employment by providing that the hours worked by an individual employee with two or more employers should all be taken into account for purposes of recording. Whereas payment for overtime beyond the permissible daily hours is to be made at a time and a quarter in Bombay, Bengal and Sind, the Punjab Act requires overtime in excess of daily hours to be paid for at double rates.

Leave with Pay.—While other Provinces have provided that all the employees covered by these Acts should get one holiday every week; the Bengal Act goes much further and prescribes that all employees should get one and a half holidays in each week. The Assam Act provides for one weekly holiday for shop employees and one and a half day for others. The Bengal and the Punjab Acts, moreover, prescribe that every shop shall also be closed for at least one and a half days and one day respectively in each week.

As far as employment of children is concerned the Bombay, Assam, C.P. and the Sind Acts provide that no child below the age of twelve years shall be employed in any establishment

covered by the Act. The Bengal Act has no provisions with regard to the non-employment of children whereas the Punjab, U.P. and Madras Acts prescribe a minimum age limit of fourteen years. The Bombay, C.P., Madras and Punjab Acts prohibit the employment of any young person in any shop or Commercial establishment to which the Act applies between certain hours. Hours of work are not to exceed seven per day or 42 per week in Madras and the Punjab, 6 per day in U.P., 7 per day and 36 per week in C.P. and Berar and 8 per day and 42 per week in Bombay. No young person is to be asked to work for more than 3½ or 4 hours at one stretch without an interval for rest.

The Bombay Act makes no provision for leave with pay; all the other Acts do: Sind—15 days' leave with pay during every year of service; Bengal—14 days' privilege leave with full pay after every twelve months' continuous employment and, in addition, casual leave on half pay for ten days in every year; Punjab—14 days for a year's or 7 days for six months' continuous employment; Assam—16 days' privilege leave and 10 days' casual leave on full pay; 30 days' sick leave on half pay; C.P.—11 days; Madras—12 days' privilege leave, 12 days' casual leave and 12 days' sick leave on full pay; and U.P.—15 days' privilege leave. Madras is the only Province which has made provisions relating to cleanliness, ventilation, lighting and precautions against fire in establishments covered by the Act.

Fines.—Two provisions which are to be found in the Punjab Act deserve special mention: (1) no employer may fine any employee to an extent greater than three pices in the rupee of his monthly wages; and (2) One month's notice or one month's pay in lieu of notice to be given by the employer for termination of service.

The Central Weekly Holidays Act is a very simple measure as compared with the Provincial prototypes. As its title implies it is merely confined to making provision for the grant of a weekly holiday in certain classes of establishments. Every shop must remain entirely closed on one day of the week. All persons employed otherwise than in a confidential capacity or in a position of management in any shop, restaurant or theatre must be allowed a holiday of one whole day in each week. Provincial Governments are empowered, if they so desire, to close shops for an additional half-day in the week or to permit employees in theatres and restaurants to enjoy an additional half-day holiday in every week. No deduction or abatement is to be made from wages in respect of any holiday that may be granted under this Act. No provision is made in the Central Act for employees in banks and offices.

The Act contains the usual provisions for inspection, penalties, rule-making power and enforcement.

The Sind and the Bombay Acts have placed the duty of enforcement of these acts on the local Authorities whereas the others leave enforcement with the Provincial Governments.

The Bombay Municipality has appointed one Chief Inspector and five senior and eleven junior Inspectors for the inspection work in the Municipal limits of the City.

Committee Report.—The report of the Committee appointed by the Government of Bombay to review the working of the shops Act has now been published. Among the more important recommendations are:

Leave with pay for employees, compulsory weekly closures of shops and commercial establishments, a substantial reduction in the normal working hours in all establishments, except commercial establishments, and the application of the Act to the areas with a population of 25,000 and more.

The Committee has suggested material and substantive changes in the Act. It recommends that the scope of the Act should be extended

by including in its operation residential hotels and clubs and widening the definitions of "commercial establishment" and "shop." The Act should be applicable to local areas with a population of 25,000 and more.

The total exemptions from the provisions of the Act should be severely curtailed and partial exemptions should be provided. Similarly registration of establishments should be provided and the opening and closing hours of establishments should be fixed.

Weekly hours for shops, daily and weekly (instead of existing provisions for monthly) hours for commercial establishments should be fixed. A substantial reduction in the normal working hours in all establishments, except the commercial establishments should be effected.

Provision for identity cards for employees in residential hotels, restaurants and eating houses be made. Women should be prohibited from work before 7 a.m. and after 7 p.m. and the age-limit of a child should be raised from 12 to 14. Fourteen days' leave with pay with freedom to accumulate upto 28 days should be provided.

The Factories Act should be amended, so that the employees in clerical establishments of factories may be governed by it.

Largely on the basis of these recommendations a Bill has been framed by the Government of Bombay to replace the Act of 1939.

INDUSTRIAL STATISTICS ACT

The collection of statistics regarding wages, conditions of employment and other matters relating to industry in the sub-continent had hitherto been effected through the goodwill and voluntary effort of the industrial units concerned. This method was not considered satisfactory.

The subject was discussed at the Eleventh Session of the Industries Conference held in 1939 and again at the Second Conference of Labour Ministers held in 1941 and it was decided that such a measure should be adopted. The Government of India introduced a Bill on the subject in the Central Legislative Assembly on the 27th February 1942 and this was passed into law at the same session with the title of The Industrial Statistics Act, 1942.

The Act permits the collection of statistics with regard to any of the following matters: (1) prices of commodities; (2) attendance; (3) living conditions including housing, water-supply and sanitation; (4) indebtedness; (5) rents; (6) wages and earnings; (7) provident and other funds provided for labour; (8) benefits and amenities provided for labour; (9) hours of work; (10) employment and unemployment; and (11) industrial and labour disputes. Penalties are provided for persons refusing to supply information or failing to furnish the required returns. Provincial Governments are empowered to appoint an officer to be the Statistics Authority for the purposes of the collection of any statistics under the Act and that Authority, when once appointed, has the power to call upon employers to furnish the information required. Penalties are also provided for in the Act for improper disclosure of information or returns by persons engaged in the collection of the information or the tabulation of the data.

The Act deals with collection of statistics relating to factories, such as production, etc., and matters dealing with labour welfare. The former have already been implemented by the various Provinces and the Director of Industrial Statistics has undertaken censuses of production. In regard to the clauses of the Act dealing with statistics relating to labour, these are being implemented and the matter was recently discussed by the Standing Labour Committee.

DEMAND FOR UNIFORMITY

With a view to achieving some uniformity in labour legislation the Government of India convened a Conference of Labour Ministers from the Provincial and the State Administrations at New Delhi in January 1949. A Second Labour Ministers' Conference which was held at New Delhi in January 1951 was preceded by separate Conferences between the Labour Member of the Government of India and the representatives of the two Federations of Employers' Associations and the All-India Trade Union Congress at Calcutta at the beginning of the year. A similar procedure of separate conversations with the representatives of Capital and Labour was followed prior to the third session of the Conference of Labour Ministers which was held at New Delhi on the 29th and 31st January, 1952.

The Government of Pakistan, at the time of partition, adopted under the Pakistan (Adaptation of existing Pakistan Laws) Order, 1947, all the then existing labour enactments. Since August 15, 1947, the Government have enacted the Dock Labourers' Act 1951, and have extended the provisions of the Payment of Wages Act, 1936, to oilfields, coalmines, salt mines and quarries.

India and I. L. O. As is well known, the International Labour Organisation owes its creation to the Treaty of Versailles. India joined this organisation at the very start and since 1922 has been one of the eight leading industrial countries in the world and as such has been allotted a permanent seat on the Governing Body of the Organisation. India also contributes liberally towards the finances of the Organisation and stands fourth in the list of contributors. India's share in the appointments of the office is, however, somewhat inadequate. This is a matter which has been discussed from time to time and was also prominently raised in the recent session of the Asian Regional Labour Conference.

The International Labour Office and its various annual conferences have been a source of inspiration and guidance to India in the enactment of labour legislation and framing of labour policies. India has so far ratified 16 out of the 90 Conventions adopted by the International Labour Organisation but has in addition incorporated into its national legislation the essential features of many other Conventions. Since the International Labour Organisation is essentially a Tripartite Organisation, India's membership of it has resulted in the formation of powerful central organisations both of employers and of labour for purposes of representation, etc., at the conferences.

The last ten years have marked a new development in the policy of the International Labour Organisation, namely, the holding of Regional Labour Conferences of Member States. The first and second such Conferences were held in Santiago de Chile and Havana respectively in 1936 and 1939. The Philadelphia Conference of 1944 passed a resolution recommending that an Asian Regional Conference should be held at an early date. Accordingly, the Government of India invited the International Labour Organisation to hold an Asian Regional Conference in India and the invitation was accepted. The session of the Conference in India started on the 27th of October 1947 and lasted for over a week. More than 200 delegates from various countries, including America and some of the European countries, were represented at the Conference. The problems dealt the Conference were incorporated by the International Labour Organisation in a series of Reports which were circulated to those attending the Conference. The following were the subject matters of the Reports:—

- (i) Problems of social security.
- (ii) Labour policy in general including the enforcement of labour measures,

- (iii) Programme of action for the enforcement of social standards embodied in Conventions and recommendations not yet ratified or accepted.
- (iv) The general economic background of social policy, including problems of industrialisation, and
- (v) Director-General's Report dealing with the question of the co-ordination of regional activities of the International Labour Organisation.

The following is the list of Conventions ratified:—

1. Hours of Work (Industry), 1919.
2. Night Work (Women), 1919.
3. Night Work (Young Persons), 1919.
4. Right of Association (Agriculture), 1921.
5. Weekly Rest (Industry), 1921.
6. Minimum Age, 1921.
7. Medical examination of Young Persons (Sea), 1921.
8. Workmen's Compensation (Occupational Diseases), 1925.
9. Equality of Treatment, 1925.
10. Inspection of Emigrants, 1926.
11. Seamen's Articles of Agreement, 1926.
12. Marking of Weight, 1929.
13. Night Work (Young Persons), 1934.
14. Underground Work (Women), 1935.
15. Protection Against Accidents (Dockers) Convention, 1929, Revised in 1932.
16. Final Article Revision Convention, 1946.

TRIPARTITE MACHINERY

A Plenary Conference of the representatives of workers, employers and Governments met on August 7, 1942 at New Delhi and decided that a collaborative machinery composed of the representatives of Governments, employers and workers in India should be established forthwith for the consideration of all questions relating to the conditions of labour.

It also decided that a Standing Labour Committee should be constituted.

The main function of the Standing Labour Committee is to consider and examine such questions as might be referred to it by the Plenary Conference or by the Central Government taking also into account suggestions made by Provincial Governments, States, and representative organizations of Employers and Workers. Whereas the Plenary Conference is to meet at least once in every year, the Standing Labour Committee is to meet as often as it might be convened by the Central Government for the consideration of questions that may be before it.

Industrial Committees.—In the light of the experience it was found that the subjects for the Conference or the Committee should be divided into (1) those dealing with general problems and (2) those covering all concrete questions relating to labour welfare and administration of labour laws. The former to be assigned to the Plenary Conference and the latter to be dealt with by a new body called the Labour Welfare Committee. The Standing Committee should cease to be a deliberative body and should act as the agent of the Conference.

Industrial Committees have been set up for important industries such as plantations, cotton, cement, leather and coal.

The question of re-constituting the tripartite machinery was again placed on the agenda of the eighth Labour Conference held in April 1947. In view of the establishment of Industrial Committees, proposals were also made for the abolition of the Standing Committee but the workers' representatives were opposed to this change.

As there was imperative need after the advent of the Interim Government in September 1946 for a co-ordinated and uniform labour policy throughout the country, it was felt that the co-operation of the Provincial and State Governments was necessary before giving final effect to Government's programme of

amelioration of labour conditions. Separate conferences first with the Provincial Labour Ministers and then with the States Labour Ministers were, therefore, organised. Government's labour programme was discussed in detail at both these Conferences. This Conference was followed by a joint Conference of Provincial and States Labour Ministers. At the end of the year 1946 a special Conference of employers and workers was also held to consider the five-year programme.

Arising out of the adoption of the Industrial Truce Resolution in December 1947 at a conference of representatives of Government and of employers and employees, a Central Advisory Council has now been set up. A meeting of the Central Advisory Council was held at Lucknow on the 19th, 20th and 21st November 1948. The agenda for the meeting was as follows:—

1. Consideration of the Report of the Profit Sharing Committee.
2. Determination of the principles of fair wages and the statutory machinery required for securing the same.
3. Review of industrial relations and working of Works Committees.
4. Draft model constitution of Production Committee.
5. Setting up of Industrial Committees for different industries.

The Profit Sharing Committee was called upon to enquire into and report on the following points:—

- (a) fair return on capital employed in the industry,
- (b) reasonable reserves for the maintenance and expansion of the undertaking, and
- (c) labourer's share of the surplus profits, calculated on a sliding scale normally varying with production after provision has been made for (a) and (b) above.

This Committee was composed of representatives of workers' and employers' organisations and also of the Ministers of Industry & Supply, Labour, Finance and Commerce of the Government of India. The Report of the Committee has been published.

The recommendations of the Committee will be considered by the Committee which has been appointed to examine and report upon the question of fair wages for labour.

WAGES, EARNINGS, HOURS OF WORK AND CONDITIONS OF EMPLOYMENT

The last few years have witnessed an almost revolutionary change in the industrial wage-structure of India. Reference has already been made to the plethora of strikes which took place after the close of the first world war on account of the earnings of the workers lagging seriously behind the cost of living. Such gains as the industrial workers of the country had achieved were, to some extent, nullified by the economic factors which intervened as a result of the great depression which set in 1929 and lasted almost upto 1937. During the year 1931 wage cuts became almost the order of the day and resulted in great industrial unrest in the country. The lessons of history were, however, not forgotten and by the time of the second world war broke out labour also had become more conscious of its rights. During the progress of the second world war Government in their desire to maintain the tempo of production and also to increase it to the maximum took timely action to ensure that production did not suffer as a result of industrial unrest. As will be seen from another section, Central and Provincial Governments tried to avert strikes or to settle them by timely intervention. During the progress of the War, Industrial Tribunals were also appointed to adjudicate in disputes under Rule 81A of the Defence of India Rules. The awards of arbitrators, and of Industrial Tribunals and Industrial Courts have resulted in great benefits to labour and, as stated already, almost a revolution has taken place in the wage structure of industrial labour in this country.

No serial statistics of wages and earnings are available in India except for those compiled under the Payment of Wages Act. The returns under these Acts, however, relate only to persons in receipt of wages and salaries of Rs. 200 per month. However, these data are of considerable value in showing the trends of earnings of industrial workers and the following table contains the details:—

Average Annual Earnings of Factory Workers in Perennial Industries by Provinces

| Province | 1947 | 1946 | 1930 | Percentage increase (+) or decrease (—) in 1947 compared to | |
|-----------------------------------|-------|-------|-------|---|--------|
| | | | | 1946 | 1930 |
| | Rs. | Rs. | Rs. | | |
| Ajmer-Merwara | 415.3 | 447.8 | 163.7 | — 0.6 | +172.0 |
| Assam | 755.5 | 687.5 | 203.7 | + 9.9 | +186.5 |
| West Bengal | 567.7 | 496.3 | 248.7 | + 11.4 | +128.3 |
| Bihar | 819.8 | 511.0 | 415.5 | +50.7 | + 97.3 |
| Bombay | 977.9 | 812.3 | 370.4 | +20.4 | +164.0 |
| Central Provinces & Berar | 572.3 | 479.7 | * | +19.3 | .. |
| Coorg | 409.2 | 212.3 | * | +192.7 | .. |
| Delhi | 877.7 | 837.2 | 309.4 | + 4.8 | +183.7 |
| Madras | 560.3 | 422.2 | 175.9 | +32.7 | +185.5 |
| Orissa | 493.6 | 440.1 | 161.8 | +12.2 | +105.1 |
| United Provinces | 672.8 | 593.6 | 255.6 | +15.3 | +183.6 |
| All India | 728.3 | 619.1 | 287.5 | +19.2 | +156.8 |

* Information not available. N. B. Information for East Punjab is not available.

RATES OF WAGES

Until the enforcement of the awards, etc., referred to above basic wages in many industries were abnormally low and in many cases the quantum of dearness allowance was four to five times the basic wage. This situation exists even today in certain centres and industries where wage regulation has not taken place as a result of awards of Industrial Tribunals, etc. However, as a consequence of the implementation of

the recommendations of the Central Pay Commission by the Government of India and the enforcement of awards of Industrial Tribunals, a very large body of industrial workers in the country today are in possession of a basic wage which is very much higher than it used to be only a few years ago. The tabular statement below shows the basic wages and earnings of important categories of industrial workers in India.

STATEMENT SHOWING THE BASIC MINIMUM WAGE DEARNESS ALLOWANCE AND THE MINIMUM MONTHLY EARNINGS OF WORKERS IN DIFFERENT INDUSTRIES (1948).

| Industry | Centre | Minimum basic wage | | Minimum dearness allowance | | Minimum monthly earnings | |
|---------------------|---------------|--------------------|-------|----------------------------|-------|--------------------------|-------|
| | | Rs. | a. p. | Rs. | a. p. | Rs. | a. p. |
| Cotton | Bombay City | 30 | 0 0 | 55 | 9 0 | 85 | 9 0 |
| | Ahmedabad | 28 | 0 0 | 68 | 7 0 | 96 | 7 0 |
| | Sholapur | 26 | 0 0 | 10 | 4 1 | 66 | 4 4 |
| | West Bengal | 20 | 2 5 | 30 | 0 0 | 50 | 2 5 |
| | C. P. & Berar | 26 | 0 0 | 41 | 11 4 | 67 | 11 4 |
| | Madras | 26 | 0 0 | 19 | 5 0 | 66 | 5 0 |
| Jute | Kanpur | 30 | 0 0 | 65 | 4 0 | 95 | 4 0 |
| | West Bengal | 26 | 0 0 | 32 | 8 0 | 58 | 8 0 |
| Engineering | West Bengal | 30 | 0 0 | 25 | 0 0 | 55 | 0 0 |
| | Bombay (1) | 30 | 0 0 | 25 | 0 0 | 55 | 0 0 |
| Dockyards | (2) | 26 | 0 0 | 55 | 9 0 | 81 | 9 0 |
| | Calcutta | 27 | 10 0 | 25 | 0 0 | 52 | 10 0 |
| Coal Mines | Bengal (West) | 15 | 0 0 | 19 | 8 0 | 32 | 8 0 |
| Mica Mining | Bihar | 10 | 9 0 | 15 | 13 6 | 26 | 6 6 |
| Gold Mining | Mysore | 21 | 2 0 | 17 | 8 0 | 38 | 10 0 |

WAGES IN MINES

It will be remembered that in May 1917, as a result of the recommendations of the Board of Conciliation, which were implemented by Government substantial increases in wages were granted to workers in the coalfields. It is of interest, therefore, in this context to study the increase in the wage bills of coal mines as a result of the

implementation of these recommendations. The Chief Inspector of Mines collects every year information regarding attendances and wage bills in the various Indian coalfields for the month of December. The figures collected by him on this subject for December 1946 and December 1947 are presented in the table below:—

| | December 1946 | | December 1947 | |
|---------------------------|-------------------|-------------------|-------------------|-------------------|
| | Total attendances | Total amount paid | Total attendances | Total amount paid |
| | | Rs. | | Rs. |
| I. Raniganj (Bengal) .. | 1,849,405 | 23,86,376 | 2,116,425 | 39,76,901 |
| II. Raniganj (Manbhum) .. | 280,391 | 4,09,219 | 387,442 | 6,99,758 |
| III. Bokaro | 718,001 | 10,03,742 | 546,588 | 8,86,294 |
| IV. Giridih | 158,866 | 1,59,975 | 194,156 | 3,70,611 |
| V. Jharia (Hazaribagh) .. | 69,028 | 79,066 | 49,364 | 97,689 |
| VI. Jharia (Manbhum) .. | 3,025,021 | 40,43,161 | 3,464,257 | 61,72,314 |
| Total | 6,100,712 | 80,81,540 | 6,788,232 | 1,22,03,570 |

DEARNESS ALLOWANCE

Unlike many other countries in the world, industrial workers in India are being compensated for the rise in the cost of living by the grant of what is known as dearness allowance. During the year 1917, when the prices had increased from the price level of 1914, the Bombay Millowners Association granted a dearness allowance to their employees. Gradually the percentage of this allowance particularly in the cotton textile industry in Bombay Province, was increased until it reached a level of 65 per cent in the case of spinners and 75 per cent in the case of weavers. With the coming in of the depression, however, such employers as had granted either wage increases or dearness allowances naturally tried to reduce their Wage Bill, particularly by reducing the allowances. Consequently during the years 1933-31 there was almost a general tendency to reduce these allowances to a very considerable extent. This resulted in several industrial disputes, culminating in a general strike in Bombay City. Even so, the cut in the allowances could not be restored to the war-time level.

Soon after the declaration of hostilities during World War II, workers in certain industries, notably those in the cotton textile industry in Bombay City again began to clamour for the grant of a dearness allowance. A Board of Conciliation was appointed for this purpose in Bombay City. Thereafter, a similar demand was made by railway workers in the country and the Ram Court of Enquiry was appointed. In each case the demand of the labour had to be accepted, though partially.

As has already been explained the idea of dearness allowance is to neutralise the increase in the cost of living. However, no definite principle has so far been evolved whereby a uniform percentage of dearness allowance could be fixed for the whole country at any given time. The scale of the allowance varies not only from centre to centre and industry to industry, but also, except where these matters are adjudicated upon, from unit to unit in the same industry at the same centre. The following tabular statement contains details for the principal industries regarding the dearness allowance paid:

| Industry and Centre | | Amount paid during September 1948 |
|---------------------------|--------|-----------------------------------|
| | Rs. a. | |
| COTTON | | |
| 1. Bombay | 55 9 | |
| 2. Calcutta | 30 0 | |
| 3. Madras | 40 5 | |
| 4. Kanpur | 65 4 | |
| JUTE | | |
| 1. Calcutta | 32 8 | |
| 2. Kanpur | 61 8 | |
| ENGINEERING | | |
| 1. Bombay | 55 9 | |
| 2. Calcutta | 25 0 | |
| 3. Madras | 26 11 | |
| 4. Kanpur | 35 12 | |
| TANNERIES & LEATHER GOODS | | |
| 1. Bombay | 29 4 | |
| 2. Calcutta | 27 10 | |
| 3. Madras | 27 10 | |
| 4. Kanpur | 61 8 | |
| COAL MINES | | |
| 1. Bihar and Bengal | | |
| (a) Upto Rs. 30 | — | |
| (b) Rs. 31 to Rs. 50 | 45 0 | |
| (c) Rs. 51 to Rs. 100 | 50 0 | |
| (d) Rs. 101 to Rs. 300 | 67 0 | |
| 2. C. P. & Berar | | |
| (a) Upto Rs. 30 | 11 4 | |
| (b) Rs. 31 to Rs. 100 | 30 0 | |
| (c) Rs. 101 to Rs. 300 | 66 10 | |
| 3. Assam | | |
| (a) Upto Rs. 30 | 13 0 | |
| (b) Rs. 31 to Rs. 50 | 33 12 | |
| (c) Rs. 51 to Rs. 100 | 27 8 | |
| (d) Rs. 101 to Rs. 300 | 50 0 | |

Reference has already been made to the recent appointment of the Fair Wages Committee by the Government of India. The questionnaire issued by the Committee contains certain questions regarding the principles which should be followed in the grant of dearness allowance. The Report of the Committee has not yet been published but it is hoped that when the Committee make their recommendations certain definite principles will be followed in the country in regard to the grant of dearness allowance or any other method that the Committee may suggest for compensating the workers for the rise in the cost of living.

BONUS PAYMENTS

As in the case of dearness allowance the practice in regard to the quantum of profit bonus varies from centre to centre and industry to industry. In the two important cotton mill centres of the Bombay Province, namely, Bombay and Ahmedabad the workers received for the year 1946 a bonus equivalent to 20 per cent of their wages. In Kanpur a bonus amounting to four annas per rupee of basic wages was paid for the same year. On the other hand, the Coimbatore mills paid a bonus equivalent to five months' basic wages for the year 1946. This figure, however, is a little misleading because in Coimbatore the scale of basic wages was much lower until recently than that obtaining either in Bombay or Ahmedabad. In the Madras and Madurai cotton mills the system followed is to pay a bonus related to the dividend which is declared.

No bonus has so far been paid in the jute mill industry in Bengal. The Industrial Tribunal considered the question but deferred its recommendations in the matter pending the results of an investigation by experts and the Government of India. The jute mills in Kanpur paid bonus at the rate of four annas per rupee of earnings. The jute mills in South India paid according to the recommendations of an award given in May 1947, a bonus equivalent to 14 months' wages in December 1947.

In the dockyards in Calcutta and Cochin no profit bonus was paid in the year 1947 although two dockyards in Bombay paid 24 months' wages as bonus. The unit at Vizagapatnam paid for the year 1946-47, a bonus equal to one month's basic wages.

The Tata Iron and Steel Co. at Jamshedpur pay a good attendance bonus amounting to 10 to 12 per cent of basic wages and a performance bonus of 10 to 50 per cent of basic wages is also given to workers. To the latter, however, only skilled and semi-skilled workers are entitled. Under the Company's Profit Sharing Scheme, the employees are entitled to a share of 22½ per cent of the annual net profit of the company and such share is credited to and/or distributed among the employees of the company in proportion to the basic salaries and wages earned or deemed to be earned by such employees respectively during the year in which such net profits were earned by the Company.

All the units under the management of the Associated Cement Companies paid for 1946-47 a profit bonus equivalent to two months' basic wages. The units at Jajala and Dalmianagar paid for the year 1947 a bonus amounting to one month and 24 months' basic wages respectively for all their employees.

In the paper mill industry none of the units in Bengal and Bombay paid an annual bonus to its employees in the year 1947. The unit at Dalmianagar, Bhadravati and Bagratnagar, however, paid a bonus amounting to 24 months', 2 months' and 100 per cent of basic wages respectively to their employees for the year 1947.

In the Tanneries and Leather Goods factories, only a few large concerns in the industry in the different centres paid bonus in 1947. The amount paid varies from one month's to 34 months' wages in the year.

The Board of Conciliation appointed for the coal-mining industry recommended the grant of an annual bonus equal to four months' basic wages, split into two parts. An attendance bonus of two months' basic wages to those fulfilling specified minimum attendance requirements, and a production bonus related to output and basic earnings and subject to their qualifying for it on the basis of a minimum attendance of 66 days per quarter in the case of surface workers and 54 days per quarter in the case of underground workers in the case of collieries in Bihar and Bengal. Bonus on the above basis is also to be paid, according to the Fact-Finding Committee's recommendations subject to a minimum attendance of 60 and 65 days in a quarter in the case of underground and surface workers respectively in Central Provinces and Berar and Orissa collieries. In Assam, the existing rate of bonus has been raised by fifty per cent so as to raise the amount of bonus earned to a sum equal to four months' wages per year.

In the Kolar Goldfields in Mysore, besides an attendance bonus of Rs. 1-8-0 paid to workers for regular attendance, underground workers are paid a further bonus of wages for half a shift for six days work in the week. The clothing allowance to underground workers which was Rs. 6 per annum before July 1947 now stands at Rs. 10. All workers were paid a profit bonus equal to three months' wages in 1947. No bonuses are paid to industrial workers employed in concerns belonging to Government. An outstanding recent development in the mining industry has been the recommendation of the Board of Conciliation that an annual bonus equivalent to four months' wages should be paid to workers employed in the mines. This bonus is two-fold in character. Half of it is linked up with attendance and half of it to production. Such a bonus was at first being paid only in the collieries in Bihar and Bengal but as a result of the recommendations of a Fact-Finding Committee it is now being paid also in the collieries situated in the C.P. and Berar and Orissa. In the collieries in Assam bonus is being granted equivalent to four months' wages per year.

So far no bonus was being paid to plantation workers but quite recently bonus equivalent to 64 per cent on total cash earnings during the calendar year 1948 was paid to workers employed in plantations in Madras Province.

PAY PERIODS

The period of wage payment varies from industry to industry and centre to centre and is mostly determined by tradition and custom. Allowing for minor differences in this respect and considering the major industries and the important centres it can be stated that in the jute industry in Bengal and in the plantations the wages are generally paid weekly. The system of wage payment in the cotton textile industry in Bombay City and Sholapur is monthly. A peculiarity of Ahmedabad is that the wages are paid per *bhapta* which varies from 14 to 16 days. The month is the accepted wage period for the railways. In some concerns wages are paid daily to certain types of workers, weekly to others, fortnightly to yet others and monthly generally to the clerical and supervisory staff. In the Tata Iron and Steel Company at Jamshedpur there are different periods of wage payment for different types of workers, e.g., workers in Agricore are paid on weekly basis, in the main stores, W.P. Electrical Department, Traffic Scrap and Salvage, Pipeline, West Electrical Steel Foundry on a monthly basis. Generally casual labour is paid on a daily basis.

Mining labour is mostly paid on a weekly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the Provincial Governments and interested persons and bodies, on three different occasions within the last twenty years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The position, however, has still remained unchanged.

HOURS OF WORK

The existing restrictions on hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. The most important happening in regard to hours of work in factories was the reduction of the weekly hours of work from 54 to 48 in perennial factories and from 60 to 54 in seasonal factories. This reduction was effected because of two considerations: (1) it was felt that 9 hours of work in a factory per day was somewhat too long; and (2) the reduction of hours of work might lead to employment of more persons.

Actually, in many industries in this country during the war when three shifts were being worked, the hours of work were not in excess of 8 per day. In the coal-mines in Bihar and Bengal the workers seldom work for more than five to six hours in the day or for more than four to five days in the week. According to a recent investigation the average weekly attendance of a coal-miner was 4-56 days. The cotton textile industry in almost all centres normally works a uniform 8-hour day. A recent development in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being.

In jute mills which are members of the Indian Jute Mills Association the hours of work are regulated according to the recommendation of the Association.

All the dockyards, many of the larger engineering and almost all the railway workshops work a 48-hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximately more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills.

Almost all seasonal factories work a uniform 10-hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible to close on the local bazaar day.

In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, cement factories, etc., work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of 8 hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of 12 hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours.

In regard to the hours of work in cotton mills, reference should be made here to the changes which had to be made in the working hours because of the short supply of power resulting from the damage done by the cyclone in Bombay City in November 1948. The Bombay Millowners' Association, in consultation with the Government of India, have, therefore, introduced a system of staggered hours in order to maintain the same production as they had before the reduction was effected in the available supply of electric power. Briefly, the scheme is as follows:—

The sixty-two mills in Bombay City have been divided into six groups and their working has been so regulated that, on any working day, not more than five groups put in a full shift, while the sixth puts in a partial shift. Rotation of work has been arranged in such a manner that in any one working week of six days, every mill works 100 per cent of its capacity for five days of 8½ hours per shift, while on the sixth day 5½ or 5 hours are worked per shift. This arrangement means a 48 or 17½ hour working week. Under the scheme, all holidays, including the weekly Sundays, remain untouched, while re-arrangement of shifts to avoid peak load at peak hours may ensure full employment to all workers. The scheme will not result in lesser earnings to workers on days on which 5 to 5½ working hours will be necessary as wages will be as on full working days for all.

The scheme was brought into operation with effect from 17th January 1949 and is expected to continue for a period of about six months or until such time as the normal power supply to industry is restored.

The Industrial Conditions Enquiry Committee on the Cotton Textile Industry in Bombay City and Bombay Suburban District, presided over by T. E. Waterfield, Esq., I.C.S., which was appointed by the Government of Bombay in November 1946 went into the question of shift working and made the following recommendation on this question:

A third shift should be immediately introduced as a temporary measure which should be compulsory for all spinning mills and for all weaving mills for which the necessary labour force can be found. The hours should be as follows:—

| | |
|--------------|---|
| First Shift | 7 a.m. to 11 a.m. and 11.45 a.m. to 3.45 p.m. |
| Second Shift | 3.45 p.m. to 7.45 p.m. and 8.30 p.m. to 12.30 midnight. |
| Third Shift | 12.30 midnight to 3.30 a.m. and 1 a.m. to 7 a.m. |

Workers in the third shift, although working only for 6 hours, should be paid for eight hours. There should be a change-over between the three shifts which may be left to mutual agreement between the management and the workers, if possible; in the absence of any agreement, a fortnightly period is suggested for the change-over of shifts.

The question of hours of work of railway servants was one of the points submitted for adjudication to Mr. Justice Rajaghiyaksha of the Bombay High Court and he has recommended as follows:

The employment of railway servants under the Hours of Employment Regulations should be classified under anyone of the following heads:

- (i) Intensive.
- (ii) Continuous.
- (iii) Essentially Intermittent.
- (iv) Excluded.

(i) The statutory limit of weekly hours for persons whose employment is classified as intensive should be fixed at 75 hours a week on the average in a month;

(ii) The statutory maximum limit for the employment of continuous workers should be fixed at 54 a week on the average in a month;

(iii) The statutory maximum for staff classified as essentially intermittent should be 75 hours a week; and

(iv) For excluded workers no statutory minimum limit can be prescribed but this should not absolve the Administrations of their responsibility on humanitarian grounds, of seeing that unreasonable conditions are not imposed.

Speaking generally, in the dry docks and workshops attached to Ports two to three shifts of 8 hours each are worked. Only in the Madras Port is there a system of weekly change-over of shifts among dock workers. During the war, overtime was a regular feature in the major ports due to increased activities created by war conditions.

In the major municipalities the hours of work vary from department to department but are generally 8 to 10 per day. In the Water Works Department, the Pumping Station and Distribution Department in Madras, there is a regular system of change over of shifts but such a system is not to be found in other municipalities. Speaking generally, municipal workers get a weekly holiday. Although those in the conservancy department get only half a day off per week, there is a certain amount of discontent among the conservancy staff for not getting a weekly holiday but since they are engaged on essential work most of the municipalities find it difficult to grant such a holiday.

COST OF LIVING

Bombay was the first Province in India to compile and publish a price series intended for measuring changes in the cost of living.

Labour Statistics are still in their infancy in India but in respect of family budget enquiries and compilation of cost of living index numbers, considerable amount of work has been done by the Provincial and Central Government in recent years as would be seen from the following paragraphs.

The Labour Office of the Government of Bombay conducted a comprehensive family budget inquiry in Bombay City between Sept. 1932 and June 1933 and taking the weights

based on the results of that inquiry it compiled a new cost of living index series on the price relative method with the average prices for the year ended June 1934 equated to 100. A full note on the method used in the compilation of this index number has been given at pages 370-72 of the issue of the *Labour Gazette* for January 1940.

In addition to the cost of living index series which the Labour Office of the Government of Bombay compiles for working classes in Bombay City, it also compiles similar cost of living index series for three other centres in the Province of Bombay: (1) Ahmedabad; (2) Sholapur; and (3) Jalgaon. Those for Ahmedabad and Sholapur are published regularly in the *Labour Gazette* along with that for Bombay City. The average prices for the year ended July 1927 have been adopted as the basis for the Ahmedabad series while the one for Sholapur is based on the average prices for the year ended January 1928.

Other Provinces in the sub-continent which compile cost of living index series for working classes are Madras, the Central Provinces and Berar, the United Provinces, Bihar, the old undivided Punjab and Orissa. Mysore was the first State to start the compilation of a Cost of Living Index for the City of Bangalore in 1942. The Mysore Government also publish now cost of living figures for Kolar Goldfields and Mysore. Among the other States which publish such figures are Cochin and Hyderabad. These figures are reproduced regularly every month in the *Indian Labour Gazette* along with those for India.

The Government of Madras compiles nine series in all: one for Madras City with the average prices for the year ended June 1936 equated to 100 and eight other series for low paid employees at Vizagapatnam, Ellore, Bellary, Cuddalore, Coimbatore, Madurai, Trichinopoly and Calicut with the average prices for the twelve months from July 1935 to June 1936 as base.

The Government of the Central Provinces and Berar compiles two series for Nagpur and Jabalpur with prices in January 1927 as base and six other series for Mofussil textile centres in the Province. Since April 1942 the base period for the indexes for Nagpur and Jabalpur has been changed to August 1939.

In the United Provinces, one series with August 1939 as the base is compiled for working classes in Cawnpore and five other series with prices at 31st July 1939 equal to 100 are specially compiled for low paid Government employees at Lucknow, Benares, Bareilly, Meerut and Gorakhpur. The Government of Bihar compiles cost of living index numbers with the average prices for the five years ending December 1914 as the base for the following six centres in the Province: Patna, Muzaffarpur, Monghyr, Jamsahpur, Jharia and Ranchi.

Average prices for five years are also the base for cost of living indexes for Lahore, Sialkot, Multan, Ludhiana and Faisalabad in the old undivided Punjab but the base period in the Punjab is the quinquennium ending December 1935. The Government of Orissa compiles a cost of living series for its headquarters town of Cuttack on the same method and base as those adopted by the Government of Bihar and another with average prices during the year 1939-40 as base for Berhampur.

INDEX FIGURES

Owing to the variations in the method of compilation of these indices, they are not strictly comparable, but the table below shows the movement of cost of living index numbers in selected centres for the fourteen months ending February 1949 :—

| | BOMBAY* | | | | C.P.* | | C.P.* | PUN-JAB* | MAD-RAS* | COCHIN STATE* | | MYSORE STATE† | | | HYDERABAD STATE + |

* Base: August 1939 = 100.

† Base: Year ending June 1936 = 100.

‡ Base: Year ending July 1944 = 100.

† Not available.

The Royal Commission on Indian Labour had commented on the unsatisfactory character of the cost of living index numbers published in the sub-continent and the Raj Govt of Enquiry were also greatly handicapped in their investigations owing to the paucity of reliable data in regard to the cost of living index numbers for industrial workers. The Government of India, therefore, in consultation with the Provincial Governments, decided to launch upon

an All-India Scheme for the preparation and maintenance of working class cost of living index numbers for selected centres in the sub-continent. This scheme was started in the year 1942 and was completed in 1946. Over 27,000 family budgets were collected in some 25 selected centres in India and Pakistan. The data collected in the course of this investigation have now been tabulated and the Reports for twenty-two centres have already been published.

The main object of these investigations was to obtain weights for compiling and maintaining cost of living index numbers on uniform lines. Accordingly, the Labour Bureau of the Government of India is now publishing regularly in the Indian Labour Gazette on base 1944 = 100 cost of living index numbers for some 11 centres in India and the latest available figures for these 11 centres on base 1941 are given below :—

| | DELHI AJMER | | BIHAR | | | | ORISSA | | ASSAM | | | EAST PUNJAB | C.P. & BERAR | |

STANDARD OF LIFE

The Bombay Labour Office carried out two family budget enquiries for working classes in Bombay City one in 1921-22 and the other in 1922-23 and the results were published in the years 1923 and 1925 respectively. As has already been mentioned, similar enquiries were also conducted in Ahmedabad and Sholapur cities and the results of both these enquiries were published in the

year 1928. In Madras, the Director of Industries published in 1938 the results of an inquiry into the family budgets of industrial workers in organized and unorganized industries in Madras City conducted under the direction of the Commissioner of Labour. A number of family budgets were also collected at Cawnpore in the United Provinces and at Nagpur and Jabulpore in the Central Provinces with the object of compiling cost of living indexes.

Reference has already been made in the section dealing with cost of living index numbers to the fact that the Government of India carried out extensive family budget surveys in selected centres in India. The results of these surveys with the exception of those at Kanpur and Calcutta have now been published. Separate reports on these surveys have been published for each centre and are available to the public. The statements below contain in a tabular form the main results of these surveys.

COMPOSITION OF THE FAMILY

| Centre | Number of budgets | Number of persons per family | EARNERS | | | | Total | DEPENDANTS | | | | Total | Average number of dependants per family living away from the worker. | Total of Col. (9) and Col. (14) |
|--------------------------|-------------------|------------------------------|---------|-------|----------|-------|-------|------------|-------|----------|-------|-------|--|---------------------------------|

For the first time we have also now available in this country family living studies for plantation workers. These were conducted in the year 1947 by the Government of India and the results of these surveys have been incorporated in two separate reports. The tabular statement below contains details regarding the main findings of these enquiries in the plantations in the North, East and South India.

COMPOSITION OF THE FAMILY, AVERAGE WEEKLY INCOME AND EXPENDITURE OF THE FAMILY AND THE ACTUAL AND PERCENTAGE DISTRIBUTION OF EXPENDITURE ON DIFFERENT GROUPS.

| Plantations | No. of budgets | Average number of persons in the family | Average number of wage earners in the family | Average weekly income per family | Average weekly family expenditure on | | | | | | | | | | | | Total weekly family expenditure |

Even prior to the integration of the Indian States in the Indian Dominion, there has been a tendency for the States to take action in labour matters similar to that taken by the Government of India. Accordingly, when the Government of the States notably Mysore, undertook a similar investigation in regard to workers employed in plantations in their territory. A report on this survey has been published.

A report on this survey has been published.

RECRUITMENT

Until recently, recruitment of labour in almost all industrial undertakings with the possible exception of Railway workshops, was effected through the medium of a recruiting agent, a *Sardar*, a *Mukadam*, a *Mistri* or a jobber. As a result, however, of the recommendations made on the subject by various committees—namely the Royal Commission on Indian Labour and the Bombay Textile Labour Inquiry Committee which have condemned this method of recruitment owing to the abuses which have come to be associated with it—many of the larger and more progressive concerns have appointed Labour Officers who are directly responsible for all new recruitment. The old method is, however, still largely prevalent in the majority of the industrial concerns.

There are various forms in which a recruiting agent is remunerated. He may be a salaried employee with a commission for every recruit he brings in as in the mines and plantations, or he may receive a lump sum payment for each recruit or a gang of recruits, or he may be paid a recurring sum for each man he places in employment as long as that man continues in service. Whatever be the method by which an employer remunerates the recruiting agent, it is fairly well known that the agent keeps a continuous hold on the recruit he places in employment and extracts from him recurring sums of money whilst he continues in that employment under pain of losing his job.

The evils in connection with recruitment were most marked in the case of casual or substitute labour. The Millowners' Association, Bombay, have dealt with the problem by establishing what is known as the "Badli Control System." Daily casual vacancies are filled only from cardholders and whenever there is a permanent vacancy it is filled from these cardholders. The evil influence of the jobber is thus eliminated. The system has been highly commended by the Textile Labour Inquiry Committee and the

Government of Bombay have recommended its adoption by all mills in the other centres of the cotton textile industry of the Province.

In the jute mill industry during recent years, many of the mills have established what are known as Labour Bureaux one of whose functions is to recruit labour. The Industrial Tribunal appointed by the Government of Bengal have stated in their award that despite the establishment of Labour Bureaux a considerable amount of recruitment was being done by the supervisory staff and have recommended that each jute mill should have a Labour Bureau and that all recruitment should be done through such Bureaux.

LABOUR OFFICERS

No reference to the appointment of Labour Officers in industrial concerns in India would be complete without mentioning the lead given in this matter by the Millowners' Association, Bombay. The Association, conducts special classes for the training of Mill Labour Officers and actively supervises and controls the work done by all such Officers where they have been appointed through the Association. Following the example of the Millowners' Association, Bombay, the University of Calcutta, in co-operation with the Indian Jute Mills Association, has recently inaugurated a special course of social work for giving suitable training to Labour Welfare Officers engaged in jute mills. The course covers both theoretical training and intensive practical work in the field, i.e., the jute mills themselves. The Indore Christian College has also recently started a course for the training of Labour Officers.

The Indian Jute Mills Association which has appointed a large number of Labour Officers, created a special post of a Senior Labour Officer in 1944.

In this connection mention might also be made of the Employment Exchange started by the Northern India Employers' Association in

Kanpur. Some progressive cotton mills in the South have also opened special Labour offices through which only recruitment is made.

TECHNICAL TRAINING

With the object of taking power to require industrial undertakings, including mines, in India to release technical personnel for employment in factories under the Crown or declared to be engaged on work of national importance, the Governor-General promulgated the National Service (Technical Personnel) Ordinance, 1940, on the 28th June 1940. This Ordinance was amended by three further Amending Ordinances issued in September 1940, in January 1942 and in July 1943.

About the end of the year 1940, the Government of India instituted a Technical Training Scheme designed to provide for the intensive training of a large number of skilled technicians required for the technical branches of the Defence Services and for ordnance and munitions factories. When the scheme was first initiated the number of persons to be trained was fixed at 15,000. This was later increased to 44,600.

The number of technicians trained under the scheme and supplied to the Defence Services up to 31st October 1945 was 83,867. More than 100,000 trained men have passed through the Training Centres during the five years of the operation of the scheme. With the termination of the war, however, the recruitment of trainees under the Scheme ceased.

Meanwhile the Government of India appointed a Special Committee with N. R. Sarkar as Chairman to consider the question of the establishment of a high grade technological institute in India possibly on the lines of the M.T.T. to provide advanced instruction and training in technology to meet the demands of industry.

At the end of the year 1948, there were 83 Technical and 107 Vocational Training Centres functioning with 5,065 and 2,744 ex-servicemen

trainees respectively. In the former group, 846 trainees passed the trade tests, bringing the total of passed out trainees to 8,698. In the latter group, 94 trainees passed out bringing the total to 1,617.

Essential Services.—As a consequence of the entry of Japan into the War, the danger had arisen of persons in India abandoning their employment or leaving certain areas. In order to avoid such a danger, the Governor-General, in exercise of the powers conferred on him by Section 72 of the Government of India Act, 1935, promulgated in 1941 an Ordinance called the *Essential Services (Maintenance) Ordinance*.

Provincial Governments in India under the above ordinance "declaring" as essential such services as railways, oil and fuel installations, port trusts and dockyards, municipalities, gas and electricity producing plants, telephone systems, certain banks, *et cetera*, to which the Ordinance was to apply. When once any employment in any particular area was 'declared' no person engaged in that employment could depart from that area without the permission of the authority making that order, nor could any employer discontinue the employment of such person without reasonable cause, and so on. A number of Provincial Governments followed suit.

Early in 1943 the Government of India also promulgated Rule 7-A of the Defence of India Rules conferring powers on both the Central and the Provincial Governments to compel certain persons to do work. This Rule empowered any Officer of Government authorised in this behalf by a general or special order to require any male person within such area as may be specified in the order to assist in the doing of work on land for such period and in such manner as the officer may direct, being work the doing of which is in the opinion of the officer necessary to meet an actual or apprehended

attack, or to repair or to reduce the damage resulting therefrom or to facilitate offensive or defensive operations in the area. Refusal by any person to comply with any lawful direction given to him under this order rendered him liable to imprisonment which might extend to six months or with fine or both. The Officer giving a direction under this order had the right to determine the remuneration to be paid for the work.

EMPLOYMENT EXCHANGES

When the National Service Labour Tribunals were established under the National Service (Technical Personnel) Ordinance, it was the intention that they should gradually assume the role of employment exchanges for technical personnel. This they had been doing but the statutory powers given to Tribunals to fix wages and terms of service and to compel an employer to give up an employee and an employee to take up employment in the national service have distinguished them from the voluntary employment exchanges commonly met with in other countries. The exacting needs of war made it necessary for the Tribunals to have these statutory powers and they served their purpose.

As the war progressed it was felt necessary to look ahead and to build up an employment organisation which would be in a position to deal with the registration and voluntary placement of the many skilled and semi skilled workmen who would be thrown out of employment on the termination of hostilities. The Tribunals had gained much experience of the requirements of employers and the placement of labour and it was therefore decided to use these organisations in the first instance for the setting up of voluntary employment exchanges for skilled and semi-skilled personnel.

The Directorate-General of Resettlement and Employment was set up in July 1945 consequent on the Government of India's decision that the resettlement of ex-service personnel should be a civilian and not a military responsibility. The object of the organisation is the resettlement and employment in civil life of demobilised ex-servicemen and women and discharged war-workers. Recently the scope of the functions of the employment exchanges has been considerably widened and they are also looking after the resettlement of refugees and of industrial workers generally.

The organisation is in the charge of a Directorate-General. There are three Directorates namely: (1) Directorate of Employment Exchanges, (2) Directorate of training, and (3) Directorate of Publicity. The country is divided into eight regions (as against 9 before the partition) each under the administrative control of a Regional Director of Resettlement and Employment.

There are 51 Employment Exchanges and 23 District Employment Offices. The sub-Regional Employment Exchange at Amritsar has been raised to the status of Regional Employment Exchange for the East Punjab.

The Central Employment Exchange acts as an Inter-Provincial Clearing House to balance the supply of and demand for labour within the various regions.

The number of Mobile Sections attached to various Exchanges is thirty-five. These have proved useful in securing at short notice applicants for vacancies of Forest Guards (1st Batta), in Railways (in Aymer and Jorhat), as Home Guards (in Shillong) and as manual labourers (in Ferozpur).

The following table contains the information regarding registrations and placements by Employment Exchanges for the twelve months of the year 1948:—

WORKING OF THE EMPLOYMENT EXCHANGES AND TRAINING CENTRES IN INDIA

| 1948 | | | | Working of the Employment Exchanges | | | | | | |
|-------------------|--|--|--|---|--|--|--|---|---|---|
| | | | | No. of exchanges at the end of the period | No. of registrations during the period | No. of applicants placed in employment during the period | No. of applicants on the five registers at the end of the period | No. of employers using exchanges at the end of the period | No. of vacancies notified during the period | No. of vacancies outstanding at the end of the period |
| 1 | | | | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| January | | | | 53 | 61,702 | 16,571 | 2,33,568 | 2,927 | 23,820 | 64,059 |
| February | | | | 54 | 50,835 | 17,153 | 2,16,551 | 2,823 | 24,104 | 65,178 |
| March | | | | 54 | 58,203 | 17,652 | 2,11,540 | 3,206 | 28,581 | 65,704 |
| April | | | | 54 | 63,851 | 18,581 | 2,12,869 | 3,361 | 32,665 | 72,333 |
| May | | | | 54 | 68,808 | 21,126 | 2,10,302 | 3,524 | 51,594 | 91,368 |
| June | | | | 54 | 93,907 | 25,379 | 2,19,714 | 3,253 | 32,032 | 88,427 |
| July | | | | 54 | 87,010 | 27,200 | 2,26,449 | 3,829 | 38,089 | 84,467 |
| August | | | | 54 | 81,993 | 27,069 | 2,32,738 | 3,582 | 33,656 | 66,145 |
| September | | | | 54 | 80,253 | 26,816 | 2,33,368 | 3,675 | 32,445 | 60,361 |
| October | | | | 55 | 66,303 | 18,535 | 2,30,727 | 3,437 | 24,468 | 56,855 |
| November | | | | 54 | 70,406 | 19,528 | 2,28,938 | 3,517 | 25,806 | 55,043 |
| December | | | | 54 | 84,916 | 24,164 | 2,39,033 | 3,930 | 31,958 | 55,131 |

In Pakistan upto the end of the year 1948 since the partition, employment exchanges registered 2,88,297 workers out of which 93,134 were placed in suitable employment.

ABSENTEEISM

One of the most usual complaints of Indian industrialists has been the high percentage of absenteeism and the large turnover in Indian factories, mines, etc. From the available information it is clear that the percentage of absenteeism in Indian industries and particularly in mines and plantations is very high. It amounts to about 10 to 15 per cent. in factories, and to about 25 to

30 per cent. in mines and plantations. The high percentage of absenteeism in mines is due largely to the fact that there is a periodical exodus of miners to their villages for purposes of cultivation. The high percentage of absenteeism in plantations can be attributed to the large amount of sickness which prevails, particularly in the tea plantations in Assam and the Bengal area. It is noteworthy that in

factories in which the conditions of work and wages are satisfactory and also where there is a system of granting leave with pay apart from the statutory holidays with pay, the incidence of absenteeism is not so high as is otherwise the case. The available statistical data on absenteeism in certain types of concerns for the twelve months of the year 1948 is given in the tabular statement below :—

ABSENTEEISM IN MANUFACTURING INDUSTRIES IN INDIA
(Percentage of man-shifts lost to man-shifts scheduled to work)

SOCIAL SECURITY

One of the resolutions unanimously passed at the Tripartite Labour Conference of 1943 asked for the setting up of machinery to investigate questions of wages and earnings, employment and housing and social conditions generally, and that as soon as possible after receipt of the required statistics and other data the Central Government should appoint a mixed committee to formulate plans of social security.

In pursuance of this resolution the Governor-General-in-Council appointed, early in 1944, a Committee of Enquiry to be known as the Labour Investigation Committee. The Committee was composed of Mr. D. V. Kege, I.C.S., as Chairman and Mr. S. R. Deshpande, Mr. Ahmad Mukhtar and Mr. B. P. Adarkar as Members.

The Committee made exhaustive fact-finding surveys in some 36 industries including major industries like cotton, jute, coal, etc. Unlike other Committees the reports of the Committee have been published under the responsibility of individual members while the Committee as a whole has prepared a document known as the Main Report of the Labour Investigation Committee. Since this was a fact-finding Committee, it has not made any recommendations as such although its findings now serve as a basis for the formulation of future policy.

A special branch entitled the Social Security Branch of the Labour Department of the Government of India was opened towards the beginning of 1945. The following three distinct schemes were under preparation in this Branch:

(1) A Unified Scheme of Insurance against sickness, accident and maternity for factory workers, to replace the original health insurance scheme was drafted by Mr. Adarkar. In the year 1944 Prof. B. P. Adarkar's Report on Health Insurance for Industrial workers was published. The Government of India invited the International Labour Organisation to depute two experts to advise them on matters contained in Prof. Adarkar's Report. These two experts were Messrs. Stack and Rao of the I.L.O. After certain amount of touring in the country and consultations with Prof. Adarkar and certain interests concerned, Messrs. Stack and Rao suggested certain alterations to the findings of Prof. Adarkar. These were published by the Government of India.

(2) A Unified Scheme of Insurance against sickness, accident and maternity for coal-miners. And,

(3) A scheme of sickness insurance and old age pensions for Indian seamen serving on Indian and foreign ships.

The last has now been published (See "Indian Labour Gazette," May 1947 issue). As regards the Health Insurance Scheme, a bill incorporating the scheme was introduced in November 1947 in the Dominion Parliament by the Hon'ble Mr. Jagjivan Ram.

The Bill became law on 19th April 1948. The Act is known as the Employees State Insurance Act and the following are its main provisions:

The Act applies to all factories including factories belonging to Government other than

seasonal factories and covers employees in receipt of wages or salaries up to Rs. 400 per month. The administration of the Act is entrusted to an autonomous body called the Employees State Insurance Corporation. A Standing Committee is to act as the executive of the Corporation. There is also to be a Medical Benefit Council to advise the Corporation on matters relating to administration of medical benefit, certification, etc. All these bodies are tripartite in character. The scheme is contributory but the Central Government is to make an annual grant to the Corporation during the first five years of a sum equivalent to 3/10ths of the administrative expenses of the Corporation. The rates of contribution payable in respect of an employee have been fixed as follows :—

| Group of employees | Employees' contribution (recoverable from employees) | | | Employers' contribution | | | Total contribution (employers' and employees' contribution) | | |
|--|--|-----|-----|-------------------------|-----|-----|---|-----|-----|
| | Rs. | As. | Ps. | Rs. | As. | Ps. | Rs. | As. | Ps. |
| 1. Employees whose average daily wages are below Re. 1 | Nil | | | 0 | 7 | 0 | 0 | 7 | 0 |
| 2. Employees whose average daily wages are Re. 1 and above but below Rs. 1-8-0 | 0 | 2 | 0 | 0 | 7 | 0 | 0 | 9 | 0 |
| 3. Employees whose average daily wages are Rs. 1-8-0 and above but below Rs. 2-0-0 | 0 | 4 | 0 | 0 | 8 | 0 | 0 | 12 | 0 |
| 4. Employees whose average daily wages are Rs. 2-0-0 and above but below Rs. 3-0-0 | 0 | 6 | 0 | 0 | 12 | 0 | 1 | 2 | 0 |
| 5. Employees whose average daily wages are Rs. 3-0-0 and above but below Rs. 4-0-0 | 0 | 8 | 0 | 1 | 0 | 0 | 1 | 8 | 0 |
| 6. Employees whose average daily wages are Rs. 4-0-0 and above but below Rs. 6-0-0 | 0 | 11 | 0 | 1 | 6 | 0 | 2 | 1 | 0 |
| 7. Employees whose average daily wages are Rs. 6-0-0 and above but below Rs. 8-0-0 | 0 | 15 | 0 | 1 | 14 | 0 | 2 | 13 | 0 |
| 8. Employees whose average daily wages are Rs. 8-0-0 and above | 1 | 4 | 0 | 2 | 8 | 0 | 3 | 12 | 0 |

The insured persons are entitled to the following benefits :

(i) sickness benefit, (ii) maternity benefit, (iii) disablement benefit, (iv) dependants' benefit and (v) medical benefit.

The implementation of the Act requires the setting up of an organisation and many details remain to be worked out. It has, therefore, been decided to make the Act applicable as an experimental measure in two centrally administered areas, namely, Ajmer and Delhi.

The following posts in connection with the implementation of the Act have so far been filled:

1. Director-General: Dr. C. L. Katial.
2. Insurance Commissioner: Dr. Vasudev Rao.
3. Medical Commissioner: Dr. V. M. Albuquerque.
4. Chief Accounts Officer: Mr. K. A. Joseph.

COAL MINES WELFARE FUND

With a view to meeting expenditure incurred in connection with measures which in the opinion of the Government of India are necessary or expedient to promote the welfare of labour employed in the coal-mining industry, the Government of India, under the powers conferred by Section 72 of the Government of India Act, promulgated the Coal Mines Labour Welfare Fund Ordinance, 1944. This Ordinance was replaced by the Coal Mines Labour Welfare Fund Act of 1947 which places the Fund on a permanent footing. The principal objects for which this fund is to be utilised are defined in the Act. These are: (1) the improvement of standards of living including housing and nutrition, the amelioration of social conditions and the provision of recreational facilities for the benefit of the labour employed in the coal-mining industry, (2) the provision of transport to and from work, (3) the improvement of educational facilities, (4) the provision of improvement of supplies of water; and (5) the improvement of public health and sanitation, the prevention of disease, the provision of medical facilities and the improvement of existing medical facilities. The Act makes provision for the appointment of an Advisory Committee consisting of Government Officers and an equal number of members representing colliery owners and workers employed in the coal mining industry of whom one has to be a woman.

The Act also contemplates the appointment of Welfare Administrators, Inspectors and other officers to supervise or carry out the activities financed by the fund. The functions of the Advisory Committee are to advise the Central Govt. on all matters which the Act requires Government to consult it and on any other matters arising out of the administration of the Act and the fund. Both the cost of administration of the fund and the salaries and allowances of the officers appointed in connection therewith are to be defrayed from the fund itself.

At present a cess of six annas per ton of coal or coke has been levied for being credited to the welfare fund. The principal activities of the fund which are financed out of this cess may be considered under the following heads:—

- (i) Housing
- (ii) Hospitals
- (iii) Prevention of disease
- (iv) Water supply
- (v) Pit head baths and creches and others.

Out of the cess of six annas it has now been decided that Rs. 6-1-4 should be apportioned to the housing account. A Coal Mines Labour Housing Board consisting of eight members has been set up. For the coalfields in the Central Provinces a separate Housing Sub-Committee has also been appointed. The proposal is to build 50,000 houses for the miners: 31,000 in Bihar, 15,500 in Bengal and 3,500 in C.P. & Berar. Certain difficulties have been experienced in rapidly carrying out the programme and the progress made so far has, therefore, been somewhat halty. To speed it up the possibility of constructing separate houses and of erecting pre-fabricated houses is being explored.

The regional hospitals and maternity child welfare centres at Katras and Tiera in the Jharia coalfield and Chora and Seorsole in the Raniganj coalfield were completed during the year. The work in regard to the central hospital for the Jharia coalfield is in progress.

For the prevention of disease, grants are being made to the Mines Boards of Health and a scheme for the treatment of tuberculosis has been drawn up. Anti-malaria work is also in full progress.

The construction of pit-head baths and of creches has now been made compulsory. A few pit-head baths and creche buildings have been completed.

The fund gives certain grants and subsidies to various other funds such as the Leper Fund.

Special measures are being taken for the welfare of women and children and 14 women's welfare centres in the different coalfields have been started.

Mica Mines Labour Welfare Fund.—The Mica Mines Labour Welfare Fund Act, 1946, which was designed to constitute a similar fund for the benefit of mica workers, provides for the levy of an *ad valorem* duty not exceeding 6½ per cent on all mica exported from India. The Act provides also for the constitution of two Advisory Committees, one for Madras and one for Bihar.

The Committee appointed to look after the welfare of workers in mica mines has commenced work. It has decided to select suitable places in mica areas for sinking wells and for the construction of dispensaries. Certain beds are being reserved in the existing hospitals for mica workers.

AMENITIES

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work places.

These principles appear to be generally followed by private companies and concerns as well, especially by coal-mine owners in Bihar and Bengal, and sugar-cane growers and tea planters in Assam. Every house in the coalfields has to be licensed and licenses are not granted unless certain standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. Even so, however, according to a recent *ad hoc* investigation, it was found that a considerable proportion of the mining community had not been provided with housing and that there was large congestion in the houses already provided by the mines. The Coal Mines Labour Housing and General Welfare Fund, has decided to give a higher priority to schemes for housing the miners according to new and improved designs. Thus, a target for building 50,000 houses for the miners has been laid down of which about 1,000 houses are already under construction. In Assam, all residential employees on tea estates are provided with rent-free quarters in barracks or 'lines' as they are called. Almost all sugar factories provide housing for their employees because the factories are located near large sugar-cane plantations.

Housing.—The pioneer work in the field of industrial housing has been done by the railways which have spent nearly 50 crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls are situated at Nalgaum, Worli, Sewri and at Delisle Road. The Municipalities of Calcutta, Bombay, Kanpur, Madras and Karachi, the Calcutta and Bombay

Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers.

Perhaps the most outstanding schemes of industrial housing conceived in the sub-continent by private employers are those launched by the Tata Iron and Steel Company, Ltd. at Jamshedpur, the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur and the Co-operative Housing Scheme of the Madura Mills. The Tata Iron and Steel Company has laid out the town of Jamshedpur on Garden City lines.

Many of the jute mills in the Bengal area and cotton mills in Bombay City and other centres have provided housing for a percentage of their total staffs but the majority of textile workers in the sub-continent are not housed by their employers.

It is of interest to observe that the Government of India, following the recommendation made by the Royal Commission on Indian Labour in the matter, amended the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings.

The Government of Bombay, finding it desirable to take powers to control labour housing and sanitation in areas outside municipal and cantonment limits, enacted the Bombay Non-urban Labour Housing Sanitation and Provision Shops Act, 1944 in the month of April, 1944.

Under the above Act, Government have the power to make regulations in respect of any non-municipal or non-cantonment area or any employer in respect of housing and sanitation. It is also proposed to levy a small tax on the employers to finance industrial housing.

Despite all the efforts made by Governments, co-operative societies, etc., however, industrial housing, in the sub-continent continues to be most unsatisfactory, particularly in the large urban areas such as Bombay, Calcutta, Kanpur, Ahmedabad, etc. This has been referred to in detail in the Main Report of the Labour Investigation Committee and certain suggestions have been made for tackling the problem. The Committee have come to the conclusion that industrial housing cannot be regarded as the responsibility of the employer and must be regarded as a responsibility of the State just as education and medical relief are responsibilities of Government.

The Government of India are seriously tackling the question of housing of miners and already a fair start has been made in this direction.

The question of industrial housing has been the subject matter of discussion between the Central and Provincial Governments and a scheme has recently been evolved for granting loans to Provincial Governments for sponsoring schemes of industrial housing. It is hoped that these schemes will shortly materialise. In the meanwhile, certain Provincial Governments are going ahead with their own schemes. Several employers also have large building programmes but the main obstacles in improving housing conditions of industrial workers have been the scarcity of suitable sites for building houses, the high cost of building material and of labour as also the inadequate supplies of the requisite material needed for undertaking fresh constructions.

Shelters, Canteens.—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments also provide tiffin rooms and rest shelters for their workmen. Most concerns had also permitted the establishment of tea stalls on the premises but apart from this, little effort had been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West.

Pioneer work in this direction had been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company had established large canteens in all their mills. The management in each case bore the salaries of staff and the on-cost for equipment; and hot meals were supplied to the workmen at actual cost. The Company had also established a hostel for boarding and lodging its poor women workers.

The Tata Iron and Steel Company maintain a number of restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. A Women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge.

About the middle of the year 1943, the Government of India recommended to all employers, through the Employers' Federation of India and the All-India Organisation of Industrial Employers, the opening up of more canteens for workers. In October 1943, the Central Board of Revenue issued instructions to all Income-Tax authorities stating that any loss incurred by employers in running canteens for workers should be allowed as a revenue loss in assessing income and excess profits tax while cost of building and equipment of canteens would be chargeable as capital expenditure.

An article on 'Canteens for Industrial Workers' published at pages 219 and 220 of the March, 1944 issue of the *Indian Labour Gazette* gives the available statistics on the subject.

The Indian Tea Market Expansion Board which maintains five working centres in India and Pakistan at Bombay, Calcutta, Madras, Lahore and Cawnpore organises new canteens in industrial establishments. It has a large trained staff for this purpose.

The war witnessed a very large expansion in the provision of canteens in Indian industry from north to south. By an amendment of the Indian Factories Act it has been made compulsory for all factories employing more than 250 persons to set up canteens in conformity with prescribed standards and conditions as regards construction, accommodation, equipment, foodstuffs to be served and the prices to be charged, representation of the workmen in the canteen, etc.

INDUSTRIAL HEALTH

Such statistics of health and mortality as are collected and published relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters.

The War witnessed a tremendous drive against the scourge of malaria especially in the coalfields of W. Bengal and Bihar. For a time the whole organisation for fighting malaria by the use of D. D. T. was taken over by the army and deaths from malaria went down to a considerable extent in a couple of years' time. The Labour Welfare Fund which has been started in the coalfields is also spending large amounts for fighting the scourge of malaria.

In the tea plantations of Assam and the Bengal area the Indian Tea Association is spending large sums of money in order to reduce the incidence of malaria. Even so, however, in many of the industrial towns and in the tea plantations, there is still a considerable amount of illness resulting in absenteeism and loss of production.

Although there is not much evidence of the existence of occupational diseases notified under the Workmen's Compensation Act in the mining and factory industries of India, this may partly be due to the defective arrangements which exist for detecting such diseases. Silicosis on a considerable scale is, however, to be found in the gold mines in Kolar.

As in most things connected with the welfare of labour, the railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them.

The Government of India have provided adequate medical facilities in most of their own establishments such as Indian Naval Dockyard and the various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trusts also maintain their own hospitals and dispensaries for the benefit of their workers.

INDUSTRIAL SAFETY

All railways have undertaken extensive schemes of safety-first propaganda including the putting up of safety posters and safeguards both in English and in the vernaculars at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety-first committees in the larger workshops.

The Millowners' Association, Bombay, has done a considerable amount of good work of a pioneering character in connection with Safety-first measures. Working in conjunction with the Safety-first Association of India, the Association drew up a Safety Code for the Cotton Textile Industry and this Code was published and put into operation from August 1940. It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1939. Factory Departments in all Provinces do all they possibly can in improving safety measures in factories. Since the beginning of the Second World War of 1939 special attention has been paid to ordinance works consequent on the employment of workers not ordinarily used to machine shop hazards.

Accidents.—The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next

after the occurrence of the accident. All classes of accidents namely, fatal, serious (i.e., accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition.

It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Provincial Government, even though no injury may have resulted therefrom to any person.

The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

In recent years the Government of India have been evincing a very great deal of interest in industrial safety. Sir Wilfrid Garrett, chief Inspector of Factories in the United Kingdom, was officially invited to India to look into the many questions dealing with factory administration and industrial safety. A new office called the Office of the Chief Adviser, Factories was started and this office issues from time to time valuable literature on the subject of industrial safety.

The Government of India propose shortly to open in Delhi an Industrial Safety, Health and Welfare Museum.

In regard to mines also much more attention is being paid to the question of safety. Provision has been made for the training of miners in first-aid. There are also in the mining areas two rescue training centres where training has been given for fighting fires, etc. in coal mines. The table below shows the number of minor and fatal accidents in Indian factories and mines in the years 1939, 1943, 1944, 1945, 1946 and 1947:—

| Year | FACTORIES | | MINES | |
|------|-----------|-------|--------|-------|
| | Minor | Fatal | Minor | Fatal |
| 1939 | 20,948 | 221 | 10,584 | 286 |
| 1943 | 46,799 | 361 | 9,000 | 328 |
| 1944 | 56,336 | 348 | 8,946 | 365 |
| 1945 | 58,775 | 342 | 8,724 | 307 |
| 1946 | 48,460* | 252 | 9,312 | 328 |
| 1947 | 49,644* | 211† | 8,137‡ | 263‡ |

* Excluding the Punjab and the N.W.F.P.

† The figures relate to the Indian Dominion excluding East Punjab whereas the previous figures relate to British India. The figures are provisional.

‡ These figures relate to the Dominion of India while the previous figures relate to British India.

WELFARE ACTIVITIES

The Reports of the Labour Investigation Committee on labour conditions in 36 odd industries as also their Main Report as well as the issues of the Indian Labour Year Book published by the Labour Bureau of the Government of India contain detailed and comprehensive information regarding labour welfare undertaken in various Provinces and industries and it is unnecessary, therefore, to go over the ground again except briefly to refer to the most salient features of welfare work that is being done in the country.

Until recently the Government of India had not undertaken any activities to promote the welfare of industrial labour employed in Central concerns. Recently, however, they have done a great deal in this respect. Reference has already been made to the institution of the Coal Mines and Mica Mines Labour Welfare Fund. Proposals for levying a cess to create a welfare fund for tea plantations is also under consideration. The Central Government have issued directives to all employing departments to constitute Labour Welfare Funds in all Government undertakings. The Fund is to be utilised for providing indoor and outdoor recreation, reading rooms

etc., to workmen employed in the undertakings. The Fund will be financed partly by Government grants.

The Provincial Governments have also given up their policy of *laissez faire* in regard to welfare work. The first big step in this direction was taken during the regime of the Popular Ministries during the years 1937-39 when the Bombay Government instituted a large Welfare Department and undertook welfare activities themselves for all industrial workers in the principal industrial towns in Bombay. During wartime the Bombay Government and the U. P. Government have directly embarked on a policy of providing welfare measures and Bengal and Sind followed suit. We may describe below the welfare activities of the various Provincial Governments:—

Provinces. In 1939, the Bombay Government first organised model welfare centres. The expenditure sanctioned in that year was Rs.1,20,000 but it has gone up to over Rs.4 lakhs during 1948. In all, there are now 32 centres classified under four classes: 'A', 'B', 'C', and 'D'. At Bombay there are 3 'A' class, 8 'C' class and 4 'D' class centres, located in various parts of the city; at Ahmedabad, 1 'A' class and 4 'C' class; at Sholapur, there are 1 'A' class and 6 'C' class centres; there is one 'C' class centre each at Dhuli, Jalgaon, Amalner, Chalisgaon and Dhulia. No 'B' class centre has yet been opened. 'A' class centres have a full-time nursery school for children; a women's section providing literary, sewing and embroidery classes and suitable games; outdoor games and gymnasium with all facilities for men; and separate arrangements for water-taps and shower baths for both men and women. Stalls as well as circulating libraries are attached to these centres; radio sets are provided; monthly cinema shows are arranged; and well equipped dispensaries are attached. 'B' class centres are intended to be a replica of 'A' class centres but on a very much smaller scale. 'C' class centres provide indoor recreation and educational facilities, static and circulating libraries and dispensaries. 'D' class centres provide only outdoor recreation, such as games and sports. The centres have been very popular and the response from workers has been quite encouraging.

In the United Provinces a new Department of Labour was created in 1937, with a Labour Commissioner and a Labour Officer whose duties were mainly to keep in constant touch with the labour situation in Kanpur and adopt conciliation measures when necessary. A Welfare Department under an experienced Superintendent has now been created to provide healthy recreation and wholesome amenities of life to workers. Recently, a Labour Welfare Superintendent also was appointed to carry on welfare work among women and children. Three types of Welfare Centres—'A', 'B' and 'C'—at present numbering 33 in all have been opened of these, 8 are 'A' type, 14 'B' type and 11 'C' type centres.

The total budget for the first year (1937) was only Rs.10,000 but in 1945-46 Rs.1,57,600 has been sanctioned. 'A' class centres provide medical aid, recreation, education, maternity and child welfare, sports and games and physical training. 'B' class centres provide all the above, though on a smaller scale. 'C' class centres are of the nature of workmen's clubs, with a reading room, a library, and indoor and outdoor games. Dispensaries are attached to both 'A' and 'B' class centres; and a trained midwife or *ayah* attends at each centre to wash, bathe and massage the workers' children, to entertain them with interesting games and to serve them hot milk all free of charge. Moreover, industrial and instructional classes are held for women and girls of the working class. Sewing, knitting, embroidery and other useful domestic arts are also taught. Debates and lectures are arranged; a number of night schools are run for mass literacy; and books and stationery are provided free of cost. Cinema shows are arranged for

workers and their families, and dramatic clubs have been successfully organised at some centres. Occasionally, baby shows, music parties, and *mushahiras* are also arranged. These Welfare Centres have been very popular.

Till 1940, the Government of old undivided Bengal gave grants to private organisations for the benefit of labour but the total amounts were very small (Rs.3,005 only in 1939-40). In 1940, however, besides these grants, Government made a start with ten Welfare Centres, and in 1944-45, there were in all 41 centres. Towards the end of 1947 the number of welfare centres was reduced to 17 but better amenities were provided in these centres. Each centre is under the charge of a Labour Welfare Worker who is assisted by a Labour Welfare Assistant. The welfare activities include library, radio, sports and a dispensary. Special attention is devoted to women's welfare and one centre has been placed under the charge of a Lady Welfare Worker.

The Sind Government have started two Welfare Centres in Karachi with provision for a gymnasium, indoor and outdoor games, a reading room and a library. The centres, however, have not been a success for want of adequate funds and supervision.

Other Provincial Governments have done next to nothing in the direction of welfare amenities for workers and have mainly contended themselves with suggesting to employers the desirability of doing certain things to improve the living conditions of their employees. Under instructions from the Central Government, Provincial Governments have taken steps to encourage the starting of cost-price grainshops and co-operative societies in industrial establishments for supplying the necessities of life to workers at cost or concessional prices.

Coming to the States, one finds that apart from a few exceptions, the State Administrations have done little by way of labour welfare work. The Mysore Government have opened two Recreation Centres in working class areas in Bangalore City with provision for indoor games, a reading room, a library and weekly *bhujangas*. Between 300 and 400 labourers visit each centre daily.

During wartime, the Baroda Government started a movement for establishing co-operative credit and thrift societies with a view to encouraging the saving habit amongst workers. So far, 20 societies, with a membership of 24,511 have been established. The scheme was at first voluntary but has recently been made compulsory. The deposited money was to be returned after the war. This was part of a programme of anti-inflationary measures, but is likely to continue during peace-time as well.

Employers' Activities.—During recent years, there was considerable extension in the welfare activities done by employers which generally take the form of provision of dispensary, rest shelter, institution of creches, provision of canteens, etc. Most of the ground has been covered elsewhere but it may be helpful to bring it all together in a brief summary.

The Tata Iron and Steel Co. provide an up-to-date and well-equipped hospital with 400 beds and a qualified medical staff; a network of primary and secondary schools, gymnasiums, clubs with facilities, for indoor and outdoor games, canteens, creches, co-operative stores, etc. The Delhi Cloth and General Mills have constituted an Employees' Benefit Fund to finance welfare measures, which include Gratuities, Pensions, Provident Fund, Sickness Insurance, educational facilities for workers' children, night schools for adults, a vocational school, libraries and reading rooms, hospitals, gymnasiums, creches, sports clubs, swimming pools, dramatic clubs, theatres, facilities for excursion, canteens, messes and grainshops. The Buckingham and Carnatic Mills of Madras have an excellent system of welfare work, including schools, mess rooms, a co-operative society, workmen's stores, an ambulance corps,

athletic associations, etc. The British India Corporation of Kanpur provide schools for boys and girls, sports, dispensaries, maternity and child welfare centres, club-rooms, a hospital, a Widows' Home, etc. The Begg Sutherland Group of Mills, Kanpur, has provided schools for adults and children, play grounds, indoor and outdoor games, radio and well-equipped creches. The J. K. Industries of Kanpur, have created a Trust with Rs.3,00,000 for providing several schools, a swimming pool and other amenities for their workmen. The Empress Mills of Nagpur have provided 4 well-equipped dispensaries, a central primary school, Kindergarten classes, a co-operative society, a sickness benefit fund, a pensions scheme, etc. The Madura Mills provide a well-equipped dispensary, a co-operative store, a thrift society, a workers' saving fund, a child welfare centre and creches, and a tea canteen. Besides, they have contributed a sum of Rs.25,000 for operating an association called "The Madura Labour Union Welfare Association", to which they are also paying a monthly contribution of Rs.1,000. The association conducts schools for adults and children, indoor and outdoor games, a reading room and a library. The Calico Mills of Ahmedabad have provided an excellent hospital with 40 beds in the general and 20 in the special maternity wards. Messrs. E. D. Sassoon & Co., of Bombay have canteen facilities, a co-operative society and a number of schools for workers. The four mining companies of the Kolar Gold Field have constituted a Central Welfare Committee to co-ordinate all welfare work, which includes the provision of a large hospital and five maternity homes, schools, sports clubs, cinema shows, dramatic performances, etc. The Dalmia Cement Company of Dalmiyanagar in Bihar, have provided a well-equipped hospital with female and maternity wards, a high school, a reading room and a library and facilities for indoor and outdoor games.

In Class I railways, again, medical facilities are provided at important centres with well-equipped hospitals. There are also educational facilities to the children of the employees mostly free of charge. Staff Benefit Funds have also been created by certain railway companies which give monetary help to the children and widows of the deceased employees. On plantations, likewise, attention has been devoted to welfare activities. Planters have maintained dispensaries and hospitals and they were probably the first to give maternity benefits. Anti-malarial measures costing large sums of money have been adopted especially in Assam. As regards employers in the States, mention may be made of the Tata Oil Company at Tatapuram near Ernakulam in the Cochin State, in which numerous welfare measures have been introduced, including a co-operative society, medical aid, gymnasium facilities and sports, a canteen, a literacy class and a *kala-samiti* to encourage the histrionic art and music. The list can be extended but this is enough to give an idea of the work being done by employers.

Trade Union Share.—Except for the Ahmedabad Textile Labour Association, the Railwaymen's Unions, and the Mazdoor Sabha of Kanpur labour unions have not done much by way of labour welfare. This has been due largely to lack of funds. Some of the Railwaymen's Unions have organised co-operative societies and various kinds of funds for the provision of specific benefits, such as, legal defence, death and retirement benefits, unemployment and sickness benefits and life insurance, etc.

Here are some aspects of labour welfare work which employers undertake under compulsion or persuasion from Government. The question has been dealt with elsewhere in piecemeal fashion. For purposes of easy reference the whole has now been brought together in this summary.

Canteens.—The Government of India have now instructed all Provincial Governments to encourage and persuade employers to start

regular canteens serving tiffin as well as hot meals in their concerns. The results obtained have not, however, been very encouraging although much progress has been made, as will be seen from the fact that till the year 1945, there were only 37 canteens in the United Provinces; 130 in Bombay, 70 in Madras and 133 in the Bengal area. According to a recent legislation on the subject, however, factories employing 250 or more number of persons are required compulsorily to open a canteen.

Creches.—Under the Factories Act, 1934 Provincial Governments can make rules "requiring the reservation of a suitable room for the use of children under the age of six years belonging to women workers in factories employing 50 or more such women." Most of the Provinces, including Bombay, C. P. Berar, and U. P., old undivided Bengal and Madras have availed themselves of this rule-making power. On the whole, however, employers have been rather slow in observing the requirements in regard to the provision of creches. Nor is the standard of maintaining the creches uniform as between factory and factory. There are some fine examples of first-class creches while in some factories the creches are only an apology for the word. Under the Factories Act, 1948, the provision of creches has been made obligatory for factories employing 50 or more women workers.

Medical Facilities.—Medical facilities provided by employers range from first-aid posts and dispensaries to first-class hospitals. In many of the factories there are not enough drugs and appliances, nor a qualified full-time medical man appointed. Some factories employ a part-time doctor who visits the factory premises once or twice a fortnight, or more often, just for an hour or so. Sometimes factories arrange to send their workers to private practitioners under an agreement. There are some examples, however, in which first rate medical facilities are provided. For example the Tata Iron and Steel Co. maintain a large well-equipped hospital with 400 beds, and also 8 outdoor dispensaries. Recently a Dental clinic, an Ear, Nose and Throat Department and a Tuberculosis clinic have also been opened. The Delhi Cloth Mills maintain a hospital which is fully equipped with x-ray apparatus and other modern appliances, and which gives free medical aid to both mill workers and their families and free food to indoor patients. The hospital at the Kolar Goldfield is a model of its kind. The Buckingham and Carnatic Mills of Madras and the three important groups of employers of the Assam Oil Co. at Digboi and many other employers have also provided adequate medical facilities. In all Class I railways in India there are medical departments under the control of chief medical and health officers with divisional medical officers seconded by a number of assistants.

Washing and Bathing Facilities.—Although the Factories Act requires that provision should be made for washing especially in factories where workers come into contact with injurious or obnoxious substances, very little effective provision exists in this regard because most factories only provide water for washing but not soaps, soda, towels, etc. As for bathing facilities, extremely few employers provide this amenity.

Other Facilities.—Other types of welfare work done by factories relate to the provision of recreational facilities, amenities for the education of workers and their children, the provision of cost price grain shops, the establishment of co-operative societies, etc.

PENSIONS, GRATUITIES

The subjects which we deal with under this section are pensions, gratuities, profit sharing, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of ten years' service

has been put in. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although some concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns.

In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than ten years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

A few large industrial establishments in India such as Messrs. Lever Bros. (India), Ltd. and others have started Retirement Benefit schemes where an account is opened for every individual worker to which a fortnight's or 13 days' pay is credited every year; interest is allowed and the amount standing at a worker's credit is paid to him on retirement.

The Tata Iron and Steel Company has instituted a gratuity scheme under which every permanent employee who has put in 20 years' service and whose salary does not exceed Rs. 500 per month is eligible for gratuity equal to half a month's pay for every completed year of service subject to a maximum of 12 months' pay. In certain specified cases, employees with less than 20 years' service also become eligible for gratuity.

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. The Provident Fund Rules of different Provincial Governments in India are by no means uniform. The Government of Bombay, by a notification dated 20th March 1941, made it compulsory for all Government servants in receipt of a monthly income of Rs. 50 per month who joined Government service before that date or of Rs. 25 per month who joined after that date to subscribe to the Government Provident Fund. Pensionable Government servants can only join the non-contributory section of the Fund.

State Railways and Ordnance factories have their own rules. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory Schemes.—Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd. and the Burma Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen.

The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by

the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money.

All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

During the year in many cases submitted to Adjudicators and Boards of Conciliation, one of the demands of the workers has been that they should be entitled to a contributory provident fund. In several cases this main demand has been met by the Adjudicators. The notable example in this connection is that of coal mines in India in which, as a result of the recommendations of the Board of Conciliation appointed by the Government of India, workers in coal mines are now entitled to a contributory provident fund.

The Coal Mines Provident Fund and Bonus Schemes Act, 1948.—This Act received the assent of the Governor-General in September 1948. It empowers Government to frame a Provident Fund Scheme and a bonus scheme for employees in coal mines. A scheme for implementing the provisions of the Act has already been drafted.

Profit Sharing.—Profit sharing in this country has mostly taken the form of payment of bonuses according to the profit making ability of a concern. The question of bonus has already been dealt with elsewhere. Reference has also been made to the recommendations of the Profit Sharing Committee.

Co-operative Societies.—The co-operative movement has made considerable progress in industrial establishment all over the country notably in the south during recent years. Almost all railway systems have co-operative banks and savings banks in addition to credit societies.

Loans and Advances.—Speaking generally most industrial concerns do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers Provincial Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

The system of giving advances is fairly common in the tea plantations of Assam and in the Bengal area. The average amount of advance, however, is nominal.

HOLIDAYS WITH PAY

In India, holidays with pay have hitherto been enjoyed by a very small percentage of the population and most leave, wherever it has been granted, has been without pay.

Under the Holidays with Pay Act of 1945, the factory employees are entitled to holidays with pay not exceeding 10 days in the year. However recently the tendency for many units particularly in South India, has been to allow holidays with pay in excess of this limit. In many of the recent awards of Adjudicators, leave with pay up to 14 days has been awarded. It is noticed generally that in the south the provision of holidays with pay is much more

generous than in Bombay and in the north. Employees of the Central Government, including those working in railways, Government owned and managed factories and Government owned mines enjoy leave facilities to a much greater extent than do private employees.

THE TRADE UNION MOVEMENT

The earliest known trade unions were (1) the Bombay Millhands' Association; (2) the Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1905, and (4) the Bombay Postal Union which was formed in 1907.

The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the first World War.

The decade following the end of that War witnessed rapid developments in the field of trade unionism. The second world war also gave a similar impetus to trade unionism as will be seen from a subsequent paragraph in this section.

Federations.—The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the Annual Sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. The latter bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical International Conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country.

This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to combat trade unionism.

The Split.—The Communists made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girmil Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the Tenth Session of the Congress which was held in Nagpur in that year.

Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms.

Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Khandekar broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in the sub-continent was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates to the International Labour Conference.

With a view to bringing about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in the sub-continent—(1) the Communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the Communists from the other sections was unbridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour. It was proposed to organise and unite all unions which accepted this platform of unity under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation.

Unity Attempts.—In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in the sub-continent. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was

to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues.

At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mahatma Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trades Union Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The Provisional Affiliation entered into at Nagpur in April 1938 was formally ratified at the Eighteenth Session of the All-India Trade Union Congress held at Bombay on the 28th and 29th September 1940.

Attitude to War.—This very same session, however, was responsible for yet another split in the Congress. The Session adopted a resolution of neutrality in connexion with the war effort but certain elements headed by Mr. Aftab Ali, President of the Seamen's Union at Calcutta desired to support the war effort. The Trade Union Congress while adhering to the principle of neutrality, however, gave a free hand to such of their affiliated members as desired to support the War Effort. This attitude of lukewarmness did not satisfy Mr. Aftab Ali and he disaffiliated his Union from the Congress.

Another section, headed by Mr. M. N. Roy and known as the Royists with Mr. Jammadas M. Mehta, formed a new central organisation known as the Indian Federation of Labour with its head office at Delhi. Mr. Jammadas M. Mehta was appointed its President and Mr. M. N. Roy its General Secretary. Two hundred trade Unions in the sub-continent had a total membership of over a quarter of a million affiliated themselves to the new Federation which carried on a country-wide campaign and propaganda for all-out support by Indian labour for the war effort.

The last few months of the year 1948 and the first few months of the year 1949 have been very eventful in the history of trade unionism in this country. Once again the Communists have alienated the sober elements in the trade union movement and have captured the Trade Union Congress. Several unions belonging to the Trade Union Congress have seceded from it and the Trade Union Congress is no longer the influential body that it was until recently.

The latest development in the field of trade unions in India has been the establishment of what is known as the Indian National Trade Union Congress. The Ahmedabad Textile Labour Association has joined this organisation which generally follows the ideology of the Congress.

The Indian National Trade Union Congress is no doubt gathering strength but another recent development has been that the Socialists under the leadership of Mr. Jai Prakash Narain have now been taking active part in trade unionism and have become a powerful force in the trade union movement. The Federation of unions organised by them is known as the Hind Mazdoor Panchayat. Thus, today the two most powerful all-India organisations of trade unionists are the Indian National Trade Union Congress and the Hind Mazdoor Panchayat.

STATISTICS OF TRADE UNIONS

One of the Annual Reports which the Government of India stopped publishing during the War was that relating to the administration of the Indian Trade Unions Act. These reports used to contain statistics regarding number of registered unions and their membership.

No Province except Bombay has maintained any records for both registered and unregistered unions. The Labour Office of the Government of Bombay has collected full and complete information regarding all trade unions in the Province of Bombay since the year 1922. The following Table shows the

progress of the trade union movement in that Province during the last few years:

| Year | Average number of Unions during the year | Average Membership during the year |
|------|--|------------------------------------|
| 1923 | 18 | 41,030 |
| 1929 | 91 | 191,937 |
| 1939 | 170 | 159,026 |
| 1940 | 177 | 191,942 |
| 1941 | 174 | 184,517 |
| 1942 | 183 | 183,364 |
| 1943 | 214 | 221,029 |
| 1944 | 261 | 266,042 |
| 1945 | 295 | 321,582 |
| 1946 | 352 | 340,540 |
| 1947 | 491 | 446,803 |

All-India Figures. Although the Government of India have not so far revived the publication of an Annual Report on Trade Unions, their Labour Bureau publishes figures for Registered Trade Unions in the *Indian Labour Gazette*. The following tabular statements show the latest available position in regard to Registered Trade Unions:—

NUMBER AND MEMBERSHIP OF REGISTERED TRADE UNIONS IN EACH PROVINCE FOR THE YEARS 1945-46 AND 1946-47*

| Province | No. of registered trade unions | | No. of unions submitting returns | | Membership of unions submitting returns | |
|--------------------------|--------------------------------|--------------|----------------------------------|------------|---|------------------|
| | 1945-46 | 1946-47 | 1945-46 | 1946-47 | 1945-46 | 1946-47 |
| Provincial unions | | | | | | |
| Ajmer-Merwara | 4 | 8 | 4 | 8 | 3,159 | 5,184 |
| Assam | 19 | 36 | 12 | 25 | 3,680 | 13,518 |
| Bangalore | 1 | — | 1 | — | 336 | — |
| Bihar | 53 | 111 | 31 | 47 | 50,203 | 35,585 |
| Bombay | 104 | 168 | 178 | 126 | 182,943 | 267,009 |
| C. P. & Berar | 45 | 96 | 32 | 48 | 17,779 | 20,149 |
| Delhi | 47 | 52 | 25 | 32 | 31,173 | 43,201 |
| Madras | 232 | 368 | 180 | 273 | 127,444 | 182,189 |
| N.W.F.P. | 6 | — | 1 | — | 409 | — |
| Orissa | 7 | 42 | 5 | 31 | 1,118 | 8,766 |
| Sind | 50 | — | 45 | — | 16,906 | — |
| United Provinces | 70 | 199 | 43 | 113 | 35,626 | 90,919 |
| West Bengal | 417‡ | 601 | 99‡ | 250 | 261,518 | 488,697 |
| Central Unions | 32 | 44 | 26 | 36 | 128,744 | 176,742 |
| Total | 1,087 | 1,725 | 585 | 998 | 861,031† | 1,331,962 |

* The 1946-47 figures are only for the Indian Dominion (excluding East Punjab), while the 1945-46 figures are for undivided India (excluding the Punjab).

† Information relates to 179 unions.

‡ Information relates to 584 unions.

§ These figures relate to Undivided Bengal, the 1946-47 figures are only for West Bengal.

The following table shows the number and membership of the Registered Trade Unions from which returns were received, classified according to industries:—

NUMBER AND MEMBERSHIP OF REGISTERED TRADE UNIONS (FROM WHICH RETURNS WERE RECEIVED), CLASSIFIED ACCORDING TO INDUSTRIES

| Industry | 1945-46 | | 1946-47 | |
|--|------------|-----------------|------------|------------------|
| | Number | Membership | Number | Membership |
| 1. Railways (including workshops) and other transport (excluding tramways) | 75 | 269,461 | 117 | 441,663 |
| 2. Tramways | 4 | 10,339 | 4 | 14,374 |
| 3. Textiles | 91 | 234,751* | 166 | 347,912 |
| 4. Printing Presses | 37 | 15,248 | 42 | 22,031 |
| 5. Seamen | 9 | 79,142 | 11 | 65,166 |
| 6. Municipal | 30 | 23,070 | 45 | 35,659 |
| 7. Docks and Port Trusts | 19 | 26,625 | 28 | 42,688 |
| 8. Engineering | 56 | 31,875 | 101 | 56,216 |
| 9. Miscellaneous | 264 | 173,520 | 481 | 306,253 |
| Total | 585 | 861,031† | 998 | 1,331,962 |

* Information relates to 90 unions.

† Information relates to 584 unions.

LABOUR ADMINISTRATION

The work of the Ministry of Labour of the Government of India has increased considerably. As a matter of fact, recently this Ministry has been split into two different Ministries, one styled the Ministry of Labour and the other Ministry of Works, Mines and Power.

Apart from dealing with labour legislation and labour conditions and attempting and bringing about uniformity of standards in the different Provinces, this Ministry has recently undertaken very great additional responsibilities for the placement of civil and military demobilized personnel, refugees, etc. It has continued active co-operation with organized employers and labour organizations through the Tripartite Labour Conference and Standing Labour Committee.

Prior to the year 1920 there was little co-ordination between the Centre and the Provinces in matters connected with Labour. The participation by India in the First Session of the International Labour Conference held at Washington in 1919 and the increasing interest taken by the Indian public in questions connected with labour made it necessary, however, both for the Government of India and the Governments of the more industrialized Provinces not only to consider the question of the representation of labour in the Central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions.

The Government of India established a Labour Bureau in the year 1920. The Bureau was however abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. Since the War and the creation of the Tripartite Labour Conference the Ministry of Labour of the Government of India has considerably expanded its staff and it now deals with a much wider range of subjects than it did before the War.

Apart from the main Secretariat of the Ministry of Labour which consists of 24 officers, it has several attached and subordinate officers. The activities of some of these have been described in the relevant sections, such as Employment, Exchanges and Resettlement, Miners' Welfare Fund, etc., but of some others are briefly given below.

Labour Bureau.—To meet the ever growing needs of Government, industry and labour for accurate and reliable information relating to labour conditions, labour legislation, etc., the Central Government established on 1st October 1946, a Labour Bureau with the following functions:—

(a) The collection of statistics relating to labour, etc.

(b) To maintain the cost of Living Index Numbers compiled under the Government of India's Scheme for the preparation of Cost of Living Index Numbers on uniform lines.

(c) To keep up-to-date the factual data relating to working conditions collected by the Labour Investigation Committee.

(d) To conduct research into specific problems with a view to furnishing data required for the formulation of policy.

(e) To edit the *Indian Labour Gazette*, and

(f) To edit a Labour Code of various Legislative enactments and the statutory rules made thereunder and a Year Book giving authoritative description of labour affairs in the country.

The Bureau has now been in existence for nearly three years. It has so far issued the following six publications:—

1. Elements of Industrial Well-being by Sir Wilfrid Garrett.

2. Problems of Indian Labour—A Symposium.

3. Report on an enquiry into the cost and standard of living of plantation workers in South India.

4. Report on an enquiry into the cost and standard of living of plantation workers in Assam and Bengal.

5. Indian Labour Year Book, 1946.

6. Indian Labour Year Book, 1947-48.

One of the extensions of the activities of this Ministry has been in the field of the collection of necessary data for compiling cost of living index numbers for selected centres in India on uniform lines. Accordingly, an Officer styled Director, Cost of Living Index Scheme, was appointed in the year 1942 and he collected some 27,000 family budgets in about 28 selected centres in India and Pakistan. The data have now been tabulated and within a short time it may be possible to have for the first time, scientifically compiled cost of living index numbers for principal centres in the two Dominions. Reference has already been made in another section to the cost of living index numbers being published by the Labour Bureau in its new series for some 14 centres.

Chief Labour Commissioner.—The Central Government, in the Ministry of Labour, have also appointed a Chief Labour Commissioner. This officer is in charge of industrial relations and conciliation, labour welfare operation of labour laws, and maintenance of information regarding wage rates and conditions of work in Central undertakings—mines, plantations, etc. There are a number of deputies working under him known as Regional Commissioners. The Chief Commissioner of Labour and his deputies also intervene in disputes arising between Government and employees in the various mines and factories.

Chief Adviser of Factories.—In order to ensure uniformity in the administration of the Indian Factories Act and to improve conditions generally in Indian Factories, the Government of India have appointed an officer designated the Chief Adviser Factories. The first incumbent to the post was Sir Wilfrid Garrett, a distinguished officer of the Ministry of Labour in the United Kingdom. The Chief Adviser of Factories has a number of deputies, including deputies who attend to matters relating to the health of the workers and the sanitation and cleanliness of factories.

The Provinces.—Consequent on the introduction of Provincial Autonomy with effect from 1st April, 1937, Sind was separated from the Presidency of Bombay and made into a separate Province. The new Government of Sind modelled its administration of all labour questions on Bombay and created a Labour Office with a special Commissioner of Labour. Since the year 1937, the Governments of the United Provinces, Assam, the Central Provinces and Bihar and Bihar have also created special appointments of Commissioners of Labour; but, whereas the appointment in the United Provinces was a full time one, those in the Central Provinces and Bihar, Bihar and Assam have been coupled with other posts. In the old undivided Punjab, administrative matters connected with Labour were in the hands of the Director of Industries. Recently, however, the East Punjab Government have decided to start a separate Labour Department and it is hoped that this new department would start functioning with effect from the 1st of April 1949. Labour conditions in Orissa and in the North-West Frontier Province are not such as to justify the creation of special appointments of Labour Commissioners.

Bengal (West).—The personnel of the Government connected with labour matters consists of the following :—

Labour Commissioner, who also holds the charge of the Registrar of Trade Unions, Statistics Authority, Conciliation Officer and Certifying Officer under the Industrial Employment (Standing Orders) Act, 1916. There are two Deputy Labour Commissioners, ten Assistant Labour Commissioners, ten Labour Officers, a Commissioner for Workmen's Compensation, the Authority under the Payment of Wages Act, Chief Inspector of Factories and eight Inspectors of Factories.

Four sets of working class cost of living index numbers (with different bases) for Calcutta, Howrah and Jagaddal are being compiled and retail prices are collected from 32 centres under the Government of India Cost of Living Index Scheme, in addition to unweighted retail prices indices for three other centres, viz., Dooars, Darjeeling and Asansol. Statistics of employment and earnings, absenteeism, etc., are collected on a voluntary basis. A proposal to expand the Statistics Department and its activities is under consideration.

Bombay.—The personnel of the Government connected with labour matters consists of the Commissioner of Labour, Director of Labour Administration, four Deputy Directors of Labour Administration, Director of Labour Welfare, four Deputy Directors of Labour Welfare, one Labour Welfare Officer, seven Assistant Labour Officers (at Bombay), three Government Labour Officers (at Jalgaon, Ahmedabad and Sholapur), Director of Labour Information and two Deputy Directors of Labour Information, Chief Inspector of Factories, Chief Inspector of Steam Boilers and Smoke Nuisance, 15 Inspectors of Factories, 8 Inspectors of Steam Boilers and Smoke Nuisance, two Certifying Surgeons, the President, Members, Registrar and the Judges of the Industrial Court and Commissioner for Workmen's Compensation.

Director of Labour Information publishes working class cost of living index numbers for four centres and retail prices of food articles for a number of industrial centres. Statistics of absenteeism, night shift working, hours of work, etc., are collected on a voluntary basis.

Madras.—The Personnel of the Government connected with labour matters consists of the following :—

Commissioner of Labour, who also holds the charges of Commissioner for Workmen's Compensation, Registrar of Trade Unions, and Chief Inspector of Factories. There is a Deputy Commissioner of Labour who is Additional Commissioner for Workmen's Compensation. There is also an Assistant Commissioner of Labour, 13 Labour Officers, Chief Inspector of Factories, Deputy Chief Inspector of Factories, 21 Factory Inspectors, 3 Inspectresses of Factories, and an Industrial Tribunal.

The office of the Economic Adviser to the Government of Madras compiles the working class cost of living index number for Madras City, cost of living index numbers for low-paid employees in certain urban centres in the Province and retail price index numbers for certain rural centres.

C.P. & Berar.—The organisation connected with labour matters in the Province consists of a Labour Commissioner, who is also the Chief Conciliator and Registrar of Trade Unions, two Labour Officers, who are also Conciliators and Assistant Registrars of Trade Unions, Chief Inspector of Factories and Statistics Authority and three Inspectors.

The Office of the Labour Commissioner compiles the cost of living index numbers and collects statistics relating to hours of work and earnings.

United Provinces.—The personnel of the Government connected with labour matters consists of the Labour Commissioner, who is also the Certifying Officer for Standing Orders, Deputy Labour Commissioner and Registrar of Trade Unions, Regional Conciliation Officer, Kanpur, four additional Regional Conciliation Officers, seven additional Regional Conciliation Officers, Assistant Registrar of Trade Unions, Trade Union Inspector, Chief Inspector of Factories and Shops, Deputy Chief Inspector of Factories, Deputy Chief Inspector of Shops, Thirteen Inspectors of Factories, Chief Inspector of Boilers, five Inspectors of Boilers, Labour Officer, Research Officer and Labour Intelligence Officer.

The statistical section of the Labour Commissioner's office compiles the working class cost of living index number for Kanpur and collects wholesale and retail prices of selected agricultural commodities in the Province. Data on absenteeism, payment of bonuses, welfare work, etc., are collected from employers on a voluntary basis. A proposal to reorganise and enlarge the statistics organisation is under consideration.

Bihar.—The personnel of the Government connected with labour matters consists of the Commissioner of Labour and Employment, who is the Statistics Authority of the Province also, Deputy Commissioner of Labour and Employment, four Assistant Commissioners of Labour, four Labour Officers, Chief Inspector of Factories, four Inspectors of Factories, one Statistics Specialist, two Labour Welfare Officers and one Superintendent of the Employment Bureau.

The office of the Commissioner of Labour and Employment compiles cost of living index numbers for six centres. Data on payment of allowances, stoppages of work, etc., are collected on a voluntary basis.

Punjab (East).—The Punjab is the only major Province which has not appointed a Commissioner of Labour. Such work as is done by the Commissioners of Labour in other Provinces is entrusted to the Director of Industries in this Province. Briefly, the organisation connected with labour matters consists of the Director of Industries, Assistant Director of Industries and Labour Officer, Chief Inspector of Factories, Chief Inspector of Shops and Commercial Establishments and five Additional Inspectors of Factories.

As stated already, a Labour Department has been created and a Labour Commissioner is to be appointed shortly.

Orissa.—The Director of Industries looks after such work as is connected with Labour and the other officers include the Registrar of Trade Unions, and the Chief Inspector of Factories and Statistics Authority.

The Office of the Director of Industries publishes cost of living index numbers for Cuttack and Berhampur.

Delhi.—The personnel of the administration connected with problems relating to labour consists of the Director of Industries and Labour, the Chief Inspector of Factories, Inspector of Factories, Labour Officer and the Statistics Authority.

Coorg.—The Chief Inspector of Factories is the Statistics Authority also. The other two officials connected with labour are the District and Sessions Judge who is the Commissioner under the Workmen's Compensation Act and the Registrar of Co-operative Societies and Trade Unions.

Ajmer-Merwara.—The personnel connected with labour consists of the Inspector of Factories and appellate authority under the Industrial Employment (Standing Orders) Act, 1946, the Labour Officer who holds the charge of a number of posts including that of the Statistics Authority, Conciliation Officer, Registrar of Trade Unions, Additional Inspectors of Factories, Certifying Officer under the Industrial Employment (Standing Orders) Act, etc., the Chief Inspector of Factories and Electrical and Boiler Inspector (Delhi and Ajmer-Merwara) and the Commissioner under the Workmen's Compensation Act.

In Assam the main question connected with Labour is that concerning the recruitment of Labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the Provincial Government are not very actively interested in the special consideration of other Labour questions. Notwithstanding this however, the Government of Assam have obtained the approval of the Government of India and the vote of the Legislature for appointing the Controller of Emigrant Labour as part-time Labour Commissioner, with a whole-time Assistant.

The only important event of interest that has occurred in the field of Labour in Assam recently is the creation of the Workmen's Compensation Deposit Scheme.

States.—The rapid industrialisation witnessed in the sub-continent especially since the advent of the Second World War in 1939 has not been confined to the Dominions alone but has also extended to the States. After the end of the First World War, there was a slight tendency for industry in British India to migrate to the States owing to the absence of labour laws and restrictive conditions of work but most of the progressive States such as Hyderabad, Baroda, Mysore, Gwalior, Indore, Travancore, Cochin, etc., have endeavoured during recent years, to bring their labour legislation into line with the Labour laws in the Dominions with the result that industrial workers in these States are now assured of conditions very similar to those obtaining in India and Pakistan. The participation by some States in the Conferences of Labour Ministers and their representation in the Tripartite Labour Conference and in the Standing Labour Committee created in 1942 have given an added impetus to planned industrialisation and the levelling up of conditions of work in the States with those obtaining in the Dominions.

Mysore.—Prior to 1941, Mysore had a Factories Act, a Mines Act, a Workmen's Compensation Act and a Maternity Benefit Act. Labour problems in Mysore have, however, been brought into considerable prominence as a result of rapid industrialisation in the last few years. In addition to 28 new plants, 25 large industrial concerns of which 17 were State-aided and eight State-owned were established in the State during the decade ending 1941. The total number of large industrial undertakings stood at 330 by the end of 1943 and these gave employment to an average of nearly 86,000 workers. An amendment made to the Mysore Factories Act in 1942 extends the scope of the Act to all factories employing ten or more persons instead of 20 as before thus bringing almost all factories in the State within its purview. The Mysore State has now fallen in line with the Indian Factories Act by reducing the hours of work to 48 per week. The Mysore Workmen's Compensation Act was considerably liberalised and the operation of the Mysore Maternity Benefit Act was extended to women employed in mines in the same year. The Code of Civil Procedure was also amended in such a way as to ensure the exemption of the wages of workers from attachment.

The most advanced piece of labour legislation in States today is the Mysore Labour (Emergency) Act enacted in 1941 and placed permanently on the Statute Book in January 1942.

This Act creates machinery for the peaceful and speedy settlement of industrial disputes and seeks generally to promote the welfare of labour. Among its many provisions are those relating to the setting up of a Department of Labour with a Commissioner and three Assistant Commissioners of Labour and a Court of Industrial Arbitration; the framing by the Commissioner of Labour, of Standing Orders for workmen; and the conferring of the rights of association on all labour employed in the State. The Court of Industrial Arbitration, consisting of a Judge of the High Court as its Chairman and two independent members decides industrial disputes referred to it by Government or by agreement between the parties and decides appeals from the Orders of the Commissioner of Labour regarding Standing Orders.

The creation of rival unions of workers is avoided by prescribing a single Association each for industrial undertakings employing not less than 100 persons and by conferring Statutory recognition on each Association immediately it is registered.

A Labour Welfare Board consisting of representatives of employers, unions of

workers and local bodies interested in labour welfare with the Commissioner of Labour in Mysore as Chairman was constituted in December 1942 with a wide range of functions covering all matters relating to labour welfare, labour legislation, collection of statistics and dissemination of labour intelligence.

The personnel dealing with matters connected with labour is as follows: Commissioner of Labour and Chief Inspector of Factories; Assistant Commissioners of Labour; Chief Conciliator and Registrar of Associations and the Chairman, Court of Arbitration.

Hyderabad.—On the 1st April 1944, there were 668 industrial concerns subject to the Hyderabad Factories Act employing 53,295 operatives of whom 37,627 were men, 12,255 were women and 1,413 were children. In addition to the Factories Act which embodies provisions for the health and safety of labourers, there is a Mines Act, a Boiler and Machinery Act, the Hyderabad Labour Compensation Act, and a Maternity Benefit Act. Recent legislation includes a Payment of Wages Regulation, an Employment of Children Regulations, a Trade Disputes Order for the appointment of an Industrial Court and Conciliation Boards and a Trade Unions Act. Debt Conciliation, Land Mortgage and Money-Lenders Regulations have been framed for the protection of agriculturists and agricultural labour. Hours of work in the majority of the factories do not exceed 54 or 60 per week and in Government concerns are limited to 7 to 8 per day. Strikes and lockouts have been made illegal unless 21 days' notice has been given.

A Departmental Employment Bureau has been created for solving the problem of unemployment. A Statistics Act, much wider in scope than the Industrial Statistics Act of India has also been enacted. The Department of Statistics has instituted quinquennial inquiries into wages and conditions of employment of agricultural and industrial labourers since the year 1920 and the first printed Report on the Labour Census was published in 1935. The second Report on Labour Wages Census (Rural and Urban) 1940 has also been published. A scheme for Inquiries into Family Budgets and the compilation of Cost of Living Indexes in several industrial centres of the Dominions, Hyderabad City (including Secunderabad), Warangal, Nizamabad, Nanded, Aurangabad and Gulbarga is in process of completion. A collection of Statistics Act was adopted early in the year 1945. This is the most advanced piece of legislation of its kind yet adopted in the sub-continent and is much wider in scope than the Industrial Statistics Act, 1942. The personnel dealing with matters connected with labour is as follows: Minister in charge of Labour; Secretary for Labour; Commissioner of Labour; Labour Officer and the Labour Welfare Inspectors.

Baroda.—The total number of registered factories in the Baroda State on the 31st July, 1944 was 170 of which 80 were perennial and 90 seasonal. The total number of persons employed in all factories employing more than 20 persons was 41,771. Baroda was one of the first states in India to enact a Mines Act. The Baroda Mines Act, 1908 contains provisions in regard to health and safety of workmen employed in the Mines. As far as other Labour Laws are concerned the Government has adopted, with certain changes to suit local conditions, the Indian Factories Act, 1934; the Workmen's Compensation Act, 1923; the Trade Disputes Act, 1929; the Trade Unions Act, 1926; the Payment of Wages Act, 1936; and the Bombay Maternity Benefit Act, 1929. Under the Baroda Factories Act, the maximum permissible weekly hours of work are 48 for perennial factories and 54 for seasonal factories. The Workmen's Compensation Act and the Rules framed thereunder have been adopted in toto. In the Baroda Maternity Benefit Act, the benefit is to be at the rate of six annas a day

as against 8 annas a day as in the Bombay Act. Sections 6(3) and 18A (relating to the appointment of Conciliators) have been omitted from the application of the Trade Disputes Act, 1929.

The Baroda Trade Unions Act has important variations from the India Act on which it has been modelled: (1) No Associations or Unions of Government Servants, whatever be their objects, are permitted; (2) the forming, by Unions, of political funds is not recognised; (3) the proportion of persons connected with an industry which is covered by a Union to outsiders on its executive has been fixed at 66⅔ and 33⅓ per cent. respectively; and (4) Section 30 of the British Indian Act has been omitted. Under the Baroda Payment of Wages Act, all wages have to be paid before the expiry of the tenth day following the period for which they fall due. In the application of Rule 81A of the Defence of India Rules, the period of notice required for the declaration of a strike or a lock-out is six weeks.

A Labour Officer whose main duty was to endeavour to bring about settlements in labour disputes was appointed in the year 1938. In addition to conciliation work he is entrusted, as Special Registrar of Co-operative Societies for Workers, with the work of organising Co-operative Societies and other welfare Schemes with the help of employers. In the year 1943, the Government of Baroda State instituted an inquiry into the general financial condition of the cotton mills in the State and the conditions of labour employed in them with special reference to recruitment, wages, hours of work, labour welfare and efficiency.

With a view to seeing that the increased earnings accruing to industrial workers in the State as a result of war conditions might not be frittered away in drink, etc., the Baroda Government decided to start Co-operative Thrift Societies for the workers. The Government have guaranteed the security of all deposits made in such Societies. By the end of February, 1945, twenty such Societies with a membership of 24,301 workers had been established in the State. The total amount of savings as at the same date amounted to Rs. 20,19,962.

The personnel of the Government of Baroda dealing with administrative matters connected with labour is as follows: Director of Labour and Registrar of Trade Unions; Labour Officer, Inspector of Factories under the Payment of Wages Act and Special Registrar of Co-operative Societies for Labour and the Inspector of Factories.

Cochin.—Unlike Mysore, Baroda and Indore, the large industrial population of Cochin State is organised on a cottage basis. The number of concerns on the Factory Register at the end of the last official year (18th August 1944) was 103 employing 12,806 persons. Today Cochin State has all the labour laws which have been enacted in Indore with a Dock Labourers' Act in addition. Recent additions include an Employment of Children Act and the Employee's Liability Act. The administration of labour matters is generally in the hands of the Commissioner of Labour. The Factories Act and the Workmen's Compensation Act are, however, under the immediate administrative control of the Chief Engineer, Public Works Department and the District Magistrate of the State respectively.

Travancore.—In Travancore there is a Commissioner of Labour assisted by three Assistant Labour Commissioners. There is also a Chief Inspector of Factories.

Recently owing to the merging of some of the States with the Indian Provinces there may be changes in the set up of labour administration in some of the States. In this connection it may be stated that in the Madhyabharat Union there is a Commissioner of Labour with headquarters at Indore.

SCIENTIFIC SURVEYS

THE Botanical Survey Department of the Government of India is awaiting reorganisation. Pending a new appointment the duties of the Director are distributed amongst (a) Dr. K. P. Biswas, M.A., D.Sc. (Edin.), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta and (b) K. S. Srinivasan, M.A., M.Sc., Curator, Industrial Station, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum, a Curator who is engaged in the development and maintenance of the Industrial Section.

A Training Scheme for systematic and taxonomic work has been inaugurated by the Government of India with a view to developing the Botanical Survey of India in the near future.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the vegetable resources of the area it administers, and although apart from the cinchona operations, the activities of the survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, limnology, distribution of plants, ecology and economic botany of plant life—the work accomplished in pure and applied botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty-six years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open, prove to be most useful in dealing with such questions of considerable State importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaptation of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

The Industrial Section of the Indian Museum was founded for the exploration of the economic resources of India (economic plants and plant products) and for working as a Bureau of public information by diffusion of knowledge on economic botany. The section maintains a public gallery, where plants and plant-products, such as food, fodder, spices, crude drugs and pharmaceutical products, vegetables, fibres, dyes and gums, oil and oil-seeds, gums and resins, are displayed with individual and descriptive labels. Identification and supply of specimens for research work is also carried out for assisting scientists in India and abroad.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys in the World. The present department, now under the Government of India, Ministry of Works, Mines and Power, was founded in 1851. Its primary function is the preparation of a geological map of India, the basis on which all geological work, including an appraisal of the mineral deposits of the country, must rest.

Up to the beginning of the present century, most of the geological maps prepared were on the small scale of 1" = 4 miles, many of the surveys being rather in the nature of geological reconnaissance with the object of obtaining a broad view of the geology of the country as a whole. During the last 40-50 years, mapping has, wherever possible, been on a standard scale of 1" = 1 mile, and in certain areas of special economic importance on larger scales.

The importance of geological work in connection with India's industrial development is now widely realised and, to meet enhanced demands, the gazetted cadre of the Department is being increased as rapidly as possible. The present
